PROCEEDINGS AND DEBATES OF THE 86th CONGRESS, SECOND SESSION

SENATE

FRIDAY, MAY 6, 1960

The Senate met at 9:30 o'clock a.m., and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Our Father God, whose love is unfailing and whose mercies are new every morning, again we turn unfilled to Thee, bowing in our ignorance and weakness, praying for strength and wisdom to face with courage the somber specters of hatred and misery that stalk our darkened earth. Through the angry emotions which embitter the present days help us to seek not the vindication of our opinions but the truth no matter where it leads.

If we secretly covet the superior gifts of others and so neglect our one talent, if we inwardly rejoice in the failure of others, if we furnish hospitality to thoughts that debase and degrade, if we are content with anything short of our best, if we have believed the worst about others on flimsy and perhaps false reports, if in any human relationship we have been untrue, unfair, unbrotherly: O Thou who takest away the sin of the world, forgive us, cleanse us, renew us, restore our soiled souls, and lead us in the paths of righteousness for Thy name's sake. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Thursday, May 5, 1960, was dispensed with.

ENROLLED BILLS SIGNED

The PRESIDENT pro tempore announced that on today, May 5, 1960, he signed the following enrolled bills, which had previously been signed by the Speaker of the House of Representatives:

H.R. 7947. An act relating to the income tax treatment of nonrefundable capital contributions to Federal National Mortgage Association;

H.R. 8684. An act to provide transitional provisions for the income tax treatment of dealer reserve income;

H.R. 9660. An act to amend section 6659 (b) of the Internal Revenue Code of 1954 with respect to the procedure for assessing certain additions to tax, and for other purposes; and

H.R. 10234. An act making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

MESSAGES FROM THE PRESIDENT—APPROVAL OF JOINT RESOLUTION

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries, and he announced that on May 5, 1960, the President had approved and signed the joint resolution (S.J. Res. 150) permitting the Secretary of the Interior to continue to deliver water to lands in the third division, Riverton Federal reclamation project, Wyoming.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed a bill (H.R. 11998) making appropriations for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H.R. 11998) making appropriations for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

THE AREA REDEVELOPMENT ACT

The Senate resumed the consideration of the amendment of the House to the bill (S. 722) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

The PRESIDENT pro tempore. The question is on agreeing to the motion of the Senator from Texas [Mr. JOHNSON] that the Senate concur in the House amendment.

Mr. JOHNSON of Texas. Mr. President, under the unanimous-consent agreement there is to be an hour on each side, to be controlled by the majority and minority leaders.

I wonder if the Senator from Pennsylvania [Mr. CLARK] is prepared to take any time now.

Mr. CLARK. Mr. President, the Senator from Illinois [Mr. DOUGLAS] is on his way to the Chamber. He had intended to open the debate; but if the majority leader desires, I am prepared to do so.

Mr. DOUGLAS entered the Chamber.

Mr. JOHNSON of Texas. The Senator from Illinois has been a leading advocate of this legislation. It was due largely to his efforts that the original bill was passed. It has been materially reduced by the House of Representatives substitute, but I was pleased to support the Senator from Illinois when S. 722 was originally before the Senate. While I would like to see legislation that at least went as far as S. 722, I do not see any chance of getting it at this session.

As I understand, the Senate bill provided some $389 million. The President recommended a sort of token appropriation of $50 million odd, and the House of Representatives, against great parliamentary obstacles, passed a bill providing $251 million; and I am hopeful that that reasonable, moderate, fair, prudent course will be upheld by the Senate today.

I yield to the Senator from Illinois. How much time does the Senator wish?

Mr. DOUGLAS. I should like 10 minutes.

Mr. JOHNSON of Texas. I yield 10 minutes to the Senator from Illinois.

Mr. CLARK. Mr. President, before the Senator from Illinois proceeds, will the majority leader yield for one comment?

Mr. JOHNSON of Texas. I yield.

Mr. CLARK. I think it is important, as we debate this bill, for us to remember that this is only an authorization bill. The other bill was a spending bill, but this bill has been converted by the House into an authorization bill, so it would not cost one cent unless appropriations were later forthcoming.

Mr. JOHNSON of Texas. The Senator points out a very important matter.

Mr. President, I do not believe we ought to have double standards in this Government. I sat with the Appropriations Committee. All last week I tried to get a mutual aid bill through for all the free world, containing almost $4 billion in grants throughout the free world. Now we are asking for $251 million, largely in loans for our own people in distressed and depressed areas, and we have to fight every inch of the way. I do not think we should have a standard like that, under which we grant $4 billion to other people, and cannot even lend a quarter of a billion to our own people. I am for helping both. I think we can do it and remain fiscally solvent. I think we can do it and become a stronger nation in a stronger world. I do not understand the voices which say, "You cannot cut one dime from the $4 billion of grants to foreign nations, but you must not permit loans of a quarter of a billion to our own people."

Mr. DOUGLAS. Mr. President, I appreciate the generous comments of the majority leader. It would have been impossible to pass this bill through the Senate at any time—and it was passed three times—without his unfailing cooperative and efficient help. I pay tribute to him on this point. We have not always agreed on every measure before the Senate, but no one could have been more cooperative and helpful than the senior Senator from Texas.

Mr. JOHNSON of Texas. I thank the Senator.

Mr. DOUGLAS. Mr. President, this is a very important measure, and I think I should describe the House amendments first, indicate some of the details in which it differs from the Senate bill, and then make a very brief argument.

As the Senator from Texas has said, Senate bill 722, when it passed this body, made commitments for a total of $379 million. The House has cut this sum to an authorization for $251 million, but it has retained all the features of the program embodied in S. 722.

Thus, loans for industrial redevelopment has been cut from $100 million to $75 million; loans to establish new industries in critical farm areas of low income and high underemployment have also been reduced from $100 million to $75 million; loans to localities to provide industrial facilities, such as industrial water and industrial parks, have been reduced from $100 million to $50 million.

The figure for grants to especially needy localities which have need for some outright grants in addition to loans, has been cut from $75 million to $35 million. Funds for technical assistance have been maintained at $4,500,000. Then there are authorizations of $10 million for, in subsistence payments during retraining and $1,500,000 for vocational rehabilitation.

As the Senator from Pennsylvania has stated, Senate bill 722 originally provided that the $300 million of loans could be made by the Administrator without further appropriation by Congress, and then the costs would have been met by the flotation of additional quantities of Government bonds. As the Senator from Pennsylvania has made clear, no part of the entire amount can now be spent without further authorization by Congress.

The House has also made changes in eligibility and has effected some liberalization of the rather stringent standards which had been imposed in the Senate bill. However, the provisions which are retained are quite stringent and, in my judgment, adequate.

There is an initial requirement that there must be at least 6 percent unemployment at the time the application is made, that there must have been at least 9 percent unemployment during at least 15 of the 18 previous months, and 6 percent during at least 18 months of the preceding 24 months, if unemployment of not less than 15 percent of the labor force has existed during the 6-month period immediately preceding the date of the application.

A proviso has also been inserted at the last moment by the House that if unemployment falls below 6 percent of the labor force during the period that the application is being processed, such an area will lose its eligibility, and the administrator will not make grants to it. There would be 30 "major" industrial areas which in March of 1960 would be eligible in industrial areas, and 100 smaller areas.

I ask unanimous consent to have printed in the RECORD at this point in my remarks a list of the areas which, in March 1960, would be eligible under the provisions of the House bill.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Tentative list of areas that may qualify for Federal assistance as areas with substantial and persistent unemployment under various legislative proposals,[1] March 1960

[1] This listing is preliminary and tentative, and is based largely on bimonthly or semiannual data compiled from area labor market reports prepared in connection with the Bureau of Employment Security's program for the classification of areas according to relative adequacy of labor supply. Data used cover a 2-to-5 year period, generally extending through January 1960. Later data, now becoming available for some areas, could result in several changes in the above listing. A more comprehensive review of area data on a monthly—rather than bimonthly or semiannual—basis, and in the light of whatever criteria may be included in the bill finally enacted, would be required to determine which areas are eligible for assistance as areas with substantial and persistent unemployment.

[2] Major areas are areas included in the Bureau of Employment Security's regular area labor market reporting and classification program. This program covers 149 of the country's leading employment centers. Unemployment and labor force data for these areas are generally available on bimonthly basis.

[4] Smaller areas: Areas with a labor force of 15,000 or more which are officially classified as "smaller areas of substantial labor surplus" by the Bureau of Employment Security. Data for such areas are generally available on a semiannual basis. Information for smaller areas which are not classified, or for areas with a labor force of less than 15,000, is not available in Washington on a consistent basis.

ATTACHMENT TO MARCH 1960 TENTATIVE LIST OF ELIGIBLE AREAS UNDER PROPOSED AREA ASSISTANCE LEGISLATION

SUMMARY OF ELIGIBILITY CRITERIA USED

The administration (Kilburn) bill (H.R. 4278):

1. Unemployment is now 6 percent or more of the labor force, discounting seasonal or temporary factors.

2. The annual average unemployment rate in the area has been:

(a) At least 50 percent above the national average for 4 of the preceding 5 calendar years.

(b) At least 75 percent above the national average for 3 of the preceding 4 calendar years.

(c) At least 100 percent above the national average for 2 of the preceding 3 calendar years.

The Douglas bill (S. 722) as passed by the Senate:

1. Unemployment is now 6 percent or more of the labor force, discounting seasonal or temporary factors.

2. The annual average unemployment rate in the area has been:

(a) At least 50 percent above the national average for 3 of the preceding 4 calendar years.

(b) At least 75 percent above the national average for 2 of the preceding 3 calendar years.

(c) At least 100 percent above the national average for 1 of the preceding 2 calendar years.

Spence bill (S. 722) as reported by House Banking and Currency Committee:

1. Unemployment in the area is currently 6 percent and has been:

(a) At least 6 percent during 18 of the preceding 24 months.

(b) At least 9 percent during 15 of the preceding 18 months.

(c) At least 12 percent during the preceding 12 months.

Mr. DOUGLAS. So far as the agricultural areas in the country are concerned, they are to include those areas in

which there existed the largest number of low-income farm families, and the administrator is also to consider the number of those families in each of such areas and the current prospective employment opportunity in such area and the availability of manpower in each area for supplemental employment.

There shall be included among these areas any county which is among the 500 counties in the United States ranked lowest in the level of living of the farm families, or which is among the 500 counties in the United States having the highest percentage of commercial farms producing less than $2,500 worth of products for sale annually.

I should emphasize that this bill is intended to help the farming regions of the country equally with the industrial regions. I cannot understand how Senators from low-income farm areas can contend that the bill is intended to help exclusively industrial areas, because it applies equally to farming areas, and because the sums authorized for loans are equal.

What is intended is to have a loan made at the average yield on Government bonds of 30 years duration, plus one-half percent. So this is in no sense a grant program. It is instead a loan program designed to bring industry into areas of high and persistent unemployment and underemployment and to provide instead additional employment and additional income.

Under the bill there would be set up a separate Administrator, to be appointed by the President, subject to Senate confirmation, and an advisory board consisting of various Cabinet officers and leading members of the administration, and a public advisory board of 25 members consisting of representatives of labor, management, agriculture, and the public in general.

As I have said, the loan program is conditioned upon sound industrial opportunities, and no Government loan can exceed 65 percent of the cost of the fixed capital, including not merely the cost of buildings, but also plant and machinery, but with no provision for working capital.

The local authorities must also put up at least 10 percent as a minimum—whereas 65 percent is the ceiling for the Federal loans—and those who request loans must put up at least 5 percent, and, of course, must provide for all working capital and for such portions as are not made from Federal and local loans. In practice they will have to put up or raise 25 percent of the capital and in the overwhelming majority of cases far more than this.

So the aim is merely to provide seed capital with which to start new industries in areas where unemployment is high and persistent.

The PRESIDENT pro tempore. The time of the Senator has expired.

Mr. JOHNSON of Texas. I yield 5 additional minutes to the Senator from Illinois.

Mr. DOUGLAS. The Senator from Texas has already referred to the fact that the Government and the administration are spending abroad enormous sums of money for industrial development in so-called undeveloped countries or, as I believe the phrase now is, "developing countries."

I hold in my hand a list of projects for which outright grants, not loans, have been made by the Federal Government in countries abroad, which has been collected by the Senator from Alaska [Mr. GRUENING], and which he has made available to me.

Visitors in the gallery and Senators on the floor can see the huge size of this volume. I have had it weighed before I came on the floor. It weighs 6 pounds, 7 ounces, and it lists the billions upon billions of dollars that this administration, is giving away to communities abroad.

I voted for most of these appropriations. Incidentally when I have done so, at the request of the administration, I have been attacked by the administration supporters at home.

We also have a Development Loan Fund, largely put into effect through the imagination of the Senator from Oklalahoma [Mr. MONRONEY], who has never been given proper credit for what he has done. This book weighs somewhat less, about a half pound. It contains hundreds of authorizations amounting to $1,400 million, with loans which have already been committed amounting to $900 million.

The administration is saying we cannot reduce a single cent of these sums. I have voted for this program in the past, and I expect to vote for substantial portions of it this year, although not for all. However, I do protest the administration program of spending enormous sums of money abroad and refusing to spend small sums of money at home to help rehabilitate areas which have suffered from persistent and continued high unemployment.

It is a fact that industries decay. The coal mining industry, due to technical improvements and the substitution of other fuels, employs hundreds of thousands fewer workers than before. As a result, Pennsylvania, Kentucky, West Virginia, and southern Illinois have a high percentage of unemployment and have had this high percentage of unemployment for years. The textile industries of the country have sustained unemployment. Other regions of the country also have high unemployment.

As a result, people from those regions have migrated into industrial centers. However, people of advanced years or in the middle age group, who have established families, find it very difficult to migrate. The drying up of payrolls has left in many cases ghost towns, areas with high unemployment, tax rolls shrinking, and relief payments increasing. These areas and the people in them are in great difficulty. I believe we should bring industry to those localities under loans, so as to bring jobs to some of these people and utilize the social facilities which are already there.

For if large numbers continue to migrate, it will be necessary for them to go into other regions, where not only will it be difficult for them to find work, but where housing, street pavements, water systems, sewer systems, electric light systems, and all the other public services will have to be constructed for them; whereas if the work is brought to them, they can more fully utilize the social capital and the community life which exist in their home communities. All this and the reduction of relief costs will mean that even in more dollars and cents, this measure will yield large dividends to the American people. Let us delay no longer and pass this bill. And may I point out that it is futile to try to change it for if we do, under the rules of the House, it will undoubtedly be killed. If we wish to make some changes, as I personally would like to do, we can amend the act later. But if we really want action, we should vote "yes." Now is the time to stand up and be counted.

Mr. JOHNSON of Texas. Mr. President, I hope the distinguished minority leader can support the motion. If he cannot, I hope he will use some of the time on the other side. I do not want to say "in opposition to the motion," because I know the minority leader has great faith in the municipalities and distressed areas of America. He knows that they will pay back every dollar which the Federal Government lends them. As a matter of fact, the Federal Government made a great profit during the time Mr. Jesse Jones was in charge of a program which came to the rescue of a good many sections of the country which had pockets of unemployment.

I believe this is a sound program. Certainly it is a much more modest one than the one which earlier passed the Senate. I hope the minority leader can support it. If he cannot, I hope he will be gentle in his opposition to it, and will use some of his time to discuss it now.

Mr. DIRKSEN. It is precisely because the minority leader has great faith in the counties, localities, and other political subdivisions of the Nation that he opposes the motion. I shall address myself to it later. For the moment, I yield 10 minutes to the distinguished Senator from New Hampshire.

Mr. COTTON. Mr. President, when the bill passed the Senate, I spoke in opposition to it, as I shall again this morning. Because the Senate will take its final action upon it today, the Senator from New Hampshire wishes to make a brief statement reiterating his unalterable opposition to the measure.

I base my opposition on the ground not only that it is dangerous, but that it violates every principle or rule concerning participation by the Federal Government in such matters that has existed throughout the history of the Republic.

No Member of the Senate has more sympathy for areas of unemployment or for business, industrial, or agricultural distress than I have. The reason is that the State of New Hampshire, only a few years ago, passed through a critical period when some of our biggest textile mills closed their doors. We had areas of heavy unemployment and distress, and we had a burdensome relief load. However, during that period, we did not wait for Federal help. We went to work ourselves. We succeeded in bringing to our State small industries—plastics, elec-

tronics—and in diversifying our industries and our employment. Today, because of the resourcefulness, the courage, the persistence, and, even more, the adaptability of the working people of New Hampshire to take up new fields of activity, our economic situation is such that we could not even qualify for this Federal aid, should it become available to other parts of the country.

But that is not the reason for my opposition. In section 6, page 8, of the bill, there is included a provision against what is known as pirating. I am positive that the framers of the measure have drafted the bill with the most praiseworthy and laudable motives, and have endeavored to write into it every safeguard which they could. Nevertheless, this provision attempts to make certain that Federal aid, Federal resources, and Federal money shall not be used to take industries away from one area or one State and relocate them in a new area or another State, and thus cause employment and distress in the State or area from which they were taken.

The very fact that this provision is contained in the bill indicates that the framers and the supporters of the measure are painfully aware of the dangers of the proposed legislation.

Mr. President, I think I can state, without fear of contradiction by anyone who would ever study this matter to its depth, that human ingenuity can never write into a measure, can never hedge it about with enough safeguards to prevent the inevitable result that someone in Washington—perhaps the Administrator, or the executive department, or even the President—will be face to face with the problem of determining what parts of the country shall receive the beneficent aid of the Federal Government to lift them up over a period of depression and unemployment, and what parts of the country will suffer thereby.

It is not enough to say that a factory should not be taken away from Connecticut and located in Michigan. However, when the Federal Government stretches forth its long arm and encourages or induces a factory to locate in Michigan, it is thereby taking a factory which, if left to its own accord and resources, might have located in Connecticut, New Hampshire, New York, or West Virginia. Furthermore, the use of Federal aid and of facilities built at public expense will give such a relocated industry an unfair competitive advantage which could result in hardship, unemployment, and distress in totally unforeseen areas.

So there is no way on earth that the proposed program can be administered, no matter how good may be the intentions, without exercising favoritism and discrimination by the Federal Government among the States.

Who would be the man who could administer the new permanent bureau which would be established in Washington? That man, if such a man were available, if a human being could be found who could exercise this arbitrary power and be completely fair in deciding the relative needs and merits of the different sections and States of the Union, would have to be a man of high caliber and discernment, a man having divine intuition.

If there were such a man, there are many other places in the Government where he ought to be used. He could be given the task of administering the farm program, because such a man would know when it was going to rain and when there would be a drought. He would understand all the conditions of nature which intervene in the matter of farm production and farm price supports. Or such a man could administer the national defense, because he could foresee the relative merits of every weapon. Such a man would be gifted with intelligence which has thus far been denied human beings.

Mr. President, it is utterly impossible that this kind of authority could be exercised wisely and justly, and without someone suffering from the decisions made in Washington. Therein lies the distinction between the fields in which the Federal Government has an obligation to participate and those in which it should not.

I am not one who wishes to curtail, block, and prevent all Federal aid. I take this opportunity to say that I supported the measure for Federal participation with the States and local subdivisions in the construction of facilities to prevent the pollution of water. This morning, I wish to say that I would have welcomed an opportunity to vote to override the President's veto of that measure, because I happen to believe that is a field in which the Federal Government has a distinct obligation and a distinct responsibility.

But in this field of aid to depressed areas, as in certain other fields, we are marching straight into an activity in which the Federal Government is attempting to arrogate unto itself powers for good and powers for harm that never can be carefully and wisely exercised.

I regret that some of those who support programs in this field—and they even include the administration—are doing so on the basis of dollars and cents. When shall we ever learn that there cannot be a little bit of pregnancy? When shall we ever learn that when we embark upon a new field of activity, particularly one which is unsound in principle and dangerous in practice, when we create downtown a new department which will be permanent, which always will be with us once it is created, we shall have traveled down a road along which we can move in only one direction, and that will be ahead; we shall have adopted a program which will be subject to change in only one dimension, and that will be to enlarge it.

So, Mr. President, once more I find myself in complete opposition to this bill—in any form, no matter what amendments may be adopted, no matter what "safeguards" may be incorporated in it, no matter how much it may be surrounded by every kind of skillful protection which its framers can devise.

The PRESIDING OFFICER (Mr. MANSFIELD in the chair). The time yielded to the Senator from New Hampshire has expired.

Mr. COTTON. Mr. President, may I have 1 additional minute?

Mr. DIRKSEN. Mr. President, I yield 2 additional minutes to the Senator from New Hampshire.

The PRESIDING OFFICER. The Senator from New Hampshire is recognized for 2 additional minutes.

Mr. COTTON. I thank the Senator from Illinois.

Mr. President, I repeat: The fact that the bill has to have some of those safeguards and restrictions shows how dangerous it is, and demonstrates the fact that the bill is fundamentally and basically unsound.

Mr. President, a little more than 1 year ago—in April of last year—the Senate acted on this original bill. At that time, under date of April 2, 1959, I wrote a report to my constituents in the State of New Hampshire. In the report, I summarized the features of this proposed legislation, and indicated some of the reasons why it should be opposed. I ask unanimous consent that that report by me may be printed in the RECORD, following my remarks.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

YOUR SENATOR REPORTS

(By NORRIS COTTON)

This week by a surprising close vote the Senate passed the so-called area redevelopment bill. The meat in that coconut is all found in the word "area." By way of illustration, let me tell you the story of two States, New Hampshire and Michigan.

In 1935 the Amoskeag, largest cotton mill in the world employing 16,000 at its peak, closed its doors forever. Manchester, a one-industry city for more than a century, faced its darkest hour and won out by sheer grit and self-reliance. Manchester businessmen organized the Amoskeag Industries, took over the chain of mills, split them up, and went out after small plants. Between 1936 and 1952 they brought in 73 concerns employing approximately 11,000 people—without special inducements, tax exemptions, or Federal aid. When Textron pulled out of Nashua throwing 3,500 out of work, Nashua met its challenge the same way, bringing in 19 companies employing 3,700. Dover and many other communities have written a similar glorious chapter in their history. I wish space permitted me to name them all. They are healthier today than when they were at the mercy of one large industry, and this solid foundation adds new meaning to the name "Granite State."

Michigan, with its giant automotive industry, has long been a wealthy State, but it dissipated that wealth on lush, vote-getting welfare programs of every kind and variety. Modern methods produce more cars with less workers. Hence, unemployment has mounted. On February 15 Michigan went broke. Its State universities had to borrow from banks to heat their buildings and pay professors. That tragic date came to be called Collapse Day. Private enterprise finally came to the rescue by advancing $35 million in taxes months ahead of their due date. Governor Williams' only solution is more borrowing and this area redevelopment bill—giving him Federal money to buy new industries.

Under this bill, New Hampshire, which tightened its belt and won its battle, could not qualify for a single cent of the $400 million. Thanks to its own efforts, it doesn't have the required percentage of unemployment. On the contrary, we would pay our

share to help attract new industries to Michigan, which wallowed in wealth and squandered its resources.

However, the main reason for opposing this bill is not because it siphons money from New Hampshire to aid Michigan. The bill is dead wrong in principle and in practice. The fact that its language tries to prevent using Federal money to pirate industries from one area to another shows that even its supporters know what is bound to happen. Every year we gladly place funds in the hands of the President for quick and generous help to any area stricken by earthquake, flood, or other catastrophe, but it will be a sad day when a new nest of bureaucrats in Washington (set up in this bill) use the long arm of the Federal Government to aid some areas at the expense of others. Furthermore, the minute $1 of Federal funds is available to help get new industries, every community in this country will be after it. Self-reliance and frugality will go out the window, and the floodgates will be opened for a torrent of spending carrying with it all kinds of discrimination and favoritism. It is regrettable that the President opposes this bill on the amount rather than its principle, and many who voted against it this week might vote for a lesser sum. Why must we always be plunging into new fields of Federal spending under the old delusion that it's possible to be "a little bit pregnant"?

Members homeward bound for Easter display some misgivings for there are signs of revolt in the hinterlands against the congressional spending spree, particularly as April 15 draws near and income taxes are being computed. As a counterirritant, AFL-CIO is bringing 5,000 unemployed to Washington for a mass meeting as Congress returns. Unlike Coxey's army of 1894 and the bonus marchers of 1932, who trudged on foot and slept in tents, they will travel comfortably by plane, train, or bus, and the tab will be picked up by the union.

This is a gentle reminder to the majorities in the 86th Congress who owe their election to labor and have not been quite as subservient as was expected. The depressed area bill had a narrow squeak. Unemployment benefits were extended but not set up as a permanent Federal dole. The demand increases for a labor rackets law with teeth in it. Most amazing of all is the proposal by two liberal Senators, Neuberger and CLARK, that this Congress hike taxes to pay for its new spending. This is rank heresy to those who want to sugar-coat the pill by more borrowing. Imagine suggesting that we stop taking paregoric and swallow castor oil.

Perhaps these young men are waking up to the fact that a government big enough to give you everything you want is big enough to take everything you've got.

Mr. COTTON. Mr. President, I yield back the remainder of the time available to me.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that at this time I may suggest the absence of a quorum, without having the time required therefor charged to the time available to either side under the agreement, and that I may have permission to withdraw the quorum call before it is concluded.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOUGLAS. Mr. President, I yield 5 minutes to the Senator from West Virginia [Mr. RANDOLPH].

The PRESIDING OFFICER. The Senator from West Virginia is recognized for 5 minutes.

Mr. RANDOLPH. Mr. President, the proposal before us is for a modest program of economic aid for areas of the Nation in which there exist the devastating problems of chronic unemployment. This measure has as its purpose the encouraging of local distressed communities to mobilize, with the aid of our Federal Government, for rehabilitation.

Last year, Mr. President, during the first session of this Congress, we passed S. 722, the area redevelopment bill. That measure was given the approval of the membership of this body after extensive hearings, voluminous testimony, and adequate debate on the floor of the Senate. I say the hearings were extensive; and I know that to be true, because they were conducted in many sections of the Nation. Some of them were held in West Virginia.

I had the privilege of being one of the cosponsors of Senate bill 722.

As we know, that measure was broader in its coverage, and called for the expenditure of a larger sum of money than does the bill which was passed the day before yesterday by the House of Representatives. But the measure, in the form before us at this time, is a meritorious and vital one.

I recall that I offered testimony at Beckley, the county seat of Raleigh County, in the heart of the coal-mining area of West Virginia. Tremendous tonnages of bituminous coal are produced in the area surrounding Beckley. Approximately 118 million tons of bituminous coal were mined there in 1959. About the same tonnage was produced in 1958. Yet the 1959 production was achieved with 7,000 less miners on the job than were employed in 1958.

That is the result of mechanization within this industry. That situation did not develop only in 1958 or 1959; it is the result of a long-continuing process.

In mentioning Raleigh County, I speak of an area where, today, perhaps as much as 27 percent of the labor force—eager to work—is unemployed.

There are other counties in West Virginia where these same percentages prevail.

In West Virginia the subcommittee of the Senate Banking and Currency Committee conducted the hearings to which I have referred. My diligent colleague from West Virginia, Senator ROBERT C. BYRD, was in charge of those hearings as a member of that committee. I participated actively, Mr. President, in the debate in this Chamber, because this is legislation of vital interest to the unemployed people of our labor surplus areas, and, in fact, to all of the people, approximately 2 million, in the State of West Virginia.

We know that if erosion takes place in one area of one State, that erosion probably will spill over into other areas in other States.

The PRESIDING OFFICER (Mr. COTTON in the chair). The time of the Senator from West Virginia has expired.

Mr. DOUGLAS. Mr. President, I yield such time to the Senator from West Virginia as he may require.

Mr. RANDOLPH. It was my privilege during the last few months, as a member of the Senate's Special Committee on Unemployment Problems, to conduct hearings in West Virginia last winter on these matters. I became more convinced that it is important for us to realize that problems growing out of unemployment constitute a responsibility which must be shared at all governmental levels—local, county, State, and Federal. We cannot set it apart; we cannot bracket this job to be done by any particular unit of government.

I repeat that the people of West Virginia are interested—desperately interested—in helping themselves. They are sturdy folk. These men, who are unemployed today, are just as hardy as were their fathers and their grandfathers; but they have been caught in a situation, little of which is of their making, but which is well known, and which has been explained before. There seems to be an overriding concern within the Congress today to face up to this problem.

There must be bold action, although certainly this is but a modest program of the total effort which must be made. The timid approach of the present Federal administration will not suffice. These are full-time obligations which the Congress must assume, and part-time attention to this requirement is not enough.

I think it is important also to point out that the President of the United States, in his latest budget message, urged the Congress to authorize and appropriate billions of dollars to foreign nations. He said:

> Through the mutual security program as a whole the United States helps promote stability and economic growth in less developed countries and helps strengthen the defense of the free world.

There is no doubt in my mind that the President is correct in that statement.

There should not be any doubt on the part of the President or any other official in public affairs that we must accept the same relative urgency as relates to programs right here in the United States which, as Mr. Eisenhower said about foreign aid, "will promote stability and economic growth."

How can we be expected to literally pour billions of dollars into countries abroad without doing everything within our power to do at least as much for our own people as the President would have us do for citizens of other lands?

The President also said, in his mutual security message:

> I emphasize once again that, as we strive to build the kind of world in which America believes, our adversaries are not all included in the single word "communism." There are distress and privation as well, and also the desperation of peoples when they realize that, lacking outside help, they struggle in vain to better their lives. Widespread chaos and misery cannot provide a world climate in which our free Republic can prosper and remain secure.

Those were the words of the President of the United States in speaking of men and women of foreign countries. Why

does he not speak as compassionately and act as forthrightly concerning those of our unfortunate fellow citizens in these United States who are victims of the factors and conditions which have compounded the problems of so many of our communities and turned them into distressed areas?

It is possible that "distress and privation" in foreign countries is more entitled to our sympathy than "distress and privation" at home.

The President is aggressively in favor of this country providing the "outside help" that is needed by desperate people overseas—but he apparently becomes ultra budget conscious when there is proposed by the representatives of the people in the Congress "outside help" for our own communities back home in the form of Federal loans and grants, technical assistance, and vocational retraining.

Mr. President, I hold in my hand an edition of the Charleston, W. Va., Gazette of Thursday morning, May 5. I read in the opening paragraph these words:

> President Eisenhower has given assurances of lending a hand toward helping West Virginia with its economic troubles, Governor Underwood of West Virginia reported Wednesday from Washington after a conference with the President.

That discussion revolved around the legislation which we have under consideration here today.

I say again, let those of us who believe in this measure—and I trust we shall have a very substantial vote in favor of the passage of the proposal—give to the President not only the opportunity but the responsibility, of signing this proposed legislation into law, and then we shall see if the vow he has made will turn out to be a valid one.

Mr. JOHNSON of Texas. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER (Mr. PROUTY in the chair). The Senator will state it.

Mr. JOHNSON of Texas. How much time remains?

The PRESIDING OFFICER. The Senator from Texas [Mr. JOHNSON] has 31 minutes. The Senator from Illinois [Mr. DIRKSEN] has 48 minutes.

Mr. JOHNSON of Texas. The Senator from Illinois does not appear to have Senators interested in this matter on his side, so I will yield 5 minutes to the very able Senator from West Virginia [Mr. BYRD]. Then I hope the other side will yield some time.

Mr. BYRD of West Virginia. Mr. President, Senate bill 722, the area redevelopment bill, was passed in the House of Representatives by a vote of 201 to 184. The responsibility now is with the Senate to approve the House version of the bill.

Although the bill passed by the other body provides for some $138 million less than the original bill passed by the Senate, I feel that half a loaf is better than no loaf at all.

As passed by the House, the area redevelopment bill provides for $251 million to help economically depressed areas; $75 million will be provided in loans for urban industrial development, $75 million in loans for rural area development, $50 million in loans for construction of public facilities, $35 million in grants for public facilities, $4.5 million for technical assistance grants, $10 million in grants to retain workers for new jobs, and $1.5 million for vocational training grants.

On September 6, 1958, President Eisenhower vetoed Senate bill 3683, which provided the same assistance, generally, that Senate bill 722 would provide.

This type of legislation should not become partisan; yet the President himself has made it so with his adamant position.

The administration suggests $53 million for area redevelopment. Just how far would $53 million go in a program of this nature? That figure would not suffice in my State of West Virginia, exclusively. Is the administration aware of the depressed areas in our country? It would appear that it is not.

I realize fully that the plight of West Virginia has been aired frequently in the past month, but allow me, once again, to state that the situation is worsening in some sections of the country.

In 20 of 55 counties in my State, 15 percent or more of the citizenry receive surplus food commodities. There is one county in which 19,000 persons or 41 percent of the population, are receiving these commodities.

Rehabilitation in an area where machines have replaced man is a necessity. For instance, this year in West Virginia, 40,000 men will extract the same amount of coal from the fertile fields of this natural resource as was extracted by 117,000 men 10 years ago. It is impossible to battle such catalysmic changes without Federal aid.

Chronic unemployment in this country in serving as a brake on the economy. We, the most powerful nation on earth, must be prepared to combat the problem.

There are the humanitarian aspects of this bill, but from purely an economic standpoint the merits are evident also. This bill would cut down the inflationary process. It would promote productivity. Money put out by the Federal Government would come back later, with interest.

After a time the large sums that the Federal and State governments pay out in unemployment compensation would naturally be lessened if the people now drawing such payments were given work.

Welfare programs now burdening the Federal Government, not connected directly with unemployment, would also be somewhat reduced.

Thousands upon thousands of words have been said about the area redevelopment bill. They went for nothing in 1958. In 1960 there is, once again, the opportunity to allow the distressed areas to help themselves.

Productive communities, now lifeless, would be the result. Inhabitants of these depressed areas would have the responsibility themselves to make this bill work for them.

Mr. President, I feel that S. 722 embodies the plan which can adequately come to grips with the problem of depressed areas. As I said earlier, I am disappointed with the cutting of the $138 million from the original figure in the Senate bill, but such legislation is needed so extremely and so urgently, I urge passage of the bill as it has been returned to this Chamber.

The practicality, the feasibility, and the reasonability of the bill have not been erased. It would induce new vitality into areas of lingering joblessness.

Were the Senate to pass the House version of S. 722, the President of the United States would have within his power the opportunity to aid thousands of American citizens. Only his signature would be needed.

In the past, the administration has dourly complained of the cost of such legislation. This time it is my hope that it will pass up the price tag—knowing in advance—that a quality item, one of deep necessity, does not come inexpensively.

The people have spoken. The need for area redevelopment legislation is evident.

The depressed areas, where serious unemployment has existed for some time, are undergoing structural changes in their economies. Automation is resulting in a growing number of displaced workers, and there is a need for governmental action. With this change to automation, in the long run, there will be greater prosperity. There will be better working conditions; but, we must be aware that the transition will work temporary hardships—hardships that should and can be eased by legislation such as the area redevelopment bill.

The administration has given lip service to the needs for area redevelopment legislation. As late as May 3, 1960, the President expressed the desire that a bill of this nature be sent to his desk.

This body should act quickly and positively.

I for one do not feel that a balanced budget is more important than that the people of this country have jobs, homes, and useful lives.

The Senate should put the stamp of approval on the area redevelopment bill returned to us from the House of Representatives, and the President should sign it immediately so that the unemployed thousands can work again.

The PRESIDING OFFICER. The time of the Senator from West Virginia has expired.

Mr. DOUGLAS. Mr. President, in view of the fact that the proponents of the bill have been taking most of the time, and the minority leader does not seem to have any speakers available in the Chamber, I hope the distinguished minority leader, my esteemed colleague, will take some of his time now.

Mr. JOHNSON of Texas. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. JOHNSON of Texas. How much time remains?

The PRESIDING OFFICER. The Senator from Texas has 26 minutes remaining and the Senator from Illinois has 48 minutes remaining.

Mr. JOHNSON of Texas. 26 minutes and 48 minutes?

The PRESIDING OFFICER. The Senator is correct.

Mr. DIRKSEN. Mr. President, I yield 5 minutes to the distinguished Senator from New York [Mr. JAVITS].

The PRESIDING OFFICER (Mr. CLARK in the chair). The Senator from New York is recognized for 5 minutes.

Mr. JAVITS. Mr. President, I have given very serious study to this bill, as it comes to us from the House of Representatives, because I am a member of the Committee on Banking and Currency.

In March of 1959, when the bill was under debate in the Senate, I gave it a considerable amount of time and attention. It may be recalled, Mr. President, that I voted against the bill on the vote on passage at that time. The distinguished Senator from Connecticut and I sought to have the bill amended, in order to eliminate from it further the danger of raiding of the industries of large industrial States.

Mr. President, I would be less than true to my own conscience and to the interests of my State if I did not make my position very clear. We in the Senate occupy a dual position as Senators of the United States who are solicitous about its interests, and as Senators of our own States and solicitous about their interests. We must necessarily balance both interests.

Mr. President, I would be derelict in my duty if I did not state that though I now intend to support the measure—and I shall state my reasons for doing so—it is by no means wholly satisfactory. I think it is, however, a necessary step at this time under these circumstances.

I think it should be fairly said to those who may benefit from passage of this measure that if we face a situation where the measure is abused through the way in which it is used and an effort is made to unfairly load the situation in competition among the States, people like myself, I think, will be absolutely free to exercise their discretion in respect to appropriations, in view of the fact that we shall, by our votes, allow the measure to become substantive law so that appropriations may be requested.

Mr. President, I think it is important to point out that in States like my own the moderating and precautionary aspects of this plan may be invoked on appropriations, if it is abused and if it is not administered in accordance with its fundamentally substantive purpose.

After some soul searching, I have decided to support the measure for the following reasons:

The measure has now been pending for a year in the other body. I served in the other body. Whatever may be the ways in which the other body works, it is now clear that this opportunity must be taken advantage of, if the bill is reasonable at all or remotely reasonable, in order to send a measure to the President for signature. If the bill should be sent back to the other body, it will unquestionably mean we shall again have to run the same gauntlet, and we shall be delayed for a year, probably, until the next Congress, before the matter will have to be started all over again.

The PRESIDING OFFICER. The time of the Senator from New York has expired.

Mr. JAVITS. Mr. President, will the Senator yield me 2 more minutes?

Mr. DIRKSEN. I yield 2 additional minutes to the Senator from New York.

The PRESIDING OFFICER. The Senator from New York is recognized for 2 additional minutes.

Mr. JAVITS. Mr. President, I am disappointed in the fact that the measure still permits loans to be made for machinery and equipment, something to which the Senator from Connecticut and I strongly objected. I note, however, that the amounts involved have been very considerably reduced. I cannot see how any administrator could afford to devote anything to machinery and equipment in the handling of the bill, so I think perhaps the objections I have might be dealt with in the practicalities of the situation.

The same is true with respect to the 65 percent of loan capability, which I think is much too high and which I felt should be 50 percent.

So in respect to the machinery and equipment factor; the 65 percent of loan factor; and, notwithstanding the two antiraiding provisions, still the possibility that some raiding may be attempted, I found myself in a difficult state of mind about the bill. On balance, considering the fact that the amount has been reduced and considering the fact that those of us who feel it is very essential to deal with rehabilitation and improvement in world areas must of necessity and in good conscience give our attention to domestic areas of persistent unemployment, I believe the bill is entitled to support.

Mr. President, I shall support the bill.

Mr. JAVITS subsequently said: Mr. President, I ask unanimous consent that there may be included in the RECORD as a part of my remarks the comparison of the areas in New York which will be affected by the bill as it came over to us from the House, as compared to the effect upon similar areas by the bill as passed by the Senate. I call attention to the fact that this was the question raised by the Scott amendment at the time it was debated in the Senate. I, as well as my distinguished colleague from New York, supported that amendment.

There being no objection, the comparison was ordered to be printed in the RECORD, as follows:

Tentative list of areas in New York State that may qualify for Federal assistance as areas with substantial and persistent unemployment under various legislative proposals, March 1960

Mr. DIRKSEN. Mr. President, I yield 5 minutes to the distinguished Senator from Vermont [Mr. PROUTY].

The PRESIDING OFFICER. The Senator from Vermont is recognized for 5 minutes.

Mr. PROUTY. Mr. President, I believe that my State will receive no benefits whatsoever under this legislative proposal, but I would not oppose the bill on that ground. I think as a U.S. Senator it is my responsibility to be concerned with problems at the national level and wherever they exist in the country. I point out, Mr. President, that as a member of the Special Committee on Unemployment Problems I collaborated in drafting minority views with the distinguished Senator from Kentucky [Mr. COOPER] and the distinguished Senator from Pennsylvania [Mr. SCOTT].

We devoted considerable time and thought to this problem—and I must confess that it is a problem, and one which gives me no little concern. I believe it is a problem which cannot be solved entirely at State and local levels. There must be Federal participation and Federal assistance.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks chapter 3 of the minority views in the report of the Special Committee on Unemployment Problems, entitled "Economic Aid to Distressed Areas."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CHAPTER III. ECONOMIC AID TO DISTRESSED AREAS

The minority agree with the conclusion that "no single remedy will cure the deep-rooted problems of chronic unemployment and underdevelopment." However, the report as it now stands offers no remedies that are new, nor does it list all the remedies that are possible.

If the committee really desires the passage of a bill, it might be desirable at least to outline the basic points which are essential for the beginning of such a program. In vetoing the area redevelopment bill which was passed by the 85th Congress, the President cited a number of specific objections, many of which remain in the legislation as it passed the Senate in the 86th Congress, and an effort should be made to meet some of these objections in order to evolve a practical program and to assure the passage of a bill in this session.

Comments on essential points to be included in legislation, with comments on possible changes from various existing proposals, are noted below:

1. SCOPE OF FEDERAL AID TO LABOR SURPLUS AREAS

In general, the Federal aid provided should be restricted to a limited number of areas with truly chronic unemployment, including rural areas, so that the aid which can be given will be effective, rather than be so thinly spread as to be wasted.

2. URBAN AREAS

The amount of unemployment which would qualify an area for industrial loans could vary with the national level of unemployment, thus defining specific areas having separate problems. During a recession Federal activity is essential, but it should be broad gaged. The distressed area program should be geared to the specific problem of longrun chronic unemployment.

It is important, therefore, that flexible criteria be the basis for legislation. The nature of the criteria for eligibility of areas for industrial loans constituted one of the principal reasons for the President's veto of the earlier legislation.

3. RURAL AREAS

It is absolutely essential that assistance be provided for rural areas. Many of the coalmining areas are in this category.

Numerous witnesses testified to the gravity of unemployment and underemployment in rural areas. Moreover, studies by the Department of Labor and the Department of Agriculture indicate that the number of farm jobs required in the 1960's will decline further, as they have in the last three decades. If many of the people now living on farms, and especially the young people, are to find a livelihood without moving out of the area it will be necessary to develop industrial activity. This is widely recognized. Work is under way through the rural development program of the Department of Agriculture to improve the situation in these areas, but that program is primarily oriented to agriculture and makes no provision either for technical assistance or for loans for industrial development. Therefore, the minority believe that aid to rural as well as urban areas is essential to the attack on the problem of chronic unemployment.

We recommend that the Secretary of Agriculture and the Secretary of Labor be authorized to develop more effective measures for the identification of chronically depressed rural areas, within a broad provision indicating that they are to be selected from low-income areas with high levels of unemployment and underemployment.

4. PUBLC FACILITIES

Public facilities are often the real bar to local redevelopment, whether the lack be sewers, a good water supply, access roads, or other public facilities. There is ample evidence that, next to technical assistance for planning an economic redevelopment program, especially in small towns and rural areas, adequate public facilities are most urgent. Many communities can and do finance such improvements, but others do not have credit to do the job by themselves. The minority believe that some aid of this kind is absolutely essential, particularly in the rural program, and further suggests that there is more which should be done by the States than has so far been achieved.

The administration has opposed grants, for local public facilities, as well as the provision for such loans through a new area redevelopment agency. It has proposed, instead, that the existing facilities of HHFA be used to make loans of this kind, with the provision that first priority be given to processing applications for projects in redevelopment areas. The HHFA has already made loans amounting to close to $100 million for facilities, all to communities of 10,000 population or under, and is presently seeking authorization for an additional $100 million. The minority recommend that a legislative solution be sought along these lines, in order to avoid setting up still another Federal lending agency. Since loans for public facilities appear to be essential for the redevelopment of some areas, notably the smaller areas whose credit is not sufficiently good to float bonds for major improvements, a satisfactory solution is important.

5. INDUSTRIAL LOANS

There is general agreement that loans for the construction of industrial facilities are essential to this program. There has been disagreement on the amounts which should be authorized.

The President has again urged passage of area redevelopment legislation, and has included $50 million for industrial redevelopment loans in the budget for fiscal 1961.

While the minority believe a larger authorization than $50 million is needed for this program, the main thing is to make a start. Time is required to organize an agency, to qualify areas, to provide technical assistance, for communities to develop suitable local economic development plans and to have them approved by an appropriate State authority, to negotiate for loans, etc. Not all industrial areas that would qualify under the administration bill have redevelopment plans; not all such areas want Federal loans, as testimony before this committee indicates.

6. CONTINUED NEED FOR AREA REDEVELOPMENT LEGISLATION

There is no fundamental difference of opinion as to the continuing need for economic assistance to depressed areas throughout the country.

In all of the affected communities which your committee visited during the hearings, there were repeated pleas for development loans, for technical planning, for projects whereby the community could attract new industry and improve its opportunities for a share in the national prosperity.

Unemployment in some areas has reached as high as 16 percent of the labor force, and has persisted at high levels for long periods of time. In other areas opportunities for employment simply do not exist, and the stultifying effects are equally apparent. These are not temporary maladjustments, but continuing problems of economic distress.

Technological changes, migration of industry, shifts in demand, depletion of resources all have contributed to the complexity of the situation. But whatever the cause, we cannot be healthy as a nation with sagging pockets of unemployment and underemployment as unpleasant reminders of our lack of action and inability to set our economic house in order.

Depressed areas are an expensive burden which our country cannot afford to carry. Not only is the individual deprived of his right to livelihood, but our national cash register must suffer accordingly.

A greater part of our country is enjoying a high degree of prosperity, with indications that we will forge ahead to even greater business and economic growth. For certain areas and communities to be caught in the backwash of this tide, through no fault of their own, is a national hazard.

We need the active participation of every American citizen in our national welfare. We must extend to these areas of continued depressed conditions the financial and technical assistance needed to put themselves back on the track.

It is a matter of prime importance to the work of this committee that an area redevelopment bill be enacted and the program launched this year with sufficient means for stimulating local effort.

7. TECHNICAL ASSISTANCE

Technical assistance must have a very high priority in any distressed areas legislation, everyone is agreed. If charges are considered, the minority believe that even greater stress should be placed upon this feature. It is especially important for rural areas and very small communities.

8. VOCATIONAL TRAINING

Great emphasis is placed upon vocational training in the present report, and this is highly advisable. All bills relating to area redevelopment contain some provision for vocational training, and the Senate measure makes it clear that training other than conventional vocational education is involved. Training includes such important programs as apprenticeship training and on-the-job

training, both of which, in practice, are much more closely related to acquiring skills that will lead to reemployment, since this training would be directed to the needs of particular industries.

However, none of the bills presently under consideration indicates that the prospective reemployment for which training is being given need necessarily be in a distressed area, since some people will presumably be moving from this area. Nor does any bill make provision for transporting persons to places of training or retraining. A special allotment for needed training facilities might well be provided through a grant, to be handled by the agency operating the local program. At the Federal level, HEW might administer the financial aid for training, after consultation with the Department of Labor on needed types of training. A specific provision of $1,500,000 for this purpose is made in the bill reported out by the House Committee on Banking and Currency, and is favored by the minority.

9. SUBSISTENCE PAYMENTS DURING RETRAINING

Both the Senate-passed and the proposed House bill include a provision for grants to States in an amount of $10 million for subsistence payments to unemployed persons not receiving unemployment insurance benefits but certified as undergoing vocational training or retraining. Under present rules, an unemployed person, otherwise eligible, who decides to take training is considered ineligible for unemployment compensation since he is not available for work while undergoing training. This penalizes the person with the initiative to undertake a training program. There is, therefore, considerable merit in retraining subsistence payments. However, it is regarded as undesirable that these should be administered by the unemployment compensation services.

It is therefore recommended that a local authority, preferably an educational authority or the local director of the redevelopment program, administer these grants, which would be related in amount to what the individuals would be entitled to under the State unemployment compensation system. A specific authorization of funds, on the order of $5 million, for payments for training and grants to States for administering should be provided.

10. RURAL DEVELOPMENT PROGRAM

Inadequate attention is given by the majority to the rural development program in connection with the proposals for area redevelopment. This whole subject deserves more emphasis. There is no doubt that there are many rural areas in which income from farming is very small and where there is considerable underemployment or unemployment.

As noted elsewhere, the number of jobs available in agriculture has declined steadily and will decline during the 1960's. Department of Labor estimates, indicate another decline, this time of approximately 17 percent, between 1960 and 1970. In the circumstances, the emphasis of the rural development program should be directed not merely toward assisting farmers to improve their incomes, although this is useful, but toward assisting the development of these areas along industrial lines, and the education and training of young people to take their places in an industrial society, and aid in placing persons displaced in rural areas in suitable jobs. The following recommendations are made along these lines:

(1) Substantial stepping up of the services of the U.S. Employment Service and its affiliated employment services in rural areas, not necessarily through the location of new offices but through three phases of their program:

(a) Registration for job applications—with traveling representatives going to small towns on a regular basis;

(b) Work with the rural schools to provide better occupational information for young people on future occupations together with testing and counseling services for those going into the labor market, similar to the services now provided in urban areas;

(c) Extension to more areas of the valuable skill surveys made by the State employment security agencies under the guidance of the Bureau of Employment Security, on the skills of the people in these areas. Similar surveys have been helpful, as in the Lawrence, Mass., area, in attracting new industry. It is reported by the Department of Labor that some 36 States have made or are currently making area skill surveys. Among the larger States which are active in this field are a number with areas of substantial labor surplus, including Illinois, Michigan, Pennsylvania, and West Virginia. The availability of manpower is one sound basis for attracting industry to an area. It is, therefore, recommended that the Department of Labor, through the Bureau of Employment Security, working with the States in which there are areas of substantial labor surplus, such as would qualify for area redevelopment assistance, expand its program for making these skill surveys and give priority to areas of labor surplus.

The Department of Labor and four of its cooperating State agencies now have an experimental rural program in process, as a part of the regular Employment Service activities. Working with the Department of Agriculture, the Department of Labor, and the staff of the Extension Service and the State employment services have arranged for experimental projects in Kentucky, Tennessee, Arkansas, and Wisconsin, involving skill surveys, the promotion of nonfarm jobs, placement, testing, and counseling of workers and potential workers in the area. All of these States have active rural development committees.

The Department of Labor prepared technical guidelines for a group of surveys for appraising the occupational potential of these areas, and the State agency has surveyed the population in the selected counties and has taken applications for placement, and has prepared a report on the economic base of the area. In one of these counties, Adair County in Kentucky, a new garment factory has been opened, employing 75 persons, and may later employ 125. Its establishment was in part the result of the availability of evidence that suitable manpower could be found in this area.

It is anticipated that a full report on the work of these experimental studies will be available in the spring, and that by early summer the Department of Labor will have a proposal for a more active program in rural areas. The minority recommended that the committee request the Secretary of Labor to expedite plans for an active program in rural areas for counseling, testing, and placement.

11. A COORDINATED ATTACK ON THE DEPRESSED AREA PROBLEM

Insufficient attention is paid in the majority report to the important activities already being carried out by the Federal Government, which, if more effectively coordinated, would be of great help to areas in need of redevelopment. A bill along these lines (S. 2730) was introduced by Senator COOPER in the 1st session of the 86th Congress, providing for an interagency committee to prepare coordinated programs for the development of areas in need of redevelopment.

In December 1959 an Interdepartmental Committee To Coordinate Federal Area Assistance Programs was appointed by the President. The members of the committee include the Under Secretary of Commerce, Chairman; the Deputy Postmaster General; the Under Secretary of Interior; the Under Secretary of Agriculture; the Under Secretary of Labor; the Under Secretary of Health, Education, and Welfare; the Assistant Secretary of Defense (Supply and Logistics); the Administrator of the General Services Administration; the Administrator of the Federal Aviation Agency; the Administrator of the Small Buisness Administration; the Administrator of the Housing and Home Finance Agency; the Director of the Office of Civil and Defense Mobilization; the Special Assistant to the President for Public Works; and a member of the Council of Economic Advisers.

This Committee is working with the long-established Committee for Rural Development Programs.

The Committee, which began operations in December 1959, has prepared a report on the activities of the Federal agencies. The record of assistance by the Department of Commerce, the Department of Labor, and other agencies is quite impressive. We understand that this Committee has already sent a task force into one coal-mining area in Pennsylvania (Tamaqua) where there has been a large layoff, to aid in working out a local program. This effort should go much further. More task forces should be sent into distressed areas to work out specific activities through coordinated use of existing Federal programs, where possible, along the lines proposed by Senator COOPER.

The Interdepartmental Committee To Coordinate Federal Area Assistance Programs is a step in the right direction, and the minority recommend that it be given statutory authority in connection with any area redevelopment program which is past. It is clear that such a committee would be needed even if there were a new area redevelopment authority.

12. SMALL BUSINESS ADMINISTRATION AID

The Small Business Administration also has a community development program which offers aid to local development companies in the form of loans for the cost of planned new factory buildings or their conversion or expansion, as well as various forms of technical assistance, in addition to its regular loans to small business. These services are not confined to labor-surplus areas, but requests for projects in such areas are given priority in processing. The Small Business Administrator indicates that 37 loans aggregating $4,280,000 were made to community development companies in 1959 and 1960 through March 21. Loans are also made to State development companies. So far, one such loan, for $314,000 to Rhode Island, has been approved. We urge increased activity by the Small Business Administration in its community development program.

13. PREFERENTIAL FEDERAL PURCHASING AND CONTRACTING

For a number of years the Federal Government has followed an official policy of encouraging the placing of defense contracts and facilities in areas where there is a surplus of labor. It has diverted a portion of defense contracts into areas of substantial unemployment or to industries which are depressed, on a preferential basis, to the extent that facilities are available and the bids are competitive. It has also paid particular attention to the effects of employment cutbacks, giving advance notice to the Employment Service.

The most important of the programs for preferential procurement operates under Defense Manpower Policy No. 4. Under this policy, $14 billion in contract awards have

gone to labor-surplus areas from January 1, 1958, to January 1, 1960. This total includes many awards which would have gone into these labor-surplus areas in any case. Of the total, $144,600,000 have gone to areas of labor surplus specifically as a result of preferential treatment. These figures include contracts of $10,000 and over for defense supplies and services and construction.

Prior to January 1, 1958, records were kept only of contracts of $25,000 and over and only for supplies and equipment. In the period between July 1, 1952, and January 1, 1958, these figures show a total of $4 billion in awards to surplus areas generally, of which $95 million were awarded on a preferential basis.

Early in 1958 when a business recession was on, the Assistant Secretary of Defense, as indicated in testimony by his representative before this committee, took several actions to give emphasis to this program. He inserted a clause in supply contracts of $5,000 and over, in which the contractor agreed to use his efforts to place subcontracts with firms in areas of substantial labor surplus, and policy decisions were taken that where there was a choice between making a set-aside for small business and a set-aside for firms in labor surplus areas, the labor surplus area would be given preference. The record shows that the volume of preference awards rose considerably after these actions were taken.

While these amounts are not a large share of the defense budget, defense contracts can be very important to surplus labor communities, particularly smaller communities. Although the minority is of the opinion that the Government services concerned are making conscientious and continuing efforts under existing regulations to give special attention to labor surplus areas, we believe that the dollars spent in these areas by the Federal Government could be increased if the policy is extended beyond the procurement of defense supplies and services and construction per se.

RECOMMENDATIONS

We therefore recommend that—

1. The Federal Government direct all Federal agencies, defense and otherwise, either through Executive order or by legislation, to give preferential treatment to areas of substantial labor surplus in their purchasing and contracting, under preferential policies affecting contracts of substantial size similar to those in Defense Manpower Policy No. 4.

2. Federal agencies should be directed, when locating or expanding or curtailing employment outside Washington, to give special consideration to putting new installations in areas of substantial labor surplus. This applies both to defense and other Government agencies and facilities.

New defense installations are being dispersed; so are special installations for manufacture of new weapons. There is every reason to put such installations where there is surplus civilian labor to aid in their construction and to man the civilian-type services. It would be advantageous to the military and to the area.

On the civilian side of governmental activities, it is also good policy to decentralize certain functions—notably clerical functions—outside of Washington. Instead of crowding these offices into huge, congested areas where labor is scarce, they could well be erected or leased in lower cost areas where labor is available.

Excellent examples are the Internal Revenue office for tabulation of income tax returns in Lawrence, Mass., with 400–500 employees; the office for the tabulation of the Census of Population of 1960 in Jeffersonville, Ind., in the Louisville, Ky., area, with 600–1,500 employees. This was formerly a large ordnance facility. In addition, the Census Department has arranged for clerical work on the Census of Agriculture of 1954 in Pittsburg, Kans., a labor surplus area, which is now a district office. The Census of Agriculture of 1959 is being tabulated in Parsons, Kans., and this installation will be converted into a national headquarters.

The Atomic Energy Commission was instrumental in securing locations of plants of its contractors in labor surplus areas in the Korean period—for example, the plant in Portsmouth, Ohio, and the Union Carbide & Carbon plant in Paducah, Ky. These actions were taken on the initiative of the agencies concerned, with surveys by the Department of Labor's Bureau of Employment Security and its affiliated State agencies to assure a location where there was an adequate labor supply. It is this kind of activity which we believe should be pursued more systematically by the Federal Government, and especially by the Department of Defense. Although the Department of Defense follows a policy of notification where installations are being curtailed, we believe that more could be done on a positive approach to this problem. Positive action to explore other governmental uses of these facilities should be taken prior to announcement of decision to curtail.

3. The Secretary of Labor be asked to give consideration to changing the present definition of "labor surplus areas" for purposes of Defense Manpower Policy No. 4 and similar programs, to make more restrictive the list of areas qualified to receive perference in Federal purchases so that a larger share of purchases will bo into areas of truly chronic unemployment.

In the recession of 1957–58, unemployment rose above 6 percent for several months. In consequence, many major labor market areas qualified for preferential treatment under Defense Manpower Policy No. 4. For example, in mid-1958, at the trough of the most recent recession, 89 out of 149 major labor market areas, with over 70 percent of the total labor force in these areas, had unemployment above 6 percent and were eligible for preferential treatment. These included such major areas as Detroit and Philadelphia.

The minority believe that the test for qualification of areas receiving special preferential treatment should rise or fall with the national average rate of unemployment, and that in periods of recession a higher minimum rate should be established. This principle was established in the qualifications for cities eligible for loans under the Area Redevelopment Act which was passed by the Senate in the 1st session of the 86th Congress (S. 722). It is requested that special study be given to effecting this change in a period of prosperity such as the present, so that regulations will be well understood in advance of any possible rise in unemployment in future years.

Mr. PROUTY. Mr. President, I believe that that statement represents a sympathetic and objective approach to this problem, and I hope Members of the Senate will take time to read it, either in the report or in the CONGRESSIONAL RECORD.

In the report of the Special Committee on Unemployment Problems, the minority recommended that the Secretary of Labor give consideration to changing the present definition of "labor surplus areas" for purposes of Defense Manpower Policy No. 4 and similar programs to make more restrictive the list of areas qualified to receive preference in Federal purchases so that a larger share of purchases will go into areas of truly chronic unemployment. For example, in mid-1958, at the trough of the most recent recession, 89 out of 149 major labor market areas, with over 70 percent of the total labor force in these areas, had unemployment above 6 percent and were eligible for preferential treatment. These included such major areas as Detroit and Philadelphia.

I believe that the test for qualification of areas receiving special preferential treatment should rise or fall with the national average rate of unemployment, and that in periods of recession a higher minimum rate should be established.

This principle was embodied in the Senate-passed bill, S. 722, but it is conspicuously absent from the House-passed version of this legislation.

Area redevelopment proposals are designed to help hard-core depressed areas. I have right here with me a list of industrial areas which would qualify for help under the House distortion of the Senate bill. This amended proposal would qualify 44 major industrial areas notwithstanding the fact that 9 out of 10 of the major industrial areas in the United States show employment totals greater than a year ago. Let us take a look at some of the major areas that will qualify for money under this bill even though they have less than 6 percent unemployment now. These areas are New York City; Philadelphia; Newark, N.J.; York, Pa.; Corpus Christi, Tex.; Worcester, Mass.; Trenton, N.J.; Paterson, N.J.; Birmingham, Ala.; and Portland, Maine.

The criteria in both the Senate-passed bill, S. 722, and the criteria in the administration bill were so drafted as to insure that the bulk of money would go to the truly depressed areas that have a long range problem to solve. The Douglas bill would qualify 19 major areas; the administration bill, 16 major areas. Contrast these realistic assessments of what constitutes a depressed area with the results of the criteria of the House proposal which would qualify right now 44 major areas.

Why does the House bill produce such weird consequences? The principal reason is that one of its criteria for determining a depressed area is an unemployment rate of 6 percent in 18 out of the last 24 months. Anytime we have the slightest recession practically every industrial area in the country will be eligible for help and this will spread the money so thin that hard-core depressed areas for whom the bill is really intended would get practically nothing.

Up to this point, I have spoken principally about industrial redevelopment areas. Now let us turn our attention to the rural development situation. The House bill purportedly attempts to set up a rural development program which will allegedly aid farming areas by bringing industry to these rural counties. Here again we find that the criteria are almost fictional in concept and have no relationship whatsoever to reality.

The bill calls for a $75 million plant loan fund. This is enough money to start a real substantial program. But here again it isn't the amount of money

that's bad, it's how the money will be distributed under the poorly drawn criteria.

Seventy-five million dollars will have to be spread thinly across 663 eligible counties. When you split up this fund by the 663 counties, you end up with 23 new jobs per county. This calculation is based on testimony to the effect that it takes about $5,000 to create a new job.

Those who support the criteria in the House bill are faced with this dilemma. The first horn of the dilemma is that either everyone of the 663 counties eligible for rural development may well get funds to the loss and serious detriment of chronically depressed areas such as those in West Virginia or, and this is the second prong of the dilemma, only truly depressed areas will get the money if the bill is administered properly and the hundreds of counties that are made eligible by the bill will have been misled to believe that they are going to get Federal money when, in fact, they are not.

I do not agree with all the elements in the Senate bill. In particular, I disagree with the procedures which call for borrowing money from the Treasury rather than using the appropriation process, but I must say that the Senator from Illinois [Mr. DOUGLAS], and his colleagues on the Banking and Currency Committee, did have the good sense to realize that the legislation that is needed is legislation to help depressed areas and that we will be hurting rather than be helping depressed areas if we spread the money so thinly that the truly troubled areas, such as those in West Virginia and Kentucky, will get virtually nothing.

I shall vote against the bill for two principal reasons. First, I object, as a matter of principle, to legislation of this kind and of this importance being brought up on such short notice and under such restricted time for debate. The House acted on this measure only 2 days ago. This morning I called the staff of the Committee on Labor and Public Welfare, and asked them to give me a comparison of the House amendment and the Senate bill, which was passed some time ago. They said, "We have not had sufficient time to do that." Up to this time I have not received a report from the staff members of the Labor and Public Welfare Committee on the Senate side.

Second, I shall oppose the bill, because I think we are developing a political issue rather than a program. I think we can all take it for granted that this bill will not be approved by President Eisenhower, and that the veto will not be overridden. The margin in the House was only 17 votes, I believe.

If more time had been provided, it might have been possible to arrive at a compromise with the White House, which would have resulted in the enactment of legislation bringing into being a realistic, worthwhile program. I know that the men and women who are suffering hardship and privation in the distressed areas want a program rather than an issue.

That is the second reason why I shall vote against the bill today, even though in principle I believe the Federal Government should participate in programs of this nature.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. DOUGLAS. I esteem the Senator from Vermont very highly; but is it not his opinion, as a member of the Special Committee on Unemployment, that more than $50 million is needed for this program?

Mr. PROUTY. I do believe that more than $50 million is required.

Mr. DOUGLAS. The President's program calls for only $50 million, and the House amendment to the bill provides for $253 million.

Mr. PROUTY. Let me say to the Senator from Illinois that I think it is a possibility, at least, that the President might have approved a higher figure than the one originally suggested in the budget. I believe that a figure of $100 million, $125 million, or even $150 million might have received Presidential approval. I have no authority for that statement, but I know that I and others on this side would have exerted great effort to persuade the President that more funds were needed, provided a more realistic and equitable formula for distribution had been conceived.

To repeat, what is being developed here now is a political issue instead of a program to alleviate suffering and hardship on the part of many people in the distressed areas.

Mr. President, I yield back the remainder of my time.

Mr. DIRKSEN. Mr. President, I yield 5 minutes to the distinguished Senator from Pennsylvania [Mr. SCOTT].

Mr. SCOTT. Mr. President, this bill is an authorization bill only. The factor of Treasury financing is no longer in it. The bill would have no impact upon the 1960–61 budget. It would require at least 6 months to implement the bill, I am advised by departmental agencies. We could not get an appropriation until next year. Therefore, in my judgment, this particular bill would not run counter to the objections which we have heard from the executive department, as to impact upon the current budget.

It is my intention to offer an amendment to the pending bill, in the nature of a substitute, if the parliamentary situation will permit. My amendment contains the language of an amendment offered by Representative VAN ZANDT, of Pennsylvania, when Senate bill 722 was before the House of Representatives on May 4.

I realize that favorable action on the motion to concur, as provided in the consent agreement, would preclude my being able to offer a substitute amendment, unless, of course, the motion should fail. For that reason I wish to discuss very briefly my reasons for attempting to submit substitute language.

My first consideration is that the Senate pass an area redevelopment bill that will have a better chance of avoiding a Presidential veto. That has been my purpose since first introducing an area redevelopment bill, Senate bill 268, in the 1st session of the 86th Congress.

As Senate bill 722 was passed by the Senate, it contained a formula for determining unemployment areas which would have limited the application of the benefits to major areas of chronic and persistent unemployment. S. 722, as it passed the House, and is now before us, contains a considerably expanded formula, which would dilute the funds to the point where the eligible communities—and this is particularly true in Pennsylvania—would not receive sufficient assistance to be effective.

One of the reasons for the veto of the earlier legislation, in 1958, was the inclusion of areas not affected by chronic unemployment. If we could substitute a formula which would cut down the coverage to those communities of proven need, I feel sure we would improve the chances for having an Area Redevelopment Act finally approved.

There are other features of S. 722 which I believe would also be improved by the amendment I would hope to offer.

I ask unanimous consent to have printed in the RECORD at this point a comparison of the features of the cost of S. 722 as passed by the Senate, S. 722 as passed by the House, and the Scott-Van Zandt amendment; also a brief analysis of the substitute amendment.

There being no objection, the comparison, summary, and analysis, were ordered to be printed in the RECORD, as follows:

Comparison—Area redevelopment bills

Subject	S. 722 as passed Senate	S. 722 as passed House	Scott-Van Zandt amendment
Organization	Separate area redevelopment administration	Separate area redevelopment administration.	Department of Commerce with Administrator equal to Assistant Secretary.
Division of redevelopment areas	Administrator to designate 2 types: Industrial—having substantial and persistent unemployment. Rural—large percentage of low-income families, and substantial unemployment and underemployment.	Same as Senate version	Secretary authorized to make grants for technical assistance, industrial loans, and public facility grants to assist areas of substantial and persistent unemployment, designated by Labor Department. Also to assist rural areas to develop manufacturing, processing, and service activities to supplement agricultural.

Comparison—Area redevelopment bills—Continued

Revolving fund loans	Borrowed from Treasury	Appropriated	Appropriated
Industrial	$100,000,000	$75,000,000	$100,000,000.
Rural	$100,000,000	$75,000,000	None specified.
Public facilities	$100,000,000	$50,000,000	$25,000,000.
Federal participation in loans	65 percent	65 percent	33⅓ percent in class I area, 50 percent in class II area, 75 percent in class III area.
Maximum loan period	30 years (possible extension to 40)	40 years; permits loans up to full amount of project cost, and omits requirement of ten percent State contribution.	25 years (possible extension 10 years); not less than 15 percent participation by State, agency instrumentality, etc.
Grants for public facilities	$75,000,000	$35,000,000	$25,000,000; Federal participation: 33⅓ percent class II areas, 75 percent class III areas.
Retraining subsistence payments.	$10,000,000	$10,000,000	$5,000,000.
Vocational training grants	Not specified	$1,500,000	Secretary of Labor to determine vocational training or retraining needs. Secretary HEW to provide assistance, and if necessary financial assistance to State vocational education agency. May also provide through public or private educational institutions.
Technical assistance	$4,500,000	$4,500,000	$3,000,000.
Criteria of unemployment	6 percent throughout qualifying period (below) and, 50 percent above national average for 3 of 4 years preceding, or 75 percent above national average for 2 of 3 years preceding, or 100 percent above national average for 1 of 2 years preceding.	12 percent for 12 months preceding, or 9 percent for 15 of 18 months preceding, or 6 percent for 18 of 24 months preceding.	6 percent throughout qualifying period (below) and, 50 percent above national average for 4 out of 5 years preceding in class I areas, or 75 percent above national average for 3 out of 4 years preceding in class II areas, or 100 percent above national average for 2 out of 3 years preceding in class III areas.
Rate of interest on loans	Maximum permitted would come to about 4⅜ percent.	Maximum permitted, 2⅞ percent	To be determined by Secretary based on going rates.

SUMMARY—PRINCIPAL FEATURES

Subject	S. 722 as passed Senate	S. 722 as passed House	Scott-Van Zandt amendment	Subject	S. 722 as passed Senate	S. 722 as passed House	Scott-Van Zandt amendment
Industrial loans	100, 000, 000	75, 000, 000	100, 000, 000	Vocational training grants	(1)	1, 500, 000	(1)
Rural loans	100, 000, 000	75, 000, 000	None	Technical assistance	4, 500, 000	4, 500, 000	3, 000, 000
Public facility loans	100, 000, 000	50, 000, 000	25, 000, 000				
Public facility grants	75, 000, 000	35, 000, 000	25, 000, 000	Total	389, 500, 000	251, 000, 000	158, 000, 000
Retraining subsistence payments	10, 000, 000	10, 000, 000	5, 000, 000				

[1] Not specified.

BRIEF ANALYSIS OF THE SCOTT-VAN ZANDT SUBSTITUTE AMENDMENT

Briefly, the substitute proposal provides for the following:

First. Technical assistance: Depressed areas would be eligible for technical assistance to help the communities to appraise their physical and human resources, which would prepare them to plan constructive programs to attract new businesses and expand existing businesses in these areas.

Second. Community loans: Depressed communities would be eligible to receive loans from a revolving fund of $100 million.

We know that conventional lending facilities in depressed areas are not as venturesome as those in growing and expanding communities.

The fund would put the depressed areas on a more equal footing with other communities in attracting new jobs.

Third. Public facilities: Some communities need improvement in public facilities before they would become sufficiently attractive to new businesses which might desire to locate in these areas.

The amendment provides for an establishment of a $25 million revolving fund from which these communities would be able to borrow.

While the figure may appear modest, attention is called to the fact that legislation is pending which would establish special funds for community facilities.

Meanwhile, under the amendment a smaller fund would be allocated and earmarked to aid depressed areas.

In addition, the most depressed communities which do not have the sufficient resources to borrow funds would be eligible to receive grants up to a maximum of $25 million for public facilities related to redevelopment.

Let me stress that this is not an annual appropriation but is intended to be a $25 million revolving fund from which these communities would be able to borrow.

The administrator of the program would be expected to limit the grants only to communities with the greatest need for aid and which do not have sufficient resources to repay the loans in the foreseeable future.

It should be stressed that this is no giveaway program; under the provisions of the bill grants would be made only for projects which would provide lasting improvements and broaden the economic base of the communities.

Fourth. Vocational training and subsistence: One of the big problems in depressed areas is the fact that many industries have declined or disappeared and, consequently, the demand for the skills acquired by the people in these areas has also diminished or vanished.

In order to enable these people whose skills have become obsolete to gain new employment, we must provide facilities to retrain them.

But many have been unemployed for a long period of time, and it would be unreasonable to expect that they could undergo an effective period of vocational training without any means of support.

Consequently, while the unemployed are undergoing training and if they are no longer eligible for unemployment compensation, they would be receiving subsistence payments equal to the average unemployment insurance in their State during the period while they are undergoing training, but not for a period exceeding 13 weeks.

Only the unemployed residing in the communities with the highest level of unemployment would be eligible for this type of aid and the total amount that would be appropriated for this program would be limited to $5 million a year.

Mr. SCOTT. Mr. President, I have no alternative, as a proponent of area redevelopment legislation, but to vote for S. 722 as it is now pending, notwithstanding the fact that I feel it has, by action of the other body, tended to become a legislative grabbag, in view of the unemployment formula which it would apply. I want the RECORD to show that I have done all in my power for a realistic bill which would serve the needs of the people in the depressed areas, to whom we must render this assistance.

If this bill is passed and vetoed, and the veto is not overridden, perhaps we can—and we certainly should—write a realistic bill pinpointing the areas of need, and costing in the neighborhood of $150 million.

Mr. CLARK. Mr. President, will the Senator yield for a question?

Mr. SCOTT. I shall be glad to yield in just a moment.

In my opinion, such a bill would receive approval at the other end of the avenue, and give us relief instead of a political issue.

Finally, let me say that I have talked with the President. Of course, I am in no position to quote him, but the Senator from Kentucky [Mr. COOPER], the Governor of West Virginia, Mr. Underwood, and I talked with the President this week. First of all, we all, including the President, want a bill. There would be no objection, in my opinion, to a reasonable bill which pinpointed the need in the areas where critical unemployment is most serious, and is a matter of concern to both the executive and legislative departments.

I now yield to my senior colleague from Pennsylvania [Mr. CLARK].

Mr. CLARK. Does the Senator not have some hope, because of the stiffening up of the requirements for eligibility, which the House made after my friend from Pennsylvania saw the President, that the President will be persuaded to sign the bill, if passed?

Mr. SCOTT. I want to make it clear to my colleague that I hope the President will sign the bill, even though I have certain objections to it. I think the bill is more acceptable, as the Senator says, because after our conference with the President an amendment was added in the House tightening somewhat the unemployment criteria.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). The time of the Senator has expired.

Mr. DOUGLAS. I yield 1 additional minute to the Senator from Pennsylvania.

Mr. SCOTT. The bill therefore does pinpoint the need more than heretofore, and therefore it is, in my opinion, more acceptable. In my summary I have indicated the features which I think would give us a good bill, at a cost in the neighborhood of $150 million.

Mr. JOHNSON of Texas. Mr. President, I yield to the Senator from Montana such time as he may require.

Mr. MANSFIELD. Mr. President, the junior Senator from Wyoming [Mr. MCGEE] is unable to be present because of prior commitments undertaken as a member of the Subcommittee of Freedom of Communications of the Committee on Interstate and Foreign Commerce.

I ask unanimous consent that a statement which the Senator from Wyoming had prepared and intended to make on the pending subject be included in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MCGEE

The purpose of this bill is to establish an effective program to alleviate conditions of unemployment in certain areas of the Nation which are economically depressed. As a member of the Senate Special Committee on Unemployment Problems, I am painfully aware that such sections of our otherwise prosperous economy do exist and that where they exist, economic conditions are just as bad as they were throughout the Nation during the darkest days of the great depression.

Our committee held a number of hearings in States where these depressed areas exist. We found that in many cases as much as 20 or 30 percent of the working force was either unemployed or underemployed. The tragic and community-corroding loss which such unemployment causes, especially when it is chronic, has become a matter of grave concern to every member of our committee.

The causes for chronic employment disadvantage in some 70 labor market areas throughout the country are diverse. There is no single program which will alleviate the disease from which these labor market areas suffer. In its report our committee pointed out that changes in consumer demand depletion of resources, changes in defense procurement or in location of defense facilities, decentralization of production, lack of industrial diversification, and technological change are the most important causes of depressed areas.

S. 722, with the House amendment, is a measure which will not be fully responsive to the need which our committee's study has demonstrated exists. It is a measure of limited scope; but, of course, those of us who believe in doing something about such problems must often be content with half a loaf when the whole loaf cannot be obtained. This bill, if enacted in its present form, will be a start.

If we combine this minimal start with the imagination and initiative of the American people themselves, we can and we shall accomplish a very great deal.

One of the hearings of the Special Committee on Unemployment Problems was held in Rock Springs, Wyo., a community which has suffered grievously in the past from unemployment because of wholesale mine closings which occurred in 1953 and 1954. If this hearing demonstrated nothing else, it demonstrated the courage and the ingenuity with which a community can meet a crippling blow to employment in its basic industries.

This bill, though meager, can at least be a beginning in providing stimulus for such courageous action on the part of other communities in other areas.

Mr. DOUGLAS. I yield 2 minutes to the Senator from Alaska.

Mr. GRUENING. Mr. President, I think it is about time that we did something for the American people.

Last week the Senate passed a bill authorizing more than $4 billion in aid to approximately 104 foreign countries. The pending bill would help the American people in ways similar to those by which we are helping foreign countries It would authorize $251 million, which is one-sixteenth of the amount the Senate last week authorized for the people in countries overseas.

The probability has been expressed by the distinguished junior Senator from Vermont, who rose in opposition to the bill, that the President would veto the bill. I hope that will not happen, although it would not be wholly surprising in view of the fact that he vetoed an area redevelopment bill 2 years ago, and before and since the Eisenhower administration has repeatedly taken a position adverse to adequate expenditures for the benefit of the American people, whether for airport development, to meet the urgency of the jet age, whether for housing, whether for education, whether to stop the pollution in our waters, whether to conserve and develop our natural resources, or whether to provide adequate medical insurance for the aged.

We are repeatedly told by the Eisenhower-Nixon administration such expenditures are extravagant, wasteful, and that they would unbalance the budget. However, the contrary attitude is revealed by the White House when it comes to spending money abroad. Those appropriations of American dollars, it tells us, are sacrosanct, and must not be cut by a nickel.

The pending bill, coming from the House, which is a very modest bill and less effective than the Senate-passed bill, is desirable to help many areas in our country, would aid depressed areas in Pennsylvania and West Virginia—which I visited only two nights ago—in Kentucky, in Arizona, in Illinois, in Alaska, where our fishing communities are in a serious plight owing to the steady depletion of our salmon fishery as a result of Federal mismanagement, and in many other parts of our country.

Is it not about time that we considered our own domestic needs and took care of them? Being only an authorization bill, and regrettably, therefore it will not be effective for another year or more. But it is not the fault of the Congress that the Presidential veto prevented a start 2 years ago.

I shall support the bill, and I hope that the President will at last see the light and decide that the interests of the American people should not, as hitherto, be placed second to the interests of other people.

Mr. DOUGLAS. In view of the fact that we have taken more time than the other side, I hope that my colleague from Illinois will be able to take some time now. If he is not ready, I will yield 5 minutes to the senior Senator from Minnesota.

Mr. HUMPHREY. Mr. President, I am grateful to the Senator from Illinois for yielding this time to me. I wish to concur in the decision to bring up the House bill, and to commend the House of Representatives on the passage of the area redevelopment bill.

I am sure that every Senator knows that the Senator from Massachusetts [Mr. KENNEDY] and I have been engaged in some very careful observations of the economic, social, and political scene in the beautiful State of West Virginia. I can assure Senators that the beauty and the charm of that wonderful State, and the quality and character of its people, would be further enhanced by passage of the area redevelopment bill.

Of course the proposed legislation is not designed for any particular State. It is designed for the Nation. It is the kind of economic assistance program, for our own workers, for our own economy, for our American communities, that we extend rather generously to the rest of the world.

I am a supporter of foreign aid, particularly foreign economic aid based upon the principle of long-term loans at low interest rates for the purpose of constructive, productive economic development.

I feel, however, that the same principle is applicable to situations in the United States, where there are underdeveloped areas and areas which, due to technological change, or due to working out of basic resources, suffer chronic unemployment or economic distress.

We have many such areas in the United States. The Labor Department's Bureau of Employment Security presently classifies 142 American communities as labor surplus areas with substantial unemployment.

Mr. President, we have in many parts of our Nation, in State after State, communities which were once thriving industrial, productive, prosperous communities, but which, through no fault on the part of management or local government or labor or civic organizations, find themselves today in serious economic stress.

This is to be found, for example—using my own State—in the northern and northeastern parts of Minnesota, where there is needed diversification of industry. We have done much in Minnesota

to help diversify our industry. We have the Iron Range Resources Commission, established by the State of Minnesota. It extends economic aid and technical assistance to localities and industries and workers in the northern and northeastern portions of Minnesota. We have our Department of Business Development, which is equally helpful.

However, there is a time when even greater assistance is required. That is where the area redevelopment bill becomes vital. The bill before us is a sincere effort on the part of Congress to find a mutual ground, so to speak, between the completely inadequate proposal advanced by the administration and the bill as passed by the Senate last year.

Area redevelopment is not new to Congress. This is no election-year panacea. Area redevelopment was passed in the Senate and in the House in 1958. It was passed by an overwhelming vote in the House, and it was passed in the Senate after a considerable struggle. Unfortunately, however, the President pocket vetoed this bill.

We passed it again in the Senate last year by a relatively close vote. Finally the House acted this past Wednesday on a modified version. The bill before us is not all I want, but it is effective legislation. I for one will support it. I say to Members of Congress, particularly to my colleagues in the Senate, who vote for foreign aid, "You cannot go home and face your constituents after having voted substantial sums of money for foreign aid, and deny to the American people, American industry, American labor, and American agriculture an opportunity for economic assistance on the basis of loans, on the basis of the kind of help that American communities need." The Senator from Alaska [Mr. GRUENING] put it so well when he stated that we cannot accept such a double standard.

Mr. President, I urge my colleagues to approve this measure. It deserves to be passed by an overwhelming vote.

The PRESIDING OFFICER. The time of the Senator from Minnesota has expired.

Mr. DOUGLAS. Mr. President, I yield 10 minutes to the Senator from Pennsylvania.

Mr. CLARK. Mr. President, may I have the attention of the minority leader? Is it agreed that we will yield back the remainder of our time, after an additional 10 minutes has been expended on each side, so that we may accommodate Senators who wish to leave?

Mr. DIRKSEN. Has the Senator made provision for the Senator from Kentucky [Mr. COOPER]?

Mr. CLARK. If he comes to the Chamber.

Mr. DIRKSEN. Also, the majority leader may wish to speak a few minutes on the bill.

Mr. CLARK. Is it agreed that we will yield back whatever time remains after that?

Mr. DIRKSEN. That is agreeable.

Mr. CLARK. Mr. President, the first point I wish to make in support of the bill is that it is not an expenditure bill; it is an authorization bill. If the bill passes, not one cent of money will be appropriated for the program unless and until the Committees on Appropriations of the two Houses, and the President, agree on an appropriation measure. So no Senator should be deterred from voting for the bill because he expects it to result in large amounts of immediate expenditures. This is a very important difference between the bill which we are now dealing with and the bill which we passed last year.

Senators who believe that this bill provides an amount which is too high will get another crack at it when the appropriation comes before the Senate. It seems to me that it is entirely unlikely that the full amount of the authorization will be required for the first fiscal year. Therefore, I make the point, as strongly as I can, that this is only an authorization, not an expenditure.

Moreover, the amount of the authorization has been reduced. The original Senate bill provided for $389 million. The bill now before the Senate calls for only $251 million of authorizations. So the amount has been reduced to make it approach more nearly the objectives of the President.

My third point is that the bill has a strong antipirating provision. It is a substantially stronger provision than was contained in the bill which passed the Senate last year. This bill forbids the lending of money, under its provisions, if such a loan will result in increasing unemployment in the area from which the industry has moved in order to go into a depressed area.

More than that, by an amendment made to the bill in the House at the last minute, a large number of communities which would otherwise have been eligible are no longer eligible. The eligibility restrictions have been tightened up by the House. Several big cities, including my own city of Philadelphia, and New York, have been excluded by these stronger provisions which were written into the bill by the House. Hundreds of additional areas would be deprived of eligibility if only our economy could be gotten back on the road, so that unemployment would be decreased. A drop in unemployment of 1 percent across the country would, in my judgment, result in the elimination from eligibility of scores of areas, because they would then be in a situation where their labor surpluses did not exceed 6 percent.

So the bill will take effect if, but only if, there are conditions of substantial unemployment throughout the country, and which highlight areas of chronic unemployment, so as to make the areas more eligible.

Mr. President, I yield to my colleague from Pennsylvania.

Mr. SCOTT. Mr. President, I yield 2 minutes to the distinguished senior Senator from Pennsylvania from the time on this side, so that he may answer two questions.

First, I am glad the Senator pointed out—and I think it is important for the people in our Commonwealth to understand that both Senators from Pennsylvania accept and recognize as a desirable factor—that our city of Philadelphia has of necessity been eliminated, much as we should like to help our own home city. But its elimination has made it possible, if the bill shall become law, to provide needed aid to Scranton, Wilkes-Barre, Hazleton, Uniontown, Connellsville, and other areas of economic distress and unemployment. Does the Senator not agree?

Mr. CLARK. The Senator is correct. I am in accord with his view. Of course, if unemployment should get very much worse in Philadelphia, then our city could well qualify. But it does not qualify now.

Mr. SCOTT. That is true. Second, with respect to the matter of the use of Federal funds—the taxpayers' money—it occurs to me that at times the allocation is inequitable. I call the attention to the Senator to the testimony given by officials of the Department of Agriculture that one grain storage company in the Midwest received $23,470,636 from the Federal Government last year in fees charged for storing surplus crops. One storage company, in other words, received more money than the amount of farm surplus payments paid as subsidies to all of Pennsylvania, New Jersey, and Delaware combined; and, moreover, more than Pennsylvania probably would receive for unemployment and economic distress under this bill. Does the senior Senator from Pennsylvania not believe that that is inequitable and a costly shame?

Mr. CLARK. I am glad my colleague has pointed out these facts. In addition, I point out that the bill calls for an authorization of $75 million in loans to depressed rural areas. So it is neither a big city bill nor an industrial bill. It is a national bill, which takes care of rural underemployment to the same extent and in the same amount as it takes care of urban unemployment.

Mr. SCOTT. It is much more useful to the rural areas than is generally believed.

Mr. CLARK. The Senator is correct. I thank him for his helpful interjection into the debate.

Mr. President, I turn to a document which, in my judgment, makes the bill a "must," and that is the report of the Senate Special Committee on Unemployment Problems, a committee consisting of nine members, whose conclusions were practically unanimous. They made their report only a little more than a month ago, and stated in no uncertain terms the need for this kind of legislation, a need which was found out only by the Democratic members of the committee, but also by the Republican members of the committee. I quote from page 69 of the report:

> Members of the committee and its staff observed directly the suffering and distress of people in depressed areas and were deeply impressed with the need for immediate action. The committee therefore recommends that highest priority be given to the enactment into law in this session of an effective area redevelopment bill.

While that statement was in the report of the majority, we find the following in minority views:

It is a matter of prime importance that an area redevelopment bill be enacted

and that it contain means for stimulating local effort.

There we have the statements of nine U.S. Senators, from both sides of the aisle, saying that an area redevelopment bill is needed this year. This is our only chance this year to pass such a bill. I hope Senators on both sides of the aisle will give effect to the unanimous recommendation of the Special Committee on Unemployment Problems of their own body, which has so recently reported.

I share the views of Senators who deplore the "double standard," as it has come to be called. I have always supported mutual security aid for underdeveloped countries abroad. I hope to continue to do so. However, I may say that I share the views of the Senator from Alaska [Mr. GRUENING] and other Senators that it is unconscionable and unethical to give the money of American taxpayers to the underdeveloped people abroad, much as they need it, and to deny the very same kind of assistance to American citizens who are asking only for an opportunity to work for an honest living.

I do not understand how Senators of good conscience can vote for foreign aid, or urge the Senate to vote for foreign aid, and deny domestic aid to undernourished Americans who live in conditions of squalor. If Senators could see, as I have seen, and as members of the Special Committee on Unemployment Problems have seen, they would be ill at their stomachs and be astounded to learn that such conditions could exist in the United States of America.

Finally, this situation is a cancer in our body politic; a cancer which is invading the sound soul of democracy.

Our neglect of the people who are suffering such misery, our failure to show a sense of compassion toward our fellow citizens, must make them feel that they are abandoned; it must make them feel that this is indeed an odd way for the richest country in the history of the world to treat its own citizens. This cancer will spread, unless it is cut out by drastic surgery.

Mr. President, this bill is a pale little bill; it makes only a start; it is not nearly good enough. We accept it only because we legislate under the shadow of the rules of the House of Representatives, over which we have no control. There is a hammer at our heads. We are told, "Take it or leave it. This or nothing."

So those of us who fought so hard and so long for a better bill will take this bill, and will return, another day, to fight for a more adequate bill.

I hope every Member of the Senate will search his heart and his conscience before he determines how he will vote on the question of the passage of this bill. If he does so, I have no doubt that the bill will be passed by the Senate by an overwhelming vote, which the bill so justly deserves.

Mr. HUMPHREY. Mr. President, will the Senator from Pennsylvania yield to me?

Mr. CLARK. I yield.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). The time yielded to the Senator from Pennsylvania has expired.

Mr. DOUGLAS. Mr. President, I yield 1 additional minute to the Senator from Pennsylvania.

The PRESIDING OFFICER. The Senator from Pennsylvania is recognized for 1 additional minute.

Mr. CLARK. I am glad to yield to the Senator from Minnesota, Mr. President.

Mr. HUMPHREY. Mr. President, the other day, I noticed that the President of the United States had suggested to the agencies of the Government that they do what they could to be of help to the communities of the great State of West Virginia. Instead of telling the agencies of the Government to do what they should, he watered down his request, and told them to do what they could. Instead of telling them to do what was needed, he said to the heads of those agencies, "Do what you think you may be able to do nicely and easily."

There is one way for the administration to demonstrate that it really cares about the American people, the American economy, and what is occurring in our country: The President still has time to send to the Senate a message that he will sign the area redevelopment bill.

What the President does in regard to this bill will be the test; then we shall find out whether we shall receive from him more in the field of public relations or more in the field of public policies. Unfortunately, Mr. President, I am afraid that we are likely to get more of the public-relations gobbledygook, instead of public policies.

The PRESIDING OFFICER. The additional time yielded to the Senator from Pennsylvania has expired.

Mr. DIRKSEN. Mr. President, I yield 7 minutes to the Senator from Kentucky [Mr. COOPER].

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 7 minutes.

Mr. COOPER. Mr. President, I shall vote for the House amendment to Senate bill 722, which was passed by the Senate last year.

This is not a new position for me. In 1958, I supported the Douglas-Payne bill. In 1959, I joined with the Senator from Illinois [Mr. DOUGLAS], the Senator from Pennsylvania [Mr. CLARK], and the Senator from Maryland [Mr. BEALL] in introducing the original version of Senate bill 722, which the Senate passed.

It is true that the country as a whole is enjoying an extended period of prosperity—the longest period of prosperity, I believe, our country has ever known in peacetime. Wages, personal income, investments, housing starts, and gross national product prove my statement to be true. Except for this high level of prosperity, conditions in the depressed areas would be worse.

But, Mr. President, it cannot be denied that throughout the Nation there are areas in which substantial and persistent unemployment has existed for several years. Several of those areas—notably, in the eastern coal mining section—are in my own State.

The fact remains that growing prosperity elsewhere in the Nation has not been able to bring employment and better times to the depressed areas of the United States.

Today, Mr. President, I do not have time to explain the details of this legislation; but many of us know how acute the situation is, because of the vast technological changes which have occurred in many areas of the United States. In the coal mining areas of the Nation, a miner who formerly produced an average of 3 or 4 tons of coal a day, by using a pick, now can produce 35 tons of coal a day, with the use of modern equipment. The average production per day, per man has risen from 3–4 tons to 14 tons. I know that in the eastern part of Kentucky, where formerly 60,000 miners were employed, today less than 30,000 produce the same amount of coal.

This bill is designed to bring to these sections new opportunities for employment of the people, who may never again secure employment in the work they have known throughout all their lives.

This morning, I should like to address myself to the Members of the Senate, and particularly the members of my own party, and ask them to consider carefully what is at stake. I hope they will vote for this bill. Let Senators on this side of the aisle, in particular, remember that the President of the United States was the first one to recommend to the Congress the enactment of a bill to give assistance to the depressed areas of the United States. The Congress passed its own bill in 1958; and I believe this bill will be passed.

It is true that the approach of the President and the approach of the Congress have differed. If a greater effort had been made in the last 2½ years, both by the administration and by the majority leaders of the House and the Senate, to conciliate their differences, perhaps today we would have on the statute books legislation which would be giving aid to these areas, rather than be engaged in a fight which may deteriorate into a political issue.

But, Mr. President, whatever the record of the past, we have an opportunity today to do something about this critical situation.

This measure is not an appropriation bill; it is an authorization bill. The Appropriations Committees of both Houses of Congress will have opportunities to consider the value of all the programs provided by this bill, and fix the appropriations for such programs as they may approve.

I hope the Senate will pass this bill, and I hope the President will sign it. For before the Appropriations Committees act on the necessary appropriations bill, the administration and the congressional leaders can meet and can conciliate—and they ought to conciliate—the differences between them with respect to the provisions of this bill.

In the face of the demonstrated need of the people of the depressed areas, and the present opportunity to help those who have been left behind in the progress of our Nation, surely the executive branch and the legislative branch, and our two parties and their leaders, will demonstrate the statesmanship and

conciliate the differences which exist between the administration and the Congress.

A few minutes ago I heard the distinguished Senator from Minnesota [Mr. HUMPHREY] speak about the President's responsibility; the Senator from Minnesota said the President had only lately directed the heads of the Government's executive agencies in these areas to take action. Let me say that I have been in correspondence with the President, and I have talked to him two or three times this year about depressed areas. The remarks of the President followed a meeting which the Senator from Pennsylvania [Mr. SCOTT] and I had with the President. At that meeting we made certain suggestions for additional executive action, and the President's response was a response to those suggestions.

Let me also say to the distinguished minority leader——

The PRESIDING OFFICER. The time yielded to the Senator from Kentucky has expired.

Mr. COOPER. Mr. President, I should like to have additional time, if I may.

Mr. DIRKSEN. Mr. President, I yield 1 additional minute to the Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 1 additional minute.

Mr. COOPER. Mr. President, as I was about to say, I would point out to the distinguished minority leader that, although he may know more about this particular subject than I do, so far as I know, the President has not yet said he would veto this bill. I hope he will sign it—to give opportunity to get a program going. I ask the Members of the Senate who belong to my party to give the administration and the congressional leaders an opportunity to attempt to work out, by means of this authorization bill, a measure which will meet the needs of the people of the distressed areas of the United States.

The PRESIDING OFFICER. The additional time yielded to the Senator from Kentucky has expired.

Mr. COOPER. Mr. President, I should like to have an additional minute.

Mr. DIRKSEN. Mr. President, I yield 1 additional minute to the Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 1 additional minute.

Mr. COOPER. I thank the Senator from Illinois.

Mr. President, I wish to assure the Senate that unhappy situations do exist in this country.

I have visited many times these areas in my own State, I have seen these conditions—people who do not have an adequate diet, or enough clothes, and whose morale is very low, because they believe, unhappily, that they have been forgotten.

Mr. President, these are realities. Mercy, compassion, and justice ought to move the Members of our body and demand that we help our less fortunate fellow countrymen, their families, and their children.

It is better to do something today than to do nothing. I urge the Senate to pass this bill.

Mr. President, I ask unanimous consent to place in the RECORD, following my remarks, my recommendations to the President of executive action which could be taken to assist our depressed areas, in addition to this legislative bill.

There being no objection, the recommendation was ordered to be printed in the RECORD, as follows:

PROPOSALS OF SENATOR JOHN SHERMAN COOPER FOR EXECUTIVE ACTION IN AID OF DEPRESSED AREAS WITHIN EXISTING PROGRAMS

1. Department of Labor:

Provide additional personnel for employment offices, and establish additional employment offices in distressed areas—to search out immediately all employable persons.

Direct employment offices throughout the country to search out and list all job opportunities.

Provide emergency funds to move employable persons from distressed areas to job opportunities, and provide temporary assistance to such persons.

2. Department of Health, Education, and Welfare:

Establish vocational training schools in distressed areas for persons capable of employment.

Provide compensation to trainees under Defense Education Act or vocational training programs. If not adequate, provide emergency compensation during term of training.

3. Department of Agriculture:

Establish rural development programs in all rural depressed areas.

Establish immediately a garden program in cooperation with State farm agencies to supplement surplus foods. Provide emergency seeds and fertilizers.

4. Long-range programs toward development of rural distressed areas:

Establish, in connection with State, priorities for needed roads, civilian airports, and water development for basic economic growth of such areas.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. DIRKSEN. Mr. President, I yield 1 minute to the distinguished Senator.

Mr. SCOTT. The Senator from Kentucky and I were both at the White House recently. The point has been made previously that we may not indulge in direct quotations. However, does not the Senator agree with me it is better to get an actual bill for the relief of chronically distressed areas of unemployment at a cost in the neighborhood of $150 million than to see the $251 million bill vetoed and fail to become law? Does not the Senator agree that we would be better off with $150 million to start the work than to say, "We tried to get $251 million, but did not get it"?

Mr. COOPER. I agree, but the Appropriations Committee can take what action it desires on the bill. I think we ought to pass the bill.

Mr. SCOTT. I do, too.

Mr. DIRKSEN. Mr. President, consonant with the understanding I had with the distinguished Senator from Pennsylvania, I will remain within the 10-minute limit.

I yield 1 minute to the Senator from Massachusetts [Mr. KENNEDY].

The PRESIDING OFFICER. The Senator from Massachusetts is recognized for 1 minute.

Mr. KENNEDY. Mr. President, the first time such a bill came to the floor it came out of the Committee on Labor and Public Welfare, and I had the honor of being the floor manager for it. This bill is overdue. I think it should have been passed 4 or 5 years ago, when it first came to our attention.

There are many areas in the country which have been left high and dry by the advance of technology and automation. Unless the influence, power, and credit of the Federal Government is placed behind the rehabilitation of those centers, they will continue to decline in a gradually increasing spiral.

I hope the bill will pass, and that the President will sign it into law.

Mr. JOHNSON of Texas. Mr. President, I yield myself such time as I may need.

The PRESIDING OFFICER. The Senator from Texas.

Mr. JOHNSON of Texas. Mr. President, I was very proud to support this proposed legislation when it was originally before the Senate. I did not think it went too far then. I do not think it goes too far now. I think so long as this country is as wealthy, as big, and as broad as it is, and so long as we can grant $4 billion a year to make grants around the world, we can at least make loans at home totaling one tenth of that amount.

Mr. President, I have traveled from one end of this great Nation to the other. I have seen pockets of unemployment. I have seen areas depressed. I have seen people distressed. I think all those people could be paying taxes and all those areas could be prosperous communities if the powers of government were used to help them help themselves.

I remember that a great man was brought to this town under another administration. Mr. Hoover reached down to our State of Texas and selected Mr. Jesse Jones. He went from one State to another, making loans, some of which were like those contemplated in this bill. I think the Treasury made a profit out of those loans. I remember in my own State, when people were hungry, when their children were in boxcars, when their areas were depressed, that a loan was made to a State authority for a development program, and that loan was made at 4 percent interest, but the indenture provided that if the bonds were paid off before a certain period they would have to be paid off at 105 instead of 100. We were later able to recover, and pay those bonds off. The Treasury made money as a result of the aid it gave to depressed areas and distressed people during the 1930's. The Treasury can do the same in the 1960's.

I do not think the wise or provident or prudent course is to say, "Go away," because this problem will not go away. We must face up to it. We are going to do so today.

I hope and believe that each Member of the Senate will seriously consider whether or not he is willing to

use the powers of this Government to help people help themselves.

Mr. DIRKSEN. Mr. President, I yield myself 7 minutes.

The PRESIDING OFFICER. The Senator from Illinois is recognized for 7 minutes.

Mr. DIRKSEN. This bill has had a long and tortuous course. It passed after 9 tumultuous hours in the House, interspersed with many quorum calls and motions to put it aside and send it back to the committee, and when they got all through in the House the vote was 201 to 184. It was carried by only 17 votes.

It has been 13 months or more since a bill of larger dimension was passed in the Senate. That bill carried in the Senate by a vote of 49 to 46. So it has been here a long time, and it has taken a long time to get back to the Senate in the form of a proposal to concur in the House amendment. I have no objection to the procedure. I do not believe any cause would be served particularly by having this bill go to conference. I only point out one or two things.

First, this is a new undertaking, and here we are authorizing $251 million. In the Senate bill we authorized $389 million. The distinction is made that this is an authorization, and not an appropriation bill. Well, it is a naive distinction, for when the money and the authority are authorized, then the next step, of course, is to go before the Appropriations Committee and get money. That is inevitably done, and it is inevitably voted.

Second, I point out that it is a new agency that is involved. I introduced the administration bill. It was introduced in February of 1959. That bill left the matter in the Department of Commerce and in the Department of Labor. Here is a new permanent agency provided; and after a long period of time in the legislative branch I have discovered how these agencies proliferate, how they grow, how definitions are changed, how new areas are brought into the picture, and how greater and greater sums are finally requested.

I look upon this proposal as just another threat to our fiscal integrity. It has been said by its proponents that this must be done, and they point out what a great record has been made in appropriations. As a matter of fact, this Congress, so far as the House and Senate are concerned, has made a good record on appropriations. But I point out something else. The Senate passed the Youth Conservation Corps bill. The impact will be $181 million if the House passes it. We passed the veterans peacetime pension bill. That will call for a very substantial sum. The House has already passed the omnibus housing bill, involving $1 billion.

The Senate has passed the international health bill. So has the House of Representatives. The 1961 budget impact will be $50 million. We passed an educational TV bill. The cost will be $10 million. Pending in the House now, reported from the House committee, is a pay bill. Had the committee reported the original bill the cost involved would have been $1,637 million, and in its original form the impact even on this fiscal year, since the provisions of the bill were retroactive till January, would have been over $800 million. That is now a 9-percent pay raise bill instead of a 20-percent bill, but whatever it is, it is going to "nibble away" at what the President had hoped would be a surplus in 1961.

Only by frugality, only by caution, only by watching can we "nose out" a very slender $100 million surplus in 1960. If we fail to supply the necessary revenues and if we add to the expenditures, I envision that what looked like a $4.2 billion surplus to be applied on the public debt in 1961 will be "nibbled away" and will be reduced finally to a deficit rather than a surplus.

I wish to add only one other thing, Mr. President. Why compare this with foreign aid? How often does one have to point out that the mutual security bill is for the common defense of the country? There is no analogy whatsoever.

Of course, if there is any virtue in the argument which was made on the floor this morning, then why not open up the gates? Let us have an omnibus public works bill. Let us encompass every State, every county, every locality, every water course, every harbor, every place which needs a public building. Let us throw everything in.

We are already committed to the expenditure of billions of dollars—more than $25 billion on highways, billions of dollars for public buildings and other improvements, billions of dollars for subsidies for the merchant marine and others. It is an amazing state of affairs.

We are piling up not only c.o.d.'s, but also I O U's. I wonder whether that is in the interest of continuing confidence in the country. When that confidence ebbs, if something should happen to the economy, then, of course, there will be real hardship in the areas which have been presenting an appeal to us this morning.

I leave it there. If it were left to me, I would say to the President, "You should veto this bill. It is not consonant with your program and is not in the interests of the country, as it stands today."

I am ready to vote.

Mr. DOUGLAS. Mr. President, I yield back the balance of my time.

Mr. DIRKSEN. Mr. President, I yield 2 minutes to the distinguished Senator from Vermont [Mr. PROUTY].

The PRESIDING OFFICER. The Senator from Vermont is recognized for 2 minutes.

Mr. PROUTY. Mr. President, I will not take the 2 minutes. When I spoke earlier, I had been unable to get all the information on the bill which I thought important to justify a logical vote. I have obtained some information since then, and I ask unanimous consent that I may include the statement with the remarks I made earlier.

The PRESIDING OFFICER. Without objection, it is so ordered.

Does the Senator from Illinois yield back his remaining time?

Mr. DIRKSEN. I yield back the balance of my time, Mr. President.

The PRESIDING OFFICER. All time has been yielded back.

The question is on agreeing to the motion of the Senator from Texas.

Mr. JOHNSON of Texas. Mr. President——

The PRESIDING OFFICER. The Senator from Texas.

Mr. JOHNSON of Texas. I yield myself such time as I may desire.

Mr. ELLENDER. Mr. President, I understand that the time has been yielded back.

Mr. JOHNSON of Texas. I have not yielded it back. I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks a brief statement which I had intended to make at this time.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JOHNSON OF TEXAS

The Senate is about to vote on one of the most important bills it will consider this year. We are going to send a bill to the President that will provide some assistance to Americans who live in areas of substantial, and persistent, unemployment.

I would have preferred to see the original Senate bill enacted into law. That bill provided sums that are needed and that could be used almost at once to help these distressed areas to help themselves. Compared to the need that exists, it was not an extravagant bill.

The House has reduced the total figure in S. 722, and it has provided an authorization bill in lieu of direct financing by the Treasury. Nevertheless, the bill we are voting on today is meaningful and will go a long way toward restoring these areas to productive life.

For that is what we are doing here—providing the means by which Americans who want to work may do so. This is not a dole. It is not a handout. It is an encouragement to hundreds of thousands of men who can work, who want to work, and who have been rendered idle by circumstance.

Technological change, the migration of industry, shifts in demand, long periods of seasonal unemployment, the depletion of natural resources—all these factors have made distressed areas out of places that once contributed to our economic life.

What happens when industry leaves a town and the mines and factories close? All those resources that go to make up a community—schools, stores, hospitals, banks, office buildings, homes, churches, all the public services of a community—waste away. They were built at great expense and effort, and now they are left to disintegrate.

We do not want this kind of disintegration, this kind of waste of human and natural resources, anywhere in the world. And it is strange to me that the same people who tell us that we must do something about such waste in other parts of the world, tell us that we cannot lend our own people enough money to prevent that waste in America.

Let us stop using this double standard. Let us stop this waste at home, as we are trying to stop it abroad. Let us give these American men and women the hope of prosperity we are trying to give our friends abroad. Let us give them the chance to rebuild their economic and community life, and once again to have some part in the American dream of a better life.

Mr. President, I yield back the remainder of my time.

Mr. BENNETT subsequently said: Mr. President, I was attending a meeting of a subcommittee of the Committee on

Banking and Currency and was therefore unable to be on the floor during the discussion of the depressed areas bill. I ask unanimous consent that a statement I have prepared concerning the bill may be printed in the body of the RECORD, at a point before the vote on the passage of the bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BENNETT

The depressed areas bill, officially tabbed the area redevelopment bill, is a serious mistake. I have sincere compassion for those persons presently unemployed in certain labor surplus areas of our economy; but, frankly, it is because of this compassion that I am opposed to the bill.

The general motive behind the bill is most worthy. The bill would provide Federal assistance to treat the problem of economically-depressed areas by attempting to induce industry to locate in these areas by offering Federal subsidies. The bill provides for capital loans for industrial development projects, together with loans for certain public facilities and for rural development. In addition, the bill would set up a program of grants for those areas which cannot provide these facilities on a loan basis. There are other minor provisions of the bill. In order to qualify, an area must have a level of joblessness which persists for 2 or more years, even during periods of overall national prosperity.

All this sounds worthy, but the trouble is the bill holds out false hopes to the people in those areas. Depressed area problems arise from change; from shifts and adaptations in output and the use of capital; from the depletion of natural resources. You can legislate against change, but you can't stop it. If the Federal Government had tried to do so in the past, it might still be subsidizing western ghost towns and buggy whip factories.

I agree with the President when he said that "this bill would perpetuate insecurity by making distressed areas dependent upon the uncertainties of continued Federal subsidies, or would pour Federal dollars into areas where distress has been temporary and which are competent to meet their problems themselves."

This bill cannot do the job its proponents claim. It is billed as a cure-all for the economy. The qualifying areas are in a constant state of change but the latest best estimates show about 1 million unemployed in the 30 major areas and 100 minor areas which would qualify for aid under the bill at the present time. The committee received evidence indicating that an investment of from $10,000 to $15,000 is required to support each industrial job. Thus, to provide jobs for all of the unemployed in these areas which are the prospective beneficiaries of the bill would cost from $10 billion to $15 billion.

The bill would not only fail to meet the problem, it would create a "Pandora's box" of new problems. To name just a few:

1. DISCRIMINATION IN FAVOR OF FEW

Careful scrutiny of the bill's provisions shows that only a select proportion of the Nation's unemployed would be singled out as eligible for the alleged benefits of the program, and it should be noted that the selection process is based on purely arbitrary criteria. The criteria for eligibility, by their nature, impose an impossible burden on the administration of the program. In the absence of detailed area studies of the forces underlying high unemployment, the Administrator is placed in an unenviable position of making discriminatory judgments, in favor of some unemployed, and against others, without having a clear-cut basis for his decision.

2. IT RAISES A PROBLEM OF JOB TRANSFERS

The bill does not adequately protect against the pirating of industry from one area to another. Under the terms of the bill the people in the healthy economic areas, and this, mind you, is the major portion of our country, would be forced to underwrite with their Federal tax dollars the export of jobs to competing areas. This, to my mind, is unconscionable. Our efforts should be aimed at creating new job opportunities, instead of merely transferring jobs from one locality to another.

3. DISCRIMINATION WITHIN INDUSTRIES

Moreover, not only would the bill promote discrimination by the Federal Government in favor of some areas at the expense of others it would also promote such discrimination to benefit some companies within a given industry at the expense of competitors.

Assume a situation in which several companies have plants in various parts of the country, none of which are in a so-called depressed area.

Company A, employing 250 persons, is at a competitive disadvantage because it has not kept pace with the industry as a whole in modernizing its factory and improving machinery.

A community eligible for redevelopment under the bill builds and equips a factory with Federal assistance, and induces company A to relocate.

A double discrimination, promoted with Federal funds, has thus taken place: discrimination against the area of original location of company A and discrimination against company A's industrial competitors.

4. IMPROPER INTERFERENCE WITH PRIVATE MARKETS

A basic defect of the approach of this bill is this that it runs counter to the precepts of what is still essentially a private market mechanism operating within a dynamic and growing economy.

The strength of the United States to a great degree is attributable to the fluidity of its resources among such areas as could use them most efficiently. Unlike the economies of other continents, the economy of the United States has been able to distribute its resources into their most efficient uses without regard to State boundaries or regional areas. This has always been an essential strength of our political system—that it permitted these adjustments. And this bill would threaten to destroy that adjustment mechanism within our system.

5. FAILURE TO RECOGNIZE EXISTING PROGRAMS

The devices established in the bill to carry out its objectives are defective in the failure to recognize existing programs, thus causing a duplication of efforts. I won't take time to detail them at this time, but most States have development corporations or industrial planning committees. In addition, during the last Congress we passed the Small Business Investment Act which provides for loans and investments based upon private judgment with a minimum of interference from the SBA. And there are others.

In light of these and other objections, I hope this bill will be rejected by the Senate.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas [Mr. JOHNSON] that the Senate concur in the House amendment to Senate bill 722.

Mr. JOHNSON of Texas. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered, and the Chief Clerk called the roll.

Mr. BEALL (when his name was called). Mr. President, on this vote I have a pair with the junior Senator from Kansas [Mr. SCHOEPPEL]. If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I therefore withhold my vote.

Mr. KEATING. Mr. President, on this vote I have a pair with the senior Senator from South Dakota [Mr. MUNDT.] If he were present, he would vote "nay." If I were at liberty to vote, I would vote "yea." I therefore withhold my vote.

Mr. MANSFIELD. I announce that the Senators from New Mexico [Mr. ANDERSON and CHAVEZ], the Senator from Alaska [Mr. BARTLETT], the Senator from Virginia [Mr. BYRD], the Senator from Mississippi [Mr. EASTLAND], the Senator from South Carolina [Mr. JOHNSTON] the Senator from Tennessee [Mr. KEFAUVER], the Senator from Oklahoma [Mr. KERR], the Senator from Wyoming [Mr. MCGEE], the Senator from Georgia [Mr. RUSSELL], the Senator from South Carolina [Mr. THURMOND], are absent on official business.

I also announce that the Senator from MISSOURI [Mr. HENNINGS] is absent because of illness.

The Senator from Virginia [Mr. ROBERTSON] is absent because of a death in his family.

I further announce that the Senator from North Carolina [Mr. JORDAN] is necessarily absent.

On this vote, the Senator from New Mexico [Mr. ANDERSON] is paired with the Senator from Virginia [Mr. BYRD]. If present and voting, the Senator from New Mexico would vote "yea," and the Senator from Virginia would vote "nay."

On this vote, the Senator from South Carolina [Mr. JOHNSTON] is paired with the Senator from Alaska [Mr. BARTLETT]. If present and voting, the Senator from South Carolina would vote "nay" and the Senator from Alaska would vote "yea."

On this vote, the Senator from Missouri [Mr. HENNINGS] is paired with the Senator from Virginia [Mr. ROBERTSON]. If present and voting, the Senator from Missouri would vote "yea," and the Senator from Virginia would vote "nay."

On this vote, the Senator from Wyoming [Mr. MCGEE] is paired with the Senator from Georgia [Mr. RUSSELL]. If present and voting, the Senator from Wyoming would "yea," and the Senator from Georgia would vote "nay."

On this vote, the Senator from Mississippi [Mr. EASTLAND] is paired with the Senator from New Mexico [Mr. CHAVEZ]. If present and voting, the Senator from Mississippi would vote "nay," and the Senator from New Mexico would vote "yea."

On this vote, the Senator from Oklahoma [Mr. KERR] is paired with the Senator from South Carolina [Mr. THURMOND]. If present and voting, the Senator from Oklahoma would vote "yea," and the Senator from South Carolina would vote "nay."

On this vote, the Senator from Tennessee [Mr. KEFAUVER] is paired with the Senator from Indiana [Mr. CAPEHART]. If present and voting, the Senator from

Tennessee would vote "yea," and the Senator from Indiana would vote "nay."

Mr. KUCHEL. I announce that the Senator from Indiana [Mr. CAPEHART] and the Senator from Kansas [Mr. CARLSON] are absent on official business.

The Senator from Hawaii [Mr. FONG], the Senator from Arizona [Mr. GOLDWATER], the Senator from Nebraska, [Mr. HRUSKA], and the Senator from South Dakota [Mr. MUNDT] are necessarily absent.

The Senator from Kansas [Mr. SCHOEPPEL], is absent on official business as a member of the Board of Visitors of the Coast Guard Academy.

If present and voting, the Senator from Kansas [Mr. CARLSON], the Senator from Nebraska [Mr. HRUSKA], and the Senator from Arizona [Mr. GOLDWATER] would each vote "nay."

The respective pairs of the Senator from South Dakota [Mr. MUNDT] and the Senator from Kansas [Mr. SCHOEPPEL] have been previously announced.

The Senator from Indiana [Mr. CAPEHART] is paired with the Senator from Tennessee [Mr. KEFAUVER]. If present and voting, the Senator from Indiana would vote "nay," and the Senator from Tennessee would vote "yea."

The result was announced—yeas 45, nays 32, as follows:

[No. 194]

YEAS—45

Bible	Hartke	Morse
Byrd, W. Va.	Hayden	Moss

Eastland	Kefauver	

So the motion of Mr. JOHNSON of Texas to concur in the amendment of the House was agreed to.

Mr. DOUGLAS. Mr. President, I move to reconsider the vote by which the motion of the Senator from Texas was agreed to.

Mr. JOHNSON of Texas. Mr. President, I move to lay that motion on the table.

The motion to table was agreed to.

Mr. SYMINGTON subsequently said: Mr. President, today's vote marks a significant day for the distressed areas of our country.

Congressional approval of the area redevelopment bill (S. 722), which I joined in cosponsoring, is a recognition of the fact that when there is suffering in any part of our country, all America suffers.

On the other hand, when there is economic health in distressed areas, all of the country benefits.

This bill is a good start, but much is left to be done. I have visited many of the chronically depressed areas of our country, and have come away from these visits with a conviction that we in Washington cannot afford to ignore these conditions.

The Federal Government must move ahead with effective programs, such as S. 722, to wipe out the persistent unemployment in our pockets of poverty, especially because most of the country is experiencing unprecedented prosperity.

S. 722 should be viewed as the beginning of cooperative Federal-State and private efforts designed to eradicate unemployment and depression from the American economy.

The area redevelopment bill rejects the theory that such conditions are an inevitable part of our system.

We must invest further in the economic health of our country, just as we have been doing in other countries.

PETITION AND MEMORIAL

A petition, etc., were laid before the Senate, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution adopted by the Common Council of the City of Buffalo, N.Y., favoring the enactment of the so-called Forand bill, to provide medical care for the aged; to the Committee on Finance.

A telegram, in the nature of a memorial, from Mr. and Mrs. Max Brenner, of North Hollywood, Calif., remonstrating against the adoption of the concurrent resolution (S. Con. Res. 83) to strengthen the authority of the United Nations to prevent war; to the Committee on Foreign Relations.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. FULBRIGHT:

S. 3501. A bill to promote greater equity in the administration of the pay systems of employees in the Veterans' Administration under prevailing rate schedules by providing for certain adjustments in the compensation of such employees; to the Committee on Post Office and Civil Service.

By Mr. MURRAY:

S. 3502. A bill to extend and amend the National Housing Act, as amended, to provide mortgage insurance for individually owned units in a multifamily structure, and for other purposes; to the Committee on Banking and Currency.

By Mr. MCNAMARA (for himself, Mr. KENNEDY, Mr. CLARK, Mr. RANDOLPH, Mr. SYMINGTON, Mr. HUMPHREY, Mr. WILLIAMS of New Jersey, Mr. MAGNUSON, Mr. MCGEE, Mr. YOUNG of Ohio, Mr. DOUGLAS, Mr. GRUENING, Mr. LONG of Hawaii, Mr. MURRAY, Mr. HART, and Mr. MORSE):

S. 3503. A bill to provide for the payment of hospital and other health services furnished to aged retired individuals, and to provide for a continuing study of the health needs of such individuals; to the Committee on Finance.

(See the remarks of Mr. MCNAMARA when he introduced the above bill, which appear under a separate heading.)

By Mr. BUSH (for himself and Mr. CAPEHART) (by request):

S. 3504. A bill to amend the National Housing Act to remove certain limitations on the aggregate amount of outstanding mortgage insurance; to the Committee on Banking and Currency.

(See the remarks of Mr. BUSH when he introduced the above bill, which appear under a separate heading.)

MEDICAL CARE FOR THE AGED

Mr. MCNAMARA. Mr. President, on behalf of myself and Senators KENNEDY, CLARK, RANDOLPH, SYMINGTON, HUMPHREY, WILLIAMS of New Jersey, MAGNUSON, MCGEE, YOUNG of Ohio, DOUGLAS, GRUENING, LONG of Hawaii, MURRAY, HART, and MORSE, I introduce, for appropriate reference, a bill to provide for the payment of hospital and other health services furnished to aged retired individuals, and to provide for a continuing study of the health needs of such individuals.

Within the very near future, I will present a detailed explanation of the bill, along with the compelling reasons why it, or a bill of similar content, should be enacted at this session of the Congress. For the moment, I wish only to say that the bill represents the results of 18 months of study by the Subcommittee on Problems of the Aged and Aging, of which I have been privileged to serve as chairman.

I ask unanimous consent that the bill be printed in the RECORD, at this point.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3503) to provide for the payment of hospital and other health services furnished to aged retired individuals, and to provide for a continuing study of the health needs of such individuals, introduced by Mr. MCNAMARA (for himself and other Senators), was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Retired Persons Medical Insurance Act".

TITLE I—AMENDMENTS TO TITLE II OF THE SOCIAL SECURITY ACT

SEC. 101. (a) Title II of the Social Security Act is amended by adding after section 225 the following new section:

"MEDICAL INSURANCE BENEFITS

"SEC. 226. (a)(1) Every individual who—

"(A) has attained retirement age (as defined in section 216(a)),

"(B) is retired (as defined in paragraph (3)),

"(C) is, or would upon filing application be, entitled to monthly benefits under section 202, shall be eligible to receive medical insurance benefits. Payment of such benefits shall be made in accordance with the pro-

visions of this section, but only if application is filed for such payment in such form and in such manner and by such person as the Secretary may by regulation prescribe. The provisions of clauses (B) and (C) shall not apply to any person (i) who is the husband or wife of an individual eligible to receive medical insurance benefits and (ii) who was receiving more than one-half of his or her support from such individual for one year provided such year began no earlier than the calendar year preceding the year such person attained retirement age.

"(2) Payment of medical insurance benefits shall be made for hospital services, nursing home services, home health services, diagnostic outpatient services, and very expensive drugs (as defined in subsection (c)).

"(3) For purposes of paragraph (1)—

"(A) Except as may be provided in subparagraph (B), an individual shall be retired with respect to the period for which he files for payment of medical insurance benefits if—

"(i) he had total earnings (as defined in section 203(e)) of less than $2,000 in any calendar year preceding the year in which the first day of such period occurs, provided such calendar year is no earlier than the year preceding the year in which he attained retirement age, or

"(ii) he did not render services for wages of more than $100, and did not engage in self-employment in each of at least three months in any calendar year, provided such third month preceded the first day of such period and such calendar year is no earlier than the year preceding the year in which he attained retirement age, or

"(iii) he attained the age of seventy-two in a month prior to such period.

"(B) For the purposes of benefits for very expensive drugs, an individual shall be retired if on the first day of the month in which he incurs the cost of such drugs he meets the provisions of clause (i), (ii), or (iii) of subparagraph (A). Such first day shall be deemed the first day of the period for which he files for the payment of medical insurance benefits.

For purposes of subparagraph (A)(iii), an individual shall be presumed not to have engaged in self-employment with respect to any month if, by applying the provisions of section 203(e) and the regulations issued thereunder, the Secretary determines that such individual did not engage in self-employment in such month, except that for such purposes the term 'substantial services,' as used in paragraph (3)(B)(i) of such section 203(e), shall mean services rendered by such individual with respect to his trade or business in more than 7 days in such month.

"(4) Payment of medical insurance benefits which an individual is eligible to receive may be made for—

"(A) hospital services furnished to such individuals for a total of not more than 90 days in any calendar year;

"(B) nursing home services furnished to such individual for a total of not more than 180 days in any calendar year;

"(C) home health services furnished to such individual for a total of not more than 240 days;

"(D) disagnostic outpatient services but only to the extent the Secretary, after consultation with the Advisory Council established pursuant to subsection (f), may by regulation specify;

"(E) very expensive drugs furnished such individual, but only to the extent the Secretary, after consultation with such Advisory Council, may by regulation specify.

The maximum of any combination of hospital services, nursing home services, and home health services for which payment may be made for such services furnished, during any calendar year, to any individual eligible to receive medical insurance benefits, shall not exceed 90 units of services. For the purpose of the preceding sentence, one "unit of services" equals (i) one day of hospital services, (ii) two days of nursing home services, or (iii) two and two-thirds days of home health services.

"(5) Notwithstanding the previous provisions of this subsection, no individual shall be eligible to receive medical insurance benefits insofar as they relate to hospital services, nursing home services, or home health services, unless such services are rendered after referral by a physician, and such physician certifies in writing that such hospital services, nursing home services, or home health services are or were required for his medical treatment; except that such referral shall not be required for hospital services in case of an emergency which makes such referral impracticable. Periodic recertification that medical treatment which extends over a period of time is required shall, in accordance with regulations established by the Secretary, be a condition of continuing eligibility to receive such benefits during the period such services are furnished.

"(6)(A) An application for the payment of medical insurance benefits shall be valid, with respect to a period during which one or more of the services described in subsection (c) are furnished, if such application is filed no earlier than the first day of the third month preceding the month in which the first day of such period occurs or no later than the last day of the twelfth month succeeding the month in which the first day of such period occurs. An application for the payment of medical insurance benefits shall be valid with respect to the cost incurred for a very expensive drug if such application is filed within such time as the Secretary may by regulation prescribe.

"(B) For purposes of this section, a period during which—

"(i) hospital or nursing home services (or both) are furnished means a consecutive number of days (including only one day) in which such services are furnished;

"(ii) home health services are furnished means one or more days (but not exceeding 240 days in any calendar year) in which such services are furnished, but only if the number of days elapsing between any two days in which such services are furnished does not exceed 30;

"(iii) diagnostic outpatient services are furnished means one or more days (but not exceeding in any calendar year the number of days specified by the Secretary pursuant to paragraph (4)(D) of this subsection) in which such services are furnished, but only if the number of days elapsing between any two days in which such services are furnished does not exceed 14.

"EVIDENCE AND DETERMINATIONS OF ELIGIBILITY

"(b)(1) Proof that an individual is entitled to monthly insurance benefits under section 202 by reason of having attained retirement age shall be conclusive evidence that such individual has attained retirement age.

"(2) The provisions of section 205 relating to the making and review of determinations shall be applicable to determinations as to (i) whether an individual is eligible to receive medical insurance benefits, and (ii) the number of days, in any calendar year, for which an individual is eligible to receive such benefits.

"DESCRIPTION OF MEDICAL INSURANCE BENEFITS

"(c)(1) 'Hospital services' means, subject to further definition and limitation by regulations, the following services provided an individual as an inpatient: bed and board in a hospital, in semiprivate accommodations unless they are unavailable, or unless other accommodations are occupied at the request of the patient or, are required for medical reasons; and such medical, nursing, ambulance, and other services, and such drugs, supplies, and appliances, as the hospital customarily provides bed patients either through its own employees or through arrangements with others, except that this term shall not include service provided in connection with cosmetic or plastic surgery performed for beautification.

"(2) 'Nursing home services' means, subject to further definition by regulations, skilled nursing care, related medical and personal services required for the treatment of the patient, and accompanying bed and board furnished to an individual as an inpatient.

"(3) 'Home health services' means, subject to further definition by regulations, professional nursing care (including part-time homemaker services, physical and occupational therapy, medical social services, dietary counseling, ambulance service, and similar allied services) in a place of residence maintained as an individual's home, furnished by a nonprofit home health service agency.

"(4) 'Diagnostic outpatient services' means, subject to further definition by regulations, such services furnished by a hospital and prescribed by a physician licensed to practice surgery or medicine to any individual as an outpatient for purposes of diagnostic study.

"(5) 'Very expensive drugs' means, subject to further definition by regulations, those drugs which have been prescribed by a physician licensed to practice surgery or medicine in a State for use of an individual, if such drugs are prescribed by their official title as included in United States Pharmacopoeia, National Formulary, Homeopathic Pharmacopoeia or New and Non-Official Remedies, or in an equivalent manner, specified in regulations and the cost of which is in excess of an amount fixed by the Secretary. Nothing in this definition shall be construed to prevent any physician from prescribing by brand or trade name if the prescription bears a notation to the effect that no substitution may be made. Notwithstanding the preceding description of medical services in this subsection, such services shall also include that part of similar but of more expensive medical services as is equivalent in cost to such benefits.

"AGREEMENTS WITH PROVIDERS OF HEALTH SERVICES

"(d)(1)(A) The Secretary shall publish, at such time or times as he designates, a list of (i) hospitals, (ii) hospitals furnishing outpatient diagnostic services, (iii) nursing homes, and (iv) public or other nonprofit home health services agencies in the United States, which meet the standards prescribed by him for providing hospital services, diagnostic outpatient services, nursing home services, and home health services, and which have filed with him agreements under subparagraph (B) of this paragraph. No institution or agency required by or pursuant to State law to be licensed shall be included in any such list unless it is duly licensed. In setting eligibility standards for any class of institutions or agencies, the Secretary may take account of standards set by any recognized national listing or accrediting body. The Secretary may utilize the services of appropriate State agencies in determining whether providers of services meet such standards as he shall prescribe.

"(B) No hospital, nursing home, or home health service agency shall be included in a list under subparagraph (A) unless it has filed with the Secretary an agreement to make no charge to or on account of individuals or other persons for services for which such individuals are eligible to receive medical insurance benefits under this section (or to cancel any charge and refund any payment made prior to a determination of eligibility to receive such benefits), but such

agreements shall not preclude the making of charges to such individuals or persons for accommodations or services, furnished at their request, which are in addition to, or more expensive than, those for which patients are eligible to receive medical insurance benefits by reason of this section. An agreement under this paragraph may be terminated by the provider of health services at such time and upon such notice to the Secretary and to the public as he may specify by regulations.

"(C) No mental or tuberculosis hospital shall be included in a list under this paragraph.

"(2) (A) Any hospital, nursing home, or home health services agency, listed by the Secretary under paragraph (1) for providing a class of services, which provides services of that class to an individual eligible to receive medical insurance benefits under this section shall be entitled to receive payment for such services under this title. Under conditions specified in regulations, and in amounts determined in accordance therewith, payments shall be made to hospitals not listed by the Secretary for emergency hospital services rendered to individuals eligible to receive medical insurance benefits under this section.

"(3) Payments for hospital services and outpatient diagnostic services, to hospitals listed by the Secretary, shall be equal to the cost of rendering the services. The method or methods of determining such cost shall be prescribed by regulations, issued after consulation with the Advisory Council.

"(4) No payment shall be made under this section for any hospital services which the hospital is obligated by law, or by contract with the United States or a State or political subdivision thereof, to render at public expense and without regard to the income or resources of the patient. No such payment shall be made for any hospital services for any injury, disease or disability for which the patient is entitled to hospitalization (or to the cost thereof) under any workmen's compensation law; except that payment may be made if (A) an appropriate application for hospitalization (or for the cost thereof) has been made under the workmen's compensation law, (B) entitlement thereto has not been finally determined, and (C) an arrangement satisfactory to the Secretary has been made for reimbursement of the Federal Medical Insurance Trust Fund if the claim under the workmen's compensation law is finally sustained.

"(5) The amount of payments for nursing home services and for home health services shall be determined in accordance with regulations, issued after consultation with the Advisory Council. The method of determining the amount of the payments shall be based on the reasonable cost of rendering the services.

"(6) (A) Any pharmacy which employs one or more pharmacists who are licensed under the laws of the State in which it is located to dispense drugs at retail shall be eligible to enter into an agreement with the Secretary whereby such pharmacy will be paid for furnishing drugs to individuals eligible to receive medical insurance benefits under this section.

"(B) Such agreement shall apply only to the furnishing of 'very expensive drugs' as defined in subsection (c) (5), and shall relate only to the part of the cost of such drugs which exceeds such amount as may be fixed by the Secretary. The amount of the payments to any pharmacy for furnishing drugs to individuals under such an agreement shall be determined in accordance with regulations issued after consultation with the Advisory Council. The method of determining the amount of the payments shall be based on the reasonable cost of such drugs to such pharmacy plus such percentage of such costs as may be determined to provide adequate compensation to such pharmacy for its services in furnishing such drugs.

"(7) No supervision or control over the administration or operation, or over the selection, tenure, or compensation of personnel, shall be exercised under the authority of this section over any hospital, nursing home, home health services agency or pharmacy which has entered into an agreement under this section.

"(8) Agreements under this section shall be made with the hospital, nursing home, home health services agency or pharmacy providing the services described in subsection (c), but this paragraph shall not preclude representation of such institution or pharmacy by any individual, association, or organization authorized by the institution or agency to act on its behalf.

"(9) Nothing in such agreements or in this section shall be construed to give the Secretary supervision or control over the practice of medicine or the manner in which medical services are provided.

"(10) Except to the extent the Secretary has made provision pursuant to subsection (g) (relating to utilization of private nonprofit organizations) for the making of payments to providers of health services, he shall from time to time determine the amount to be paid to each provider of health services under an agreement with respect to the services furnished and shall pay such amount, except that such amount may be reduced or increased, as the case may be, by any sum by which the Secretary finds that the amount paid to such provider of health services for any prior period was greater or less than the amount which should have been paid to it for such period. The Secretary of the Treasury, prior to audit or settlement by the General Accounting Office, shall make payment from the Federal Medical Insurance Trust Fund, at the time or times fixed by the Secretary, in accordance with such certification.

"FREE CHOICE BY PATIENT

"(e) Any individual eligible to receive medical insurance benefits under this section may obtain hospital services, nursing home services, home health services, or diagnostic outpatient services from any provider of health services which is listed by the Secretary under subsection (d) (1) as eligible to provide the class of health services in question and which admits such individual or undertakes to provide him services; and may obtain very expensive drugs, upon such payment as may be required, from any pharmacy with which the Secretary has in effect an agreement under subsection (c) (6).

"NATIONAL MEDICAL INSURANCE BENEFITS ADVISORY COUNCIL

"(f) (1) For the purpose of advising and assisting the Secretary in the formulation of policy and the promulgation of regulations in connection with the administration of this section, there is hereby created a National Medical Insurance Benefits Advisory Council which shall consist of the Commissioner of Social Security and the Surgeon General of the Public Health Service, who shall serve as cochairman ex officio, and twelve members to be appointed by the Secretary. Not less than four of the appointed members shall be representatives of the general public, and the remainder of the appointed members shall be persons who are outstanding in the fields pertaining to hospitals and health activities. Each appointed member shall hold office for a term of four years, except that any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and the terms of office of the member first taking office shall expire, as described by the Secretary at the time of appointment, three at the end of the first year, three at the end of the fourth year after the date of appointment. An appointed member shall not be eligible to serve continuously for more than two terms but shall be eligible for reappointment if he has not served immediately preceding his reappointment. The Advisory Council is authorized to appoint such special advisory and technical committees as may be useful in carrying out its functions. Appointed members of the Advisory Council and members of its advisory or technical committees, while serving on business of the Advisory Council, shall receive compensation at rates fixed by the Secretary, but not exceeding $50 per day, and shall also be entitled to receive an allowance for actual and necessary travel and for subsistence expenses while so serving away from their places of residence. The Advisory Council shall meet as frequently as the Secretary deems necessary, but not less than once each year. Upon request of four or more members it shall be the duty of the Secretary to call a meeting of the Advisory Council.

"(2) The Advisory Council, or a technical committee appointed by the Council with the approval of the Secretary, shall have the duty of study and evaluation of the operation of this section. Any recommendations by the Council for amendment of this section shall be transmitted to the Congress by the Secretary.

"UTILIZATION OF PRIVATE NONPROFIT ORGANIZATIONS

"(g) (1) The Secretary may utilize, to the extent he finds economical and otherwise advantageous, the services of private nonprofit organizations which are exempt from Federal income taxation under section 501 of the Internal Revenue Code and which are skilled in dealing with hospitals in matters pertaining to hospitalization of individual patients and payment therefor. The Secretary is authorized to enter into an agreement with any such organization under which, in the whole or any part of the United States, the organization undertakes to determine (subject to such review as may be provided for in the agreement) the payments to hospitals required by this section and by regulations prescribed thereunder, and to make such payments, and to perform such other functions as may be deemed appropriate by the Secretary. The Secretary is authorized to utilize in similar manner the services of nonprofit organizations to determine and make payments, and to perform such other functions as he deems appropriate, in the provision of medical insurance benefits other than hospital services.

"(2) An agreement under paragraph (1) shall provide for payment from the Federal Medical Insurance Trust Fund to the organization of the amounts paid out by such organization to providers of health services under this section and of the cost of administration determined by the Secretary with the advice of the Advisory Council to be necessary and proper for carrying out such organization's functions under its agreement pursuant to this section. Such payments to any organization shall be made either in advance on the basis of estimates by the Secretary or as reimbursement, as may be agreed upon by the organization and the Secretary, and adjustments may be made in subsequent payments on account of overpayments or underpayments previously made to the organization under this section. Such payments shall be made by the Secretary of the Treasury from the Federal Medical Insurance Trust Fund at such time or times as the Secretary may specify and shall be made prior to audit or settlement by the General Accounting Office.

"(3) The Secretary with the advice of the Advisory Council shall prescribe stand-

ards relating to the certification of payments or the disbursement of funds by organizations entering into an agreement under this section.

"(4) The Secretary with the advice of the Advisory Council shall formulate procedures and prescribe standards relating to the certifying of payments and disbursing of funds made available to organizations under this section, and such procedures and standards shall be binding upon all organizations entering into such agreements.

"(5) An agreement under subsection (a) with any organization may require any of its officers or employees certifying payments or disbursing funds pursuant to the agreement, or otherwise participating in its performance, to give surety bond to the United States in such amount as the Secretary may deem necessary, and may provide for the payment of the cost of such bond from the Federal Medical Insurance Trust Fund.

"RULEMAKING POWERS OF THE SECRETARY

"(h) The Secretary, after consulting with the Advisory Council, shall have full power and authority to make rules and regulations and to establish procedures, not inconsistent with the provision of this section, which are necessary or appropriate to carry out such provisions, and shall adopt reasonable and proper rules and regulations to regulate and provide for the nature and extent of the proofs and evidence and the method of taking and furnishing the same in order to establish the right of individuals to medical insurance benefits hereunder.

"CERTIFYING AND DISBURSING OFFICERS

"(i) (1) No individual designated by the Secretary pursuant to an agreement under this section, as a certifying officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payments certified by him under this section.

"(2) No disbursing officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment by him under this section if it was based upon a voucher signed by a certifying officer designated as provided in paragraph (1)."

Federal medical insurance trust fund

(b) (1) The heading to section 201 of the Social Security Act is amended to read: "Federal old-age and survivors insurance trust fund, Federal disability insurance trust fund, and Federal medical insurance trust fund".

(2) Subsection (a) of section 201 of such Act is amended by inserting before the semicolon in paragraph (3) thereof the following: "and in clause (1) of subsection (c) of this section"; by inserting before the period in paragraph (4) thereof the following: "and in clause (2) of subsection (c) of this section"; by amending the last sentence thereof to read as follows: "The amounts appropriated by clauses (3) and (4) shall be transferred from time to time from the general fund in the Treasury to the Federal old-age and survivors insurance trust fund, the amounts appropriated by clauses (1) and (2) of subsection (b) shall be transferred from time to time from the general fund in the Treasury to the Federal disability insurance trust fund, and the amounts appropriated by clauses (1) and (2) of subsection (c) shall be transferred from time to time from the general fund in the Treasury to the Federal medical insurance trust fund, such amounts to be determined on the basis of estimates by the Secretary of the Treasury of the taxes, specified in clauses (3) and (4) of this subsection, paid to or deposited into the Treasury; and proper adjustments shall be made in amounts subsequently transferred to the extent prior estimates were in excess of or were less than the taxes specified in such clauses (3) and (4) of this subsection.

(3) Section 201 of such Act is further amended by redesignating subsections (c), (d), (e), (f), (g), and (h) as (d), (e), (f), (g), (h), and (i), respectively.

(4) Section 201 of such Act is further amended by adding after subsection (b) the following new paragraph:

"(c) There is hereby created on the books of the Treasury of the United States a trust fund to be known as the 'Federal Medical Insurance Trust Fund.' The Federal Medical Insurance Trust Fund shall consist of such amounts as may be appropriated to, or deposited in, such fund as provided in this section. There is hereby appropriated to the Federal Medical Insurance Trust Fund for the fiscal year ending June 30, 1961, and for each fiscal year thereafter, out of any moneys in the Treasury not otherwise appropriated, amounts equivalent to 100 per centum of—

"(1)(A) ½ of 1 per centum of the wages (as defined in section 3121 of the Internal Revenue Code of 1954) paid after December 31, 1960, and before January 1, 1972, and reported to the Secretary of the Treasury or his delegate pursuant to subtitle F of the Internal Revenue Code of 1954, which wages shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of wages established and maintained by such Secretary in accordance with such reports; and

"(B) ¾ of 1 per centum of the wages (as defined in section 3121 of the Internal Revenue Code of 1954) paid after December 31, 1971, and reported to the Secretary of the Treasury or his delegate pursuant to subtitle F of the Internal Revenue Code of 1954, which wages shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of wages established and maintained by such Secretary in accordance with such reports; and

"(2)(A) ⅜ of 1 per centum of the amount of self-employment income (as defined in section 1402 of the Internal Revenue Code of 1954) reported to the Secretary of the Treasury or his delegate on tax returns under subtitle F of the Internal Revenue Code of 1954 for any taxable year beginning after December 31, 1960, and before January 1, 1972, which self-employment income shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of self-employment income established and maintained by the Secretary of Health, Education, and Welfare in accordance with such returns; and

"(B) 9/16 of 1 per centum of the amount of self-employment income (as defined in section 1402 of the Internal Revenue Code of 1954) reported to the Secretary of the Treasury or his delegate on tax returns under subtitle F of the Internal Revenue Code of 1954 for any taxable year beginning after December 31, 1971, which self-employment income shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of self-employment income established and maintained by the Secretary of Health, Education, and Welfare in accordance with such returns."

(5) Subsection (d) of section 201 of such Act, as redesignated by paragraph (3) of this subsection, is amended by striking out "and the Federal Disability Insurance Trust Fund" and inserting in lieu thereof "the Federal Disability Insurance Trust Fund, and the Federal Medical Insurance Trust Fund".

(6) Subsection (g) of section 201 of such Act, as redesignated by paragraph (3) of this subsection, is amended to read as follows:

"(g) The interest on, and the proceeds from the sale or redemption of, any obligations held in the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, and the Federal Medical Insurance Trust Fund shall be credited to and form a part of the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, and the Federal Medical Insurance Trust Fund, respectively."

(7) Subsection (h) of section 201 of such Act, as redesignated by paragraph (3) of this subsection, is amended by striking out in the third sentence of paragraph (1) thereof "either or both" and inserting in lieu thereof "any or all"; by striking out in the fourth sentence of such paragraph "from one to the other of" and inserting in lieu thereof "among"; by striking out in the fifth sentence of such paragraph "from one to the other of" and inserting in lieu thereof "among".

(8) The last sentence of paragraph (2) of subsection (h), as redesignated by paragraph (3) of this subsection, is amended to read as follows: "Payments pursuant to the first sentence of this paragraph shall be made from the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, and the Federal Medical Insurance Trust Fund in the ratio in which amounts were appropriated to such Trust Funds under clause (3) of subsection (a) of this section, clause (1) of subsection (b) of this section, and clause (1) of subsection (c) of this section."

(9) Subsection (i) of section 201 of the Social Security Act, as redesignated by paragraph (3) of this subsection, is amended by inserting after the first sentence the following sentence: "Payments required to be made under section 226 shall be made only from the Federal Medical Insurance Trust Fund."

(10) Subsection (h)(1) of section 218 of such Act is amended by striking out "and (b)(1)" and inserting in lieu thereof ", (b)(1), and (c)(1)".

(11) Subsection (b) of section 1106 of such Act is amended by striking out "and the Federal Disability Insurance Trust Fund" and inserting in lieu thereof ", the Federal Disability Insurance Trust Fund, and the Federal Medical Insurance Trust Fund".

Effective Date

(c) Payments pursuant to section 226 of the Social Security Act, as added to such Act by subsection (a) of this section, shall be made only with respect to hospital services, nursing home services, home health services, diagnostic outpatient services furnished or very expensive drugs purchased after dates to be fixed by the Secretary, but such dates shall be, in the case of (1) hospital services, not earlier than July 1, 1961, or later than January 1, 1962, (2) nursing home services, not earlier than January 1, 1963, or later than July 1, 1963, (3) home health services, not earlier than January 1, 1962, or later than July 1, 1962, (4) diagnostic outpatient services, not earlier than July 1, 1961, or later than January 1, 1962, and (5) the purchase of very expensive drugs, not earlier than July 1, 1962, or later than January 1, 1963. The terms used in this section shall have the meaning assigned to them in title II of the Social Security Act.

TITLE II—MEDICAL BENEFITS FOR RETIRED AGED NOT ELIGIBLE FOR BENEFITS UNDER TITLE II

SEC. 201.(a) The Social Security Act is further amended by adding after title XV thereof the following new title:

"TITLE XVI—MEDICAL BENEFITS FOR THE RETIRED AGED NOT ELIGIBLE FOR BENEFITS UNDER TITLE II

"SEC. 1601. (a)(1) Every individual who—

"(A) has attained retirement age (as defined in section 216(a)),

"(B) is retired (as defined in paragraph (3)),

"(C) is a resident of the United States, and

"(D) is not eligible to receive medical insurance benefits under section 226,
shall be eligible to receive medical benefits. Payments of medical benefits shall be made in accordance with the provisions of this section, but only if application is filed for such payment in such form and in such manner and by such person as the Secretary may by regulation prescribe. The provisions of clause (B) shall not apply to any person (i) who is the husband or wife of an individual eligible to receive medical benefits and (ii) who was receiving more than one-half of his or her support from such individual for one year provided such year began no earlier than the calendar year preceding the year such person attained retirement age.

"(2) Payment of medical benefits shall be made for hospital services, nursing home services, home health services, diagnostic outpatient services, and very expensive drugs (as defined in section 226(c)).

"(3) For purposes of paragraph (1)—

"(A) Except as may be provided in subparagraph (B), an individual shall be retired with respect to the period for which he files for payment of medical benefits if—

"(i) he had total earnings (as defined in section 203(e)) of less than $2,000 in any calendar year preceding the year in which the first day of such period occurs, provided such calendar year is no earlier than the year preceding the year in which he attained retirement age, or

"(ii) he did not render services for wages of more than $100, and did not engage in self-employment in each of at least three months in any calendar year, provided such third month preceded the first day of such period and such calendar year is no earlier than the year preceding the year in which he attained retirement age, or

"(iii) he attained the age of seventy-two in a month prior to such period.

"(B) For the purposes of benefits for very expensive drugs, an individual shall be retired if on the first day of the month in which he incurs the cost of such drugs he meets the provisions of clause (i), (ii), or (iii) of subparagraph (A). Such first day shall be deemed the first day of the period for which he files for the payment of medical benefits.

For purposes of subparagraph (A)(ii), an individual shall be presumed not to have engaged in self-employment with respect to any month if, by applying the provisions of section 203(e) and the regulations issued thereunder, the Secretary determines that such individual did not engage in self-employment in such month, except that for such purposes the term 'substantial services', as used in paragraph (3)(B)(i) of such section 203(e), shall mean services rendered by such individual with respect to his trade or business in more than 7 days in such month.

"(4) Payment of medical benefits which an individual is eligible to receive may be made for—

"(A) hospital services furnished to such individual for a total of not more than 90 days in any calendar year;

"(B) nursing home services furnished to such individual for a total of not more than 135 days in any calendar year;

"(C) home health services furnished to such individual for a total of not more than 180 days.

"(D) diagnostic outpatient services but only to the extent the Secretary, after consultation with the Advisory Council, established pursuant to subsection 226 (f), may by regulation specify;

"(E) very expensive drugs furnished such individual, but only to the extent the Secretary, after consultation with such Advisory Council, may by regulation specify.

The maximum of any combination of hospital services, nursing home services, and home health services for which payment may be made for such services furnished, during any calendar year, to any individual eligible to receive medical benefits shall not exceed 90 units of services. For the purpose of the preceding sentence, one "unit of services" equals (i) one day of hospital services, (ii) one and one-half days of nursing home services, or (iii) two days of home health services.

"(5) Notwithstanding the previous provisions of this subsection, no individual shall be eligible to receive medical benefits insofar as they relate to hospital services, nursing home services, or home health services, unless such services are rendered after referral by a physician, and such physician certifies in writing that such hospital services, nursing home services, or home health services are or were required for his medical treatment except that such referral shall not be required for hospital services in case of an emergency which makes such referral impracticable. Periodic recertification that medical treatment which extends over a period of time is required shall, in accordance with regulations established by the Secretary, be a condition of continuing eligibility to receive such benefits during the period such services are furnished.

"(6)(A) An application for the payment of medical benefits shall be valid, with respect to a period during which one or more of the services described in section 226(c) are furnished, if such application is filed no earlier than the first day of the third month preceding the month in which the first day of such period occurs or no later than the last day of the twelfth month succeeding the month in which the first day of such period occurs. An application for the payment of medical benefits shall be valid with respect to the cost incurred for a very expensive drug if such application is filed within such time as the Secretary may by regulations prescribe.

"(B) For purposes of this section, a period during which—

"(i) hospital or nursing home services (or both) are furnished means a consecutive number of days (including only one day) in which such services are furnished;

"(ii) home health services are furnished means one or more days (but not exceeding 180 days in any calendar year) in which such services are furnished, but only if the number of days elapsing between any 2 days in which such services are furnished does not exceed 30;

"(iii) diagnostic outpatient services are furnished means one or more days (but not exceeding in any calendar year the number of days specified by the Secretary pursuant to paragraph (4)(D) of this subsection) in which such services are furnished, but only if the number of days elapsing between any two days in which such services are furnished does not exceed fourteen.

"Determinations of eligibility

"(b) The provisions of section 205 relating to the making and review of determinations shall be applicable to determinations as to (i) whether an individual is eligible to receive medical benefits, and (ii) the number of days, in any calendar year, for which an individual is eligible to receive such benefits.

"Incorporation of certain provisions of section 226

"(c) For the purposes of administering this title, the provisions of section 226 (d), (e), (f), (g), and (h) shall be applicable to this title, and for such purposes references in such subsections of section 226 to title II, medical insurance benefits, and section 226 (or any subsection, paragraph, or subparagraph thereunder) shall be deemed to refer to this title, medical benefits for which payment may be made under this section, and this section, respectively.

"Certifying and disbursing officers

"(d)(1) No individual designated by the Secretary pursuant to an agreement under this section as a certifying officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payments certified by him under this section.

"(2) No disbursing officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment by him under this section if it was based upon a voucher signed by a certifying officer designated as provided in paragraph (1).

"Appropriation

"SEC. 1602. There are hereby authorized to be appropriated to the Federal Medical Insurance Trust Fund for each fiscal year, beginning with the fiscal year ending June 30, 1962, out of any moneys in the Treasury not otherwise appropriated, such sums as the Secretary determines to be necessary to meet the payments made from such Trust Fund pursuant to this title with respect to individuals who are eligible to receive medical benefits under this title, plus interest accruing on such sums at the rate for each such fiscal year equal to the average rate of interest (as determined by the Managing Trustee) earned on the invested assets of such Trust Fund during the preceding fiscal year.

"Payments

"SEC. 1603. Payments required to be made under this title, as provided in section 1601, shall be made from the Federal Medical Insurance Trust Fund.

"Nonapplicability of this title

"SEC. 1604. The provisions of this title shall not apply to any individual (i) who is, or upon filing application would be, entitled to an annuity or a pension under the Railroad Retirement Act or (ii) who is receiving, or is eligible to receive, an annuity under the Civil Service Retirement Act, or (iii) who is the wife or dependent husband of an individual described in clauses (i) or (ii)."

Effective Date

(b) Payments pursuant to subsection (a) of this section shall be made only with respect to hospital services, nursing home services, home health services, diagnostic outpatient services furnished, or very expensive drugs purchased after dates to be fixed by the Secretary, but such dates shall be, in the case of (1) hospital services, not earlier than July 1, 1961, or later than January 1, 1962, (2) nursing home services, not earlier than January 1, 1963, or later than July 1, 1963, (3) home health services, not earlier than January 1, 1962, or later than July 1, 1962, (4) diagnostic outpatient services, not earlier than July 1, 1961, or later than January 1, 1962, and (5) the purchase of very expensive drugs, not earlier than July 1, 1962, or later than January 1, 1963. The terms used in this section shall have the meaning assigned to them in title II of the Social Security Act.

TITLE III—AMENDMENTS TO THE INTERNAL REVENUE CODE OF 1954

Changes in tax schedules

Self-Employment Income Tax

SEC. 301. (a) Section 1401 of the Internal Revenue Code of 1954 (relating to rate of tax on self-employment income) is amended to read as follows:

"SEC. 1401. RATE OF TAX:

"In addition to other taxes, there shall be imposed for each taxable year, on the self-employment income of every individual, a tax as follows:

"(1) in the case of any taxable year beginning after December 31, 1959, and before January 1, 1961, the tax shall be equal to

4½ percent of the amount of the self-employment income for such taxable year;

"(2) in the case of any taxable year beginning after December 31, 1960, and before January 1, 1963, the tax shall be equal to 4⅞ percent of the amount of the self-employment income for such taxable year;

"(3) in the case of any taxable year beginning after December 31, 1962, and before January 1, 1966, the tax shall be equal to 5⅝ percent of the amount of the self-employment income for such taxable year;

"(4) in the case of any taxable year beginning after December 31, 1965, and before January 1, 1969, the tax shall be equal to 6⅜ percent of the amount of the self-employment income for such taxable year;

"(5) in the case of any taxable year beginning after December 31, 1968, and before January 1, 1972, the tax shall be equal to 7⅛ percent of the amount of the self-employment income for such taxable year; and

"(6) in the case of any taxable year beginning after December 31, 1971, the tax shall be equal to 7⅝16 percent of the amount of the self-employment income for such taxable year."

Tax on Employees

(b) Section 3101 of such Code (relating to rate of tax on employees under the Federal Insurance Contributions Act) is amended to read as follows:

"SEC. 3101. RATE OF TAX:

"In addition to other taxes, there is hereby imposed on the income of every individual a tax equal to the following percentages of the wages (as defined in section 3121 (a)) received by him with respect to employment (as defined in section 3121 (b))—

"(1) with respect to wages received during the calendar year 1960, the rate shall be 3 percent;

"(2) with respect to wages received during the calendar years 1961 and 1962, the rate shall be 3¼ percent;

"(3) with respect to wages received during the calendar years 1963 to 1965, both inclusive, the rate shall be 3¾ percent;

"(4) with respect to wages received during the calendar years 1966 to 1968, both inclusive, the rate shall be 4¼ percent;

"(5) with respect to wages received during the calendar years 1969 to 1971, both inclusive, the rate shall be 4¾ percent; and

"(6) with respect to wages received after December 31, 1971, the rate shall be 4⅞ percent."

Tax on Employers

(c) Section 3111 of such Code (relating to rate of tax on employers under the Federal Insurance Contributions Act) is amended to read as follows:

"SEC. 3111. RATE OF TAX:

"In addition to other taxes, there is hereby imposed on every employer an excise tax, with respect to having individuals in his employ, equal to the following percentages of the wages (as defined in section 3121(a)) paid by him with respect to employment (as defined in section 3121(b))—

"(1) with respect to wages paid during the calendar year 1960, the rate shall be 3 percent;

"(2) with respect to wages paid during the calendar years 1961 and 1962, the rate shall be 3¼ percent;

"(3) with respect to wages paid during the calendar years 1963 to 1965, both inclusive, the rate shall be 3¾ percent;

"(4) with respect to wages paid during the calendar years 1966 to 1968, both inclusive, the rate shall be 4¼ percent;

"(5) with respect to wages paid during the calendar years 1969 to 1971, both inclusive, the rate shall be 4¾ percent; and

"(6) with respect to wages paid after December 31, 1971, the rate shall be 4⅞ percent."

TITLE IV—MISCELLANEOUS PROVISIONS

Declaration of policy on railroad retirement and civil service annuitants

SEC. 401. It is hereby declared to be the policy of the Congress in enacting this Act to include as many retired people as possible under the type of program established by this Act and to provide that their benefits should, to the extent possible, be financed by contributions made by them (and their employers) during their working years. To further this policy, the Congress should take action as soon as possible to make available to persons receiving annuities under the Railroad Retirement Act and the Civil Service Retirement Act a program under which such individuals can obtain the same type of services made available by this Act to those who are receiving old-age and survivors insurance benefits.

Study of health needs of individuals

SEC. 402. Section 702 of the Social Security Act is amended by inserting "(a)" after "702"; by adding at the end thereof the following new subsection:

"(b) The Secretary shall conduct a continuing study and investigation of the health needs of individuals who have reached retirement age, and the means by which such needs may most effectively and efficiently be met. In connection with such study and investigation, the Secretary shall institute and conduct appropriate demonstration programs relating to the health needs of such individuals and the manner and means by which such needs may be fulfilled. The Secretary is authorized to provide for the carrying on of such research studies pertaining to health care and the administration of such care as may be recommended by the Advisory Council designated pursuant to section 226(f). Such research studies may be carried on directly by the Department of Health, Education, and Welfare, by others under contracts negotiated for, or grants made by the Secretary for, such purpose."

SEC. 403. As used in the provisions of the Social Security Act, amended by this Act, the term "Secretary" means the Secretary of Health, Education, and Welfare.

Mr. McNAMARA. Mr. President, I further ask unanimous consent that the bill lie on the desk for 4 calendar days, in order to afford other Senators an opportunity to cosponsor it.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF NATIONAL HOUSING ACT

Mr. BUSH. Mr. President, by request, on behalf of the Senator from Indiana [Mr. CAPEHART] and myself, I introduce, for appropriate reference, an administration housing bill.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3504) to amend the National Housing Act to remove certain limitations on the aggregate amount of outstanding mortgage insurance, introduced by Mr. BUSH (for himself and Mr. CAPEHART, by request), was received, read twice by its title, and referred to the Committee on Banking and Currency.

Mr. BUSH. Mr. President, I ask unanimous consent that a statement in connection with the bill be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON BILL TO REMOVE CERTAIN LIMITATIONS ON FHA'S MORTGAGE INSURANCE AUTHORIZATION

This bill would remove the limitation on the aggregate amount of the Federal Housing Administration's General Mortgage Insurance Authorization and the separate limitation on the amount of FHA mortgage insurance under title II of the National Housing Act. With respect to insurance now subject to the general mortgage insurance authorization, the effect of the bill would be to authorize the FHA to insure all loans submitted at any time by private lenders if the loans conform to the standards established by Federal law and by FHA rules. The amendment would not remove the separate limitation on the aggregate amount of FHA mortgage insurance which may be outstanding under title VIII of the Act (military housing) or on the amount of property improvement loan insurance which may be outstanding under title I of the Act.

This bill is designed to allow both the FHA and the homebuilding industry to operate in the future without needless interruption or uncertainty concerning the availability of FHA assistance for loans which are eligible under applicable law and regulations. Congress would be relieved of the necessity to act on authorization requests virtually every year or two. Of course, the Congress would in no way be precluded from restoring such a limitation or from liberalizing or tightening FHA mortgage insurance terms, including per room or per unit mortgage ceilings, maximum maturities, and maximum ratios of loan amounts to cost or value. Such changes in permissible mortgage terms can always be made by the Congress to meet changing economic conditions. These changes in terms, if wisely made, automatically have a desirable effect on the volume of FHA mortgage insurance business. By contrast, fixed ceilings on the total insurance authorization merely serve to disrupt the homebuilding industry from time to time when authorizations run out.

The FHA has run out of needed insurance authorization with respect to one or more of its programs about 25 times while noncontroversial increases or time extensions were delayed. In some cases a single special program, having a small impact on the building and lending industries, was affected for a short period of time. In other cases there was a serious impact on total housing construction. In 1950 there was a 6-week delay and in 1951 there was a 10-week delay in obtaining needed authority.

During many of these occasions in the past, the FHA was forced to maintain daily controls through its central Washington Office to assure that new mortgage insurance written in its field offices did not exceed repayments under existing insured mortgages. More recently, from October 16, 1958, to September 24, 1959, the FHA, in lieu of issuing actual insurance commitments, issued "agreements to insure" at such time as mortgage insurance authority later became available. However, the "agreements to insure" were not a satisfactory substitute for adequate insurance authority, and in any case they are no longer permitted as a result of legislation enacted in 1959.

The rationing of FHA commitments or delays in processing commitments which result whenever FHA mortgage insurance authorization runs out are extremely disturbing to the homebuilding and lending industries. This is especially true because housing production involves many months of time needed for general planning, land acquisition, and the preparation of detailed

plans and specifications. Both builders and lenders want to be sure that FHA insurance authorization will be available when their long-range building plans are completed and new homes are ready for sale.

Even more important is the fact that the uncertainties and delays ultimately cause hardship to consumers, both indirectly because of the disturbance to the market and directly because consumers need to know the terms at which financing will be available to them.

It is to be noted that the purpose of this bill is to provide long-term assurance of availability of FHA mortgage insurance, rather than any immediately needed authorization. Estimates made on the basis of current tendencies in the market indicate that the existing FHA authorization should be adequate to carry into the next session of the Congress.

LOANS TO SCHOOLTEACHERS FOR SUMMER SCHOOL COURSES—EXTENSION OF TIME FOR BILL TO LIE ON DESK

Mr. YARBOROUGH. Mr. President, on yesterday I introduced the bill (S. 3481) to amend the National Defense Education Act of 1958 in order to make student loans under title II of such act available to teachers attending summer sessions in institutions of higher education. At that time I obtained unanimous consent that the bill lie on the table until tomorrow, Saturday, for additional cosponsors. I now ask unanimous consent that the time for the bill to lie on the desk be extended until the close of business on Monday next.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

AGREEMENT WITH INDIA FOR AVOIDANCE OF DOUBLE TAXATION—REMOVAL OF INJUNCTION OF SECRECY

Mr. MANSFIELD. Mr. President, there was transmitted to the Senate today by the President of the United States Executive H, 86th Congress, 2d session, being an agreement between the United States of America and India for the avoidance of double taxation with respect to taxes on income, signed at Washington on November 10, 1959. I ask unanimous consent that the injunction of secrecy be removed from the agreement, and that the agreement, together with the President's message, be referred to the Committee on Foreign Relations, and that the President's message be printed in the RECORD.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana? The Chair hears none, and it is so ordered.

The message from the President is as follows:

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith an agreement between the United States of America and India for the avoidance of double taxation with respect to taxes on income, signed at Washington on November 10, 1959.

I transmit also for the information of the Senate the report by the Acting Secretary of State and an exchange of notes between the American Embassy at New Delhi and the Ministry of Foreign Affairs of India with respect to the proposed agreement.

The agreement has the approval of the Department of State and the Department of the Treasury.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 6, 1960.*

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. HUMPHREY:

Excerpts from address delivered by him at West Virginia University on May 5, 1960.

AMENDMENT OF MOTOR VEHICLE SAFETY RESPONSIBILITY ACT OF THE DISTRICT OF COLUMBIA

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business, which is S. 2131.

The Senate resumed the consideration of the bill, S. 2131, to amend the Motor Vehicle Safety Responsibility Act of the District of Columbia, approved May 25, 1954, as amended.

TRIBUTE TO SENATOR JAMES MURRAY

Mr. O'MAHONEY. Mr. President, well do I remember Senator JAMES MURRAY's coming to the Senate in 1934. A resurgence of liberalism was pulsating throughout the country and the liberals in the Senate, of which I counted—and still count—myself one, were most gratified to welcome the able new Member to our group as successor to another outstanding western liberal, Senator Thomas Walsh.

The light of liberalism burned brightly in the new man from Montana, and from that day to this JIM MURRAY has never deviated from the course of true liberalism. His liberalism has not been of the shouting type which seeks to ride roughshod over any opposition; it has always been the basic, progressive kind that seeks to obtain for all citizens opportunity for sharing to the fullest extent the rich life of our great country.

He has fought many a good fight for liberal causes, and I have been more than proud to be associated with him in these. One achievement I recall with deep satisfaction is the enactment of the Employment Act of 1946, in the introduction of which I joined Senator Murray; Senator Robert A. Wagner, Democrat, of New York; Senator Elbert Thomas, Democrat, of Utah; Senator Wayne Morse, Republican, of Oregon; Senator Charles W. Tobey, Republican, of Vermont; Senator George Aiken, Republican, of Vermont, and Senator William Langer, Republican, of North Dakota. This was the law which established the Council of Economic Advisers to the President and the Joint Economic Committee.

That was in 1946. Six years earlier Senator MURRAY, realizing the mounting pressures on small businesses, pressures which threatened the existence of these independent American organizations, introduced a resolution creating the Select Committee on Small Business; he served as the first chairman of the group and thereby did yeoman service to the cause of free enterprise.

In the same vein he sponsored the Smaller War Plants Corporations Act, to enable modest private plants to share in government contracts.

These outstanding achievements in the battle to preserve our free American economy are only a few examples of JIM MURRAY's contribution to true American liberalism. The country, as well as the citizens of Montana, owe a deep debt of gratitude to him for these accomplishments.

The same vision that inspired JIM MURRAY, through his long and fruitful career, to promote liberal ideas that provide opportunity for all has been responsible for his effective championship of natural resource development, on which the prosperity and welfare of our Western States, indeed our very national survival, may well depend.

JIM MURRAY has always labored for the development of the resources of our great West—the water, the soil, the timber, the oil and other minerals. I am proud to be one of those who have worked with him for these objectives.

Finally, I pay tribute to JIM MURRAY, the man and friend. I count him a close personal friend and I take deep pride in that fact. My service in the Senate, as that of many Senators, has been enriched by his strength of character, his kindness, his unfailing courtesy under every circumstance. My friendship with him will not cease with his retirement from the Senate; it will endure through the years ahead, a relationship I shall ever cherish.

AMENDMENT OF FEDERAL DEPOSIT INSURANCE ACT TO PROVIDE SAFEGUARDS AGAINST MERGERS AND CONSOLIDATIONS OF BANKS

Mr. JOHNSON of Texas. Mr. President, for the information of all Senators, I believe the distinguished Senator from Arkansas [Mr. FULBRIGHT], former chairman of the Committee on Banking and Currency, in the absence of the Senator from Virginia [Mr. ROBERTSON], who is absent because of a death in his family, is prepared to make a motion in connection with the bank merger bill.

I do not believe it will take very long. It is not controversial. However, I ask unanimous consent that the Senator from Arkansas may make the motion at this time, and that there be not to exceed 5 minutes debate, pro and con.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). Is there objection? The Chair hears none, and it is so ordered.

Mr. FULBRIGHT. Mr. President, I ask that the Chair lay before the Senate

a message from the House on the bill S. 1062 with the amendment of the House thereto.

The PRESIDING OFFICER laid before the Senate the amendments of the House of Representatives to the bill (S. 1062) to amend the Federal Deposit Insurance Act to provide safeguards against mergers and consolidations of banks which might lessen competition unduly or tend unduly to create a monopoly in the field of banking, which were, to strike out all after the enacting clause and insert:

That subsection (c) of section 18 of the Federal Deposit Insurance Act is amended by striking out the third sentence and inserting in lieu thereof the following: "No insured bank shall merge or consolidate with any other insured bank or, either directly or indirectly, acquire the assets of, or assume liability to pay any deposits made in, any other insured bank without the prior written consent (i) of the Comptroller of the Currency if the acquiring, assuming, or resulting bank is to be a national bank or a District bank, or (ii) of the Board of Governors of the Federal Reserve System if the acquiring, assuming, or resulting bank is to be a State member bank (except a District bank), or (iii) of the Corporation if the acquiring, assuming, or resulting bank is to be a nonmember insured bank (except a District bank). Notice of any proposed merger, consolidation, acquisition of assets, or assumption of liabilities, in a form approved by the Comptroller, the Board, or the Corporation, as the case may be, shall (except in a case where the furnishing of reports under the seventh sentence of this subsection is not required) be published, at appropriate intervals during a period (prior to the approval or disapproval of the transaction) at least as long as the period allowed under such sentence for furnishing such reports, in a newspaper of general circulation in the community or communities where the main offices of the banks involved are located (or, if there is no such newspaper in any such community, then in the newspaper of general circulation published nearest thereto). In granting or withholding consent under this subsection, the Comptroller, the Board, or the Corporation, as the case may be, shall consider the financial history and condition of each of the banks involved, the adequacy of its capital structure, its future earnings prospects, the general character of its management, the convenience and needs of the community to be served, and whether or not its corporate powers are consistent with the purposes of this Act. In the case of a merger, consolidation, acquisition of assets, or assumption of liabilities, the appropriate agency shall also take into consideration the effect of the transaction on competition (including any tendency toward monopoly), and shall not approve the transaction unless, after considering all of such factors, it finds the transaction to be in the public interest. In the interests of uniform standards, before acting on a merger, consolidation, acquisition of assets, or assumption of liabilities under this subsection, the agency (unless it finds that it must act immediately in order to prevent the probable failure of one of the banks involved) shall request a report on the competitive factors involved from the Attorney General and the other two banking agencies referred to in this subsection (which report shall be furnished within thirty calendar days of the date on which it is requested, or within ten calendar days of such date if the requesting agency advises the Attorney General and the other two banking agencies that an emergency exists requiring expeditious action). The Comptroller, the Board, and the Corporation shall each include in its annual report to the Congress a description of each merger, consolidation, acquisition of assets, or assumption of liabilities approved by it during the period covered by the report, along with the following information: the name and total resources of each bank involved; whether a report has been submitted by the Attorney General hereunder, and, if so, a summary by the Attorney General of the substance of such report; and a statement by the Comptroller, the Board, or the Corporation, as the case may be, of the basis for its approval.

And to amend the title so as to read: "An Act to amend the Federal Deposit Insurance Act to require Federal approval for mergers and consolidations of insured banks."

Mr. FULBRIGHT. Mr. President, I move that the Senate concur in the amendment of the House.

Senate bill 1062 was introduced on February 16, 1959. It was sponsored by the Senator from Virginia [Mr. ROBERTSON], the Senator from Indiana [Mr. CAPEHART] and myself. S. 1062 was based on bills which had previously passed the Senate, S. 3911, 84th Congress, in 1956, and section 23 of title III of the financial institutions bill, S. 1451, 85th Congress, in 1957.

The Banking and Currency Committee held hearings on S. 1062. The committee considered the bill thoroughly and amended it to require reports from the Attorney General on prospective mergers.

The Senate debated the bill thoroughly and amended it to require semiannual reports to Congress on approved mergers.

The House Banking and Currency Committee held hearings and made a number of additional amendments, which I will discuss later. The bill, as amended by the House committee, passed the House on April 4, 1960.

Since the bill has already been thoroughly considered by the Senate, it is not necessary to discuss at length the reasons for the bill—the great number of mergers which have recently been taking place and the vast resources involved in these mergers; and the fact that many bank mergers are subject to virtually no control, and even those which are subject to control are not covered by clear standards with respect to competitive factors.

On previous occasions when the Senate has considered bank merger bills, the principal issue has been whether bank mergers should be regulated by the Federal bank supervisory agencies—the Comptroller of the Currency in the case of national banks, the Board of Governors of the Federal Reserve System in the case of State member banks, and the FDIC in the case of insured nonmember banks—on the basis of banking factors and competitive factors, like other regulated industries; or whether bank mergers should be subject to the antimerger provisions of section 7 of the Clayton Act, like ordinary nonregulated industrial or commercial enterprises.

As it passed the Senate, S. 1062 expressed the view of the Senate, for the third time, that bank mergers should be regulated by the Federal banking agencies on the basis of banking factors and competitive factors, with no single factor being in itself controlling. S. 1062 was a clear statement, for the third time, of the Senate's view that the provisions of section 7 of the Clayton Act should not apply to bank mergers.

The amendments to S. 1062 made by the House do not change this aspect of the bill. The House has agreed with the Senate that bank mergers should be controlled by the Federal banking agencies on the basis of both banking factors and competitive factors, and that section 7 of the Clayton Act should continue to be inapplicable to bank mergers.

Banking is regulated and subject to many controls not applicable to the ordinary industrial or commercial enterprise: entry into the field of banking is restricted; the establishment of branches is restricted; and the practices and procedures of banking, from the payment of interest on deposits to the kinds of loans made and the reserves which must be maintained, are closely regulated and controlled. Competition in banking is desirable and beneficial; but unrestricted competition in banking, with the bank failures which would result, is no more possible than it is in the field of public utilities or other industries affected to a greater or lesser extent with the public interest. Banking is too important to depositors, to borrowers, to the Government, and the public generally, to permit unregulated and unrestricted competition in that field.

The antitrust laws have reflected an awareness of the difference between banking and other regulated industries on the one hand, and ordinary unregulated industries and commercial enterprises on the other hand. The 1950 amendment to section 7 of the Clayton Act, which for the first time imposed controls over mergers by means other than stock acquisitions, did not apply to bank mergers which are practically invariably accomplished by means other than stock acquisition. Accordingly for all practical purposes bank mergers have been and still are exempt from section 7 of the Clayton Act.

It is not clear whether the Sherman Antitrust Act of 1890 would now be held to apply to banking in general and to bank mergers in particular, though it seems clear that Senator John Sherman, the former Secretary of the Treasury, for whom the act was named, and the 51st Congress, did not expect or intend banking to be covered by an act applicable to interstate commerce. And even if the Sherman Act is held to apply to banking and to bank mergers, it seems clear that under the rule of reason spelled out in the Standard Oil case, different considerations will be found applicable, in a regulated field like banking, in determining whether activities would "unduly diminish competition," in the words of the Supreme Court in that case.

I should like to explain the amendments made by the House in more detail.

The House committee bill, which was passed by the House under suspension of rules on April 4, is a complete substitute for S. 1062.

Both bills require the appropriate banking agency to consider the six banking factors set forth in the Federal Deposit Insurance Act. These are: First, the financial history and condition of each of the banks involved; second, the adequacy of its capital structure; third, its earnings prospects; fourth, the general character of its management; fifth, the convenience and needs of the community to be served; and sixth, whether the bank's corporate powers are consistent with the purposes of the Federal Deposit Insurance Act. S. 1062 incorporated these factors by reference; the House amendment lists them.

S. 1062, as passed by the Senate, added a seventh factor to be considered: whether the transaction would "unduly lessen competition or tend unduly to create a monopoly." The House bill substitutes for this the requirement that "the appropriate agency shall also take into consideration the effect of the transaction on competition—including any tendency toward monopoly."

The House amendment goes on to provide that the merger "shall not" be approved unless, "after considering all such factors, it—the agency—finds the transaction to be in the public interest."

The House amendment, like the Senate version of S. 1062, makes it clear that the banking factors and the competitive factors must be considered by the banking agencies. The House amendment, like the Senate version of S. 1062, makes it clear that no one of these factors is controlling. In any given merger, competitive factors unfavorable to the merger may be outweighed by banking factors favorable to the merger, and competitive factors favorable to the merger may outweigh banking factors unfavorable to the merger. All of these seven factors must be considered and weighed together, and the merger should be approved only if, after consideration of all of these factors, the net result is in favor of the proposal.

This balancing of favorable and unfavorable banking factors along with favorable and unfavorable competitive factors, with no one of them being overlooked and no one of them being controlling, was just what was meant by the Senate when it used the word "unduly" in referring to the competitive factors. I am satisfied that the House has reached just the same result the Senate reached three times before.

This is made clear at pages 11 and 12 of the House report, where it is stated that:

> Your committee is convinced the Senate's approach is basically sound. Where demonstrable benefits would flow from a proposed merger, these should be weighed against any adverse effect on competition. Your committee feels, however, that the language of the Senate bill can be improved, to insure that the intent indicated in the legislative history of the bill in the Senate will be properly carried out. Your committee concurs with the Senate committee report's repeatedly expressed intent to allow approval of bank mergers that would be in the public interest.
>
> After all the factors have been weighed, the transaction should be approved only if the supervisory agency is satisfied that, on balance, its effect will be beneficial.

This understanding was also expressed by Representative BROWN, chairman of the subcommittee which handled the bill, in presenting the bill to the House at page 7258 of the CONGRESSIONAL RECORD. Representative BROWN said:

> In determining whether a merger is in the public interest, the banking agency will consider the several factors listed in the bill; after weighing them, the agency will determine whether the net balance is favorable or unfavorable, and will approve the merger only if the merger is in the public interest in the sense that this balance is favorable.

The PRESIDING OFFICER. The time of the Senator from Arkansas has expired.

Mr. FULBRIGHT. Mr. President, I ask that I may have 3 additional minutes.

Mr. JOHNSON of Texas. Mr. President, I yield 3 minutes to the Senator from Arkansas.

Mr. FULBRIGHT. I was quoting from Representative BROWN's explanation of the purpose and meaning of the phrase "in the public interest."

The phrase "in the public interest" as used in S. 1062 is not independent; it is not isolated. The phrase is specifically and clearly tied in with the banking and competitive factors which are specifically listed in the bill. The language of the bill is entirely clear on this point:

> The agency shall not approve the transaction unless, after considering all of such factors, it finds the transaction to be in the public interest.

This distinguishes the phrase "in the public interest," as here used, from comparable phrases in other statutes where the phrase, "consistent with the public interest," is used as a general standard without reference to specific factors.

The phrase, "in the public interest," is not a new standard itself. It is not an eighth factor. It does not call for a separate finding that a proposed merger is "in the public interest," aside from the banking factors and competitive factors which must be considered. The phrase is used only to indicate that if the merger is to be approved, the weighing of the seven specified factors must have resulted in a finding favorable to a merger.

The requirement that a favorable finding must be made if the merger is to be approved means only that a beneficial result must appear after the weighing of the seven specific factors set forth in the bill. It does not require the agency to go beyond these seven factors and find an independent and separate public interest in the merger.

The requirement of a favorable finding after weighing these seven factors does not seem out of place in this legislation. A favorable finding would have to be made, for example, in other cases which the banking agencies must consider, such as the chartering of a new bank. It is this distinction between banking and other businesses which justifies different treatment for bank mergers and other mergers. It was this distinction that led the Senate to reject the flat prohibition of the Clayton Act test which applies to other mergers.

Furthermore, with respect to the requirement of a favorable finding, it is clear this question remains entirely within the determination of the Federal banking agency passing upon the merger, to be based upon its weighing of the six "banking" factors and the "competitive" factor.

The Senate version of S. 1062 required the banking agency considering a merger to obtain a report from the Attorney General on the competitive factors involved in the merger. This report was required in order that the Attorney General's knowledge and background of experience in the field of anticompetitive and monopolistic matters should be made available to the banking agencies in their consideration of bank mergers. At the same time, it was made clear that the Attorney General's report on competitive factors was limited to this one aspect of the proposed merger. The Attorney General was not expected to consider or report on the various banking factors involved, nor was he expected to make any recommendation as to the action the banking agencies should take on the basis of consideration of all of the factors involved. Under these circumstances, while cooperation is, of course, expected between the banking agencies and the Justice Department, it is not intended that this provision should give the Justice Department free entry to the files of the banking agencies. It is not intended that the Justice Department would have any occasion to examine the banking agencies' files relating to the banking factors under consideration, and in particular, it is expected that the banking agencies will continue to give the bank examiners' reports the same confidential treatment which the Department of Justice gives to FBI reports.

The House made several amendments to the bill with respect to the mechanics of consultation among the banking agencies. The procedure for obtaining the views of the other two banking agencies, by the banking agency which has final responsibility, is made to conform with the procedure for obtaining a report from the Attorney General. Under the House bill, the supervisory agency having jurisdiction can act to save a failing bank without seeking the views of the other banking agencies; and the other banking agencies are required to submit their views within 30 days, or within 10 days if an emergency exists. The House amendment also provides that the reports of the other banking agencies shall be requested only on the competitive factors, rather than on all factors to be considered, including the banking factors.

The Senate bill required semiannual reports of the bank supervisory agencies; the House amendment provides instead for including this information in the agencies' annual reports. The Senate bill provided for a summary by the banking agencies of the Attorney General's reports; the House amendment makes it clear that the summary should be prepared by the Attorney General.

An entirely new provision in the House amendment is a requirement that notice

of a proposed merger be published in a newspaper of general circulation in the community or communities where the main offices of the banks involved are located. In the normal case, the notice must be published at least 30 days before the banking agency approves or disapproves the merger, with exceptions for emergency situations. A similar requirement now exists for national bank mergers and for bank holding company acquisitions.

I have consulted with members of the Senate Committee on Banking and Currency who would be conferees if the bill were to be sent to conference, and we are agreed that the Senate should agree to the House amendments.

I should add that I believe this bill, providing for effective regulation of bank mergers for the first time, is a significant accomplishment. We have tried for a long time to enact sound legislation on this subject and I trust we shall now be successful.

I move that the Senate concur in the House amendments to the bill, S. 1062.

During the delivery of Senator FULBRIGHT's remarks,

Mr. BENNETT. Mr. President, will the Senator from Arkansas yield?

Mr. FULBRIGHT. I yield.

Mr. BENNETT. We are now operating under a strict time limitation. As the Senator from Arkansas knows, the chairman of the committee, the Senator from Virginia [Mr. ROBERTSON] and I prepared a set of questions and answers in order to set forth and make clear our understanding of the purpose and effect of the bill.

Mr. FULBRIGHT. Yes. That is correct. The Senator from Virginia [Mr. ROBERTSON] prepared answers to several questions which the Senator from Utah [Mr. BENNETT] had posed. These answers represent the views of the Senator from Virginia, who is chairman of the Committee on Banking and Currency and the Subcommittee on Banking. Other members of the committee have considered these questions and answers and they represent, I am satisfied, the committee's understanding of the bill, and the correct understanding of the bill.

Mr. BENNETT. Mr. President, in order to make clear to the banking agencies, which will administer this act, the understanding and intention of the Senate in accepting the amendments of the House and passing the amended bill, I ask unanimous consent that this set of questions and answers be printed in the RECORD following the statement by the Senator from Arkansas, as though I had asked the questions and the Senator from Arkansas had made the answers.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXHIBIT 1

BANK MERGER BILL

Question. As I understand it, this bill is not directed against nor intended to proscribe or limit size as such, without regard to the banking and competitive tests set forth in the bill, and hence a merger of two large banks should be approved if found to be in the public interest under the tests set down in the bill. Suppose, for example, a situation where such a merger would increase the extent, quality, and efficiency of services rendered to the public, enhance local, regional, or national competition, and meet all the other specific tests in the bill, would not such a merger be considered to be in the public interest under this bill, regardless of size?

Answer. Yes. The bill is not directed against size as such, nor does it impose limits on the size of banks. Size may be, of course, an element to be considered as part of the banking tests and as part of the competitive test under the bill. But it is not controlling. If a merger of two large banks qualifies under the tests set forth in the bill, it should be approved and it will be approved, no matter how big the two banks may be.

Question. The competitive factor in the bill I take to refer, in appropriate cases, not only to local but also to State, regional, and national competitive effect. Is this correct?

Answer. Yes. The Federal banking agency reviewing a proposed merger should consider whatever field of competition the merging banks are engaged in and the new bank will engage in. Some banks are engaged only in local competition. Other banks are primarily engaged in regional competition. Other banks engage in national or international competition. The field of competition which is actually involved is the field which should be given consideration in reviewing a merger. This is true also of the Justice Department reports on the competitive factors involved in the merger. These, too, should be concerned with the kinds of competition the two banks are now engaged in and the kind of competition the merged banks will be engaged in.

Question. In considering a proposed merger, should the needs of the community and the area and the country as a whole for increased financial services resulting from an expanding economy be considered?

Answer. Yes. The Federal banking agency reviewing a merger under S. 1062 would certainly give due regard to the adequate accommodation of the growing capital requirements of an expanding economy in the community, in the area, and in the country generally. This would not, of course, be the controlling factor any more than any other single factor and, of course, other means of providing increased financial services would be borne in mind.

But there is no question that the Federal banking agency should give due regard to the adequate accommodation of the growing capital requirements of an expanding economy.

Question. In considering a proposed merger, would the responsible Federal banking agency be able to take into consideration the competition which the merging banks face, and the merged bank would face, from other kinds of financial institutions—savings and loan associations, credit unions, insurance companies, finance companies, and the like?

Answer. Yes, indeed. All competition which the merging banks now face, and which the merged bank would face, must be taken into consideration by the banking agency. This includes both competition from other banks and trust companies and competition from other financial institutions which may provide the same or similar services. It includes competition for the public's funds, in the form of deposits, savings accounts, and the like, and it includes competition in supplying the public's needs for funds in the way of personal loans, consumer credit, mortgages, business loans, and so on.

Question. Mergers already effected have given some banks distinct competitive advantages because of increased lending limits, increased quantity and quality of services, increased availability of highly specialized and technical personnel, and increased overall resources. Other banks have not so grown in size through mergers because of lack of feasible merger opportunities, State laws, management policy, or other reasons. If the effect of the adoption of this bill is to discriminate against these latter banks and thereby to affect adversely their future opportunity to acquire or regain reasonable competitive equality through merger, then we shall be protecting and making permanent a competitive advantage or, a kind of monopolistic position. It is my understanding that such a discriminatory result is not intended, and that the competitive test in this bill should not be so construed. Is that correct?

Answer. S. 1062 is not intended to have any discriminatory results. It is not intended to discriminate against banks which have been unable to merge in the past because of State laws or any other reasons. The fact that a bank has been unable to merge in the past, and therefore is at a competitive disadvantage with other banks, is something which can be and should be taken into consideration by the banking agency reviewing a merger application. The bill is not intended to prevent banks which have not been able to merge from acquiring or regaining reasonable competitive equality through merger.

Of course, this does not mean that merely because a bank was unable to grow by merger before the enactment of S. 1062, it would thereby have a right to engage in a merger which otherwise would be ruled out by the standards of S. 1062. The standards set forth in S. 1062 are the controlling tests; the competitive disadvantage which a bank is suffering from because it could not previously merge is to be considered as just one of the factors entering into these tests.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. JAVITS. I ask unanimous consent that a letter I have received from Mr. J. Russell Clark, superintendent of banks of New York, be printed at this point in the RECORD. Mr. Clark raises two questions, which have been written out for Senator ROBERTSON, together with Senator ROBERTSON'S answers to those questions. If the Senator from Arkansas agrees—and I understand that he does—I ask unanimous consent that the questions and answers may also be printed at this point in the RECORD.

Mr. FULBRIGHT. That is correct. The Senator from Virginia [Mr. ROBERTSON] prepared answers to the questions posed by the Senator from New York [Mr. JAVITS]. In order to make clear to the banking agencies which will administer this act the understanding and intention of the Senate in passing this bill, I join in the request of the Senator from New York [Mr. JAVITS].

There being no objection, the letter and the questions and answers were ordered to be printed in the RECORD, as follows:

STATE OF NEW YORK,
BANKING DEPARTMENT,
New York, N.Y., April 28, 1960.

HON. JACOB J. JAVITS,
Committee on Labor and Public Welfare,
U.S. Senate, Washington, D.C.

DEAR SENATOR JAVITS: Reference is made to your letter of April 11, 1960, requesting my views and comments on S. 1062, as amended by the House of Representatives.

I believe the amendments to such bill effected by the House of Representatives to be most constructive and desirable. The criteria specified under the bill is quite similar

to the criteria that we in New York are required to consider in approving or disapproving bank mergers, as well as applications to form or to expand bank holding companies. Moreover, such criteria are similar to those required to be considered by the Board of Governors of the Federal Reserve System under the Bank Holding Act of 1956. I personally believe there should be no substantial difference between the criteria to be considered in approving or disapproving a merger and those to be considered in approving or disapproving the formation or expansion of a bank holding company. Consequently, I believe the criteria now contained in the bill to be vastly superior to the criteria previously specified in the original Senate version.

As I pointed out in a speech which is included in the House report, I have some doubts as to how the adjective "unduly," as applied to a lessening of competition, in the original Senate version, would be interpreted in those cases where banking factors did not necessitate approval of a proposed merger. Ultimately, the courts would have had the responsibility of interpreting the adjective "unduly" in the original Senate version, for the very indefiniteness as to what was meant by the use of such adjective as contrasted with the "substantial" as employed in the Clayton Act, would probably have lead to extended litigation. I firmly believe that the House in deleting the adjective "unduly" has negated a great deal of needless litigation. In passing, I should like to note that the title to the act still retains the adjective "unduly" and in view of the new criteria, I would suggest that the title to the act be changed.

I would also like to call your attention to the remarks in my statement in regard to whether the bill may not place State-chartered banks somewhat at a disadvantage as compared to national banks, since in the case of State bank mergers both a State and a Federal supervisory agency are required to approve, while in the case of national banks, only approval by the Comptroller's office is required. On the other hand, I believe the requirement that each of the Federal agencies consult with the others as to their opinions with respect to competitive factors would certainly tend to reduce the possibility that the various supervising agencies will adopt conflicting policies. Perhaps State banks might be placed in a more equal position, if it were made clear that the Comptroller could not approve a merger where the principal consideration was the possible adverse effect upon competition, if both the FDIC and the Federal Reserve were of the opinion that the effect on competition would be adverse. Of course, I must admit that as a practical matter I doubt that the Comptroller would so approve in the face of the opposition of both the Federal Reserve and the FDIC and, therefore, do not strongly urge this point.

I would, however, like to call your attention to the House report accompanying S. 1062, which states that the approval of the merger should depend "on a positive showing of some benefit to be derived from it * * * the burden should be on the proponents of a merger to show that it is in the public interest, if it is to be approved * * *." New York State's approach to this same point is that it is necessary to determine whether the effect on competition is such as to be injurious to the public interest. In other words, under New York's approach, if all other factors are equal, approval would be granted unless it can be shown that the public will be harmed. In the majority of cases, this difference is purely a matter of semantics, but it can be controlling in a few unique situations. Personally, I believe that the inference that a proposed merger should be affirmatively in the public interest creates an unfortunate inference that banks, unlike other segments of private industry, do not have the right to engage in mergers unless the public can benefit therefrom, rather than merely having the burden of showing that there would be no substantial harm to the public through a lessening of competition. In addition, of course, there is the possibility that over the years a more and more affirmative showing that a particular merger is in the public interest may be required by the Federal supervisory authorities either as a result of conviction or public pressure. On the other hand, I think it to be obvious that a merger is either in or against the public interest. If it is clear that the burden of proof is to be placed on the applying banks to show that the merger is in the public interest, I think there could be no reasonable objection to the intent of the House report. The reason for this is that in my experience the question of burden of proof is not too important, since it has always been the individual investigation on the part of the supervisory authorities which has been controlling and not what the parties allege. Consequently, if it was intended merely to place the burden of proof on the applying parties, I think there could be no reasonable objection to this, but I think such intent should be made clear.

With the foregoing qualification, I certainly would recommend enactment of S. 1062 by the U.S. Congress, as I believe it to be a constructive and desirable step in achieving uniformity in the approach of bank supervisory authorities toward mergers.

If I may be of any further assistance in connection with this matter, please do not hesitate to communicate with me.

Very truly yours,

G. RUSSELL CLARK.

Question. Mr. Clark inquires whether the bill may place State chartered banks at a disadvantage as compared with national banks. He thinks such a disadvantage might arise out of the fact that, in the case of State bank mergers, both a State and a Federal supervisory agency must approve the merger, while in the case of national banks only the approval of the Comptroller is necessary. Mr. Clark recognizes that as a practical matter, the Comptroller probably would not approve a merger in the face of the opposition of both the Federal Reserve and the FDIC. Could I have your comments on this point?

Answer. It was to avoid the possibility of discriminatory treatment between State banks and national banks or betweeen State member banks and State nonmember insured banks that, when one of these agencies is considering a merger, it is required to get the comments of the other two agencies on the other competitive factors involved. This provides for the maximum of uniformity of treatment among the three agencies. Certainly we all expect that the consultation and the cooperation among these three Federal banking agencies will be close and will be meaningful. I do not, of course, expect that they will agree 100 percent in every case, but I do expect that they will pay careful attention and give great weight to the views of the agencies, and I do expect that in most cases there will be no disagreement between them.

Question. Mr. Clark also raises a question about a case where there is no positive showing of benefit resulting from the merger, and no positive showing of detriment. Mr. Clark points out that under these conditions New York State would approve a merger. Could I have your comments on this question?

Answer. These cases, where the banking agency in charge just cannot make its mind up, sound difficult. But I question whether in fact they will really cause much trouble.

I see that Mr. Clark thinks that in most cases the difference would be purely a matter of semantics—in most cases, he says, it will be obvious that a merger is either in the public interest or against the public interest. In most cases, in other words, the banking agency will be able to make up its mind.

Much of the trouble comes, I think, from misunderstanding and overemphasizing the expression "in the public interest." This expression does not mean that the agencies will have to find a direct and immediate benefit to the public, as Mr. Clark suggests. On the contrary, all this expression means is that, after considering all the seven factors and giving due weight to each of them, the agency can approve only if the net result of the seven factors is favorable.

The PRESIDING OFFICER. The time of the Senator from Arkansas has expired.

Mr. DIRKSEN. Mr. President, I yield 1 minute to the Senator from Connecticut.

Mr. BUSH. Mr. President, I have talked with the chairman of our committee, who is not here, and have assured him that I am in full accord with his conclusion to accept the House bill. The explanation of the bill given by the Senator from Arkansas [Mr. FULBRIGHT], and particularly the questions and answers developed by the Senator from Virginia [Mr. ROBERTSON] and the Senator from Utah [Mr. BENNETT] give a clear statement of the purpose of the bill and the way in which it is to be administered by the banking agencies. I am glad that we have been assured, by informal conversations with representatives of the American Bankers Association, the Federal Reserve Board, and the Federal Deposit Insurance Corporation, that the House bill is acceptable to those organizations. I understand the Comptroller of the Currency has a slight reservation concerning the House amendment, but that this is not held too strongly by him, and that he is willing to accept the House bill and believes it will be workable.

I hope the Senate will support the motion of the Senator from Arkansas.

Mr. DIRKSEN. Mr. President, did the Senator from New York [Mr. JAVITS] want time?

Mr. JAVITS. I have concluded my remarks on the subject. I thank the Senator.

Mr. DIRKSEN. Then, Mr. President, I yield back the remainder of my time.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that a statement by me in connection with the motion of the Senator from Arkansas be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JOHNSON OF TEXAS

The action of the Senate in approving the House amendments to S. 1062, and sending the bill on to the President for his approval, is an event which deserves comment. The Congress, the Senate, the Senate Banking and Currency Committee, its chairman, Senator ROBERTSON, and its former chairmen, Senator FULBRIGHT, and Senator CAPEHART, all should be congratulated and complimented for this significant piece of legislation.

This bill establishes uniform and clear standards, including both banking and competitive factors, for the consideration of proposed bank mergers. It eliminates a

number of gaps in the statutory framework, which now permit many bank mergers to occur with no review by any Federal agency. It provides for a thorough review by the appropriate Federal bank supervisory agency, under these comprehensive standards, and with the benefit of any information which may be supplied by the Department of Justice in the report required from them, of the bank mergers by asset acquisitions and other means which are now and will continue to be exempt from the antimerger provisions of section 7 of the Clayton Antitrust Act.

It has been a slow and arduous task to bring this legislation to this present stage. In the 84th Congress, in 1956, Senator FULBRIGHT introduced S. 3911. This passed the Senate, but it died in the House. In the 85th Congress, in 1957, Senator ROBERTSON introduced a comparable provision as part of his major financial institutions bill, S. 1451. This passed the Senate, but again the bill died in the House. S. 1062 was introduced in the 86th Congress, in 1959, by Senator ROBERTSON on behalf of himself and Senators FULBRIGHT and CAPEHART. This was amended by the Senate Banking and Currency Committee. It was passed by the Senate with a further amendment on May 14, 1959, almost a year ago. This time the House did not allow it to die. After holding hearings and after further amending the bill, the House, on April 4, of this year, finally passed the Senate bill. And the Senate has now accepted the House amendments, which clarify but do not change the substance of the Senate bill.

This long process tries the temper of those who must suffer under it. But in my judgment the repeated improvements in S. 1062, in the course of this slow process, show the real merits, the real benefits, of the legislative process at its best.

Again, I want to express my congratulations to Senator ROBERTSON and Senator FULBRIGHT, and Senator CAPEHART and the other members of the Banking and Currency Committee for the persistence and the thoroughness and the statesmanship which they have displayed in carrying this matter through to a satisfactory conclusion.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Arkansas that the Senate concur in the amendment of the House.

The motion was agreed to.

Mr. JOHNSON of Texas. Mr. President, I move that the Senate reconsider the vote by which the amendment of the House was agreed to.

Mr. DIRKSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

CONFERENCE REPORT ON THE MUTUAL AID AUTHORIZATION BILL—LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I wish to congratulate the Senator from Arkansas [Mr. FULBRIGHT] for this action; and I desire to ask him a question at this time. Early in the week we passed the mutual security authorization bill, and it went to conference. I am informed that the very able Senator from Arkansas has been able to work out a conference agreement. Is that correct?

Mr. FULBRIGHT. That is correct; we completed it just before the yea-and-nay vote the Senate had a few moments ago.

Mr. JOHNSON of Texas. I am also informed that the conference report will soon be prepared. In that event, the report will have to be acted on first by the House, before the report comes to the Senate.

Is not that correct, Mr. President?

The PRESIDING OFFICER. That is correct.

Mr. JOHNSON of Texas. Let me ask whether the Senator from Arkansas has any information as to when the conference report on the mutual security authorization bill will be taken up.

Mr. FULBRIGHT. At the earliest possible moment, I believe. But the staff will have to have time to prepare the formal report. So I think Monday will be the earliest possible time.

There threatened to be some objection in the House in regard to the Senate policy concerning the Development Loan Fund; and it is thought that a move might be made to have the bill recommitted. However, the only controversy relates to the Development Loan Fund. If that controversy does not develop, we should be able to take up the conference report immediately after the House acts on it. I believe the Senate will have no reason to object to the conference report.

Mr. JOHNSON of Texas. Mr. President, I should like to give notice that as soon as the House acts on the conference report on this very important measure, which involves $4 billion-odd, the Senate will proceed promptly to its consideration.

Let me state that we shall give priority to all appropriation bills.

Mr. President, I should like to ask a question of the distinguished minority leader. So far as I am informed, no major proposed legislation is now on the calendar, although there are on the calendar several noncontroversial bills. What is the pleasure of the minority leader in regard to having a session tomorrow?

Mr. DIRKSEN. My personal pleasure is that we have a long weekend; and I trust that all Members of the Senate will concur in that viewpoint.

Mr. JOHNSON of Texas. I personally feel the same way about that matter. Let me hasten to state that I did not wish to put the minority leader "on the spot."

Mr. DIRKSEN. I never mind that.

Mr. JOHNSON of Texas. I was merely attempting to ascertain his pleasure in the matter, before I stated my own view.

ACCOMPLISHMENTS AND PROSPECTS

Mr. JOHNSON of Texas. Mr. President, I wish to point out, for the RECORD, that the majority and the minority have worked very effectively together, this week. We passed the mutual security bill which authorizes the appropriation of approximately $4 billion.

We passed the space authorization bill, with authorizations of approximately $1 billion.

We have sent to the White House the Commerce Department appropriation bill, with a substantial reduction below the amount of the budget estimates.

We have sent to the White House the Interior Department appropriation bill.

We passed 57 bills which were on the calendar.

Yesterday we passed the Government retirees' health bill.

We have just now passed a very important piece of legislation, which has the purpose of helping people help themselves; it is called the area redevelopment bill.

We have passed the bank merger bill.

That does not mean that we have passed all the bills which must be passed at this session; but it means that we have made substantial progress on our program for the year.

I believe we have already passed almost half of the appropriation bills; and that much progress with the appropriation bills is unusual for this time in the session.

We have a wage-hour bill which we hope will be reported from the committee at an early date.

We have a bill for a medical plan for the aged, which the House is now considering. I believe the Congress will enact some legislation in that field before the session ends.

We have a Federal employees' pay raise bill, to which the committees are giving consideration, and which I hope will be reported.

The Committee on Agriculture and Forestry has already reported a farm bill; and I think the House of Representatives has such a bill under consideration. We expect to act on the wheat bill, and perhaps on a more comprehensive farm bill.

The distinguished chairman of the Housing Subcommittee, the Senator from Alabama [Mr. SPARKMAN], will, I believe, on Monday begin hearings on a comprehensive housing bill.

There is in committee an immigration bill which we expect to consider, and perhaps revise; but I hope some effective immigration bill will be reported and acted upon.

In addition, we anticipate that the other body will pass a social security bill.

If we can make as much progress in the weeks to come as we have made this week, we shall have little difficulty in facing up to these issues and resolving them in the way the majority of the Senate may desire.

ORDER FOR ADJOURNMENT TO MONDAY, AT NOON

Mr. JOHNSON of Texas. So, Mr. President, I ask unanimous consent that when the Senate concludes its business today—after having had a very productive week, for which all Senators are entitled to substantial credit—the Senate stand in adjournment until 12 o'clock noon on Monday, as a reward for the diligent and effective efforts of each Member of the Senate.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. FREAR. Mr. President, let me ask whether the distinguished Senator from Texas expects the Senate to adjourn at this time.

Mr. JOHNSON of Texas. No. There are some noncontroversial measures to be dealt with later this afternoon. If it is necessary, in order to accommodate Senators, the Senate will remain in session until late in the evening.

But I want all Senators to know that we shall not have a session tomorrow, and we do not expect any more yea-and-nay votes today. That is largely because of the fine and harmonious relationships we have with the Senators on the other side of the aisle.

Mr. DIRKSEN. Mr. President, will the Senator from Texas yield?

Mr. JOHNSON of Texas. I yield.

Mr. DIRKSEN. Mr. President, after listening to my good friend, the majority leader, I cannot tell whether this is a reward or workmen's compensation. [Laughter.]

Mr. JOHNSON of Texas. Mr. President, I hope the Congress will act on an unemployment compensation measure before it adjourns. That measure will originate in the other body, and we are waiting on it. But I anticipate that we shall take some action in that field.

Mr. President, before I yield the floor, I wish to make another statement.

The PRESIDING OFFICER. The Senator from Texas is recognized.

SHOOTING DOWN OF U.S. PLANE IN THE TURKISH REGION

Mr. JOHNSON of Texas. Mr. President, I am deeply troubled by Premier Khrushchev's statement, on yesterday, concerning the shooting down of a one-man, unarmed American weather plane.

Mr. President, the Government of the Soviet Union is a sovereign government, and it must be respected as such. But men of good will do not act in this fashion just before important peace talks are about to begin.

Premier Khrushchev may well have thought the flight of the plane was a deliberate intrusion on our part. If that were even a remote possibility, we, too, should be taken to task for allowing it just before the summit meeting, or at any other time.

But how much better it would have been if Premier Khrushchev had chosen to discuss his apprehension openly and frankly.

Mr. President, it is time that we talked more openly about these things. It has been the Soviet habit to perpetuate crises in an attempt to force negotiations or to influence the outcome of conferences. Such tactics will not work with America, nor could we expect them to work with Russia.

The Russian people are courageous and brave. They love and honor their homeland. Both they and we fought the Nazis in World War II.

But, Mr. President, lest the world forget, we Americans have a deep and unshakable belief in our country and its institutions; and I would remind the world that Americans are not afraid. We intend to continue to walk among the nations of the world with strength and with honor and with dignity.

Great nations, as with great men, can dwell in peace only if they share honor and mutual respect.

No talks, either long or short, on Berlin, on disarmament, or on nuclear test bans, can be expected to really produce unless good will also sits with the nations at the conference.

I do not wish to be misunderstood, Mr. President. The world has had enough of saber rattling. America is strong today, and we shall continue to keep America strong. Rocket threats will not produce peace.

These are simply statements of fact.

Premier Khrushchev loves his country. He says he believes in his system. He says, "We want peace, but we do not want to beg for it."

Mr. President, he must afford us the same honor and respect.

We are more than willing to talk peace with him, to attempt to iron out our difficulties. It must be done in an atmosphere of quiet dignity, good will, and mutual respect. That is what we in America have tried to do. That is what our distinguished chairman of the Foreign Relations Committee does each day. I remember his telling me of the conference he had with some important representatives of the Soviet Union just a few days ago, and I think it is worth repeating: That this Nation feels we can do this in an atmosphere of dignity, good will, and mutual respect, but America will not be coerced.

Let us tell the world this, and let us hope that we understand one another better.

Mr. FULBRIGHT Mr. President, first, I wish to compliment the majority leader on a very fine statement, and I hope that it will be taken seriously by the leader of the Soviet Union.

Mr. JOHNSON of Texas. I thank the Senator. The Senator from Arkansas is a constant inspiration to me, and I try to emulate the example he sets.

Mr. FULBRIGHT. I thank the Senator.

THE THREAT OF A WAR BY MISTAKE

Mr. CASE of South Dakota Mr. President, I ask unanimous consent to have printed in the body of the RECORD an article entitled "'War by Mistake,' a Real Threat," written by Constantine Brown, and published in the Washington Evening Star several days ago.

In view of the unfortunate circumstance reported yesterday concerning the shooting down of an American airplane by Soviet Russia, war by mistake, or possibly by miscalculation, is a very real threat. This article should be read by every Member of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"WAR BY MISTAKE" A REAL THREAT—EAST-WEST ACCORD TO HALT ARMS RACE CALLED MOST TO BE HOPED FOR

(By Constantine Brown)

Secretary of State Christian Herter made a very grave and telling point when he warned recently of the dangers of "war by miscalculation." Most of us tend to be blissfully unaware of the possibility, which exists every moment of every day, that a simple mistake could unleash the nuclear monsters on the world.

Indeed, the danger is growing steadily, in direct proportion to the stockpiling of more and more nuclear weapons and the means of delivering them.

In his hair-raising book, "On the Beach," the late Nevil Shute had his catastrophic war open with a mistake, at least a mistake in identity. Egyptian bombers were mistaken for Russian, the forces of massive retaliation moved into action, and the atomic holocaust was on.

These days events move swiftly; developments of weeks or months are today compressed into hours. The fiction of the Shute novel is not farfetched in this nuclear age.

Fortunately, the Soviet Union and its allies and satellites are just as concerned as are we and our allies with the serious dangers of war by mistake.

Moscow has used the miscalculation argument to protest the regular training flights of Strategic Air Command manned bombers. But American offers to meet the Soviet objections with a mutual security agreement, involving inspection of specific areas in the United States and the Soviet Union were rejected.

The Communists are very touchy indeed about having any outsiders prying into their peaceful secrets.

Just as in every other area of the cold war and its tensions, the prevention of war by miscalculation has to be a mutual project. Right there is the problem.

If there could exist enough trust and confidence on both sides to erect effective safeguards against war by mistake, there would be no need for the weapons that would be the occasion for the mistake. Yet so long as the situation remains as it is, the possibility that some hotheaded second lieutenant, some beserk sergeant, or some frustrated general could push the button certainly exists.

Apprehension on this score is certainly one of the major reasons for the obvious desire on both sides to remove at least some of the areas of tension where mistakes are most likely to happen.

The first step essential to international security in guarding against a war by mistake has to be an agreement, with guarantees, that will prevent the possibility of surprise attack.

This would be a monumental task indeed, but no accord, no detente or peaceful coexistence will be possible without it. Neither could any progress be made toward disarmament unless a beginning was made on prevention of surprise attack.

France has joined the nuclear club now, and it is only a matter of time before Communist China and other nations are rapping at the membership door. As the number of nuclear-armed powers increases, it will become progressively easier for any nation to acquire nuclear weapons. There will be so many, of such a variety, that it will eventually be as easy for a nation to purchase nuclear weapons as it is today to buy guns.

What a prospect. Suppose for example, a dictator in Latin America had designs on his neighbor? Suppose another megalomaniac like Adolf Hitler achieved power in a major nation? What would Gamal Abdel Nasser do to Israel if he had a hydrogen bomb?

It is becoming clearer every day, in the light of the facts, that mankind is either going to get better organized or is going to be destroyed sooner or later.

International anarchy is no longer sufficient for the protection of the world's peoples. But some of the efforts being made to bring about an improvement are going in the wrong direction. For example, world government as promoted by the one worlders would not solve the problem, because it would pre-

tend that the issues that divide nations and are responsible for our present peril do not exist. And so long as these basic cleavages do exist, then nations and alliances are to be inevitable.

Plainly, the chasm between the free world and the Communist world is too wide to be closed or even bridged.

All we can hope for is a truce, a wary armistice, a mutual recognition, however grudging, that survival depends on observing the truce. It is unlikely that such a truce, if worked out, would permit of very much disarming. Distrust is much too deep for that. But a trust, an East-West detente, could conceivably act to halt the arms race by freezing armaments at a determined level.

We should try.

SUEZ CANAL RIDER IN FOREIGN AID AUTHORIZATION BILL

Mr. FULBRIGHT. Mr. President, there has been a good deal of discussion recently and I have received a great many letters about the amendment involving the Suez Canal that was considered a few days ago on the floor. There have been many editorials written about the subject, but there are three items which I think should be brought to the attention of the Senate: One editorial from the New York Times, one editorial from the Washington Post, and also an article by Mr. Arthur Krock in the New York Times of May 3. I believe, read together, these discussions by eminent commentators of the American scene can bring a good deal of light to this emotional question.

I ask unanimous consent that the editorials and article to which I have referred be inserted in the RECORD as a part of my remarks.

There being no objection, the editorials and article were ordered to be printed in the RECORD, as follows:

[From the New York Times, May 5, 1960]

DISTORTING MUTUAL SECURITY

With the ultimate purpose of Congress' most recent action aimed at opening the Suez Canal to Israeli shipping we are in entire accord. With the method chosen by both Houses through their amendment last week to the mutual security authorization bill of 1960 we are in complete disagreement.

Senator FULBRIGHT is right in calling the congressional moves "a textbook case of how not to conduct international relations." What Congress did was to give the President discretionary power to withhold aid from nations waging economic warfare against other beneficiaries of mutual security—an innocuous proposal in itself but, in the context, a suggestion, as its sponsors intended, that the people of the United Arab Republic be deprived of American assistance until the canal is opened to Israel.

That Nasser is violating every rule of decent international conduct and is utterly unjustified in barring the canal to Israel or to anyone else is a fact beyond question and we have expressed ourselves upon it on this page many times. But to try to force him to change his position through a threat to withhold American aid is not merely to distort the purpose of the mutual security program. It is also to invite a hardening of Nasser's position and to induce him to seek further recourse in the Russian assistance which under such highly political circumstances is always available.

The great strength of the American nonmilitary aid program is—or ought to be—that it is given without political strings, that the recipient is not expected to line up with our side, that this kind of assistance is offered in the hope of encouraging underdeveloped countries to achieve their economic freedom as well as to solidify their political independence. This is the only basis on which nonmilitary aid should be offered, and the only basis on which the mutual security program can succeed.

In the long run it is political in the sense that a world of free nations is a major political objective of the United States. But to use nonmilitary mutual security as a handy political weapon to achieve an immediate political purpose, whether in Asia, Africa, or South America, would be fatal and would wreck the program, as it is already threatening in Congress to wreck the International Development Association, one of the major new weapons of economic assistance to the underdeveloped countries.

[From the Washington Post, May 4, 1960]

MISCHIEF BOTH WAYS

The Senate probably made the best of a troublesome situation on Monday by retaining the Suez Canal rider in the foreign aid authorization bill. We say "probably" because we do not expect the "free navigation" declaration to accomplish much in opening the canal to Israeli shipping. The language was mischievous in the first place, as both Senator FULBRIGHT and Under Secretary Dillon emphasized. But once the provision was in the bill passed by the House and was initially approved in the Senate, its deletion might have been construed as encouragement to President Nasser.

This newspaper shares the view of Senator FULBRIGHT that the rider is a poor device for the conduct of foreign relations. It ties the hands of the Executive, and it intrudes into a delicate area advice that can only seem ex parte and gratuitous. Whether or not this particular rider resulted from domestic political pressures as charged by Mr. FULBRIGHT, it scarcely points the way to resolution of the difficulties between Israel and the United Arab Republic. Of course the boycott of Arab shipping by seamen's unions already had imposed a serious handicap on foreign policy.

When all of the objections about method have been registered, however, the rider still derives from a widespread feeling that the UAR is wrong in blocking the Suez Canal to Israeli shipping and to shipping carrying Israeli goods. There have been injustices on both sides, and Israel herself could contribute more to a solution of the Arab refugee problem. But the United States remains committed by Presidential declaration and by its own instincts to freedom of transit in the Suez Canal and there is no need, in the desire for better relations with the UAR, for this country to swallow its principles. The congressional statement is clumsy, but it would not have come about if President Nasser were not engaging in a maneuver that is offensive to many Americans.

[From the New York Times, May 3, 1960]

AN UNSOUND BASIS FOR FOREIGN POLICY

(By Arthur Krock)

WASHINGTON, May 2.—The statements made by Senator FULBRIGHT, supported by Senator COOPER and Under Secretary of State Dillon, in his unsuccessful effort to induce the Senate to modify a foreign aid bill amendment by Senator DOUGLAS that it previously had approved, merit the serious consideration of all citizens who don't want to see foreign policy shaped—as much domestic policy is—by pressures of ethnic and religious groups in this country.

"This amendment," in FULBRIGHT'S accurate description, "contemplates that the President is to use the Mutual Security (foreign aid) Act as a club to force the United Arab Republic to open the Suez Canal to Israeli shipping." Like many other proposals of like origin, its objective is admirable but its method assures the defeat of the objective. And when the area involved has produced, as FULBRIGHT pointed out, "probably the most delicate international situation * * * in the world today," that defect is of utmost gravity.

The following extracts from the plea by the chairman of the Committee on Foreign Relations that the Senate reverse its action go straight to the point:

"The principal reason this amendment was offered was not because of the overwhelming good of the United States, but because of the existence of a pressure group in the United States which seeks to inject the Arab-Israeli dispute into domestic politics. This amendment and the recent economic coercion to prevent the loading of an Arab ship in New York are part of a pattern which I find disastrous in the functioning of our constitutional system. One hundred and eighty million Americans find their foreign policy being whipsawed by an irresponsible maritime union and by a minority pressure group." In elaboration FULBRIGHT offered these arguments:

The New York union boycott and the Douglas amendment are attempts to integrate into American politics "the feuds and emotions that are part of the political conflicts of foreign nations to avoid which this Nation was created."

The formulation and conduct of sound American foreign policy is being more and more "compromised" by these multiplying attempts.

In this instance the immediate effects have been reprisals by the UAR which demonstrate that the steps taken here do not advance but, on the contrary, impede progress toward an amicable settlement of the Arab boycott of Israeli ships desiring to pass through the Suez Canal.

Repeating these points, Under Secretary Dillon today also factually refuted one of the reasons given for the Douglas amendment. This reason was that the UAR has denied canal passage to American ships and any others which merely have called at Israeli ports. That, Dillon informed the Senate, is simply not true.

Senator COOPER'S observations were particularly impressive because, as he informed his colleagues, he had first been inclined to support the Douglas amendment as a move which might "forward the principle of freedom of navigation in international waterways and, inferentially, in the Suez Canal." But upon reflection I decided that [the amendment] would be harmful to these very purposes. His principal conclusion, he said, was that the amendment "would be viewed solely as an effort by the American Congress to put pressure on another country through our aid program," a charge the Soviet Union has long been making "with a great hue and cry" and has induced "some free countries unfortunately to believe it." And the greatest individual sufferer, in COOPER'S judgment, would be Israel itself.

From this point of departure, the Kentucky Senator, justly celebrated as progressive, made an analysis of the whole problem of foreign aid that was particularly authoritative for the reason that, as an Ambassador to India and a legislator, he has studied the project from both sides. "If the program is to survive," he said, "it demands reorganization by the executive branch and by Congress. It is not as effectively used as it should be. It must be given continuity, like the Marshall plan. And for the secondary projects into which a great amount of aid is channeled there should be substituted primary ones, especially agricultural, in consultation with the World Bank and the United Nations."

A very large crop of political courage and common sense from just two Senators and one Under Secretary of State.

PROVISION FOR CERTAIN PILOTAGE REQUIREMENTS IN NAVIGATION OF U.S. WATERS OF GREAT LAKES

Mr. MAGNUSON. Mr. President, I ask that the Senate proceed to the consideration of Calendar No. 1317, Senate bill 3019.

The PRESIDING OFFICER. The bill will be stated by title.

The CHIEF CLERK. A bill (S. 3019) to provide for certain pilotage requirements in the navigation of U.S. waters of the Great Lakes, and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Washington that the Senate proceed to the consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Interstate and Foreign Commerce with amendments, on page 2, line 4, after the word "a", to strike out "person" and insert "person,"; at the beginning of line 6, to strike out "vessel" and insert "vessel,"; in line 20, after the word "means", to strike out "a" and insert "the master or any other"; on page 3, after line 2, to insert a new subsection, as follows:

(f) "Foreign vessels" means all foreign merchant vessels except Canadian vessels whose operations are exclusively upon the Great Lakes or between ports in the Great Lakes and the St. Lawrence River, or whose operations while predominantly as aforesaid fail of being exclusively so only because of an occasional voyage to a port or ports in the maritime provinces of Canada in the Canadian coastal trade.

At the beginning of line 13, to strike out "those"; in the same line, after the word "vessels", to strike out "designated by him"; at the beginning of line 24, to strike out "such"; in the same line, after the word "and", to strike out "designated"; on page 4, line 18, after the word "service", to strike out "provided" and insert "provide"; on page 8, line 12, after the word "of", to strike out "such vessel in violation of the provisions of section 3(a) and 3(b) of this Act or regulation issued pursuant thereto" and insert "the vessel by a person not a registered pilot in the waters designated by the President pursuant to section 3(a) of this Act or who permits the navigation of the vessel without having on board a registered pilot or other officer in the waters described in section 3(b) of this Act"; in line 23, after the word "jurisdiction", to strike out "of the violation" and insert "thereof"; on page 9, line 3, after the word "a", to strike out "United States or Canadian"; in line 4, after the word "vessel", to insert "subject to this Act in the waters designated by the President pursuant to"; at the beginning of line 6, to strike out "in violation of the provisions of"; in the same line, after the word "Act", to strike out "or regulations issued pursuant thereto,"; on page 10, line 14, after "(c)", to strike out "This Act shall be administered and applied so as to permit Canadian vessels operating exclusively on the Great Lakes and the Saint Lawrence River to be navigated in United States waters of the Great Lakes solely by qualified officers certificated by Canada," and insert "The exceptions in section 2(f) applying to Canadian vessels shall be effective only"; and on page 11, line 1, after the word "three", to insert "public", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Great Lakes Pilotage Act of 1960."

SEC. 2. As used in this Act:

(a) "Great Lakes" means Lakes Superior, Michigan, Huron, Erie, and Ontario, their connecting and tributary waters, the Saint Lawrence River as far east as Saint Regis, and adjacent port areas.

(b) "Secretary" means the Secretary of Commerce.

(c) "United States registered pilot" means a person, other than a member of the regular complement of a vessel, who holds an unlimited master's license authorizing navigation on the Great Lakes and suitably endorsed for pilotage on routes specified therein, issued by the head of the Department in which the Coast Guard is operating under regulations issued by him, and is registered by the Secretary as provided in section 4 of this Act.

(d) "Canadian registered pilot" means a person, other than a member of the regular complement of a vessel, who holds a master's certificate or equivalent license authorizing navigation on the Great Lakes and pilotage on routes specified therein, issued by the appropriate agency of Canada, and is registered by a designated agency of Canada on substantially the same basis as registration by the Secretary under the provisions of section 4 of this Act.

(e) "Other officer" means the master or any other member of the regular complement of the vessel concerned who is qualified for the navigation of the Great Lakes waters described in section 3(b) of this Act and who is either licensed by the head of the Department in which the Coast Guard is operating under regulations issued by him or certificated by an appropriate agency of Canada.

(f) "Foreign vessels" means all foreign merchant vessels except Canadian vessels whose operations are exclusively upon the Great Lakes or between ports in the Great Lakes and the St. Lawrence River, or whose operations while predominately as aforesaid fail of being exclusively so only because of an occasional voyage to a port or ports in the maritime provinces of Canada in the Canadian coastal trade.

SEC. 3. (a) The President shall designate and by proclamation announce those United States waters of the Great Lakes in which registered vessels of the United States and foreign vessels shall be required to have in their service a United States registered pilot or a Canadian registered pilot for the waters concerned, who shall, subject to the customary authority of the master, direct the navigation of the vessel in those waters. These designations shall be made with due regard to the public interest, the effective utilization of navigable waters, marine safety, and the foreign relations of the United States.

(b) In those United States waters of the Great Lakes which are not designated by the President in accordance with paragraph (a) of this section, there shall be on board registered vessels of the United States and foreign vessels, a United States registered pilot or Canadian registered pilot or other officer qualified for the waters concerned who shall be available to direct the navigation of the vessel in such undesignated waters at the discretion of and subject to the customary authority of the master.

(c) The authority extended in paragraphs (a) and (b) of this section to Canadian registered pilots or to other officers certificated by Canada to serve on registered vessels of the United States and foreign vessels in United States waters of the Great Lakes shall be in effect only so long as Canada extends reciprocity to United States registered pilots or to other officers licensed by the United States, in regard to requirements established for the pilotage of Canadian waters of the Great Lakes.

SEC. 4. (a) The registration of United States pilots shall be carried out by the Secretary under such regulations as to qualifications, terms, and conditions which will assure adequate and efficient pilotage service, provide for equitable participation of United States registered pilots with Canadian registered pilots in the pilotage of vessels to which this Act applies, and provide fair and reasonable opportunity for registration. Each applicant must, as a prerequisite, be the holder of an appropriate master's license as described in section 2(c). In addition, the qualifications, terms, and conditions to be met by each applicant shall include, but not be limited to, availability for service when required and agreement to comply with all applicable regulations issued by the Secretary pursuant to this Act. Such qualifications, terms, and conditions shall not include matters relating to a pilot's professional competency nor be inconsistent with his duties under the license issued to him by the Coast Guard, which matters shall remain the responsibility of the Coast Guard.

(b) The Secretary shall issue documentary evidence of registration to United States registered pilots and such evidence shall be in their possession at all times when in the service of a vessel. Further, this evidence of registration shall describe the part or parts of the Great Lakes within which the holder is authorized to perform pilotage under this Act and such description shall not be inconsistent with the terms of the pilotage authorization in his license.

(c) The Secretary shall establish by regulation the period of validity of registration of United States registered pilots. When the Secretary determines on the record, after notice and opportunity for a hearing, that a United States registered pilot has violated any regulation pursuant to this Act, he may revoke or suspend the registration of such pilot. The basis for such revocation or suspension of a pilot's registration shall not extend to or include matters which may be the basis for revocation or suspension of his license by the Coast Guard under section 4450, Revised Statutes, as amended (46 U.S.C. 239), or under any other law or regulation administered or prescribed by the Coast Guard, except that upon revocation or suspension by the Coast Guard the Secretary shall revoke or suspend the pilot's registration. The Secretary shall advise the Coast Guard of the name and Coast Guard license number of each pilot who has been registered or whose registration has been revoked or suspended. The Coast Guard shall advise the Secretary of the name of any registered pilot whose license has been revoked or suspended.

(d) The Secretary is authorized to enter into arrangements with an appropriate agency of Canada for equitable participation by United States registered pilots with Canadian registered pilots in the pilotage services required by both countries for vessels navigating the Great Lakes. To that end, the Secretary is further authorized to arrange with an appropriate agency of Canada for the number of pilots who shall be registered in each country.

(e) Notwithstanding the provisions of any other law, the Secretary may authorize the formation of a pool or pools by a voluntary association or associations of United States registered pilots to provide such arrangements and facilities as may be necessary or desirable for the efficient dispatching of ves-

sels and rendering of pilotage services required under the provisions of this Act. The Secretary may—

(i) establish such rules and regulations for the operation of a pool or pools as he may deem necessary;

(ii) require that pooling be coordinated on a reciprocal basis with similar arrangements established by the appropriate agency of Canada;

(iii) limit the number of pools;

(iv) audit and inspect the administration and operation of a pool or pools;

(v) prescribe uniform systems of accounts for a pool or pools.

SEC. 5. (a) The Secretary is authorized and directed to establish by regulations the rates, charges, and any other conditions or terms for services performed by registered pilots to meet the provisions of this Act.

(b) The Secretary is authorized to arrange with the appropriate agency of Canada for the establishment of joint or identical rates, charges, and any other conditions or terms for services by registered pilots in the waters of the Great Lakes.

(c) The rates, charges, and any other conditions or terms for pilotage services by registered pilots established by the Secretary in accordance with subdivisions (a) and (b) of this section shall be fair and equitable, giving due consideration to the public interest and the reasonable cost and expense of providing and maintaining such facilities and arrangements as are required for the efficient performance of pilotage services in accordance with the provisions of this Act.

SEC. 6. Any written arrangements between the Secretary and the appropriate agency of Canada under the provisions of this Act shall be subject to the concurrence of the Secretary of State.

SEC. 7. (a) Any owner, master, or person in charge of a vessel subject to this Act who permits the navigation of the vessel by a person not a registered pilot in the waters designated by the President pursuant to section 3(a) of this Act or who permits the navigation of the vessel without having on board a registered pilot or other officer in the waters described in section 3(b) of this Act shall be liable to the United States in a civil penalty not exceeding $500 for each violation, for which sum the vessel shall be liable and may be seized and proceeded against by way of libel in any district court of the United States having jurisdiction thereof. Each day the vessel shall be so navigated shall constitute a separate violation. This subsection shall be enforced by the head of the department in which the Coast Guard is operating.

(b) Any person, not a registered pilot, who directs the navigation of a vessel subject to this Act in the waters designated by the President pursuant to section 3(a) of this Act, shall be subject to a civil penalty in an amount not exceeding $500 for each violation. Each day such person so directs the navigation of such vessel shall constitute a separate violation. This subsection shall be enforced by the head of the department in which the Coast Guard is operating.

(c) A person who violates any regulation issued pursuant to sections 4 and 5 of this Act shall be liable to the United States in a civil penalty not exceeding $500 for each violation. The provisions of this subsection shall be enforced by the Secretary, who may, upon application therefor, remit or mitigate the penalty provided for herein, upon such terms as he, in his discretion, shall think proper.

SEC. 8. Notwithstanding any other provision of this Act, a vessel may be navigated in the United States waters of the Great Lakes without a United States or Canadian registered pilot when—

(a) the Secretary, or his designee, with the concurrence of the head of the department in which the Coast Guard is operating, or his designee, notifies the master that a United States or Canadian registered pilot is not available, or

(b) the vessel or its cargo is in distress or jeopardy.

SEC. 9. (a) No State, municipal, or other local authority shall have any power to require the use of pilots or to regulate any aspect of pilotage in any of the waters specified in this Act.

(b) Nothing in this Act shall apply to any vessel of the United States which, in its navigation of waters to which this Act is applicable, is required by any other Act to have in its service and on board pilots or other navigating officers licensed by the United States for such waters.

(c) The exceptions in section 2(f) applying to Canadian vessels shall be effective only so long as Canada permits enrolled vessels of the United States to be navigated on Canadian waters of the Great Lakes solely by qualified officers licensed by the head of the department in which the Coast Guard is operating.

SEC. 10. (a) The Secretary is authorized to appoint an Advisory Committee of three public members, each of whom shall have had at least five years of practical experience in maritime operations. The term for which a member may be appointed or reappointed shall not exceed five years.

(b) The Advisory Committee shall meet at the call of the Secretary. The Advisory Committee may review proposed pilotage regulations and policies and make such recommendations as are deemed appropriate.

(c) Members of the Advisory Committee shall be compensated at a rate not exceeding $75 per day when actually engaged in the performance of their duties, together with their necessary travel expenses while going to and from meetings and when engaged on business at the call of the Secretary.

SEC. 11. (a) The Secretary may use, with their consent, the available services, equipment, personnel, and facilities of agencies and instrumentalities of the Federal Government, on a reimbursable basis when appropriate.

(b) In carrying out the functions vested in him by this Act, the Secretary, subject to the standards and procedures of section 505 of the Classification Act of 1949, as amended, is authorized to place not to exceed two positions in grades 16, 17, or 18 of the general schedule established by such Act. Such positions shall be in addition to the number of positions authorized to be placed in such grades by such section 505.

SEC. 12. If a provision of this Act or the application of such provision to any person or circumstances shall be held invalid, the remainder of the Act and the application of such provision to persons or circumstances other than those to which it is held invalid shall not be affected thereby.

SEC. 13. This Act shall become effective upon the date of its enactment, except that the pilotage provisions of this Act shall not become effective until the first day of the fourth month following the issuance of regulations pursuant hereto by the Secretary.

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the RECORD at this point portions of the report on this bill. The reason why I am bringing the bill up today is that the season is opening on the Great Lakes, and it is necessary to act on the bill now.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

PURPOSES OF THE BILL

S. 3019 would establish certain pilotage requirements for foreign oceangoing vessels as well as for vessels of U.S. registry while such vessels are navigating the five Great Lakes, their connecting and tributary waters, the St. Lawrence River as far east as St. Regis, and adjacent port areas. It also would provide for a regulated pilotage system and for the coordination of this system with a similar pilotage system in Canada for ocean vessels navigating the Great Lakes waters of that country. None of these ocean vessels have any statutory pilotage requirements now for the navigation of U.S. waters of the Great Lakes.

Section 2 of the bill defines certain terms as employed in the bill, and sets up qualifications for the registered pilots authorized to direct the navigation of the vessels in certain to-be-designated restricted waters, as well as in the open waters of the lakes, and for the other officers who will be authorized to direct navigation solely in the nondesignated, or open, waters.

Section 3(a) provides that the President shall designate certain areas in which registered vessels of the United States and foreign vessels coming into the lakes must have in their service a registered pilot to direct their navigation, and lays down certain bases for such designation.

In section 3(b), applying to waters not designated by the President, the bill permits vessels to have available aboard either a registered pilot or the master or another officer among the vessel's licensed complement who is qualified to direct navigation in such open waters.

Section 3(c) specifies that the authority extended in sections 3(a) and 3(b) to Canadian registered pilots or to other officers certified by Canada shall be on a reciprocal basis.

Sections 4(a) and 4(b) authorize the Secretary of Commerce to make regulations covering registration of pilots which will assure adequate service and provide for equitable participation of U.S. registered pilots in the pilotage of vessels, but reserve to the Coast Guard the question of the pilots' professional competency. Pilots are required to have in their possession when in service of a vessel the documentary evidence of registration issued by the Secretary.

Section 4(c) deals with the period of validity of registration of U.S. pilots; reasons and procedures for suspension of pilots; and the respective responsibilities of the Secretary and the Coast Guard in such matters. Remaining provisions of section 4 authorize the Secertary to arrange with Canadian authorities as to the number of pilots to be registered, and to assure equitable participation in this pilotage by U.S. pilots; to authorize the formation of a pool or pools by U.S. pilots, to establish rules and regulations for their operations, etc.

In section 5 the Secretary is authorized and directed to establish rates, charges, etc., for pilotage services, and to arrange with Canadian authorities for joint or identical rates, etc. Section 6 provides that written agreements shall be subject to concurrence of the Secretary of State.

Sections 7(a) and 7(b) provide penalties for violations of section 3, and for enforcement by the head of the department in which the Coast Guard is operating.

Section 8 affords relief from pilotage requirements in emergency, or when registered pilots are not available. Section 9 provides that States or localities may not require the use of pilots, or regulate any aspect of pilotage, in waters covered by this act; exempts from application of the provisions of the act any U.S. vessel which, in the waters covered by the act, is required by any other act to have aboard pilots or other navigating officers licensed for such waters; and provides for reciprocity in the exemption from requirements as to use of registered pilots on enrolled U.S. vessels navigating Canadian waters and on Canadian "lakers" and "canalers" navigating U.S. waters of the lakes.

Sections 10(a), 10(b), and 10(c) authorize the Secretary to appoint an advisory committee of three, who shall meet at his call to

review regulations and policies, and make recommendations and provide for their pay and travel.

The bill is not intended to apply to small enrolled motor-driven vessels which are not now required to have licensed pilots aboard.

The act would become effective upon enactment, except that the pilotage provisions would not become effective until the first day of the fourth month following the issuance of regulations by the Secretary.

REASONS FOR THE LEGISLATION

Opening of the St. Lawrence Seaway in 1959 has greatly complicated vessel safety problems on the Great Lakes by making possible entry into the lakes of ocean vessels of higher tonnage and in far larger numbers than previously was the case. In addition to the 2,206 United States and Canadian vessels operating on the lakes exclusively or in large part, some 1,033 foreign commercial vessels and 61 vessels under U.S. registry made round voyages on the lakes in 1959. All indications are that this total, of foreign vessels particularly, will increase in the years ahead.

The upsurge of foreign vessels navigating U.S. waters of the Great Lakes, and the entry of U.S. ocean vessels into the area, present a definite threat to safe navigation. There is presently statutory requirement for the use of qualified pilots on both U.S. and Canadian vessels navigating only on the lakes. However, operation of the oceangoing vessels, without skilled lake pilots, as evidenced by the reported accidents and near accidents during the first year's operation of the St. Lawrence Seaway, presents a threat of considerable magnitude not only to the lake vessels, but also to the ocean vessels whose officers, in some cases, may not be sufficiently familiar with the Great Lakes rules of the road, the restricted waters, etc.

When S. 2096, the Coast Guard's bill to require pilotage on the U.S. waters of the Great Lakes, was considered by your committee in the 85th Congress, there was opposition presented by Canada and various European maritime nations, largely due to the requirement that vessels must carry a registered pilot the entire time they were in the Great Lakes waters. Because of this opposition, the committee did not approve the bill. Instead, request was made of the State Department that consultation be held with the responsible Canadian authorities, to the end that a bill acceptable to the authorities of both nations be developed.

Your committee is satisfied that the bill now before us will be mutually acceptable. Our State Department has had the cooperation of the Commerce Department, Treasury Department, and the Coast Guard in its consultations with the Department of Transport of the Canadian Government, and assurance has been had from the Canadian authorities that action will be taken there, once this act is approved, to legislate along similar lines. Similarly, the representative of the Shipping Federation of Canada, which vigorously opposed S. 2096, stated at our committee hearing on S. 3019:

"The federation, on behalf of the ocean shipping industry which it represents, is happy to give its support to bill S. 3019 and wishes to assure the Government agencies concerned of its wholehearted cooperation in the attainment of the objectives which the legislation is intended to further."

The federation witness was speaking also, he said, for the Chamber of Shipping of the United Kingdom and the International Chamber of Shipping, both of London, as well as for the Baltic and International Maritime Conference of Copenhagen, three organizations which represent and present the views of the British and European shipping interests as a whole on all questions of major policy.

S. 3019 has met the objections to use of registered pilots on all waters of the Great Lakes by permitting on waters not designated by the President as restricted that the vessels may have on board either—

* * * a U.S. registered pilot or Canadian registered pilot or other officer qualified for the waters concerned who shall be available to direct the navigation of the vessel in such undesignated waters at the discretion of and subject to the customary authority of the master.

Your committee gave consideration to proposals by the American Merchant Marine Institute representative that (1) the bill, instead of the President, should designate the restricted waters and the vessels required to carry the registered pilots, and (2) that in connection with section 5 of the bill, the Secretary of Commerce be required to hold public hearings prior to the establishment of rates, charges, and other conditions or terms for services rendered by these pilots. In accordance with the one industry view, a new subsection, 2(f), was added to define the foreign vessels intended to be covered by the bill.

With regard to the designation of the restricted waters, your committee believes that, because of the international aspects of the bill, the division of authority and responsibilities among the three Government departments directly involved, and the necessity for expert, detailed delineation of the restricted areas, the overall authority and responsibility should be reserved for the Chief Executive. Specific designation in the act of these areas might well require continuing modification of the act, to meet circumstances which may later develop but which cannot be foreseen. The committee has been informed that Canadian authorities plan to designate their restricted areas by regulation rather than by law.

However, it seems beyond question that certain general areas of U.S. waters in and adjoining the Great Lakes do require and will be designated for expert navigation in the interest of safety. These areas include the St. Lawrence River, as far as St. Regis; the waters of western Lake Erie, and the Detroit, St. Clair, and St. Marys Rivers and the waters adjacent thereto.

As for the proposed public hearings on rates, etc., the Administrative Procedure Act would provide for such hearings, your committee has been officially advised, and so interprets that act.

It should be made clear that the registered pilots, who become members of the voluntary associations or pools that may be authorized by the Secretary of Commerce under section 4(e) of the bill, will not be employees of the Federal Government but will function after the manner of pilot associations elsewhere in the country.

With reference to the provision in 11(b) of the bill, that the Secretary of Commerce, subject to the standards and procedures of section 505 of the Classification Act of 1949, as amended, would be authorized to place not to exceed two positions in grades 16, 17, or 18 of the general schedule established by such act, the U.S. Civil Service Commission made the following comment:

"Section 11(b) requires the Civil Service Commission to evaluate the duties, responsibilities, and qualification requirements of the two positions (as well as the qualifications of proposed appointees) to determine whether they warrant allocation to grade GS–16, 17, or 18. It would not, however, require that the Commission allocate the two positions to any one of these grades unless such action is appropriate under the standards and grade definitions in the Classification Act."

Included herewith are the reports of the Government departments and agencies on the bill, as follows: Department of State, dated February 11, 1960, requesting introduction of the legislation, with attached analysis of the draft proposals; Department of the Treasury, dated March 31, 1960, with draft of suggested amendments; Department of Commerce, dated February 29, 1960; Depart of Justice, dated March 30, 1960; Comptroller General, dated March 18, 1960; U.S. Civil Service Commission, dated March 16, 1960; and the St. Lawrence Seaway Development Corporation, dated March 28, 1960.

There is no change in existing law.

DEPARTMENT OF STATE,
Washington, February 11, 1960

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce, U.S. Senate.

DEAR SENATOR MAGNUSON: Pursuant to the Department's letter of January 18, 1960, there are transmitted herewith a draft and analysis of a proposed bill to provide for certain pilotage requirements in the navigation of U.S. waters of the Great Lakes, and for other purposes.

This draft bill has been prepared jointly by the Departments of State and Commerce and the Coast Guard, with advice from the Bureau of the Budget.

The primary purposes of the proposed bill are to establish pilotage requirements in U.S. waters of the Great Lakes and St. Lawrence River for U.S. and foreign-flag vessels operating on ocean routes into the Great Lakes and to provide the basis for a regulated system of pilotage to meet those requirements. Provision is made for coordination of this system with a pilotage system regulated by Canada in Canadian waters of the Great Lakes.

The requirements provided for in the proposed bill would not be applicable to any vessel of the United States which is required by any other act to have in its service and on board pilots or other navigating officers licensed by the United States for navigation in the Great Lakes.

The proposed bill would not discriminate against foreign-flag ships and need not conflict with treaties to which the United States is a party.

The Department has beeen informed by the Bureau of the Budget that there is no objection to the submission of this proposal to the Congress for its consideration.

Sincerely yours,
WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

The PRESIDING OFFICER. The question is on agreeing to the committee amendments.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the amendments be considered en bloc.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the amendments will be considered en bloc.

The committee amendments were agreed to en bloc.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

The title was amended, so as to read: "A bill to provide for certain pilotage requirements in the navigation of U.S. waters of the Great Lakes, and for other purposes."

PHILIPPINE SUGAR—U.S. SOLON RAISES VALID POINT

Mr. FREAR. Mr. President, on April 5, 1960, the Honorable ROBERT W. LEVERING, Democrat of Ohio, a member of the House Agriculture Committee, in an ex-

tension of his remarks in the CONGRESSIONAL RECORD, complained that the Philippines had been denied increases in its sugar quota because of its ban on American tobacco, while no such action had been taken against Cuba. His remarks in the CONGRESSIONAL RECORD pointed out that at the time of the approval of the last extension of the Sugar Act in 1956 the only foreign area denied participation then to share in the increased consumption provided for all other foreign countries was the Philippines.

The New York Times article of April 2, bearing a Havana dateline, cited by Mr. LEVERING should remind the members of the Congress representing tobacco growing States that Cuba, the principal beneficiary of U.S. sugar import quotas, has placed a ban on U.S. cigarettes. To quote from the article:

For his own reasons, Dr. Castro has declared a war on luxuries, privileges, and wealth. He contends that they have led to these economic distortions and the poverty of the Cuban masses.

As Mr. LEVERING further reminds us, the Philippine Government, in curtailing the importation of Virginia burley leaf tobacco, followed the recommendation of the U.S. Economic Mission in 1950, commonly called the Bell Mission, which suggested the curtailment of importation by the Philippines of luxury items, including tobacco, in order to conserve fast-dwindling dollar reserves.

It is not fair or even relevant to use the argument that the Philippines do not freely import Virginia burley leaf tobacco as a basis for opposing favorable consideration of Philippine sugar producers in the increases of import quotas included in any revision of the Sugar Act in this Congress. It is much more logical and pertinent to refer, in this connection, to the unequivocal promise of President Eisenhower when he signed the amendments to the Sugar Act in 1956, when the Philippines alone among the foreign areas were not granted an increase in quotas. May I take the liberty of again quoting the press release which came from the White House at the time of the enactment of the 1956 amendments:

STATEMENT BY THE PRESIDENT

I have today approved H.R. 7030, to amend and extend the Sugar Act of 1948, as amended, and for other purposes.

In addition to extending the Sugar Act for 4 years, the bill restores to the domestic areas the right to supply 55 percent of this country's increased requirements of sugar. The amendments also permit foreign countries to supply as much as they have been, plus 45 percent of the increases in our requirements. These increases will be most important relatively for the countries that heretofore have been minor suppliers.

It was not considered feasible to recommend an increase in the Philippine quota at this time. I believe, therefore, that when new amendments are being prepared at the conclusion of the present act, consideration should be given to allowing the Philippines to share in increased consumption, as is now provided for other foreign countries by this bill.

It is not hard to believe that the words imputed to the President raised high the hopes of the Philippine people that the 1960 revision of the Sugar Act would include favorable consideration of Philippine sugar producers. Nonetheless, the President of the United States on April 4, in reply to an inquiry by the President of the Philippines, wrote as follows:

DEAR MR. PRESIDENT: I have received your telegram of March 17 asking that I increase the Philippine sugar quota. As you know, the sugar quotas are determined by Congress, and any modification would require congressional action. Since the Sugar Act of 1948 as amended in 1956 expires this year, Congress is expected to consider its extension during the present session.

The administration has been giving considerable thought to what recommendations it should make to Congress for its consideration. After weeks of most careful study of this problem, I have concluded that the time is not propitious to recommend any change in the present structure of quotas assigned to foreign countries.

Accordingly, I have recommended to the Congress only certain minimum changes in the present Sugar Act. The most important of these would give me the authority to reduce the quota for a calendar year for any foreign country, except, of course, the Philippines, and to make required replacements from any source when I determine it to be in the national interest or necessary to insure adequate supplies of sugar. I have requested this authority primarily to enable me to protect our sugar consumers should our supplies of sugar from foreign sources be endangered for any reason. The final decision as to whether I am to be given this authority, however, rests with Congress. I regret, therefore, that it has not been possible for me to comply with the wishes of the Philippine sugar producers. I wish to assure you, however, that the position of the Philippines has been given full consideration by the administration in arriving at the position which I have recommended to Congress.

With assurances of my continued esteem,

Sincerely,

DWIGHT D. EISENHOWER.

This reply, with a number of equivocal and unclear phrases, disregards and dismisses the simple words of the President, uttered less than 4 years ago, that "when new amendments are being prepared at the conclusion of the present Sugar Act, consideration should be given to allowing the Philippines to share in increased consumption as is now provided for other foreign countries by this bill." The reply of the President, the message accompanying the recommended revision of the Sugar Act, and the message from the executive department accompanying these recommendations all appear to make much of the design to give the President authority to reduce quotas during any calendar year for foreign countries excepting the Philippines. The reduction of the fixed minimum quota of the Philippines is not a subject for our present consideration. In 1934 when our quota system was adopted, the Philippines received a staggering reduction of its historical and proportionate participation in the U.S. sugar market to the tune of 897,872 short tons. From 1934 the annual fixed quota for the Philippines has never been increased to any extent despite the apportionment among other foreign suppliers in the annual increased demands of U.S. users. What we are talking about now is a belated increase in the export quota to the United States for the Philippines along with other foreign suppliers to meet our annual increased sugar requirements.

At this point it may be well again to clarify what seems to be an impression, mistaken though it is, that the fixed Philippine quota of 980,000 tons annually cannot be increased due to the provisions of the Sugar Act and the trade agreement in force between our country and the Philippines. Article II of the Philippine Trade Agreement Revision Act of 1955 specifically provides:

The establishment herein of the limitations on the amounts of the Philippine raw and refined sugar that may be entered, or withdrawn from warehouse, in the United States for consumption, shall be without prejudice to any increases which the Congress of the United States might allocate to the Philippines in the future.

There are many strong economic and political reasons for including in any revisions which this Congress makes of the Sugar Act for the period commencing January 1, 1961, an increase in the Philippine quota commensurate with other foreign suppliers to meet the annual increased sugar needs of the United States. I shall not elaborate upon them, but point again only to the moral obligation which we have to act in this manner in fulfillment of the promise of the President of the United States reflected in the press release which I have quoted to the effect that at this very time we would allow the Philippines to share in increased consumption.

The remarks of Mr. LEVERING, a survivor of the Bataan death march and a firm friend of the Philippines, have received wide notice and favorable comment. Among other news items, and this one particularly of interest to our colleagues representing tobacco producing and processing States, is an editorial published in the Philippines Herald of Saturday, April 9, 1960, entitled "U.S. Solon Raises Valid Point," which I ask unanimous consent to have printed at this point in my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

U.S. SOLON RAISES VALID POINT

A Member of the U.S. House of Representatives, Representative ROBERT W. LEVERING, Ohio Democrat, complained on the U.S. Congress floor the other day that the Philippines had been denied increases in its sugar quota because of its ban on American leaf tobacco. At the same time, Representative LEVERING called attention to the fact that, while Cuba had similarly cracked down on American cigarettes, no such action had been taken by the United States against that country.

The implications of this charge which hews along similar others that had been raised in the U.S. Congress anent the Philippine Islands bid for an increased sugar quota, add up to a powerful indication of deliberate discrimination against the Philippines, for reasons that, considering the close ties of friendship between the Philippine Islands and the United States, are hard to understand, indeed.

Representative LEVERING, who obviously is one Member of the U.S. Congress who has not permitted his sense of justice to be influenced by selfish or petty considerations in discussions on the Philippine Islands sugar quota question, has raised a valid point which his colleagues in the U.S. Congress

would do well to ponder. It is that the Philippine Islands decision to curtail its tobacco imports was actually prompted by the recommendations of the Bell economic mission in 1950 which had suggested such a recourse as a means of conserving the country's fast-dwindling dollar reserves. In short, there was nothing in the Philippine Islands Government's move to suggest any intent at discrimination, but was taken solely as a legitimate and necessary step to protect the country's interests.

In sharp contrast to the circumstances involved in the Philippine Islands move, LEVERING said, was the act of Cuba in curbing its own imports of American cigarettes—an act taken, not as the result of recommendations by an American mission, but which, one might say, had been prompted largely by feelings of anti-Americanism and therefore constituting discrimination of a vicious and vindictive sort. Yet, strangely enough, America has reacted to this virtual slap in the face in the most inconceivably magnanimous manner, refusing to take any move that might be construed by the Cubans as being in the nature of a reprisal against their country.

The injustice to the Philippines becomes even more pronounced when the U.S. reluctance to grant the Philippine Islands bid is viewed in the light of the assurance that President Eisenhower himself had made to consider recommending an expansion of the Philippine Islands quota when the Sugar Act is renewed in 1960. But the Philippine Island's cause, of course, is not entirely a lost one. It may sound like wishful thinking, but, as President Garcia had pointed out in effect, there is still a chance that the United States may realize the injustice and assay in time to correct it.

FREE OR REDUCED RATE TRANSPORTATION FOR CERTAIN ADDITIONAL PERSONS

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1314, H.R. 4049.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H.R. 4049) to amend the Federal Aviation Act of 1958 in order to authorize free or reduced rate transportation for certain additional persons.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill (H.R. 4049) to amend the Federal Aviation Act of 1958 in order to authorize free or reduced rate transportation for certain additional persons, which had been reported from the Committee on Interstate and Foreign Commerce, with amendments, on page 2, line 2, after the word "retired", to strike out "directors" and insert "directors who have served at least five years"; at the beginning of line 6, to insert "widows, widowers, and minor children of employees who have died as a result of personal injury sustained while in the performance of duty in the service of such air carrier or foreign air carrier;"; at the beginning of line 18, to strike out "oversea" and insert "overseas"; and in line 20, after the word "regulations", to strike out "prescribe: *Provided*, That the free transportation authorized herein, which is for pleasure or vacation travel, shall be on a space available basis" and insert "prescribe. Any air carrier, under such terms and conditions as the Board may prescribe, may grant reduced-rate transportation to members of the United States armed services when such persons are traveling at their own expense, in uniform of those services, between a place in Alaska or Hawaii, on the one hand, and a place in any of the other States, on the other hand, while on official leave, furlough, or pass."

Mr MANSFIELD. Mr. President, I ask unanimous consent that a statement relating to the purpose of the proposed legislation, with pertinent information relative to committee amendments, be printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE LEGISLATION

The purpose of this legislation is to authorize air carriers to grant free or reduced-rate transportation to certain classes of persons, in addition to those already designated in section 403(b) of the Federal Aviation Act of 1958. These are the following:

(1) Retired directors, officers, and employees and their immediate families;

(2) Parents of active or retired officers and employees (whether or not living in the immediate household);

(3) Immediate family of any person injured or killed in an accident where the object is to transport such persons in connection with such accident;

(4) Widows, widowers, and minor children of employees who die of injuries received in line of duty;

(5) Servicemen in Alaska or Hawaii returning to places in the other States, on leave or furlough, at their own expense.

The bill, which implements a legislative recommendation of the Civil Aeronautics Board, was introduced at the request of the Board and was supported by all segments of the aviation industry, including management and labor. It is permissive and not mandatory and the Board will retain control over all conduct of the air carriers pursued thereunder.

NEED FOR THE LEGISLATION

Under the provisions of existing law (sec. 403(b) of the Federal Aviation Act of 1958), air carriers are permitted to transport various classes of persons at free or reduced rates under terms and regulations prescribed by the CAB. Included in this classification of persons are airline employees, officers and directors and their immediate families, as well as persons injured in aircraft accidents and physicians and nurses attending such persons.

Over the years, however, the air carriers extended similar privileges to their retired employees, officers and directors, and to parents of employees and officers, irrespective of whether or not such parents were actually residing in the same household. Additionally, as a humanitarian practice, the air carriers have transported members of the families of persons injured or killed in an aircraft accident to and from the place of the accident, or to the hospital or other appropriate location in the area of the accident.

Several years ago the CAB reviewed and investigated all the practices of the regulated air carriers in the granting of free or reduced-rate transportation. This investigation disclosed that many of the air carriers were granting such transportation to persons who did not appear to qualify within the limited number of categories specified in section 403(b), such as executives of the advertising agency retained by the carrier, attorneys or members of the firm of attorneys retained by the air carriers, physicians retained by an air carrier who continued their own private medical practice, and the Board promptly forbade the continuation of such practices. Additionally, the Board was constrained to hold that the provisions of existing law did not permit the granting of such privileges to (a) retired employees; (b) parents who did not live in the immediate household of employees; (c) members of the immediate family of a person injured or killed in an accident; or (d) widows and minor children of employees who had died as the result of injuries sustained while in the service of the carrier. Upon representation by the industry that the privileges accorded to this latter group of persons was a custom of long standing which had become imbedded in the industry's public- and labor-relations structure, the Board suspended the effectiveness of its prohibition as to them from time to time, the latest suspension order expiring April 30, 1960.

In order to regularize and validate these industry practices, the Board proposed and sponsored this legislation. Your committee has been advised that the Board believes that the provision of such free or reduced-rate transportation will not unduly burden the carriers and would be in the public interest.

COMMITTEE AMENDMENTS

The hearings conducted by your committee indicated a need for amending the House bill in the following respects:

(1) Require service of at least 5 years before a retired director could qualify for pass privilege;

(2) Add survivors of employees who die of injuries received in line of duty;

(3) Eliminate the restriction of pleasure and vacation travel to space-available basis;

(4) Continue status quo for servicemen in Alaska or Hawaii traveling back to States on furlough or leave at own expense (Magnuson-Bartlett amendment).

With reference to amendment (1) above, the committee felt it desirable to require a period of active service of at least 5 years before a retired director could qualify for a pass privilege in order to prevent potential abuses.

With respect to amendment (2) above, the hearings established the need for permitting widows, widowers, and minor children of employees who have died as the result of personal injury sustained while in the performance of duty in the service of an air carrier to be entitled to receive the same privileges which would have accrued to them had the decedent survived and lived to the age of retirement.

With reference to amendment (3) above, the House, in passing H.R. 4049, adopted an amendment which would require all free transportation for pleasure or vacation travel to be on a space-available basis. The Civil Aeronautics Board advised your committee that such an amendment was neither necessary nor desirable since the legislation is permissive and not mandatory. The Board stated that should experience demonstrate that such a restriction was needed, it could be imposed voluntarily by the carrier. Moreover, representatives of the air carriers pointed out that it is customary to place such privilege on a space-available basis and that it is in the self-interest of the airlines not to permit an uneconomic situation to develop in the use of such privilege. Accordingly, we were urged to remove this unnecessary restriction by the Board as well as by management and labor.

In regard to amendment (4) above, the CAB specifically requested such addition to the bill for the purpose of allowing air carriers to offer reduced rates for furlough travel of military personnel stationed in the State of Alaska or Hawaii in accordance with a practice which the Board has permitted in the years prior to their admission

to the Union. Specifically, the Board advised that when Alaska and Hawaii were Territories, air transportation between the States and Alaska or Hawaii was "overseas air transportation" as defined in the Federal Aviation Act and, consequently, the Board had authority under existing law, to permit air carriers to grant reduced rates to military personnel traveling at their own expense on furlough between the States and these Territories. With their admission to the Union, such transportation can no longer be regarded as "overseas air transportation" and authority to grant reduced rates under section 403(b) is lacking.

Your committee adopted the recommendation of the Board but has limited the privilege to travel only between a place in Alaska or Hawaii on the one hand and a place in any of the other States, on the other hand. This amendment would not permit or authorize the carriage of military furlough traffic at reduced rates to or from any other place in the United States.

Mr. MANSFIELD. Mr. President, I move that the committee amendments be agreed to en bloc.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to.

The PRESIDING OFFICER. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 4049) was read the third time and passed.

CONSTRUCTION OF MODERN NAVAL VESSELS

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1329, H.R. 10474, which is to be the unfinished business.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H.R. 10474) to authorize the construction of modern naval vessels.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill.

NEW YORK HIGH SCHOOL SENIOR WINS AMERICAN LEGION AWARD

Mr. JAVITS. Mr. President, each year the American Legion, as part of its Americanism program, conducts a nationwide high school oratorical contest through its 50 departments. This contest is approved by the National Association of Secondary School Principals who assist in the organization and judging of the contest. This year more than 350,000 high school students competed in 12 basic regions. The subject was a phase of the Constitution of the United States chosen by the student.

The winner of regional No. 2 contest, covering New York, New Jersey, Connecticut, and Rhode Island, is Frank J. Buono, of Binghamton, N.Y. This 17-year-old high school senior selected as the title of his oration, "The Framing Fathers and the Constitution." This is a most laudable achievement and I congratulate the young man.

I ask unanimous consent that this oration be printed in the RECORD.

There being no objection, the oration was ordered to be printed in the RECORD, as follows:

THE FRAMING FATHERS AND THE CONSTITUTION

On a beautiful Sunday afternoon, last summer, I had the rare privilege of visiting a shrine. I visited the national shrine dedicated to free men everywhere—Independence Hall in Philadelphia, Pa. There, in the scenic grandeur of Independence Square, in the heart of the modern city, I gazed upon the birthplace of the Constitution of the United States of America. And as I looked upon the simple splendor of the red brick statehouse. I thought about the men who made history there. And as I thought about their inspiring lives and of the seemingly hopeless task before them, I suddenly realized that here, on this very spot, was the beginning of the contribution which they made to their country, and to posterity. They gave us the Constitution of the United States.

Here it was, then, in the quiet, graceful surroundings of 18th century colonial America, that they met in a period considered the most critical time in the history of our Nation. And as I entered the assembly hall, I thought I heard a voice. It spoke: "Gentlemen, we have emerged from the Revolutionary War. Victory is ours and we have gained our freedom. Shall be now destroy what we have won? The Thirteen Colonies are operating under different forms of colonial government. We are separated by social and economic differences. The feeling of national unity, born within us during the war years, has now changed to jealousy and hate. There are threats of rebellion everywhere. The colonies are looking to us, the delegates to this Constitutional Convention, to save them and our young Nation from disaster and ruin."

And as I looked about the room, I saw Benjamin Franklin, inventor, philosopher, and wise man. I saw James Madison, Virginia lawyer, the Father of the Constitution. I saw Alexander Hamilton, genius in all matters of finance. I saw George Washington, soldier, statesman, leader of men. And I saw Charles Pinckney, James Randolph, planters from Virginia, farmers, businessmen, Catholics, Protestants, rich men, poor men.

And I thought about those long, hot afternoons, in the summer of 1787, when tempers flared and men made threats; when political beliefs and social differences made the task seem hopeless indeed; when the delegates discovered that the Articles of Confederation, whatever amendments they might contain, would be inadequate to establish a strong central government; when they cast aside the original purpose of the Convention and proceeded to form an entirely new government. I thought of the pleading and the disappointment, and the heartbreak, too, made bearable only by the sturdy faith of those patriots who cast aside all differences and finally, through compromise and understanding—and because of the common bond that existed in their hearts for freedom and the right of the individual—brought forth the Constitution of the United States of America.

And all at once I knew, as I stood there, that here was a document the like of which the world has never known. The great English statesman, William Gladstone, once called the Constitution of the United States the most wonderful work ever struck off at one time by the brain and purpose of man. It had not been wrested by force from a despot king, nor did it develop over the years by trial and error. But rather, here was a document that grew from the spiritual depths of the people themselves, without any previous experience and training in self-government, without indeed any other guidance but the desire of men to be free. It established the first great order in the age-old chaos of politics. It arose out of all classes and subjected them to an equal law. It wiped out all social casts, and thenceforth no one was called lord or master, and no one remained superior or inferior to his neighbor except by the natural and desirable distinctions of virtue, heroism, and intellect. Here was a document, conservative in that it clung steadfastly to the spirit of liberty, yet elastic enough to meet the ever-changing aspects of society and human nature, a document with a system of checks and balances and a control shared by the States, the Federal Government, and by the people themselves.

Our Founding Fathers created for posterity the very best that mankind, till then, had been able to offer. For did not they mold into this one glorious document the democracy of the Greeks, the freedom of the Romans, the principles of the Magna Charta? Yes, the work of the Framing Fathers was completed.

Since then, we have grown from one of the smallest nations of the world to be one of the greatest and the most populous. We have grown richer than all the rest of mankind. Our skyscraper towers rise higher in the clouds than man could ever have dreamed, and deeper than the ocean floor lie the beds of our inexhaustible mines. Our endless roadways web this vast continent of the earth and our ships plow through all its waters.

But, ladies and gentlemen, as I stood there, 172 years later, in spite of these material accomplishments, I suddenly became aware of the problems which we face in 1960 America—juvenile delinquency, disobedience to our laws, intolerance of the rights of men of all races and creeds. To assist us in the solution of these problems, we need the inspiration of these men of yesterday. And I feel that, as their spirit moved me, so must we, as a nation be inspired by these great men. They stand in the unbroken line of patriots whose personal sacrifice and devotion to country must be an inspiration to those of us who live. Let us make better use of our heritage. Let us protect these fundamental rights of men, so hard won and so generously provided for by our Framing Fathers. We have inherited from them a priceless possession—the Constitution of the United States. It is their monument to freedom. It is the gift of their noble hearts to us. But it is also a most sacred obligation. Now it is our turn. It is our duty to pass it on, intact, to future generations.

Let us keep the faith of the Framing Fathers of the Constitution. If we keep that faith—and if this be our motto, "In God is our trust," then, the banner of free men forever shall wave o'er this land of the free, this home of the brave.

FRANK J. BUONO.

INTERNATIONAL EDUCATIONAL EXCHANGE

Mr. HUMPHREY. Mr. President, I have always taken great pride in the leadership of the University of Minnesota in the program of international educational exchange. As with the private colleges of Minnesota, the university has demonstrated a thorough understanding of the role of the American college and university in creating a more vigorous and meaningful American foreign policy.

Among recent comments on the international education exchange program, few have so much information and display so much insight into the exchange program as the University of Minnesota Alumni News, April 1960 issue.

I ask unanimous consent, Mr. President, to have printed in the RECORD excerpts from several of the articles prepared for this issue of the Minnesota Alumni News.

I call these articles to the attention of my colleagues as an illustration of the vigorous role being played by university leaders in developing broader understanding and cooperation among people.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE UNIVERSITY AND INTERNATIONAL EDUCATIONAL EXCHANGE

(By J. L. Morrill, president, University of Minnesota)

The migration of scholars from one country to study in another is not new.

Not only in the Middle Ages, with their sometimes roving scholastic guilds of masters and students in the Western World, but also in the ancient Asian universities it occurred. Historians have noted the export of Buddhism to China and other Asian countries by Chinese students in large numbers who sojourned in India between the fifth and seventh centuries, principally at the famed University of Nalanda. In China itself, beginning with the seventh century there were outstanding cosmopolitan universities with student migrants from Siberia, India, Greece, Arabia, Persia, and Japan.

Nearer to our own day, have been the hundreds upon hundreds of American scholars who flocked to the great German universities of the 19th century for graduate study, and the long procession of Rhodes Scholars at Oxford from this country, for example.

But there were slender precedents to the worldwide educational exchange which has followed upon World War II. How many thousands of students, scholars, and scientists from how many lands in Europe, Asia, Africa, and Latin America are now in the universities and technical institutes in Soviet Russia we do not know with any accuracy. But the flood of some 50,000 foreign students on American campuses today far surpasses our prewar experience—and the number of American students and teachers in the universities and governmental missions overseas exceeds almost infinitely any prewar exodus of this kind.

Truly the educational world of today has become one world beyond anything we have ever known.

All this we welcome, for it has been always the instinct of universities to recognize that knowledge transcends national boundaries and that the quest for, and the fellowship of, learning are universal. Deeply we have believed and understood with men and women everywhere, of every race, religion, and color, that learning above all else can contribute best to "the intellectual and moral solidarity of mankind"; and that "it is in the minds of men that the defenses of peace must be constructed," as it was declared in the first sentence of the constitution of the United Nations Educational, Scientific, and Cultural Organization.

The University of Minnesota today is a different and better, a more significant and productive institution by reason of the nearly 1,000 students and teachers and researchers from other lands, and by reason of our working partnership with the National University of Seoul and far-off Korea.

We are confronted with new challenges to which the universities of this and every other nation are just beginning to respond. International educational exchange, I deeply believe, is at the threshold of a new destiny and vastly greater dimensions which we must strive better to perceive and must endeavor more usefully to realize.

GOPHERS COMPOSE OUR INTERNATIONAL ALUMNI

(EDITOR'S NOTE.—In April 1958 the University of Minnesota received a grant from the Carnegie Corp. of New York to make a study of continuing relationships with our foreign alumni. Forrest G. Moore, 1946, M.A., 1953, Ph. D., adviser to foreign students at the university since 1946, had the opportunity to visit alumni in 13 Asian countries, the United Arab Republic and Greece. Here he tells what he found in the way of alumni interest and something of the nature of the problems and challenges faced by our alumni overseas.)

"Don't make us oversea orphans, please."

This plea was voiced by a young Minnesota-trained scientist, back in his home country since 1958.

What does he mean? What do our oversea alumni expect of us?

It was questions like these that led the University of Minnesota to express an interest in undertaking a study of its oversea alumni in an attempt to determine what needs to be done to retain the institution's contacts with them.

From December 1958 to March 1959 I visited—in their homes and on the job—268 former students of the university. About half of the group visited were able to take time to respond to questions about their feelings of the importance of maintaining contact, and to express their ideas about how we can best accomplish this purpose. Fifty-two were interviewed at length in an attempt to determine the problems of maintaining the contact as well as the benefits which could result from maintenance. Their responses were encouraging, provocative, and practical.

From the cautious reminder that "the university should not build up hope for something that can't be done" to the cryptic comment that "continued communication with the experts in one's own field is essential to the serious researcher's existence," the responses backed enthusiastically the importance of maintaining contact with oversea alumni.

In a number of instances the feeling was expressed that the attention being paid to this idea is long overdue. Those alumni who attended the university in the twenties—and there were a number of these oldtimers in the Philippines, Taiwan, and India—spoke of President L. D. Coffman's visits to alumni around the world in 1931–32 and waxed nostalgic about their days at Minnesota.

The purpose behind such contact and the means by which the relationships may be maintained are much less agreed upon. The problems of keeping the relationship personal, valuable, and free of political overtones are undisputed. The more recent returnees speak of the importance of keeping up professional contacts. They see this as a channel through which they can give their major advisers a sense of the problems they face in putting their training into practice and at the same time keeping themselves up to date in their fields.

Here and there an alumnus, not quite satisfied with his own performance or his professional advancement, spoke of the value of the morale support which contact gives, and a few alumni hold the view that the parent university must follow up its alumni to evaluate accurately the outcome of university training.

It was tremendously encouraging to see these alumni on the job, many of them holding positions of power and responsibility that will do much to shape the view of human values and economic policies, affecting the lives of millions of people, in the decades ahead. Their dedication to their work, the professional skill with which they are solving problems and the enthusiasm with which they face these problems is inspiring to see. The university can be justly proud of the role it has played in their education for leadership.

And this leadership is evident in every country visited. In Japan their leadership is most evident in the field of education, but many of those who studied at the university during the last 12 years are now working in ministries of the government.

With the resurgence of Japanese industry and the reappearance of their industrial products on the international market, American-trained Japanese find their services in demand in the large corporations with oversea customers. Andrew Nakamura, 1947, B.M.E., 1948, M.S. and M.E., missed my visit to Japan because he was on a business trip accompanying the president of his company to the United States and South America. Another alumnus had recently moved to France as an officer in the Paris branch of the Bank of Japan.

In Turkey, Greece, and Iran, the alumni groups, though small (20–30) in number, are making effective contributions in colleges and universities and in government agencies in the fields of public health, medicine, and engineering. In each of these countries, individual alumni often are working in enterprises that maximize their effectiveness as internationally trained experts.

These include foundations, private business firms, and educational institutions that are, in effect, mutually sponsored by in-country and American interests. The positions of influence and importance these alumni hold are evidence of the cordial reception given to American-trained foreign students.

These alumni also are being called on to serve as experts in other foreign countries. Alumni from Iran, Pakistan, and the United Arab Republic have served with UNESCO Missions in other African and Asian countries in projects attempting to overcome the debilitating effects of illiteracy and disease.

In Korea, the number of alumni has risen rapidly because of the university's contract with Seoul National University. More than 200 individuals have been trained in this program during the 5 years of operation ending October 19, 1959, and the presence of Minnesota-trained agriculturalists, engineers, and physicians is becoming the dominant force in education in Korea. Alumni say that the reputation of Harvard and Columbia as the universities to attend in the United States is being overshadowed by that of Minnesota.

Taiwan-located alumni are a combination of oldtimers and recent returnees. The president of the Minnesota Club at the time of my visit to Taiwan, Mr. Shu-Ming Lin, received a bachelor of science degree from the school of architecture in 1920. His brother, Sze Chen Lin, 1922, E.M., 1923, M.S., studied geology under Professor Grout. Still another early alumnus is President Yuan-Tsai Tu of Taiwan Provincial Normal University and another, Ching-Po Sun, 1925, B.S. Ag., 1926, M.S., heads the department of agricultural engineering at National Taiwan University.

Among the more recent alumni are five who work on the Joint Commission of Rural Reconstruction, which has established a pattern of economy and effectiveness in the use of American aid for improvement in agriculture in Taiwan. Dr. Y. S. Tsiang, 1940, M.S., 1945, Ph. D., an advisee of Professor Emeritus Herbert K. Hayes in agronomy, is secretary-general.

The alumni group in Taiwan is a well organized and active group. Dr. J. L. Wong,

1922, D.D.S., and C. Y. Wu, a 1950 graduate in agricultural economics, are among its enthusiastic members, both active in getting a club established on Taiwan after the retreat from the mainland in 1948–50.

Minnesotans who visit Taiwan are given a warm welcome as both Harold Stassen, 1927, B.A., 1929, LL.B., and Gov. Orville Freeman, 1940, B.A., 1946, LL.B., found during their visits to the Far East. Members of the alumni group are disappointed when visitors from Minnesota neglect to let them know of their arrival in Taipei, as they want to be brought up to date on the Minnesota news and have the opportunity to host Minnesota friends.

The Philippine alumni constituency is the largest organized oversea alumni group. In the Manila area alone, some 40 alumni meet regularly to renew Minnesota ties. Dr. Juan C. Orendain, 1918–20, well-known Manila attorney who attended both Minnesota and St. Thomas, has been the president of the club for the past 2 years. A directory of alumni of Big Ten universities is published and an annual meeting held Thanksgiving Day to install—as president of the Big Ten Alumni Association—the president of the alumni club of the university which wins the conference title in football.

"Johnny," as he is affectionately known among his associates, is hoping that one of these days a Philippine alumnus of Minnesota will be the president.

Alumni in the Philippines from Minnesota are heavily committed to leadership in education. About half of the 40 in the Manila area are teaching in colleges and universities or providing leadership in secondary education. Cesario Bandong, 1952, M.S., is principal of Torres High School, the largest in Manila with more than 8,000 students including those in evening classes.

Others serve on the faculties of the University of the Philippines in Quezon City and Laguna, Central Luzon Agricultural College, Central Philippine University, University of Santo Tomas, Wesleyan College, Philippine Normal College, Araneta University, University of the East, and Philippine Women's College. Still other alumni are serving in the fields of public health, dentistry, and medicine.

The alumni groups in Malaya, Burma, and Iraq are all post-World War II. Small in number—5 in Malaya, 13 in Burma, and 20 in Iraq—they have had no need or wish to organize as a group. Some of them have been in touch with each other informally, but in most instances, my visit brought a number of them together for the first time.

In Malaya, three of the five alumni had journalistic training. The effect of the British educational system for the United States trained, including the passing of University of Malaya examination as the only avenue of qualifying for a government job, was adversely commented upon by the alumni. Those educated in the United States are seldom able to obtain a government position.

A group of the oversea alumni recently had banded together in an effort to get the government to recognize degrees earned in the United States as equivalent to the degrees of the University of Malaya. An on-the-spot observer indicated that the group had made the mistake of trying to compel the government to recognize degrees from all American colleges and universities as equivalent.

Alumni in Malaya are not very positive about the importance of followup relationships. One alumnus indicated he felt that many changes would need to come to Malaya before continued affiliation with an American university would be of any value—a feeling that one would be better off if he had taken his higher education in Great Britain or if he hadn't, to keep quiet about it.

Burmese alumni are few in number but have had the opportunity to be very effective. U. Myint, 1954, M.S., a graduate in agricultural economics, serves as deputy secretary of the Agricultural Rural Development corporation. U Khin, 1951, M.A., is deputy director of information for the government, and Hla Aung, 1953, M.A., serves as executive secretary of the Burma Law Institute. All hold positions which allow them to take an active part in the developments taking place in Burma.

Alumni from Thailand all are located in Bangkok or Dhonburi, the twin cities on the Chao Pharya River. The first students from Thailand enrolled at Minnesota during World War II. Thailand, like the Philippines, sends many women to the United States since they often continue their careers after marriage. Numerous alumni have studied in the field of public health and the majority are employed in universities or in government posts.

There is an informal alumni organization with an alumnus named as convenor of the group. Two of the group have been prominent in government circles. Mrs. Nandaka Suprabhatananda is secretary to the mayor of Bangkok and Chalaw Vanaputi heads the Ministry of Interior.

In India, Pakistan, and Israel the alumni are graduates primarily in the fields of agriculture and engineering. The partition of Pakistan and India in 1948 has meant the wholesale relocation of alumni, and one result of my visit was to bring up-to-date university records on alumni in the Indian subcontinent.

One gets the feeling in both India and Pakistan that the graduates in agriculture surely hold the key to the future in these two countries. Their responsibilities are heavy.

Positions held by alumni in India include those of the joint director of agriculture in Mysore, Andhre Pradesh, and Uttar Pradesh, head of the Institute of Jute Technology in Calcutta and principal of the Assam Engineering College in Assam, to name only two. The Hyderbad alumni group includes three alumni who attended the university in the twenties and thirties.

Dr. L. G. Kulkarni, plant genetics, and Dr. Syed Vaheeduddin, plant pathology, received Ph. D.'s from Minnesota in 1934 and 1936, respectively, and the third, G. A. Dewaji, began his work at the university in 1922 and received his B.S. in mechanical engineering in 1926. His daughter, Miss Vera Dewaji, only recently returned to India from a year's study at Minnesota to take up work at the Institute of Preventive Medicine in Hyderbad.

Government offices and educational institutions in New Delhi employ 17 alumni of the university. Three graduates of Minnesota located in New Delhi are serving in important posts in the Ministry of Agriculture. They are Mohan P. Bhargava, 1946, M.S., concerned with community development and cooperatives; P. R. Mehta, 1948, Ph. D., plant protection quarantine and storage; and T. R. Mehta, 1948, Ph. D., farm extension work.

In Pakistan, as in India, many alumni are serving in the field of agriculture. Many Pakistan alumni came to the university as Indian Government scholars before partition. The more recent returnees studied mainly in engineering fields. Men in their early thirties, they are having the opportunity to pioneer new developments in a new country.

In West Pakistan A. A. Anwar, 1949, Ph. D., head of the microbiology department, and S. Z. Hasanain, 1948, Ph. D., head of the botany department, are both at the University of Karachi; and F. S. Hasan, 1954, M.S., 1957, Ph. D., and S. B. Ali, 1948, M.C.E., serve in the Ministry of Agriculture. Chowdhry Mohammed Rafique, 1950, Ph. D., at Rawalpindi works in the Soil Conservation Directorate. Others are located at Punjab Agriculture College, Lyallpur; Government Central College, Quetta; and in Lahore. All are among the alumni completing work at Minnesota since 1946.

Alumni in the United Arab Republic are an example of an influential group of alumni; young, vigorous, and with training of high quality. Fifteen of the twenty-two alumni in Cairo and Alexandria took Ph. D. degrees while in the United States and as a consequence are moving rapidly into positions of significance.

These are but a few of Minnesota's alumni found working in 80 countries around the world. In all 15 countries visited I found young men and women doing a dedicated and effective job in the struggle to improve the living standards, the health, and literacy of their people.

American alumni of the university also are at work in many of these countries. Oversea alumni look to the university for leadership in the field of higher education. They want and expect the university to maintain contacts with its graduates. They feel they have the right to be kept abreast of the university's development and to be able to call on professional colleagues in the university for advice and assistance.

They expect and wish to demonstrate by personal example the vitality and the effectiveness of an education obtained at the University of Minnesota. They need our help.

Minnesota's Foreign Student Program—A Story of Progress

(By Forrest G. Moore, foreign student adviser)

Fall 1959, 284 new students from overseas began classes for the first time on the University of Minnesota campus.

They joined approximately 600 others who had been at Minnesota from 1 quarter to about 5 years, studying in 117 different graduate fields and in most of the undergraduate colleges.

Eighteen in every one hundred are women, 36 percent are married, but only 52 percent of those married have family members with them in this country.

India, China, Korea, and Canada each send more than 100 students to the campus. More than 20 students each are registered in the fields of agronomy and plant genetics, entomology, analytical chemistry, civil, chemical, electrical, and mechanical engineering, business administration, economics, English, internal medicine, and surgery.

The interplay of ideas which takes place between American and foreign students, as these young people from overseas seek an education on our campus today, is the result of an early and sustained interest at Minnesota in oversea students.

In the first published calendar of the university (1874–75), students from Nova Scotia, Canada and Denmark, were listed alongside those in the Dacotah Territory and Texas. By 1912–13, 30 foreign students from 13 countries took their place among an enrollment of 3,414. The first student from oversea to receive a Ph. D. from the graduate school, Sakyo Kanda of Japan, completed his work at the university in 1915.

A U.S. Office of Education bulletin issued in 1921 mentions Minnesota as one of 74 educational institutions offering courses of special interest to foreign students. Agriculture, medicine, dentistry, geology and chemistry were listed as the schools and departments with strong courses.

That year, 45 oversea students were registered at Minnesota and the university ranked 20th among all the schools in the country in the number of foreign students enrolled.

The university very early indicated an interest in providing special assistance for the oversea student. The Regents' Minutes for December 13, 1921, carried a notation of the appointment of H. J. Leonard 1912 D.D.S.,

1915 B.A., of the School of Dentistry, as Adviser to Foreign Students. In 1925–26, J. B. Johnston, chairman of a special committee on Freshman Week, recommended that a special "committee on advice and help for foreign students" be appointed.

By 1927–28, the number of oversea students had reached 198. The late Alfred E. Koenig 1910 M.A., then secretary of the Minneapolis YMCA, spent many hours during these years working with oversea students. He was a member of the committee on foreign students, chaired by the late E. M. Freeman 1898 B.S., 1899 M.S., 1905 Ph. D., then dean of the College of Agriculture, Forestry and Home Economics, which authored a report that received the approval and endorsement of the university senate and President L. D. Coffman in 1931. The report called for the establishment of an office to assist foreign students, and recommended that the dean of women and dean of men maintain centralized records on foreign students.

From 1931–35 C. P. Barnum, 1904, B.A., offered creative leadership to the university's work with foreign students. The Rotary Club of Minneapolis financed the program for 3 years and in 1934–35 the Carnegie Corp. of New York made a grant to continue the project.

During this period the university received the Education Medal for distinguished service in promoting international goodwill and understanding, awarded by the Federation Interalliée des Anciens Combattants (International Body of War Veterans).

The depression years, followed by the years of tension in Europe, combined to deemphasize the importance of work with foreign students and from 1936–46 the adviser to foreign students worked on a part-time basis under the administrative leadership first of Prof. Harold S. Quigley in the International Relations Bureau, and then under E. G. Williamson, 1931, Ph. D., dean of students.

During these years Prof. Asher N. Christensen, 1924, B.A. (1936–42), Aldus C. Smith, 1944, Ph. D. (1942–44), and John D. Foley, 1940, B.A. (1944–46), served as advisers to foreign students.

Through most of this period and until her death in 1957 Mrs. Mary Frances Pierce, secretary to deans of the graduate school from 1914–39, took an active interest in oversea students, both as a part of her work in the graduate school office and through her interest and sponsorship of the Cosmopolitan Club. This group played a vital role in bringing together American and foreign students to work on common problems and discuss ideas of mutual interest from its inception on the campus in 1911 until the late forties.

As a result of the attention given exchange of students with Latin America early in World War II, in 1941–42 the Regents—at the recommendation of Professor Christensen—voted to authorize two tuition scholarships from Latin American students.

Graduate Dean T. C. Blegen 1912, B.A. 1915, M.A. 1925, Ph.D. in 1942, was designated chairman of the committee to administer these scholarships and during the ensuing 18 years Blegen and many members of the original committee (Professors E. C. Stakman 1906, B.A. 1910, M.A. 1913, Ph.D., Christensen, F. B. Barton 1917–19 and Williamson) were to furnish incisive and creative leadership to the university's mounting commitment to the implementation of the purposes and ideals of international educational interchange.

In June, 1945, at the urging of the committee on Latin American scholarships, President W. C. Coffey charged the committee with the responsibility of surveying the entire situation of both undergraduate and graduate foreign students and the role of the university in their education.

This committee transmitted to President J. L. Morrill in August, 1945, a comprehensive report which was to serve as the guide to development of the foreign student program at the university in years to come. In July, 1946, President Morrill acted on one of the committee's urgent recommendations by authorizing sufficient funds to employ a full-time foreign student adviser.

The action was none too soon since the end of World War II brought to this country an influx of foreign students which sharply increased their enrollment at the university.

In addition to urging the appointment of a full-time adviser, the committee of foreign students proposed the adoption of a statement on university policy regarding educational facilities for foreign students. The statement, which was timely and farsighted in its implications, reads in part:

The University of Minnesota recognizes that a great university builds and enhances its scholarly standing and prestige not only through educating students from its own native State and from other parts of the United States, but also through educating those from many foreign countries. This is equally true in all fields of professional, scientific, and cultural study. For this and other related reasons, the university encourages and actively seeks to increase the enrollment of foreign students in its undergraduate, professional, and graduate colleges. Consistent with the diversified requisites of an educational program balanced for both American and foreign students, the university further undertakes to make fully available its facilities—instructional, cultural, counseling and housing—in educating foreign students and in forwarding their personal welfare while enrolled as students in the university.

The performance of the initial Latin American students awarded scholarships was impressive and the committee advocated and was authorized to increase the number of scholarships to 6, 12, 30, and then, in 1948, to 40. In 1946 the Latin American Scholarship Committee became the Foreign Student Committee and the benefits of the tuition scholarships were extended to students from all countries.

Foundations also have come to the assistance of the university in providing financial aid. Since 1952 the John Cowles Foundation annually has provided funds for fellowships for Asian students and in 1959 this interest was broadened to include students from Africa. Since their inception, these fellowships have been used to aid 130 students from 11 countries studying for graduate degrees.

American students on campus have made significant contributions to the financial support of the programs for the interchange of information and experience between U.S. and foreign students. Since 1951 at least one student from the university has studied at the Free University of Berlin and in return, a student from Berlin has spent a year on the university campus.

An additional demonstration of the vitality of student leadership saw the arrival on the campus in 1956 of a student leader from both Indonesia and Japan. This program, now in its fourth year of operation, is supported jointly by student organizations, the university and the National Student Association.

The importance of foreign students on campus as a facet in the education of American students was stressed in the 1945 report of the Committee on Foreign Students. In 1950–51 Minnesota students launched an American brother-sister program. Specially trained American students assisted newly arrived foreign students in becoming familiar with the demands and the potential of American university life. Each year more than 100 American students are selected and take part in this program. They are selected on the basis of special interests ranging from the language and culture of the oversea student to preparation for oversea employment.

As the number of students from overseas increased the university became more cognizant of its role in their training. An internationally minded university community is indicated by the increasing number of faculty members from overseas on the staff. Many faculty members go abroad on sabbatical leave or on special projects (35 spent from 3 months to a year overseas in 1958–59 and 38 leaves of absence have been granted during the 1959–60 academic year).

Special programs such as the Minnesota-Seoul National University relationship under the sponsorship of the International Cooperation Administration insure that a number of the university's best minds devote some time assisting in the solution of the problems of educating for leadership in the underdeveloped countries of the world.

All of these developments have found an atmosphere of ready acceptance on the Minnesota campus; welcome supplements to the academic experience of the classroom and laboratory. For the test of greatness here—as in any university—is the quality of its faculty. The foreign student comes to the campus because of the scientific excellence exemplified by men such as E. C. Stakman, to name only one of the pioneers in the shaping of a university of international reputation.

During the 1958–59 calendar year more than 1,100 foreign students studied at the university. During the same period, 184 completed degrees, 46 received the Ph. D., and 110 were awarded the master's degree between July 1, 1958, and June 30, 1959. Two of every three foreign graduate students who register at the university take an advanced degree and fewer than 10 percent fail to maintain satisfactory records while attending.

HEALTH CARE FOR SENIOR CITIZENS

Mr. HUMPHREY. Mr. President, recent articles in labor newspapers give excellent perspective on the anxiety of our senior citizens about the terrifying costs of health care and private health insurance for older people.

One article, appearing in the April 14 issue of the Machinist, a publication of the International Association of Machinists, is entitled "A Tragedy of Old Age." The second article, which appeared in the AFL–CIO News of April 9, is entitled "Health Insurance Too High for Aged."

I ask unanimous consent that these articles be printed at this point in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Machinist, April 14, 1960]

A TRAGEDY OF OLD AGE

(By Dr. William A. Sawyer)

One doesn't have to be a doctor very long without realizing that older folks have frequent medical needs which they haven't the money to pay for. Many doctors take care of such people without charging them anything. This has been a tradition of the medical profession—never to refuse treatment even though the patient could not afford to pay.

Even though older folks have read that doctors will take care of them for nothing, few would have the courage to ask for it.

Despite the statement in the press by the president of the American Medical Associa-

tion that doctors have been willing for years to treat all patients regardless of their ability to pay, this hardly seems the dignified answer to such a large and increasing problem. I do not believe that doctors generally would relish this as the answer.

If everyone had voluntary prepaid insurance that was never canceled, there would be no need for something like the Forand bill. There are too many old folks past 65 who have inadequate insurance protection for their later years. From testimony given to the McNamara Committee on the Problems of the Aged, there is ample evidence of need. Whether the Forand bill is the best answer is beside the point. Something like it is urgently required.

One man writes, "I have two sore stiff hip joints and lower spine. I cannot walk up the steps. I cannot raise my feet. The doctors do not seem to know my trouble. I walk only with the back of a chair. I can't put any weight on my sore hip joints. The neighbors bring in something to eat. Have no social security. Have nothing, so I am asking your help. Thank you."

This is not an uncommon letter. I get them frequently. The need for medical care for those past 65 is a pressing problem, and there are going to be more old people.

Organized medicine's opposition to an orderly way, such as the Forand bill, of handling such problems is unrealistic. They say these people ought to ask for welfare relief. To obtain this aid the recipient must prove his poverty, often to the point of taking a pauper's oath. In many States they must assign their homes, and sell their cars.

Organized labor rejects this recommendation. They say it is unjust that they go on relief after retirement from a lifetime of work. Through such a provision of social security as the Forand bill, they could have medical and hospital care when they need it, by paying in during their working years.

Many of these over 65 can get along fairly well until illness comes into the picture.

This is illustrated by the fact that one of the major causes of hospital deficits is the inability of those over 65 to pay their hospital bills. One witness before the McNamara committee said that "this cost is now socialized by united community funds, other charity funds, individual donations, and subsidy from local, State, and Federal taxes. Meeting the cost through the insurance provisions of the Federal social security system is merely a more orderly and efficient way of meeting this already accepted social obligation."

[From the AFL–CIO News, Apr. 9, 1960]

HEALTH INSURANCE TOO HIGH FOR AGED

(By Sidney Margolius)

Most older people can't afford even the best of the new hospital and surgical insurance plans currently being offered them. This department's survey of "over-65" plans finds that the problem of medical insurance for senior citizens is simply too big for private companies or voluntary associations to solve.

The only feasible solution yet proposed is the use of the present social security machinery as provided by the Forand bill now pending in Congress. That way we would deposit a quarter a week in the social security piggybank during our working years and our employers would chip in another quarter, to pay for hospital and surgical needs when we retire.

Here are the financial facts of retirement:

1. It now costs about $205 a month for a retired couple to have a modest standard of living in a typical U.S. city, as based on data from the Bureau of Labor Statistics and the Community Council of Greater New York. This is a modest budget providing for a three-room apartment, about a dollar a day per person for food, and approximately $15 to $17 a month in most cities for medical care. The medical allotment worked out by welfare experts takes 8 percent of the modest model budget compared to the 5 to 6 percent most younger families spend.

2. Most elderly people can't afford even this modest budget. Actually three out of five older people have less than $1,000 a year money income from all sources, compared to the welfare council budget of about $2,400 a year for a couple or $1,700 for a single person. Even the current maximum social security of $170 to a couple can't meet this modest budget with its medical allotment outlay of $15 to $17.

You want to know how much retired persons really can afford for medical care? Two-thirds of the people over 65 interviewed in a survey by the Health Information Foundation said they could pay just $5 a month for insurance that covered all medical expenses.

3. Even if you could afford $15 to $17 a month, the best of the plans now available would take most of your medical-care allotment and not begin to meet all your medical needs.

The retired worker's dilemma is that the purportedly cheap medical insurance being offered him provides only very limited benefits, but more adequate insurance is too costly.

For example, the plan now being offered by the American Association of Retired Persons costs a couple $144 a year if you include partial insurance for doctors' visits outside the hospital. Yet the model budget provides only about $200 a year for all medical care. This must pay for dentists, drugs, eyeglasses and other needs, as well as that part of the surgical, hospital, and doctor expenses not covered by the insurance. For example, the AARP plan, like the similar "65 plus" plan being promoted by the Continental Insurance Co., pays only $10 a day for hospital care compared to actual typical charges of $20.

Another plan for insuring elderly people for hospital and surgical care is being tried out by Blue Shield in Wisconsin, reports the Group Health Association. It costs $9 a month per person, or $216 a year for a couple—more than the entire medical allotment in the modest model budget. Despite this large cost, it provides only $10 a day for hospital care, although unlike the AARP plan it does pay for all miscellaneous hospital expenses, not just part.

A third possibility for the hospital insurance part of medical care is the Blue Cross senior plans spreading through the country. So far, 19 Blue Cross regional plans now offer a special "Senior Certificate." This calls for either a higher rate or reduced benefits at the same rate for people over 65. Fourteen additional Blue Cross regions have no restriction at all on age. Two do have an age limitation but periodically open membership lists to people over 65. Eight additional plans have applied to their State insurance departments for approval of a senior certificate.

This trend is desirable if Congress again refuses to pass the Forand bill. People already retired or expecting to be soon should first see what the local Blue Cross offers before signing up for commercial hospital insurance.

Yet even the best of the Blue Cross plans are still too costly for most retired people. For example, Cleveland's Blue Cross is considered an outstanding plan because it makes no extra charge for age, and provides relatively generous benefits. It provides 120 days of hospital care including full payment for all extras such as X-rays, plus hospital outpatient care and minor surgery. But the cost is $69.60 a year in a ward for one person, or $140 for a family. (Family cost for semiprivate accommodations is $165.) That would take two-thirds of the entire medical-care budget in the modest model budget.

Some of the new Blue Cross senior plans trim the cost by coinsurance, meaning you pay part of the bill. Detroit's "senior certificate," for example, provides 30 days payment for hospital care for each confinement. You pay the first $25 or 20 percent of the first $500 of hospital cost, whichever is greatest. Maximum payment is $500. Over that, you pay the bill itself. The cost is $125 a year for a couple.

POLISH INDEPENDENCE DAY

Mr. HUMPHREY. Mr. President, on May 3 Poles everywhere celebrated Polish Independence Day. As many of my colleagues know, this historic day is somewhat parallel to our own Fourth of July.

There are few peoples, Mr. President, who have shown the courage and determination that the Poles have in times of adversity. They have had a long history of oppression, and yet the Poles have never lost their sense of identity and their resolve to be the masters of their own fate.

It is particularly important that we reflect on the meaning of this day as we approach the summit meeting. I strongly urge the President to make it clear to Mr. Khrushchev that we do not accept the status quo in Eastern Europe. We must continually press the Russians to live up to their wartime agreement to guarantee free elections in the Eastern European countries.

I am sure that my colleagues here join me in asserting our strong identification with the hopes and aspirations of the Poles and other enslaved peoples. We hope and believe that one day they will live in freedom again.

FOREIGN POLICY

Mr. CLARK. Mr. President, on May 3, 1960, the distinguished senior Senator from Florida [Mr. HOLLAND] placed in the RECORD an article written by the distinguished columnist Arthur Krock entitled "An Unsound Basis for Foreign Policy," and undertook to speak in support of Mr. Krock's position, which was highly critical of a number of Members of this body.

On the same day, Mr. President, six Members of the Senate—the Senator from Illinois [Mr. DOUGLAS], the Senator from Pennsylvania [Mr. CLARK], the Senator from New York [Mr. JAVITS], the Senator from Pennsylvania [Mr. SCOTT], the Senator from New Jersey [Mr. WILLIAMS], and the Senator from Connecticut [Mr. DODD]—addressed a letter to the New York Times defending ourselves for the position we had taken. I am happy to say that the New York Times published that letter this morning, and I asked unanimous consent to have it printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., May 3, 1960.

To the EDITOR OF THE NEW YORK TIMES,
New York, N.Y.

DEAR SIR: May we take exception to our good friend Arthur Krock's May 3 column "An Unsound Basis for Foreign Policy." In that column, Mr. Krock seemingly undertakes to impugn the motives and deride

the judgment of the Members of Congress who successfully supported an amendment to the policy statement of the Mutual Security Act so that it shall provide:

1. That the United States favors freedom of navigation in international waterways and economic cooperation between nations.

2. The peace of the world is endangered when nations which receive mutual security aid wage economic warfare against each other.

3. These principles shall be applied in administering the mutual security program as the President may determine.

This declaration is one of the "sense" of the Congress—it tells the President how strongly we feel on the subject, but does not and cannot tie his hands in directing the mutual security program or the foreign policy of the United States. It is a declaration on a moral and legal issue of universal application and such importance that Congress could not just let it slide.

These provisions were approved by the House of Representatives without significant debate. The Senate Foreign Relations Committee did not include them in the Senate bill. They were restored by a floor amendment sponsored by Senator DOUGLAS, Democrat, of Illinois, and 28 colleagues from both parties. The amendment was supported by a bipartisan majority of the members of the Foreign Relations Committee, all four Democratic presidential candidates, and by all eight Senators from the States of Connecticut, New York, New Jersey, and Pennsylvania where readership of the Times is extensive.

The purpose of the proposal is to urge the President, in administering foreign aid, to try to secure compliance with the principles of freedom of navigation and economic cooperation to which we all subscribe. President Nasser, in clear violation of the Suez Canal Convention of 1888 and of the 1951 decision of the United Nations Security Council and of the pledge he made when he nationalized the Suez Canal in 1956, has repudiated these principles. He has not only prohibited Israeli shipping from using the canal, but also prevented ships flying the flags of other nations from utilizing the canal if they carried cargo for or from Israel.

The report of the House Committee on Foreign Affairs correctly states that the committee "believes the United States has not done as effective a job as it should have in urging the removal of the restrictions on the free movement of commerce through the canal."

The Congress, by its vote, evidenced its belief that the action taken would advance the attainment of the agreed goal of opening the Suez Canal to the shipping of all nations.

Mr. Krock, Mr. Dillon, and Senator FULBRIGHT disagree, as they have every right to do. But surely they are not gifted with the omniscience to predict that the amendment "will assure the defeat of (its sponsors') objective." Nor does it aid their cause to attempt to read the minds of its sponsors and to find therein motivations of "domestic politics" created by "minority pressure groups." And the effort to identify Congressional action with labor union picketing of Arab shipping—with which of course it has nothing whatever to do—is specious to put it mildly.

No one in the Senate debate contended that American ships have been denied access to the Suez Canal. So Mr. Krock's quotation of Mr. Dillon to this effect is merely to destroy a straw man he himself has erected.

That the foreign aid program demands reorganization, as Senator COOPER suggests, few would deny. But this truism can hardly be transposed into an argument in opposition to action by Congress in favor of moral principles incorporated into international law which men of good will across the world support.

Very truly yours,

PAUL H. DOUGLAS.
JOSEPH S. CLARK.
J. K. JAVITS.
HUGH SCOTT.
HARRISON A. WILLIAMS, Jr.
THOMAS J. DODD.

TRIBUTE TO THE HONORABLE JOHN TABER AND THE HONORABLE EMANUEL CELLER

Mr. KEATING. Mr. President, away back when the House of Representatives declared its "Capitol gains" for 1922, two of the names mentioned were those of JOHN TABER and EMANUEL CELLER. Now, 38 years later, these two "Capitol gains" are listed as national monuments of the Congress—active, mobile, operational and cogitational monuments, moving too fast to be admired by sightseer.

I rise today to extend birthday wishes to each of these congressional giants. JOHN TABER celebrated his 80th birthday yesterday, and EMANUEL CELLER celebrates his 72d birthday today.

Representative TABER is the senior Republican on the New York delegation, and Representative CELLER is the senior Democrat. They came to Congress together. Their length of service in the other body is exceeded only by the service of the Speaker and of Representative VINSON, of Georgia.

During my years in the House of Representatives I grew to respect and to admire these two elder statesmen of our Congress. It is true that "MANNY" CELLER and I often put on the gloves of debate and slugged it out toe to toe, but I also recall many times when we fought together shoulder to shoulder for the principles in which we both believed. Parenthetically, anyone would say it is much better to fight with "MANNY" than against him, for in 38 years of intellectual sparring he has learned all of the tricks, and he has invented some of his own.

JOHN TABER, of course, is of my political persuasion, but there have been times when I felt persuasion that JOHN did not feel, and vice versa. Our few differences have been what I might call scattered pockets of resistance in a broad field of agreement—after all, how can one differ very strenuously with a man whose name is a synonym for budgetary integrity?

JOHN TABER has been a tower of strength in maintaining our Nation's fiscal sanity, and in fighting for those causes which he felt would best benefit America. No one at any time has ever questioned his sincerity or his integrity.

The birthdays belong to JOHN TABER and "MANNY" CELLER, but their districts, their Nation, their colleagues, and their friends receive the gifts—gifts of their long and distinguished dedication to the tasks of government; gifts of their mind and judgment; and gifts of time and sacrifice and devotion which they have given freely over the years; and, above all, to those who know them, to those of us who have worked with them, they have given the supreme gift of friendship, the gift we cherish and look forward to enjoying for many, many years to come.

Mr. MANSFIELD. Mr. President, I wish to join the distinguished acting minority leader in the kind words he has had to say about the birthday anniversaries of Representatives TABER and CELLER, both of New York.

As the acting minority leader will recall, we both served in the House with these two gentlemen; and while they belong to opposite parties, and while their views are on most occasions quite divergent, nevertheless, each, in his own way, has made a solid contribution to the welfare of the district he represents, the State from which he comes, and the Nation as a whole. So it is a pleasure and privilege for me to join with my distinguished friend the Senator from New York in extending best wishes and congratulations to these two outstanding Members of the Congress.

Mr. KEATING. Mr. President, I express my gratitude to the distinguished Senator from Montana for his kind words. I know that they will be greatly appreciated by the two fine gentlemen to whom we have referred, both of whom, I am sure, bear, as I do, a deep affection and admiration for the Senator from Montana.

Mr. MANSFIELD. We, too, and many others have learned much from both of these two outstanding Members of Congress, and the country as a whole owes them both a debt of gratitude.

Mr. COOPER. Mr. President, I join the distinguished Senator from New York and the distinguished Senator from Montana in expressing congratulations and commendations to our colleagues in the House of Representatives, Representatives JOHN TABER and EMANUEL CELLER. I have never had the honor of serving with them in the House. I have come to know them, however, and to admire and respect them. I think it can be said of them that they have been giants in the legislative process, and that they are men whose integrity is respected in the Congress and elsewhere throughout the country. They are indeed great and patriotic Americans.

Mr. KEATING. Mr. President, I wish to express my gratitude to my friend from Kentucky for his fine words about the two distinguished Members of the other body from New York. I know that they would share with me the feeling that the fact that the distinguished Senator from Kentucky has not had the privilege of serving with them in the House is the House's loss. I know I can speak for them in reciprocating toward our friend from Kentucky all the very fine things he has said about these two distinguished gentlemen.

ACCOMPLISHMENTS OF THE SENATE

Mr. MANSFIELD. Mr. President, I should like to commend the Senate for the outstanding work it has accom-

plished this week. When I say "commend the Senate," I include both Republicans and Democrats.

We have passed to date something on the order of six or seven appropriation bills. We recently passed the bank merger bill and the area redevelopment bill. We passed this week 57 bills on the call of the calendar. We disposed of two conference reports, in connection with the appropriation bills for the Commerce Department and the Department of the Interior. We have also passed a mutual security bill, and will have the conference report before us before too long. We also passed a space bill, with an authorization for an appropriation covering a sizable sum.

It is anticipated that in the days ahead the Senate will take action on wage-hour legislation, on medical aid, and on a Federal employees' pay increase. We hope to pass a good farm bill, a good housing bill, and a good social security bill. I dare say that from the Committee on the Judiciary will come an immigration bill.

So, on the basis of the record made so far, and especially on the basis of the record made this week, I think the Senate is to be commended for the application and the diligence it has shown, as well as for the legislation itself; and certainly, before this session is completed, we shall take care of the other measures to which I have called the attention of the Senate.

I think special credit should go to the majority leader, the Senator from Texas [Mr. JOHNSON], and to the minority leader, the Senator from Illinois [Mr. DIRKSEN]. They worked together in bringing much of this legislation before the Senate for consideration; and because of the fact that they were able to work out agreements covering the bringing up of these measures, Congress as a whole is entitled to credit for the good work done this week.

ADJOURNMENT TO MONDAY

Mr. MURRAY. Mr. President, in accordance with the order previously entered, I move that the Senate stand in adjournment until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 12 o'clock and 36 minutes p.m.) the Senate adjourned, under the order previously entered, until Monday, May 9, 1960, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate May 6, 1960:

U.S. ATTORNEYS

Cornelius W. Wickersham, Jr., of New York, to be U.S. attorney for the eastern district of New York for the term of 4 years, vice Leonard P. Moore, resigned.

Louis B. Blissard, of Hawaii, to be U.S. attorney for the district of Hawaii for the term of 4 years, vice a new position.

U.S. MARSHAL

Thomas R. Clark, of Hawaii, to be U.S. marshal for the district of Hawaii for the term of 4 years, vice a new position.

PUBLIC HEALTH SERVICE

The following candidates for personnel action in the regular corps of the Public Health Service subject to qualifications therefor as provided by law and regulations:

I. FOR APPOINTMENT

To be senior surgeon

Henry H. Kyle

To be senior assistant dental surgeons

Robert J. Lucas
Joe T. Hillsman
Samuel J. Wycoff
Francis O. Webb

To be assistant dental surgeons

Charles C. Swoope, Jr.
Gerald W. Gaston
William E. Dorrill
Richard L. Christiansen
George N. Newton
Wellesley H. Wright
Jim D. Webb
William L. Knudson
Richard K. Fred
David A. Dutton
Franz P. Helm
Buckner S. Burch
Manuel H. Marks
Orlen N. Johnson
Gresham T. Farrar, Jr.
Donald R. Swatman

To be senior assistant sanitary engineer

Ian K. Burgess

To be senior assistant nurse officers

Laurette M. Beck
Patricia P. Grimaila

To be assistant nurse officer

Juanita M. Barkley

To be junior assistant nurse officer

Ray Cameron

IN THE ARMY

To be Assistant Surgeon General

Col. Joseph Leroy Bernier, O20093, Dental Corps, U.S. Army, for appointment as Assistant Surgeon General, U.S. Army, as major general, Dental Corps, in the Regular Army of the United States, and as major general in the Army of the United States, under the provisions of title 10, United States Code, sections 3040, 3442, and 3447.

TEMPORARY APPOINTMENTS

The following-named officers for temporary appointment in the Army of the United States to the grades indicated under the provisions of title 10, United States Code, sections 3442 and 3447:

To be major general

Brig. Gen. Richard Steinbach, O18560, Army of the United States (colonel, U.S. Army).

To be brigadier generals

Col. Howard Allen Morris, O20141, Army of the United States (lieutenant colonel, U.S. Army).

Col. Thomas DeForth Rogers, O19351, U.S. Army.

Col. Seymour Austin Potter, Jr., O29937, U.S. Army.

U.S. AIR FORCE ACADEMY

Lt. Col. Virgil J. O'Connor, 6357A, for appointment as permanent registrar of the U.S. Air Force Academy, under the provisions of section 9333(c), title 10, United States Code.

IN THE AIR FORCE

The following persons for appointment in the Regular Air Force in the grades indicated, under section 8284 of title 10, United States Code, with a view to designation under section 8067 of title 10, United States Code, to perform the duties indicated, and with dates of rank to be determined by the Secretary of the Air Force:

To be captains, USAF (Medical)

Edwin M. Bradley, AO3074753.
Roy C. Ezell, AO3043809.
Orville L. Langford, AO2245814.
Felix R. Portelli, AO3076094.
Emerson K. Wirtz, AO3010978.

To be captains, USAF (Dental)

Loy L. Julius, AO689060.
Lucius L. Robinson, AO2239975.
Eugene J. Stoebenau, AO3076478.

To be captain, USAF (Veterinary)

Farrel R. Robinson, AO2239021.

To be captains, USAF (nurse)

Alvira L. Clemetson, AN2214429.
Mary A. Flenner, AN2241978.

To be first lieutenants, USAF (Medical)

James D. Deacon, AO3089053.
Thomas O. English, Jr., AO3089278.
Dale C. Metheny, AO3089279.
Harry A. Schwamm, AO1852529.
Robert S. White, AO3091126.
Frank W. Zimmerman, Jr., AO3089110.

To be first lieutenant, USAF (Dental)

John C. Helder, AO3089310.

To be first lieutenants, USAF (nurse)

Phyllis J. Carter, AN2243052.
Pauline K. Dabkiewicz, AN3075714.
Evelyn G. Richardson, AN2243541.

The following persons for appointment in the Regular Air Force in the grade indicated, under section 8284 of title 10, United States Code, with dates of rank to be determined by the Secretary of the Air Force:

To be first lieutenants

Leroy G. Cuny, AO3054943.
Stephen W. Gilbert, AO3066756.
Richard H. Hartke, AO3055720.
Charles W. Hooker, AO3054239.
Wendell R. Keller, AO3067915.
Allan J. Kelly, AO3068726.
Elery P. Morphew, AO3054688.
Don A. Patterson, AO3067742.
Ray A. Perry, AO3054866.
Earl C. Ruby, Jr., AO3055758.
John E. Ruonala, AO3070406.
James B. Sevebeck, AO3068826.
Harold C. Smith, AO3055023.
James D. Staten, AO3066607.
John C. Tynan, AO3069420.

Subject to medical qualification and subject to designation as distinguished military graduates, the following distinguished military students of the Air Force Reserve Officers' Training Corps for appointment in the Regular Air Force, in the grade of second lieutenant, under section 8284 of title 10, United States Code, with dates of rank to be determined by the Secretary of the Air Force:

John W. Carlson
Robert W. Corcoran
William F. Lawrence
Robert F. Mullen
Albert M. Salem, Jr.

The following-named cadets, U.S. Military Academy, for appointment in the Regular Air Force, in the grade of second lieutenant, effective upon their graduation, under the provisions of section 8284 of title 10, United States Code. Date of rank to be determined by the Secretary of the Air Force:

Donald Joseph Stukel
Thomas Allen Walker

HOUSE OF REPRESENTATIVES

FRIDAY, MAY 6, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Psalm 27: 1: *The Lord is my light and my salvation; whom shall I fear? the Lord is the strength of my life; of whom shall I be afraid?*

O Thou God of all grace and goodness, as Thou hast set before us an unknown day and an untraveled way, wilt Thou

open our minds and hearts widely to Thy kindly light to lead us and Thy divine strength to sustain us.

Grant that we may be men and women of insight and understanding, whose life and labors, in the vast upheaval of these perilous days, are illumined and girded with a great faith, confident that Thou wilt have Thy way with us and our troubled world.

May nothing obscure or eclipse the prophet's vision of that glorious day when nations shall beat their swords into plowshares and their spears into pruning hooks and neither shall they learn war anymore.

Hear us in the name of the Prince of Peace. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment bills and a joint resolution of the House of the following titles:

H.R. 1217. An act to suspend for 2 years the import duty on certain amorphous graphite;

H.R. 1456. An act for the relief of Universal Trades, Inc.;

H.R. 1752. An act for the relief of Wilhelmina Ordonez;

H.R. 2082. An act for the relief of James Demetrios Chrysanthes, also known as James Demetrios Chrysanthacopoulos;

H.R. 3786. An act for the relief of Chan Kit Ying and James George Bainter;

H.R. 3934. An act for the relief of Mrs. E. Christine Williams;

H.R. 4562. An act for the relief of Stanislaw Grzelewski;

H.R. 4825 An act for the relief of Jean K. Simmons;

H.R. 5349. An act to provide for the conveyance to Orange County, Calif., of all right, title, and interest of the United States in and to certain real property situated in Orange County, Calif.;

H.R. 6083. An act for the relief of Mary V. Jones;

H.R. 6493. An act for the relief of Robert Dolton;

H.R. 6843. An act for the relief of Daniel Wilging;

H.R. 7226. An act for the relief of Mr. Hughie D. Martin and Ione Martin;

H.R. 7254. An act for the relief of Simeen Helena Chaghaghi;

H.R. 7363. An act for the relief of Chester A. Spindler;

H.R. 8280. For the relief of Clarence T. Tolpo;

H.R. 8383. An act for the relief of Maj. Jack E. Hudson;

H.R. 8456. An act for the relief of Capt. Jack Rubley;

H.R. 8672. An act for the relief of Dr. Deh Chang Tao;

H.R. 8868. An act for the relief of the Albertson Water District, Nassau County, N.Y.;

H.R. 8941. An act for the relief of Mrs. Alice Anderson;

H.R. 9216. An act for the relief of Daniel C. Turner;

H.R. 9464. An act to remove the requirement that, of the Chief and Deputy Chief of the Bureau of Ships, one must be specially qualified and experienced in naval engineering and the other must be specially qualified and experienced in naval architecture;

H.R. 9476. An act for the relief of George E. Williams and William L. Johnson;

H.R. 9760. An act for the relief of Sam Doolittle;

H.R. 10164. An act to change the name of the locks and dam No. 41 on the Ohio River at Louisville, Ky.;

H.R. 10550. An act to extend the Export Control Act of 1949 for 2 additional years; and

H.J. Res. 598. Joint resolution to extend the time for filing of the final report of the Lincoln Sesquicentennial Commission.

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, bills and a joint resolution of the House of the following titles:

H.R. 1607. An act for the relief of Mrs. Anne Morgan;

H.R. 4029. An act to amend the Internal Revenue Code of 1954 to eliminate the proration of the occupational tax on persons dealing in machineguns and certain other firearms, to reduce occupational and transfer taxes on certain weapons, to make the transferor and transferee jointly liable for the transfer tax on firearms, and to make certain changes in the definition of a firearm;

H.R. 6779. An act to amend section 170 of the Internal Revenue Code of 1954 (relating to the unlimited deduction for charitable contributions for certain individuals);

H.R. 8241. An act to amend certain provisions of the Civil Service Retirement Act relating to the reemployment of former Members of Congress;

H.R. 9308. An act to extend for 3 years the suspension of duty on imports of crude chicory and the reduction in duty on ground chicory;

H.R. 9465. An act to authorize the extension of a loan of a naval vessel to the Government of the Republic of China;

H.R. 9862. An act to continue for 2 years the existing suspension of duties on certain lathes used for shoe last roughing or for shoe last finishing; and

H.J. Res. 640. Joint resolution to authorize and request the President to issue a proclamation in connection with the centennial of the birth of General of the Armies John J. Pershing.

The message also announced that the Senate had passed bills and a concurrent resolution of the following titles, in which the concurrence of the House is requested:

S. 1349. An act for the relief of Song Tai Song;

S. 1857. An act to promote the foreign trade of the United States in grapes and plums, to protect the reputation of American-grown grapes and plums in foreign markets, to prevent deception or misrepresentation as to the quality of such products moving in foreign commerce, to provide for the commercial inspection of such products entering such commerce, and for other purposes;

S. 2087. An act for the relief of Janis Papulis;

S. 2369. An act for the relief of Sachiko Kato;

S. 2499. An act for the relief of Halina Konik Wojtusiak;

S. 2528. An act for the relief of John Lipset;

S. 2575. An act to provide a health benefits program for certain retired employees of the Government;

S. 2618. An act to authorize the exchange of certain war-built vessels for more modern and efficient war-built vessels owned by the United States;

S. 2627. An act for the relief of Nicholas Anthony Marcantonakis;

S. 2635. An act for the relief of Maria Genowefa Kon Musial;

S. 2739. An act for the relief of Yu Sui Ling, also known as Yee Shui Ling;

S. 2769. An act for the relief of John George Sarkis Lindell;

S. 2792. An act for the relief of Luigia Mion;

S. 2821. An act for the relief of Kristina Selan;

S. 2822. An act for the relief of Low Wing Quey (Kwai);

S. 2833. An act for the relief of Sadako Suzuki;

S. 2857. An act to amend the Civil Service Retirement Act so as to provide for refunds of contributions in the case of annuitants whose length of service exceeds the amount necessary to provide the maximum annuity allowable under such act;

S. 2886. An act for the relief of Nikolija Lazic;

S. 2923. An act for the relief of Ki Su (Theresa) Moun;

S. 2966. An act for the relief of Antigone Apostolaki Cassel;

S. 2969. An act to authorize the award posthumously of appropriate medals to Chaplain George L. Fox, Chaplain Alexander D. Goode, Chaplain Clark V. Poling, and Chaplain John P. Washington;

S. 3081. An act for the relief of Irena Maria Koller;

S. 3114. An act for the relief of Adolphe Herstein;

S. 3327. An act for the relief of Jean Goedicke; and

S. Con. Res. 103. Concurrent resolution favoring the suspension of deportation in the cases of certain aliens.

The message also announced that the Senate agrees to the amendment of the House to a bill of the Senate (S. 722) of the following title: "An act to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 10401) entitled "An act making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1961."

The message also announced that the Senate requests the return to the Senate of the bill (H.R. 5421) entitled "An act to provide a program of assistance to correct inequities in the construction of fishing vessels and to enable the fishing industry of the United States to regain a favorable economic status, and for other purposes."

The message also announced the appointment of the Senator from Iowa, [Mr. MARTIN], and the Senator from Ohio [Mr. YOUNG], to represent the Senate on the official delegation of the American Battle Monuments Commission to dedicate six of the World War II American military cemeteries in Europe during the period July 4–25, 1960.

THE LATE MARTIN L. SWEENEY

The SPEAKER. The Chair recognizes the gentleman from Ohio [Mr. FEIGHAN].

Mr. FEIGHAN. Mr. Speaker, I regret to announce to the Members of the House

that the Honorable Martin L. Sweeney died in his sleep at his home in Westlake, a suburb of Cleveland. Martin Sweeney was my predecessor in Congress, representing the 20th Ohio District during the 72d through the 77th Congresses. Mr. Sweeney was a very colorful public figure. He served with distinction, with vigor, and devotion. He was a gentleman of strong character and firm convictions. He had served in the Ohio State Legislature in 1913–14 and served as a judge of the municipal court of Cleveland for 8 years preceding his election to Congress. Mr. Sweeney had been a public figure in Cleveland since 1912, and early in his career had won recognition by fighting for the principles in which he believed. He was a gifted orator. He had served as national president of the Ancient Order of Hibernians.

Mr. Sweeney had, in the past few years, retired from active participation in political affairs, but he had retained his keen interest in civic, national, and international affairs.

On April 15 Mr. Sweeney had observed his 75th birthday. To his widow, children, and grandchildren I extend my most sincere sympathy.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. FEIGHAN. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. I was very sorry when I heard of the death of Martin Sweeney. The gentleman from Ohio [Mr. FEIGHAN] has very ably presented in a broad way the life of our late friend and former colleague. Martin Sweeney was a dedicated American, an outstanding legislator, and a man of unusual ability. He was very colorful. He and I became close friends during his service in this body, a friendship which continued in the intervening years up to the time of his death. I join my friend from Ohio in extending to Mrs. Sweeney and her loved ones my deep sympathy in their great loss and sorrow.

Mrs. BOLTON. Mr. Speaker, will the gentleman yield?

Mr. FEIGHAN. I yield to the gentlewoman from Ohio.

Mrs. BOLTON. Mr. Speaker, it was my privilege to know Martin Sweeney in Cleveland, not politically but as a friend. He was very generous, very delightful, and as the majority leader has said, a most colorful person. I think we are going to miss him in Cleveland. We are going to miss that color. We are going to miss some of the things he was famous for. I thank my colleague from Ohio very much for permitting me to have this little word this morning, and to send my sympathy to Mrs. Sweeney and to the family.

Mr. FEIGHAN. I thank the gentlewoman.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. FEIGHAN. I yield to the gentleman from Iowa.

Mr. GROSS. I never had the pleasure of knowing the gentleman from Ohio, Mr. Sweeney, but he must have been something of a prophet. On the occasion of a visit of the King and Queen of England to Washington a good many years ago, Government buildings were ordered closed, and he suggested that among those buildings that ought to be closed tight was the U.S. Treasury. He must have been something of a prophet because since that time billions of dollars have gone down the drain in uncollected so-called loans to the British.

GENERAL LEAVE TO EXTEND

Mr. FEIGHAN. Mr. Speaker, I ask unanimous consent that all Members desiring to do so may have 5 legislative days in which to extend their remarks on the life, character, and service of our former colleague, Martin Sweeney.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. VANIK. Mr. Speaker, I want to take this opportunity to join my distinguished colleague from Ohio, the Honorable MICHAEL A. FEIGHAN, in expressing sympathy at the untimely passing of the Honorable Martin L. Sweeney, former Member of Congress from the 20th District of Ohio, who was deceased on April 15.

During the years when the Honorable Martin L. Sweeney served in this Congress, between 1933 and 1944, he distinguished himself as an outspoken and dedicated crusader. He opposed political bosses and he opposed prohibition with equal zeal.

During his time in the Congress the Honorable Martin L. Sweeney was uniquely independent, both in thought and in action. He was colorful; he was challenging. During the troublesome days of the great depression he constantly endeavored to improve the plight of the people he represented.

Although he served the 20th Congressional District for 11 years, he was born in the district which I now represent.

I want to take this opportunity to extend words of comfort to his beloved wife, Mrs. Marie Sweeney, and his four devoted children.

FILING OF CONFERENCE REPORT ON MUTUAL SECURITY ACT OF 1960

Mr. MORGAN. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight tonight to file a conference report on the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

CAPTIVE NATIONS WEEK

Mr. PELLY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. PELLY. Mr. Speaker, last July the Congress passed Senate Joint Resolution 111 providing for the designation of the third week of July as "Captive Nations Week."

Under this resolution the President of the United States is authorized and requested to issue a proclamation inviting the people to observe such a week with appropriate ceremonies.

I have written President Eisenhower to strongly urge that he issue a proclamation this year at this early date, showing that the freedom and independence of the unfortunate peoples of the world are especially in our minds at the time of the shooting down of our weather plane and in view of the forthcoming summit meeting.

Referring to this act of international banditry and the ensuing vitriolic verbal attack by Khrushchev on the United States, I can only say I favor something more than an official protest deploring the situation.

I would call off the President's visit to the Soviet Union and have the United States withdraw from the summit talks.

KENTUCKY DERBY

Mr. BOW. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. BOW. Mr. Speaker, now that the Congress has just passed a bill making Louisville, Ky., a depressed area there is talk going on around the Hill about changing the name of the Kentucky Derby to the Depressed Areas Sweepstakes.

I hope that the thousands who attend this time-honored event in Louisville tomorrow will not grumble about Derby Day prices. The money they spend will be for a worthy cause. They will be aiding a depressed area.

SUMMIT CONFERENCE

Mr. DORN of South Carolina. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. DORN of South Carolina. Mr. Speaker, President Eisenhower should call off the summit conference. If the President goes to this summit meeting following recent events, he will be at a tremendous disadvantage. Khrushchev has carefully created incidents so as to bargain with the President. The Chinese Communists have imprisoned Bishop Walsh. The Soviets shot down another one of our planes. They helped stir up riots in Korea and elsewhere in the world. The Communists threatened the Panama Canal and gave Castro military equipment. They created the Berlin crisis. Now Khrushchev wants to sit down with the President and offer the return of Bishop Walsh, temporarily cease to incite riots, curb Castro, and refrain from shooting down our planes, all in return for Berlin or some other surrender by the United States. We cannot possibly win peace or honor at such a

conference. Khrushchev steals Eisenhower's cow before a conference, then at the conference Khrushchev says, "I will return your cow if you give me the cow's calf." The calf is what Khrushchev wanted all along. Eisenhower has all to lose and nothing to gain. We can only win the respect of the world and restore dignity to the Office of the President by refusing to meet Khrushchev under such ridiculous and shocking circumstances. This is Khrushchev's game and if we continue to play it, the United States will lose. At every conference, we make concessions and surrender just a little more, while Khrushchev gives nothing. Under no circumstances should the United States dignify Khrushchev with a summit conference until he gives the captive nations their freedom. Khrushchev can end the cold war, simply by keeping Russian treaties and promises. There is nothing to talk about.

UNION-INDUSTRIAL SHOW AT NATIONAL GUARD ARMORY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, I have been requested to announce to the Members, which I do with pleasure, that today the Union-Industrial Show opens at the National Guard Army at 1 o'clock and continues through to May 11. The President opened the show and the ribbons were cut for one of the greatest union-labor-management shows in the world.

It is a fine example of cooperation between the workers and management when they get together and display their wonderful union label products and demonstrate efficient union services.

One hundred thousand dollars in prizes will be given away.

The exhibit is free—there will be no admission charge—no sale of goods on the floor.

Everyone is invited to view this marvelous exhibition.

Mr. Joseph Lewis is the director of the show which is sponsored by the Union-Labor and Services Trades Department of the American Federation of Labor and Congress of Industrial Organizations.

AUTHORIZING APPROPRIATIONS FOR THE ATOMIC ENERGY COMMISSION

Mr. DURHAM. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11713) to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 11713, with Mr. ALBERT in the chair.

The Clerk read the title of the bill.

By unanimous consent the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from North Carolina [Mr. DURHAM] will be recognized for 1 hour and the gentleman from Pennsylvania [Mr. VAN ZANDT] will be recognized for 1 hour.

The Chair now recognizes the gentleman from North Carolina [Mr. DURHAM].

Mr. DURHAM. Mr. Chairman, H.R. 11713 is a bill to authorize appropriations for the Atomic Energy Commission for fiscal year 1961. The bill follows the same general form as the AEC authorization bills for the past 4 fiscal years.

Section 101 authorizes $211,476,000 for new AEC construction projects. This compares with $293,876,000 requested by the AEC. In other words, the Joint Committee has reduced this bill by $82,400,000. A total of 39 line-item projects are listed in section 101 of the bill, covering all aspects of the AEC program.

Sections 102 through 106 of the bill contain standard provisions on "limitations"—section 102—"advanced planning and design"—section 103—"restoration or replacement"—section 104—"currently available funds"—section 105—and "substitutions"—section 106.

Section 107 of the bill is in the form requested by AEC and amends projects authorized by prior Authorization Acts. Project 57–d–1, the zero gradient synchrotron, Argonne National Laboratory, is increased from $27 million to $42 million, and project 60–e–12, alterations to Shippingport reactor facilities, is increased from $5 million to $9 million, in order to construct a heat sink, and to modify the reactor plant for operation at a power level equivalent of 150 electrical megawatts under PWR Core 2.

Section 108 of the bill rescinds certain projects previously authorized which are no longer considered necessary by the AEC or the Joint Committee. A total of seven projects would be rescinded, amounting to $18,290,000. I think this is a sound way to legislate, because in the experience of every Member, we authorize so many things that the departments fail to use, and we sometimes do not rescind the authorization.

Section 109 authorizes an additional $40 million funds, and $5 million waiver of use charge authority, for use in the cooperative power demonstration program under the conditions and limitations of previous applicable statutes. Of the $40 million in this section, $25 million is intended for construction of an intermediate sized organic-cooled prototype reactor, if no satisfactory proposal is received from industry under the third round, under the AEC Authorization Act for fiscal year 1960. If a satisfactory proposal should be received, AEC may construct, or support the construction of, some other reactor type deemed appropriate, such as a spectral shift reactor. The remaining $15 million under section 109 is available for research and development assistance for either unsolicited proposals or third round proposals, whichever may develop, such as the large scale powerplants reportedly under consideration by two California utility groups.

Section 110 authorized $5 million for use in the cooperative program with Canada for research and development in connection with heavy water moderated nuclear powerplants.

The bill contains severals changes recommended by the Joint Committee from the bill originally proposed by the AEC.

First, the committee added as project 61–d–10, $13 million for power reactor plants for the Antarctic. Testimony furnished the committee during the hearings indicated the extremely high cost of fuel in the Antarctic, as well as the fact that many lives and equipment have been lost in the transportation process. The $13 million authorization could provide for construction of three or four small atomic powerplants in the Antarctic which would enhance our international prestige in that area, would help develop the reactor art, and would result in eventual savings to the taxpayers because of lower operating costs.

Secondly, the majority of the committee recommends, in project 61–f–7, $3 million for design and engineering of the linear electron accelerator at Stanford University, rather than the $107,200,000 construction authorization requested by AEC. The majority believes that the design and engineering authorization will allow the project to go ahead on an adequate basis and will result in better cost estimates before construction is authorized. The project came to us at a very late date. We are concerned with the history of rising costs in the high energy physics program, and the changes that have been made in this particular accelerator. The committee has requested that an overall report on the high energy physics program, and more data on this proposed accelerator, be submitted by AEC to the Joint Committee by next January 1961. We believe that the Congress would then be in a better position to consider the requested $107,200,000 construction authorization.

I do not think anyone quite realizes here in this body the amount of research that has been necessary under the AEC as well as in the Armed Forces. But I see somewhat the same situation developing here today that we had in the days immediately after World War II when we had no plans whatever and we had virtually no wind tunnels in this country. We even moved one from Germany when we got to Dortmund and Peenemunde. We moved it here to Carderock, Md. Then we had a great flurry of activity and all the agencies involved wanted wind tunnels, particularly the National Advisory Committee for Aeronautics. So we had to devise a program in this field to save money for the Government. NACA did more for the development of science in this country than any other agency although their activities have now been transferred to the new agency, the National Aeronautics and Space Administration.

This accelerator problem is somewhat similar to the wind tunnel situation. We have built some of those accelerators in this country.

I have here a list of the high energy accelerators in operation and under construction which I include as a part of my remarks at this point:

High-energy accelerators—In operation

DOMESTIC

Machine	Energy (Bev.)	Intensity	Particles	Location
Synchrotron	1.4	Average	Electron	California Institute of Technology.
Do	1.5	do	do	Cornell University.
Do	3.0	do	Proton	Brookhaven National Laboratory.
Do	6.2	do	do	University of California.

FOREIGN

Synchrotron	1.0	Average	Proton	University of Birmingham, United Kingdom.
Do	1.2	do	Electron	Rome, Italy.
Do	3.0	do	Proton	Saclay, France.
Do	10.0	Low	do	Dubna, U.S.S.R.
Do	28.0	Average	do	CERN, Geneva, Switzerland.

High energy accelerators—Under construction

DOMESTIC

Machine	Energy (Bev.)	Intensity	Particles	Location
Synchrotron	3.0	High	Proton	Princeton University.
Do	6.0	do	Electron	Cambridge, Mass.
Do	12.5	do	Proton	Argonne National Laboratory.
Do	25–30	Average	do	Brookhaven National Laboratory.

FOREIGN

Linear accelerator	1.0	Average	Electron	Saclay, France.
Synchrotron	1.0	do	Proton	Delft, Netherlands.
Do	1.2	do	Electron	Lund, Sweden.
Do	1.3	do	do	Tokyo, Japan.
Linear accelerator	4.0	(?)	do	Kharkov, U.S.S.R.
Synchrotron	7.0	Average	Proton	Harwell, United Kingdom.
Do	7.0	do	do	Moscow, U.S.S.R.
Do	7.5	High	Electron	Hamburg, Germany.
Do	10.6	Very low	Proton	Canberra, Australia.
Do	50.0	(?)	do	Moscow, U.S.S.R.

In the free world, in foreign countries which we have access to for this high energy physics research work, we have available to us one which I believe is 30 bev and several more linear accelerators.

This is almost too theoretical a subject to discuss because of its technical complexity. I am not opposed to going on with this project in an orderly fashion. I think we ought to go into all promising research work in the accelerator field, both in regard to heavy particles and light particles.

As I said, I am not opposed to any of these projects. I made the motion to put $3 million in here and let AEC come back with a thorough study to show this body exactly what it is going to cost. We started out with another accelerator, on which we estimated a cost of $15 million. But as of today we have authorized around $40 million or $42 million and we may not be through yet.

So I feel very much the same way about this item as I did about the wind tunnels. When I found out that the wind tunnels were going to use as much power as the city of New York, I thought it time to come in and take a look at them. We adopted a unified control plan and it is working out fine. It gives us all the information which I think is necessary. We have an installation, of course, in Virginia, with a wind tunnel. We have some in other parts of the country, one at Wright-Patterson Field and in that section. We have some more. I think we set up a sound program when we pooled this thing.

I think we are going to have to do something similar in the accelerator field because it is an expensive area of research. I do not have the estimated cost of operation of the ones we have in operation today but it is in the hearings. I do not have it before me. I can see, of course, that we are going to run into considerable money here unless we use a sound approach in developing this field.

I am not opposed to it. Nobody can accuse me of playing politics on these items in all my years in Congress, some 22 years or more. If they have a sound approach, if they have the physicists and other personnel, and have good cost estimates, I am not opposed to it.

Also, the committee added two projects to the AEC-proposed bill, and both of them are in the basic research field.

Project 61–f–8, $5.6 million for construction of a materials research laboratory at the University of Illinois and project 61–f–9, $2.2 million for the construction of a radiation laboratory at the University of Notre Dame.

Both of these projects were requested by the AEC Division of Research but were eliminated during the budget process. The Joint Committee believes that intensified laboratory work and research in the two important areas of materials and radiation effects will be of great benefit to the atomic energy program. The work would take place in the universities. It has been my position from the beginning that we should emphasize placing research in the hands of the universities.

The committee also increased the amount for project 61–h–1, facilities in the biomedical research field, from $4 million to $5 million, in order to intensify research efforts in the field of radiation, including effects of radioactive fallout.

Well, we know of the fine work that has been done in cancer research in this field. There is no use arguing about this. I think we could use much more money, but we did increase it $1 million.

I want to say here that I do not believe a group of more dedicated scientists in the field of biomedical research exists today than exists in the agency of the AEC and its laboratories and contractors. They have done a fine job, and we should support them. We all know of the hazards of radiation, and I think we should know all there is to know about it.

In summary, the Joint Committee on Atomic Energy, through its Subcommittee on Legislation, has held detailed hearings on every project and provision in the bill. The subcommittee and the full Joint Committee gave the bill very careful consideration, making a few revisions, and reducing the total amount authorized from $293,876,000 to $211,476,000, or a net reduction of $82,400,000. We believe that the actions of the Joint Committee, and the reasons for these actions, are thoroughly explained in our committee report, House Report No. 1277, which is available to all our colleagues in the House.

Mr. Speaker, I urge all Members of the House to vote for H.R. 11713, in the form recommended by the Joint Committee on Atomic Energy.

Mr. MONAGAN. Mr. Chairman, if the gentleman will yield, I would like to ask the gentleman if there is a provision in this bill for the reactor that was proposed in the Antarctic.

Mr. DURHAM. Yes.

Mr. MONAGAN. That is included in the bill?

Mr. DURHAM. Yes.

Mr. MONAGAN. I compliment the committee. I think it is a very progressive policy, and it should save a lot of money, as I understand it.

Mr. DURHAM. Well, it is discretionary, of course. They can build three or four or whatever they need within the $13 million figure. The reactors can be readily manufactured in the United States. All we have to do is to transport them there, and thereby save a lot of money, instead of paying $7 a gallon for fuel oil.

Mr. MONOGAN. There will be a tremendous saving in fuel oil alone.

Mr. DURHAM. In the long run we will save considerable money. As I said in my previous remarks, I do not see that we can do otherwise, and I think we should go ahead and provide these three.

Mr. MONAGAN. I thank the gentleman.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. DURHAM. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. Mr. Chairman, I know that I speak the sentiments of all the Members of the House when I say that we regret very much that our distinguished friend, the gentleman from North Carolina [Mr. DURHAM], has announced that he will not run for reelection next fall. There is no man, in my opinion, who has ever served in this body who has made a more sincere and profound impression upon his colleagues and upon the legislative history of our country than my sweet and lovable friend from North Carolina, who is a dedicated legislator. The gentleman has always conducted himself with outstanding ability, with vision, and with great courage, but over and above that he has always been a gentleman. I keenly regret that the gentleman has made the decision which he has, because in the world of today, with the international menace that confronts our country and the world as a whole, particularly the free world, we need in the Halls of Congress men with the ability and the experience and the outlook and the character and the leadership of my dear friend, the gentleman from North Carolina [Mr. DURHAM].

I am not going to start anything, but I certainly would be pleased if a grassroots campaign started in the gentleman's district, urging him to continue his service in this body.

Mr. DURHAM. Mr. Chairman, I thank the distinguished majority leader very much. It is very kind of him to make those remarks. I have had the privilege and honor of serving with him over many years, and have long admired his leadership and courage, going back to the early days of the Manhattan District in World War II.

I suppose this will be probably the last authorization bill that I shall handle on the floor of the House. I want to say to this body that the support which they have given us in these many years in developing the very complicated field of atomic energy, the military developments which, under civilian control, have helped to keep the peace of the world, has meant a great deal to me and to all the members of our committee. I am sure the Members of this body will continue to look upon this as one of the first needs in our national defense and in the security of the free world, as well as recognizing the necessity for the peaceful development of the atom.

I hope I have contributed something, may I say to our distinguished majority leader, through my years of service in the House. I have enjoyed my service on the committees of the House. The Joint Committee on Atomic Energy has especially offered a challenge. I have appreciated the fine cooperation and association with CHET HOLIFIELD and MEL PRICE, as well as my other old associate from the start of the committee, JIM VAN ZANDT. Our newer members of the Joint Committee—WAYNE ASPINALL and ALBERT THOMAS; and CRAIG HOSMER, BILL BATES, and JACK WESTLAND—have also been most kind and considerate. The Members of the other body on the Joint Committee have also been very cooperative.

Mr. VAN ZANDT. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, I would like at this time to make a general statement concerning H.R. 11713, the bill to authorize appropriations for the Atomic Energy Commission for fiscal year 1961.

At a later time, my colleague, Congressman CRAIG HOSMER, will offer an amendment, which I support, to authorize construction of the linear electron accelerator, as requested by the President and the AEC.

Before commencing my statement on this bill, I would like to say a few words in commendation of the distinguished vice chairman of our committee, Congressman CARL DURHAM, who has announced his retirement at the end of this session. CARL DURHAM and I have served together since creation of the Joint Committee on Atomic Energy in 1946. He has conscientiously served the committee and the Congress, and we, on this side of the aisle, are very sorry to see him leave us. We wish him many happy future years after he retires to join his family and many friends in Chapel Hill, N.C., and we hope that he will come back often to see his old colleagues on the Joint Committee and in the Congress.

I would also like to commend another "plank owner" on the Joint Committee, Congressman CHET HOLIFIELD, who has worked hard, as he always does, on the provisions of this bill to make them acceptable to him. Although we differ on the method of authorizing one important project, as recommended by his subcommittee, and later by the full committee, we realize that differences are possible on such a major project, and we hope that he and his colleagues on the other side of the aisle will eventually come around to our point of view with respect to the Stanford accelerator.

Supplementing Mr. DURHAM's remarks, I would like to comment on a few of the most important projects in the bill.

Subsection 101(a) of this bill covers the necessary new construction projects for the AEC special nuclear materials program, including projects at Fernald, Ohio; Oak Ridge, Tenn.; Hanford, Wash.; Savannah River, S.C.; and other AEC plants. Project 61–a–1 authorizes $10 million to provide flexibility for new construction projects as they may develop during the course of the year.

Subsections 101 (b) and (c) lists four new construction projects in the atomic weapons field, to provide our AEC laboratories with the necessary facilities to keep up their vitally important work. Included as project 61–b–1 is a $10 million authorization, which again provides flexibility to meet new requirements as they may develop.

Subsections 101 (d) and (e) contain a total of 13 reactor development projects, including project 61–d–7, test installation for Project Rover, $20 million, and project 61–d–8, test installation for Project Pluto, $15 million. The costs of these two programs have been going up, and costs for future years are still undetermined, but to date our committee and the Congress have been very generous in making available funds without insisting on detailed cost justifications.

Subsections 101 (f) and (g) contain a total of 11 physical research projects, including improvements to the Princeton-Pennsylvania accelerator—project 61–f–2, $10,820,000—and to the bevatron at Lawrence Radiation Laboratory—project 61–f–6, $9,600,000. Project 61–f–7 contains only a "design and engineering" authorization, rather than a construction authorization, for the linear electron accelerator at Stanford University.

We will offer an amendment to project 61–f–7 later this afternoon because we believe that the $3 million "design and engineering" authorization is not sufficient for work to proceed on the items which are needed now—site preparation, construction of the klystron test laboratory, and construction of working space to house scientists and engineers to work on the project. A limited "design and engineering" authorization will delay commencement of useful experiments, and will result in eventual higher costs, as we shall point out in more detail later this afternoon.

I would like to stress our competition with Soviet Russia in this field. We are competing with the Russians in an overall scientific race for men's minds, and for future accomplishments in areas which command worldwide attention. High-energy physics is one area where we are now ahead, where we have made most of the outstanding discoveries, but where the Soviets are anxious to catch up. The key to the future has always come from basic research, and I regret to see our efforts, especially our congressional support, slacken for even one step. Extensive basic research tools are admittedly necessary to come in first in this race. The Russians are spending money in this area, and will continue to do so. In our separate views to the committee report—House Report No. 1525, pages 19–29—we pointed out:

> The Stanford accelerator would permit exploration into a new field (light, charged particles at high energy) not now adequately covered by the U.S. high-energy physics program or that of any other nation. By going ahead with this research tool, our scientists will be in a position, we feel, to make discoveries that will bring our country distinction in a highly competitive field among scientists throughout the world, including Russia.
>
> The Russians have three accelerators scheduled to start up in 1960 and 1961, including a 2-Bev electron linear accelerator planned at Kharkov, and they have announced a 4-Bev electron linear accelerator planned for construction at Kharkov. Even discounting the Russian claims, the Stanford 10- to 20-Bev accelerator would be the acknowledged leader in this dynamic area of science, and would offer opportunity for some positive U.S. firsts.
>
> The Stanford accelerator will also round out our program by giving a better balance between light particle (electron) and heavy particle (proton) accelerators.

With respect to the linear electron accelerator proposed by Stanford University, it has been unanimously recom-

mended by a panel of distinguished scientists, and I quote from the letter dated February 5, 1960, reprinted at pages 27–29 of our separate views:

> In particular, this panel wishes to reaffirm its recommendation to start immediately the construction of the linear electron accelerator proposed by Stanford University, and to express its concern about the delay which has been encountered in authorizing this machine to date. All the experimental potentialities of this machine, which the panel foresaw last year, still look as attractive as they did then. In addition, new potentialities have developed for which this high-intensity, high-energy, electron machine is well suited.

When our amendment is offered, I hope it will merit the support of members of the House from both sides of the aisle.

Returning now to the other projects and provisions of this bill, subsection 101(h) of the bill contains $5 million for installations for support of biomedical research, an increase of $1 million over the amount requested.

Subsection 101(i) authorizes three community projects at Los Alamos, N. Mex., and subsection 101(j) authorizes funds for general plant projects, under the limitations of subsection 102(c).

Congressman DURHAM, the vice chairman of the committee, has already explained sections 102 through 106, which contain standard provisions.

As for section 107(b), I am happy that AEC and the other interested parties have agreed on the method of operation for the second core of the Shippingport PWR reactor. The second core will be operated at an equivalent of 150,000 electrical kilowatts, and some of the heat energy will be dissipated through a new heat sink. Admiral Rickover testified before our committee that this method of operation will permit us to obtain all the valuable data—in fact, our ability to obtain data will be enhanced—page 182 of the hearings.

Section 109 of the bill authorizes $40 million for the cooperative power reactor demonstration program. This is the amount requested by the AEC, and I believe that it is a proper amount for a well-balanced civilian atomic power development program during the next year.

Section 110 of the bill authorizes $5 million for use in a cooperative program with Canada for research and development in connection with heavy water moderated nuclear powerplants. Under the proposed arrangements with Canada, the United States will be able to obtain for use by the AEC and U.S. industry all the engineering and economic information developed under the Canadian program, including drawings, plans, specifications, and all other technical data. The $5 million authorized will be spent in this country, mostly at AEC laboratories. In my opinion, this is a very sensible and businesslike way to proceed, in cooperation with our Canadian friends, to obtain data on heavy water moderated reactors.

Section 111 of the bill authorizes certain design and engineering studies and provides that the Commission may submit reports on such studies to the joint committee by April 1, 1961.

In summary, Mr. Chairman, this bill covers authorization of projects for our entire atomic energy program. The minority will offer an important amendment a little later. That amendment will be for a high-energy physics project unanimously recommended by our scientists. We will ask our colleagues, from both sides of the aisle, to reverse the committee action, and to support the scientists, and to authorize now the proposed Stanford linear electron accelerator.

Mr. DURHAM. Mr. Chairman, I yield 10 minutes to the gentleman from Illinois [Mr. PRICE].

Mr. PRICE. Mr. Chairman, I join the majority leader, the gentleman from Massachusetts [Mr. MCCORMACK], and the ranking member of the Joint Committee on the minority side, the gentleman from Pennsylvania [Mr. VAN ZANDT], in paying tribute to the vice chairman of the Joint Committee, who was the first Member of the House to serve as chairman of the Joint Committee, back in 1952. He subsequently served another term as chairman of the Joint Committee, and that term was distinguished by a progressive and a fine record of the committee.

The gentleman from North Carolina [Mr. DURHAM] has been interested in laboratories and scientific achievements of the country not only during his period of service on the Joint Committee on Atomic Energy but he has concentrated in this area also in his work on the House Committee on Armed Services.

He vitally has concerned himself with the success of laboratories in the National Advisory Committee on Aviation and the National Science Foundation, and it was his great knowledge in this field that prompted the various chairmen of the Committee on Armed Services and the Committee on Military Affairs that preceded the Committee on Armed Services in always designating him as the chairman of subcommittees having to do with legislation dealing with scientific matters involving our Armed Forces and our national defense. I doubt if there is a greater expert in the House on the subject of wind tunnels. I know that through his great efforts millions of dollars have been saved to the taxpayers as a result of the coordination of this program of development of wind tunnels.

Mr. Chairman, I rise particularly this afternoon in support of the bill under consideration by the committee. This bill is recommended by the Joint Committee on Atomic Energy after careful and long study. First, it had long study by a subcommittee headed by the gentleman from California [Mr. HOLIFIELD]. We all know of his diligence and the great attention and study that he gives to matters pertaining to our national defense and our atomic energy program. So the bill comes before the House well recommended and after careful and complete study.

As chairman of the Subcommittee on Research and Development of the Joint Committee on Atomic Energy, I would like to speak especially of three projects we have added to the bill after receiving initial recommendations from the Atomic Energy Commission. I would like to make clear that while these items did not come to the committee in direct requests this year from the Commission, they are endorsed by the Commission. The Commission certainly would not oppose them because all of them have high priority within the Commission's division on research. The Commission, in my humble opinion, would be very happy to have the Congress act favorably on the items which I will mention.

Project 61–f–8 authorizes $5,600,000 for construction of a materials research laboratory at the University of Illinois. One of the roadblocks in the atomic energy program to date has been the difficulties with materials. Special new alloys are needed, capable of withstanding radiation, to meet special requirements in new atomic energy machines and equipment. Some of this work has been going on at the University of Illinois, which has now agreed to make available, on a long-term basis, valuable land on the campus, centrally located with respect to the participating departments. Scientists and engineers from several departments at the university would be able to participate, after construction of this new laboratory, in theoretical and experimental research of the following kinds: Solid state physics, theoretical studies, diffusion effects, solid state chemistry, magnetic resonance studies, theory of alloys, physical metallurgy, fundamental diffusion studies, and ceramics and refractories.

With this laboratory, the output of doctors of philosophy in this field would double within 5 or 10 years, from about 18 to about 36 annually, thus increasing the pool of qualified scientists in this critical area.

I might say this is one of our weak points, in the production or the lack of production of qualified people in these particular areas.

Project 61–f–9, also added by the Joint Committee, authorizes $2,200,000 for construction of a radiation laboratory at the University of Notre Dame. The radiation project at the University of Notre Dame is the largest university program primarily devoted to this work in the United States, and probably in the world.

In order to carry out this research, use is made of a 2-million-electron-volt Van de Graaff electrical generator, 2 cobalt 60 irradiators consisting of 1,200 curies each, X-ray equipment, special research spectrometers, and many pieces of scientific and electronic equipment. The present facilities made available by the university consist of 12,000 square feet of insufficient, inadequate floor space, mainly in the basement of the old chemistry building. The new laboratories would provide adequate effective facilities for the present program and allow a modest expansion of the project to make possible some additional needed research on radiation effects. The proposed building would contain radiation source and high intensity laboratories, research laboratories, and offices, shops, and supply and storage rooms.

Both of these projects were requested by the AEC Division of Research but were eliminated during the budget process. In the opinion of the Joint Committee, construction of these two laboratories, with the resulting increased effort, would help advance progress in the fields of materials and radiation effects, two critically important areas in our atomic energy program.

These two facilities would be constructed on university-owned land, but the Joint Committee believes that the Government's investment could and should be adequately protected by appropriate long-term lease arrangements, as has been done by the Atomic Energy Commission on other occasions.

Project 61–h–1 provides $5 million for installations for support of biomedical research in atomic energy. This program is under the direction of the AEC's Division of Biology and Medicine, and the facilities are used to explore biological and medical effects of radiation, including those from radioactive fallout. In 1957 and again in 1959 the Joint Committee held detailed hearings on the nature of radioactive fallout and its effect on man. One of the major conclusions of our committee hearings was that an increased research effort was needed. This year the AEC requested $4 million for new construction projects in the biomedical research program, and the Joint Committee has recommended increasing this by $1 million to a new total of $5 million.

In view of the concern of the public over fallout and radiation in the new atomic age, I urge all Members of the House to support this increase, as recommended by our committee.

In summary, Mr. Chairman, the Joint Committee has added two projects and increased the amount for one other so as to provide what we believe to be a balanced basic research program in three critically important areas. Our recommendations are based upon thorough hearings, both on this bill and in previous years.

I urge all Members of the House to support the bill in the form recommended by the Joint Committee on Atomic Energy.

Mr. DURHAM. Mr. Chairman, will the gentleman yield?

Mr. PRICE. I yield.

Mr. DURHAM. I would like at this time to thank the gentleman for what he said about me. I want to say that the gentleman from Illinois [Mr. PRICE] has done one of the most devoted jobs of running the Research Committee of any individual who has ever served on the committee. He has brought to the House many things by extensive hearings, and he has done a wonderful job all through the years.

So has my good friend and colleague the gentleman from Pennsylvania [Mr. VAN ZANDT]. He has rendered outstanding service to the committee, present most of the time. To a large degree House Members have spent many hours of service trying to carry out this program and solve our problems. There is not a Member on the House side of the committee that has not worked hard in the committees and attended the hearings.

Mr. PRICE. I thank the gentleman from North Carolina. May I say that one of the greatest awards in my career in the House of Representatives has been the pleasure I have had in serving almost the entire time on committees with the gentleman from North Carolina: The old Military Affairs Committee, the House Armed Services Committee, and the Joint Committee on Atomic Energy, I have never been associated with a more wonderful person.

Mr. VAN ZANDT. Mr. Chairman, I yield such time as he may desire to the gentleman from Massachusetts [Mr. BATES].

Mr. BATES. Mr. Chairman, I want to concur in the remarks which have been made directed toward my good friend and able colleague, the gentleman from North Carolina, CARL DURHAM. I have now served with him for 2 years on the Joint Atomic Energy Committee and over 10 years on the Armed Services Committee, as my father did before me. We all have a deep affection and respect for CARL DURHAM. We will all miss him when he retires this year. On behalf of myself and others who have a fond affection for him, we wish him a long and prosperous life.

Mr. Chairman, we present to the House today for its consideration H.R. 11713, a bill authorizing appropriations for the Atomic Energy Commission for fiscal year 1961. The authorizations contained in section 101 total $211,476,000, and with one exception which I shall discuss later, represent an effort which will permit the United States to maintain its lead in the nuclear field.

The advent of atomic energy in the forties brought with it not only speculation of the outgrowth of this field, but it was commonly accepted that its frontiers were unlimited and its answers to the problems of the day were almost all encompassing. The last decade and, more particularly, the last few years indictated the fallacy of many overenthusiastic laymen, for instance, that electric power could be produced with extremely low cost and that desire alone could bring to fruition boundless solutions.

Today the approach to the problem is more realistic, heads have come down out of the clouds and the practical avenues in this field are more closely followed and more generally understood. This evaluation has not in any way limited the frontiers which are sought; it is only that scientific knowledge and understanding have replaced fiction with fact.

The previous speakers have explained the bill in detail involving nuclear materials, atomic weapons, reactor development, physical research, and those projects having to do with biology and medicine. I believe, as does the committee, that all of these fields must be aggressively pursued to not only preserve the prestige involved in being the leading nuclear power in the world today, but also because of their vital significance in regard to the security of our Nation, and also because of the contributions the peaceful uses of atomic energy can make to the well-being of our people in so many ways.

For the most part this bill was recommended to the committee by the Atomic Energy Commission. There was one item added that I would like to discuss that has also been approved by the AEC.

When Admiral Dufek returned from his great Polar expedition to the Antarctic sometime ago, he explained with graphic illustrations, both orally and by pictures, many of the problems he encountered there. He told of the great cost of fuel oil being delivered there. He indicated that 80 percent of all transportation involved in the project was merely to get oil delivered from its source to its destination. The cost of this fuel ranged up to $10 a gallon compared to 12 to 15 cents in the States. In the last 3 years, equipment valued at almost $11 million had been lost in providing logistics for these bases. Most important of all, 17 lives have been lost. It seemed to me that these remote areas would be ideal for small nuclear reactors. It would save lives, it would save money, and add to the prestige of our Nation. I understand that these reactors will recover their costs in approximately 3 years. It is for these reasons that I have advocated these reactors for the Antarctic and why I support their inclusion in the bill before us.

It is my understanding that an amendment will be offered to authorize the full amount of $107 million for the Stanford accelerator. There was a difference in the committee as to the approach of this problem and the majority of the committee voted to include only $3 million under project 61–f–7 for design and engineering for a linear electron accelerator.

A strict interpretation of this language would preclude the design of buildings, site layout, specifications and drawings for accelerator housing, and such other detailed design and engineering required by the master plan, as well as securing bids. The committee report supplements the language of the bill to provide that all of these functions can be performed and that such is the intent of the committee. Hence one problem was clarified.

However, the Stanford scientists expressed further concern. The AEC had requested $4.2 million for appropriations this year and $107 million for authorization. The limiting authorization of $3 million meant that appropriations would be limited to that amount and, consequently, the construction of a general laboratory to house the design and engineering group and site preparation cannot be commenced.

In addition, the Stanford scientists believe that the limited action by the committee of authorizing only $3 million out of the $107 million requested creates such uncertainty that recruitment of top grade scientific personnel will present an acute problem. This is especially true in view of the fact that last year no action was taken on the request. Hence scientists who presently have tenure and

challenging positions elsewhere will not go to Stanford unless the situation is clarified and the uncertainty removed.

The matter of this accelerator is the only point at issue in this bill. The scientists in the Piore panel who studied this whole matter stated that it is "clearly our view, the Nation will err seriously if budgetary limitations should prevent the authorization of new accelerator construction. The panel wishes to express its concern about the delay which has been encountered in authorizing this machine to date."

I understand that an amendment will be offered to include the full amount of $107 million. I will support the amendment and recommend its adoption to the House.

Mr. VAN ZANDT. Mr. Chairman, I yield such time as he may desire to the gentlemen from Washington [Mr. WESTLAND].

Mr. WESTLAND. Mr. Chairman, I want to pay my respects to the vice chairman of this committee, the gentleman from North Carolina, CARL DURHAM.

As a new member of this Joint Committee on Atomic Energy I have done my best to learn as much as possible about the subject. Certainly it is a vast and complex one. I have learned a great deal from my valued friend, CARL DURHAM and I have admired his stand on many problems and questions that have come before this committee. As he intimated in his first address, there have never been any political overtones to his judgment. He has taken a look at the facts as they have come before him and judged accordingly. As I say, it has been a pleasure to work with him.

The majority leader previously intimated that he might start a grassroots groundswell to return CARL DURHAM to Congress. Although I am on the Republican side of this House, I would be very happy to go down to Chapel Hill and, if such a movement could be started, participate in that, because I really believe that CARL DURHAM has contributed tremendously to the solution of the problems faced by the Atomic Energy Committee. It has not been an easy job, and I know of no one who has devoted his time more assiduously to it. I sincerely regret that the gentleman from North Carolina has seen fit to resign from Congress.

Mr. VAN ZANDT. Mr. Chairman, I yield 15 minutes to the gentleman from California [Mr. HOSMER].

Mr. GUBSER. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] Forty-two Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll and the following Members failed to answer to their names:

[Roll No. 82]

Alexander	Blitch	Brown, Mo.
Alford	Boggs	Buckley
Allen	Bolling	Burdick
Andrews	Bonner	Burleson
Anfuso	Bow	Canfield
Ayres	Bowles	Carnahan
Bailey	Boykin	Celler
Barden	Brooks, Tex.	Chamberlain
Chelf	Kirwan	Reece, Tenn.
Clark	Kitchin	Rhodes, Ariz.
Coad	Lafore	Rivers, S.C.
Colmer	Landrum	Roberts
Cook	Lankford	Robison
Cooley	Lennon	Rogers, Colo.
Corbett	Loser	Rogers, Tex.
Davis, Ga.	McCulloch	Rooney
Davis, Tenn.	McDowell	St. George
Dawson	McGovern	Scherer
Dent	Machrowicz	Schwengel
Dowdy	Magnuson	Scott
Evins	Mailliard	Shelley
Farbstein	Marshall	Sheppard
Flynt	Martin	Short
Fogarty	Meader	Spence
Forand	Merrow	Stratton
Friedel	Michel	Taylor
Garmatz	Miller, George P.	Teague, Tex.
Gavin	Miller, N.Y.	Teller
Gilbert	Mitchell	Thompson, La.
Grant	Monagan	Van Pelt
Hays	Montoya	Wainwright
Hébert	Moore	Walter
Hemphill	Morris, N. Mex.	Wampler
Hoffman, Mich.	Multer	Watts
Holland	O'Hara, Mich.	Weaver
Ikard	O'Neill	Wharton
Irwin	Pilcher	Winstead
Jackson	Pillion	Wolf
Kee	Powell	Young
Kelly	Rains	Zelenko
Kilburn		

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. ALBERT, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 11713, and finding itself without a quorum, he had directed the roll to be called, when 309 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The gentleman from California [Mr. HOSMER] is recognized for 15 minutes.

Mr. HOSMER. Mr. Chairman, we have discussed what is in the atomic energy authorization bill. I am about to discuss something that is not in it, and that many of us desire to place in the bill. This has a lot to do with protons, neutrons, and electrons. I am going to talk a little bit about those as well as about what a linear electron accelerator is so that we can clearly have in mind what the issue before us later today will be. But before that, I would like to join my colleagues in paying tribute to the gentleman from North Carolina [Mr. DURHAM] who has chosen not to return to the Congress. We are going to miss him just as his district will miss his representation in this body and just as the Nation will miss his wisdom and the effectiveness with which he has served it for so long.

Now, my colleagues, if you pick up this glass of water here and pour it out, you make a mess on the floor. But, if you took a glass this size and back in the beginning of time, as we know it, started to pour into that glass a single stream of atoms, kept it up until today, after all those millions of years this glass still would not be half full. We are dealing in this area with something that small—the basic building blocks of the universe. These atoms—hydrogen, uranium, helium, and all the rest are divided further into parts and particles—neutrons, electrons, protons, and many others. It is the knowledge basically of what is inside these minute particles of matter that leads us to the knowledge of the universe, how and why we live in it and the ways in which to make our world better. Basic research brought us much knowledge already. Basic research has discovered the existence of these neutrons, electrons, and protons; discovered how they are put together in the thing we call the atom; how there is a nucleus of protons and neutrons; how it is surrounded by a shell of electrons to make up the basic atom. It was many years ago that scientists first theoretically determined these facts. Then experimentally they developed machinery to check out the theories and in checking out the theories, they added greatly to the basic knowledge that they have today. In the early thirties, when I was on the University of California campus, an obscure physicist named Ernest Orlando Lawrence, in a little tin building on the campus there, was constructing a new kind of scientific machine; he called it a cyclotron. What the cyclotron did was to take one of these basic particles, the proton, accelerate it to very high velocity and smash it into an atom. When that collision occurred, wreckage was created, its impression was caught on a photographic plate, and analysis showed Dr. Lawrence many of the things which later earned him a Nobel Prize and many other honors. These experiments also produced the knowledge which enabled us to conclude World War II successfully and which since that time has enabled us to resist the overwhelming manpower of the Russians, because it gave us the secret of the atomic bomb.

In other words, the atomic bomb was discovered basically out of the knowledge gained of this piece of machinery and others like it. It lead to the creation and discovery of plutonium, a substance that had disappeared from the earth many million years ago. It gave us knowledge of uranium 235 and led to discovery of all the other transuranium elements. It is these discoveries that have enabled the United States to lead the world in science.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield.

Mr. McCORMACK. Might I make an observation at this point? I think it is only fair to do so in connection with the atomic bomb, to which the gentleman has referred. Both branches of the Congress made marked contributions because I can remember when Speaker RAYBURN asked former Speaker MARTIN and myself to meet him in his office one morning. I did not know who was going to be there. I heard a rumor, but I did not know about the Manhattan project, and what they put up to us was that the Congress had to pass about $1,800 million in the next 2 fiscal years to carry on and maintain a project without letting our enemies know. It had to be done in secret. It was a calculated risk. It might be $2 billion down the drain, but we knew that Hitler's government was doing it. They started the experiment.

We did not know how many experimental plants they had. It was a race against time. If they perfected it before we did, we could very well lose the war overnight. I think this body and the other body, but it emanated from this body and the other body carried through—the money to carry on was originally started by President Roosevelt out of blanket funds appropriated to him, but he did not have enough money. We had to appropriate that money, and the American people are indebted to the Congress for what it did at that time.

Mr. HOSMER. The gentleman is correct. Every man who took part in it is to be congratulated. Today this Congress is going to have an opportunity to make a decision that might mean an equal amount to the United States of America, on this accelerator we are here talking about.

We have in this country, and they have now in U.S.S.R., machines known as cyclotrons and synchrotrons, and other great atomic smashers, which accelerate protons, as I have described, and smash them into an atomic target. When you are dealing with protons you are dealing with a particle that is 1,800 times greater in mass than electrons. When you use protons as bullets you get a lot of wreckage along with the information and data on subatomic particles that are keys to the inner secrets of the universe. In this linear accelerator we seek to accelerate the electron and use it as a bullet. Its mass is so much less than the proton that wreckage will be markedly reduced and a more discriminate and readable impression upon a photographic plate produced.

It, the linear accelerator, is the only type of scientific tool that will enable us to get into the areas of physics that no other nation is today penetrating. The construction and operation of this piece of machinery will guarantee the United States of America leadership in basic physics and leadership in basic sciences for at least a decade to come.

You might ask, why can we not accelerate these electrons in the atom smashers we have already spent a lot of money for, and get the job done right away? The reason is, if you attempt to accelerate an electron in a circular machine, it commences to lose energy by radiation instead of retaining energy by acceleration. As a consequence you have to accelerate in a straight line to achieve the required energies.

The linear acelerator is essentially a copper tube 2 miles long. I have here a section of the copper tube. It is about 3.5 inches in diameter. About every 1.5 inches, within this section of copper tube 2 miles long, there is a baffle with a small hole in the center. That is the hole through which the electrons pass as they accelerate.

Where do these electrons come from? You all have a television set in your home. Inside the television tube is an electron tube which causes the picture to show up. You have one of these at the beginning of the linear accelerator.

How do you accelerate? You accelerate the electrons in a very simple way. Actually, what you do is to take one of the parts out of a radar set, the klystron tube which creates very high energy, very short radio waves. These very short radio waves from the klystron tube are brought into the copper tube and bent in so they travel down through the baffle holes in the middle of the tube. Those waves act about like the situation at Waikiki Beach with the surfboards riding the waves. What happens is that the electrons ride along these high energy waves in similar fashion and are accelerated in velocity.

These waves come in from klystrons spaced about every 40 feet along the 2 miles. They enable acceleration to tremendous velocities. In accordance with Einstein's theory, as velocity increases mass increases. The mass of these electrons is increased approximately 100 times by the acceleration by the time they hit the target at the end of the tube. They are then about one one-hundred-and-eightieth the size of the proton. With that mass they are manageable. They can be aimed at a target. The resulting collisions give us information we have never had before. The linear accelerator will fill up the barrel of basic knowledge out of which our practical developments come. Interestingly enough, the majority of the committee only wants to delay this project until better cost estimates are made. But this piece of science machinery that can keep the United States ahead for decades is there, the cost is known, plus or minus 5 percent, and there is no good reason why we should not get on with it today. There is no good reason why we should not authorize the project in full rather than the $3 million for the study that the bill provides. Delay will cost us millions of dollars more in the end. Full authorization now will only raise from $3 million to $4 million the actual amount expended this year. Is that the something the majority is worried about when they say the costs have not been studied enough? We ought to authorize this in full.

That is what the President has asked for. He asked for it for a year ago and he asks for it now. A committee of the finest scientists of the country has again and again urged that we get going with the research tool, because it fills out our science effort in the field of basic physics. Today that effort is akin to a wheel with one side flat, a flat tire. It is not round. So, we are not going along as fast and as smoothly as we should. This tool will round out the wheel of high energy physics and make us able to go swiftly and smoothly down the road of basic knowledge.

There is posed here not whether we should spend this money but whether we can afford not to spend it, and we cannot afford not to spend it in today's competitive world. Neither can we afford to go about this job inadequately. As a nation we can afford to go about it properly, to do it right and we owe it to ourselves to so proceed. There is a lot of money involved here, we might as well do the job right, and get the most for our dollars.

We need the full authorization now, at this time, so that we can get a scientific team together. That is prerequisite to doing this job. It so happens that at Stanford University there is the nucleus of a team that developed the klystron tube that I talked about. That is the only reason the project happens to be located there. But, there are not enough of these people to do this design and engineering job as it should be done. We need to pull in additional members of this team, about double the size, from around 30 to around 60, so that it can be done perfectly the first time, so that it can be done with the highest quality. You simply cannot attract that quality people and bring the team together without a full authorization. They will not uproot themselves on the basis of a mere 1 year design study. Some people say, "Well, if we do not authorize it, we will only delay it 6 or 8 months." Well, that is true, but I am as much more worried about the quality of the scientific tool, the adequate design of this fine and expensive piece of machinery as I am in the time delay. For that reason it is inconceivable that this Congress will not act expeditiously to get the scientific team together.

It faces us with a great decision on our country's scientific future. The gentleman from Massachusetts, Mr. McCORMACK, spoke about a momentous decision that this Congress was faced with before on the Manhattan project. Congress then rose to its responsibility. Here again we have today the responsibility of either denying or acquiring for the Nation a piece of science machinery that is fundamental to our entire scientific effort. Just as with the Manhattan project, if we can persuade you gentlemen, when the amendment today is offered, to authorize this fully, I can assure you that as the years go by you will look back and say, "That was a fine thing I did that day in May 1960, because out of what I did has come to our Nation advancement that was far beyond anything we have ever known before."

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from Pennsylvania.

Mr. VAN ZANDT. I wonder if the gentleman would tell the committee what it would mean in the way of increased cost by simply authorizing an appropriation of $3 million for design and study this year and neglecting to authorize the project in its entirety?

Mr. HOSMER. If we authorize the project in its entirety, we will start getting the building built, and we will require about $4 million cash instead of $3 million cash this year. If we fail to authorize it this year and delay for 1 year, we will run into the cost escalation factors which will more than overcome any money that might be saved otherwise. In other words, if the project costs $107.2 million if it is started now, if we delay a year it will cost almost another 4 million or 5 million. That is on the bare basis of the cost escalation. It will inevitably go up. So, if you want to buy it now and buy it right and buy a high quality of machinery at the lowest price, the time to go for it is now.

Mr. VAN ZANDT. I hold in my hand here a letter signed by the Chairman of

the Atomic Energy Commission, Mr. McCone, in which he points out that the failure of this Congress to authorize this project means that the cost eventually will rise from $107.2 million to $110 million, and from a time factor or standpoint, instead of spending 6 years to construct, it is going to take 6½ to 6¾ years, and thus the valuable experience that we need will be delayed and the construction will cost more.

Mr. HOSMER. Not only do we need it, but this is the kind of thing that scientific people all over the world, on this side of the Iron Curtain and the other side of the Iron Curtain, are excited about. They know that this is one of the boldest projects, one of the most profitable areas, of research, one of the greatest research tools that man will ever have.

And they can see, if this Congress authorizes this to be done today, the firmness and the determination of the leadership of the United States. I ask my colleagues to live up to the worthy reputation of this body and do what is best for our country and our people. When you have the opportunity to take part in the advancement of this great scientific effort by your vote on the amendment, I ask that you cast aside the doubts that you may have and, with our own scientific people, boldly move ahead, to give them and to give the United States what is needed to insure our scientific leadership.

The CHAIRMAN (Mr. O'NEILL). The time of the gentleman from California [Mr. HOSMER] has expired.

Mr. DURHAM. Mr. Chairman, I yield the gentleman 2 additional minutes.

Will the gentleman yield to me at this time?

Mr. HOSMER. I yield to the gentleman from North Carolina.

Mr. DURHAM. The gentleman has made a very fine technical discourse, but I believe that the House should know, from all the evidence and all the information we have before us, that the request is for $4,200,000. They only need that much.

Mr. HOSMER. The bill only authorizes $3 million.

Mr. DURHAM. That is all they were requesting. I think this is a little bit of a departure from the policy of the Congress. We have heretofore rather hesitated to build buildings on university campuses, without Government control, without building on land that we own in this country. This project I think is so large that I, as an individual, want to know all of the details. I feel that we have very little information.

Mr. HOSMER. I just want to say to the gentleman that the issue here is not nit-picking about location, it is not quibbling about cost, it is not sending this back, as has been done for 2 years now, to restudy it to death. The issue here is whether this Congress is going to act decisively and give this Nation the machinery that it needs to project itself forward in science and all that is allied with science. There can be legislative lags and authorizational gaps and congressional defaults which are just as dangerous to this country as those occurring anywhere else. I feel that unless we move forward on this project today we may find ourselves guilty of that kind of charges.

Mr. DURHAM. I believe the Commission testified that they can make progress under what is authorized by the committee; is not that correct?

Mr. HOSMER. Of course they can make progress. You can make progress with a dime, but if you have a dollar you can get there. That is what we are asking to be done here.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman.

Mr. VAN ZANDT. I should like to refer to this letter received from the Chairman of the Atomic Energy Commission in which he says this:

> The earlier it can be completed—

He is referring to the Stanford accelerator—

> The earlier it can be completed and placed into operation the sooner will its contributions be realized and the greater will be our assurance of continued U.S. leadership in this important scientific field.

The CHAIRMAN. The time of the gentleman from California [Hr. HOSMER] has again expired.

Mr. DURHAM. Mr. Chairman, I yield myself 2 minutes.

Mr. Chairman, I think the gentleman's statement is a fine one. It was very theoretical, but it was a good statement on this subject, which is technical. We have this Midwest group of universities; there are about 12 of them, and they have still not come up with some of the answers involved in this matter. Those universities are in Indiana, Illinois, and elsewhere in the Midwest. It is a large group of universities, which have very fine technical personnel. My position in this is that until these theoretical physicists come in here and tell the Congress that this is feasible, that this can be done within our cost estimates, we had better follow the course we are suggesting.

Mr. HOSMER. Mr. Chairman, will the gentleman yield?

Mr. DURHAM. I yield to the gentleman from California.

Mr. HOSMER. I think the record will show that there was unanimous agreement among the scientists that this linear accelerator is feasible and it is basically necessary. The gentleman is referring to the Mura project, which is not an electron accelerator but a proton accelerator, an entirely different piece of machinery, about which some question was raised; but there is no question about the feasibility of the electron accelerator nor is there any question but that it opens up a new horizon for the scientist and unlocks a completely new door to basic knowledge, a door to which no other country is going to have access.

Mr. DURHAM. But we had not agreed on the construction cost of it.

Mr. HOSMER. The Atomic Energy Commission has studied it and got it down as close as anybody can get it, $107 million.

Mr. VAN ZANDT. Mr. Chairman, I yield 10 minutes to the gentleman from California [Mr. GUBSER].

Mr. GUBSER. Mr. Chairman, first I should like to compliment the gentleman from North Carolina [Mr. DURHAM]. It has been my pleasure for the past 4 years to be associated with him as a member of the Committee on Armed Services. In all of that association I have never known him to be anything but constructive and not in the least political. In my opinion, this Congress is losing a true southern gentleman. We all wish him well.

I should like to address my remarks entirely to the amendment which will be presented by the gentleman from California [Mr. HOSMER] to fully authorize a linear electron accelerator.

The question to be decided here today is this: Is the United States of America seriously interested in scientific advancement or do we intend to just talk about it? The scientific prestige of this Nation is at stake.

The entire scientific community of the country has endorsed construction of the Stanford linear electron accelerator. It has told us that present-day accelerators have been immensely useful in rolling back the frontiers of scientific knowledge; that these accelerators—or atom smashers, to use laymen's terms—can do much more in the future. But they also tell us that the newest frontier requires research in the acceleration of light particles or electrons. Present-day machines are so limited by their principle that penetrating research into the very basis of the universe is impossible without the use of a linear-type accelerator. This is a new type machine which will be a tool of basic science, the foundation for applied science. It is not a duplication of any existing machine.

The linear accelerator principle has been developed at Stanford whose personnel is recognized throughout the world as the most qualified group to construct this proposed machine. Since 1946, 10 linear accelerators have been constructed at Stanford or under Stanford's direction. Other nations are using Stanford personnel or design in forging ahead in this important work.

This machine would be used by all of the Nation's scientists. It would belong to the Nation and would be located on land valued at $4 million, offered to the country without charge.

The question is not whether the Stanford accelerator should or should not be built. The Joint Committee on Atomic Energy has recommended authorization of $3 million for design studies. This is a clearcut indication of the committee's desire to make construction of the accelerator possible.

I quote from page 9 of the committee report:

> The Joint Committee recognizes that an accelerator of this type could make a valuable addition to our national high-energy physics program.

On page 21 of the report, Dr. John H. Williams, AEC Commissioner and former Director of the Division of Research, testifies as follows:

> The 10- to 20-billion electron-volt electrical linear accelerator proposed by Stanford should be the next major step in the high-energy physics program of the country. Construction and operation of this machine

would put in the hands of U.S. physicists a most necessary tool, if we are to achieve maximum scientific progress.

The only question, therefore, is whether it should be fully authorized now or only partially authorized to the extent of $3 million. The appropriation for fiscal year 1961 will hardly be changed by full authorization. In fact, it will be increased by only $1,200,000. The only question, I repeat, is whether the project should be authorized partially or in full.

There are compelling reasons why the accelerator should be authorized in full at this session of Congress.

First, partial authorization will not make it possible to obtain the services of prominent personnel to design the accelerator, because such people would have serious misgivings about permanent employment.

Ladies and gentlemen, we are talking about a machine which costs $107 million. We cannot afford to have less than the best to design it. If we are forced to accept less than the best, we will get an inferior machine; it will cost more, and its completion will be delayed at a time when this Nation is in a desperate race to answer the unanswered in scientific research.

Here is what scientific advisers had to say about partial authorization in the committee hearings:

Dr. E. L. Ginzton, director of the Hansen Microwave Laboratory at Stanford, said:

I think the whole question before us and before the whole world is whether this country intends to or does not intend to build such an accelerator. If it is partially authorized, there will be an open question before everybody. It means we will not be able to obtain the services of prominent people who will have serious misgivings about permanent employment. As a result, the project will not be designed with the excellent staff we need. It will take longer to build and will cost more.

Dr. R. Rollefson, director, Midwestern Universities Research Association, has testified:

I agree with all the others who have testified here that it is important to authorize the whole amount. I think we of MURA have had considerable experience along this line, and we know how hard it is to attract and hold the best people when it is not sure what is going to happen.

Dr. Henry DeWolfe Smyth, of Princeton University, testified:

I feel very strongly, Mr. PRICE, that the full amount should be authorized at this time. I have had some experience in the past with situations where preliminary design was authorized or research was authorized on a project, and then there was a long delay before further authorization came through. This is extremely demoralizing. It makes it difficult to assemble a staff, and once the staff is assembled, and then there is delay in further authorization, the staff disappears and it becomes extremely difficult to reassemble the staff. In this case particularly, where the design is so fully worked out in the sense of depending on components that are already in use, and where, as I understand it, a machine could be built that would be very useful even without further development of the components, I think it would be very undesirable to give partial authorization.

In a letter dated April 13, 1960, to Congressman JAMES E. VAN ZANDT, Mr. John F. Floberg, Acting Chairman of the Atomic Energy Commission, said in part:

The Stanford linear accelerator project should be fully authorized for construction at this session of Congress.

* * * * *

We believe that the lack of full authorization of the project at this time may seriously hamper the recruitment of the additional top staff necessary for orderly progress of this project.

Within the past few weeks, in response to a specific query from the AEC, Stanford University has now stated:

We are experiencing some difficulty at the present time in keeping our present staff, the nucleus of the project, together, and there is serious danger that a number of the principal scientists on the staff will leave the university's employ because of the continuing uncertainty concerning full authorization of the project.

The number of physicists and engineers presently involved in Project Agreement No. 1 work is 27. We had planned to increase this to an average of 60 man-years during the first year of integrated development and construction activities. Under the existing circumstances we think we could recruit only five or six more physicists and engineers than we now have. Moreover, it is not likely that these new people will be of the excellence we had intended. Undoubtedly a partial authorization will not be attractive to scientists having tenure in other institutions or who otherwise require long-term commitments. As an example it would be impossible to recruit experienced high energy particle physicists who would be involved in more detailed calculations of shielding or study of other problems related to the utilization of the machine. This work is necessary for its design. Given full authorization this year we believe that we could staff to the extent and excellence that was originally contemplated.

My second reason for urging full authorization is that partial authorization will increase its costs. Present estimates provide for a 5 percent annual escalation of construction costs for each year that passes. The contingency fund also increases by 5 percent each year. Thus, for each year that final construction is delayed because of partial authorization, the cost will go up.

According to Blume & Associates, a consequence of delay in authorization for construction of the project will be an increase in the costs. Blume's estimates were predicated on the start of the construction program on July 1, 1960, with completion 6 years thereafter. Estimates of escalation were included for the second through sixth years at 5 percent a year. According to Blume:

If the project is not authorized and operations initiated so that this schedule can be followed, the cost estimates should be increased at the rate of 5 percent per year for escalation.

Thirdly, the national prestige requires full authorization at this time.

We are now the acknowledged leaders in high-energy nuclear physics research. The Soviet Union is putting tremendous effort into the construction and operation of linear accelerators. These machines have all been built on extraordinarily short construction schedules and with extremely rapid initial engineering and development. Clearly they emphasize the high-energy field as a matter of national prestige. For example, they have under design and site development a 50-billion-electron-volt machine of the circular, proton type which will probably be altered during construction to a capacity of 70 billion electron volts. They have three linear accelerators ready to start in 1960 or 1961 and another scheduled to be started at Kharkov.

Mr. PRICE. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield to the gentleman from Illinois.

Mr. PRICE. I just want to correct the gentleman on that point. The Soviet Union will not have anything like this in operation.

Mr. GUBSER. They have three linear accelerators scheduled to go into operation in 1960 or 1961, with power up to 2 billion electron volts, and another to be constructed at Kharkov of 4 billion electron volts. This is considerably less than the Stanford accelerator.

Mr. PRICE. They have such a small machine that they are not even comparable in this area.

Mr. GUBSER. Granted—we are way ahead of them and the gentleman has clinched my point. But Russia is becoming active in the high-energy field.

Much has been made of the alleged fact that we lag behind the Soviet Union in scientific research. Here is a field where we excel them. Must we partially authorize the Stanford accelerator, delay a year, spend more money, and allow the Russians to catch up? The national prestige is at stake.

Fourth, this project is ready for full authorization now. Look at this stack of reports and cost estimates from reliable enginering firms. It has been thoroughly reviewed by the Atomic Energy Commission in addition to two engineering firms. The President's Scientific Advisory Committee has twice recommended it. A special National Science Foundation panel on high-energy physics has recommended it. The general advisory committee of the Atomic Energy Commission has also recommended it; and so has the President of the United States.

The costs of this project are estimated better than any other project which has ever been presented. They are estimated as exactly as they can ever be. Listen to the testimony of Dr. T. A. Welton of the Oak Ridge National Laboratory in Oak Ridge, during the hearings:

The proposal is remarkably free of technical difficulties and cost uncertainties. This is the result of the extensive experience with the present Stanford machine. * * * The independent cost estimate by William M. Brobeck & Associates is much more detailed than any ever before prepared prior to construction authorization. It fails to reveal any such gross optimism on the part of the Stanford group as it has become customary to expect. There seems to be no reasonable basis to doubt that the requested funds will allow completion of the planned machine, with highly successful operation. To summarize, the Stanford proposal is very much more free of technical problems than has been the case for any previous accelerator.

On page 9 of the committee report, the majority indicates as its sole reasons for partial rather than full authorization

the fact that it is not satisfied with the cost estimates because "Unforeseen additions relating to possible changes in cooling, shielding, ground loading, and so forth, should be more carefully reviewed before proceeding." This field of cooling, shielding, and ground loading is exactly the area where Stanford believes that it cannot recruit prominent personnel with less than full authorization. It therefore follows that cost estimates cannot be improved in the areas mentioned by the majority unless personnel is available. In fact, it is quite possible that without prominent personnel, the cost estimates will be less favorable. Let me repeat a previous quotation of Stanford University officials which substantiates the above view:

It would be impossible to recruit experienced high energy particle physicists who would be involved in more detailed calculations of shielding or study of other problems related to the utilization of the machine.

To quote the minority report from page 20 of the committee report:

Because the majority report states that "more design and engineering might result in better cost estimates," we believe it necessary to emphasize the thoroughness of the cost reviews already made. Volume 3, page XI–2, of the Blume report contains a table entitled "Comparison of project cost estimates—Stage 1 construction," setting forth columns of estimated costs at five different sites, and demonstrating that the Sand Hill site would have the lowest cost. Then, beginning at page XV–7, there commences a table entitled "Sand Hill site, stage 1 construction, project cost estimates," which sets out, for eight pages, a detailed cost breakdown and schedule, followed by a list of drawings and site location plans.

Ladies and gentlemen, let me repeat my points. The Nation needs this machine. If it is not built, we—

First, will not get the best personnel to design it;

Second, it will cost more;

Third, it will not be the best we can get; and

Fourth, we will suffer a serious blow to our national prestige.

This project is ready for full authorization. Its cost estimates have been made by experts. Full authorization will have practically no effect on the budget we are now considering, but it will have a maximum effect upon the quality of machine we will get, how much it will cost, and when we will get it.

We all worry about the great scientific competition afforded us by the Soviet Union. This is our chance to prove before the world that we too will fill the granary of knowledge for use by generations of the future. I urge adoption of the amendment to fully authorize the Stanford linear electron accelerator.

Mr. YOUNGER. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield.

Mr. YOUNGER. I want to join with the gentleman on this question of authorization of this project. We have listened on this floor many times on the scientific race, and we have authorized many millions of dollars to encourage students in the universities. Here is a project, a machine that is absolutely essential in the further development of certain scientific knowledge. I think if the Congress fails to authorize it in this session we are going to set this development back for over a year.

I think you have made a wonderful contribution, to the discussion and I join you in it.

Mr. GUBSER. I thank the gentleman.

The CHAIRMAN. The time of the gentleman has expired.

Mr. DURHAM. Mr. Chairman, I yield the gentleman 3 additional minutes.

Mr. PRICE. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield.

Mr. PRICE. I cannot agree with the gentleman who has just made the statement to the gentleman who holds the floor, because I do not think that anyone on the Joint Committee opposes this project as such. The issue is not whether or not this is an essential tool, but the issue is whether or not we are quite ready, on the basis of cost estimates that we now have, to grant the full authorization, because our experiences have already proven that by careful study we have been able to adjust this program, and perhaps by further study we can make further adjustments that will guarantee its efficient use after it is completed.

I would like to ask the gentleman this question. I would like to read the conclusion of the report by John A. Blume & Associates:

Before final design is undertaken and before the final alinement is selected, a detailed site investigation is recommended. Such investigation should include detailed geological mapping, further investigation of ground water conditions, careful study of cut and fill slope stability, and definitive analysis of excavation and foundation problems. This work should include a comprehensive program of trenching, drilling, and material testing and investigation of possible elastic strain accumulation in the subject areas. This latter recommendation is amplified and explained in the text.

This is all we are asking. We commit ourselves to authorization, but we want a full investigation. What the committee is doing is exactly what the committee is doing with the 12 midwestern universities.

Mr. GUBSER. May I say to the gentleman that I can also quote from the Blume report:

If the project is not authorized and operation initiated so that this schedule—

The 6-year schedule—

can be followed, the cost estimate should be increased at the rate of 5 percent per year for installation.

I would like to say one more thing to the gentleman. The committee report states that the area in which better cost estimates are desired is in the area of shielding and cooling. Yet the testimony of experts tells us this is information that will develop during the course of construction. They tell us you can get better cost estimates and better construction if you have prominent people. They also state that with partial authorization you will not get the people who can give us the best shielding and cooling cost estimates.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield to the gentleman from Pennsylvania.

Mr. VAN ZANDT. We have heard a lot about a more detailed study that is needed. I would like to comment that if we follow this type of philosophy, obstacles can be raised for every project in the Atomic Energy Commission program. If we do this what will happen to the other proposed accelerators, and also power reactors, the ANP project Project Rover? Project Pluto? Project Sherwood?

Final site study would not normally be done until after the project is authorized.

Site problems have been as thoroughly studied as could be expected at this stage of authorization.

Studies which have been more thorough than for any other similar project indicate no fundamental adverse site conditions.

Of course, more detailed site studies will be made, as in any project, as the projects proceed.

Mr. DURHAM. Mr. Chairman, I yield the balance of my time to the gentleman from California [Mr. HOLIFIELD], chairman of the subcommittee, who knows more about this measure than anyone connected with the committee.

Mr. HOLIFIELD. Mr. Chairman, we have heard some rather extensive statements on this matter, and I would like to recapitulate if I can and describe the situation. I do not intend to make a long speech. I intend to place my comments in detail in the RECORD for those who wish to read them later. It is late Friday afternoon, and a number of Members have expressed the desire to catch trains and planes home for speaking engagements to which they were previously committed. It has been necessary to curtail some of their plans because of the unanticipated carryover of this bill until today. This is through no fault of anyone, of course, because the defense bill took more time for debate yesterday than was expected.

Mr. YOUNGER. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I yield to the gentleman from California.

Mr. YOUNGER. Surely the gentleman does not expect us on the floor to pay more attention to the fact that somebody wants to catch a train and leave his duties in Washington than to pass on an important subject of this kind? The gentleman does not want us to go away with that sort of impression, does he?

Mr. HOLIFIELD. The gentleman knows that the present speaker does not want anyone to go away with that impression, but there is such a thing as using a certain degree of consideration for your colleagues. It is frequently practiced on the floor of this House, that we adjourn over, for instance.

Mr. YOUNGER. Let us adjourn over until Monday, then.

Mr. HOLIFIELD. Unfortunately, the gentleman now in the well of the House is not in charge of the program. The gentleman is following the leadership, as the gentleman on the other side of the aisle is, I am sure.

The gentleman from California [Mr. HOSMER] made a very fine technical explanation of what an electron accelerator happens to be. There are various kinds of accelerators. I could spend a half hour telling you the kinds of accelerators there are.

The statement has been made by the gentleman who intends to introduce an amendment which will raise this bill $104 million that this accelerator is needed. Well, there is no quarrel on the part of the Members on the majority side that this is a desirable accelerator. The testimony before our committee established the fact that it is desirable, but there was also a great deal of testimony before our committee which, in the opinion of the majority, shows that the main work has not been done on this particular case.

Let me give you a few figures. In 1957, when this accelerator was first proposed it was supposed to cost $80 million. Then another estimate was made and it was supposed to cost $116 million. In 1959 the AEC estimated it would cost $105 million. Now, they hired a very distinguished group to make a study of it, Blume & Associates, engineers, and the Blume people came back and said it would cost $126 million. Then the AEC proposal presented to this committee amounted to $107 million.

Now, the gentlemen on the other side of the aisle have not talked to you about some other things that go along with this $107 million. There is $18 million needed for research and development. There will be $20 million the first year for operating costs, and that is a total of $46 million that will be added to the $107 million, provided that is all that will be spent.

Now, we are building one large accelerator. That is located at the Argonne National Laboratory. The first estimate to come before us was $15 million. They came back and raised this figure to $27 million. Do you know what the figure is today? Forty-two million dollars, starting out with a $15 million estimate.

Now, we want to know what we are doing when we go into this program. Spending $107 million, that is the first estimate. Is the cost of this accelerator going to accelerate three times as the Argonne Laboratory did, from $15 million up to $42 million? Is it going to be $107 million? Is it going to be $321 million? Is it going up three times? That is what the majority of this committee is concerned about. That is why we are asking for some additional cost estimates on this. For instance, Blume & Associates asked for some additional work to be done, and their conclusions and recommendations, No. 2, state as follows:

> Before final design is undertaken and before the final alinement is selected, a detailed site investigation is recommended. Such investigation should include detailed geological mapping, further investigation of ground water conditions, careful study of cut and fill slope stability, and definitive analysis of excavation and foundation problems. This work should include a comprehensive program of trenching, drilling, and material testing and investigation of possible elastic strain accumulation in the subject areas. This latter recommendation is amplified and explained in the text.

Now, this job of preliminary work has not been done; it has been partly done. We do not know what they are going to come up with. In the first instance, they were going to put this accelerator in a tunnel in the ground, and the Joint Committee demurred at that last year. This was going to cost them a great deal of money. They went back and made a study and decided that they could build it above ground on a cut and fill basis, and they decided that that would save about $25 million by making a cut and fill operation in place of a tunnel through the earth.

We went into the matter of the cost of operation of this particular accelerator from the standpoint of electrical energy. In last year's hearings the AEC came before us and said they were going to buy electricity at a cost of 9.3 mills. We told them to go back and look at the situation again and study it. They came back this year with an estimate that they had now made arrangements through the Bureau of Reclamation, Trinity River Division, to obtain electricity at 4.6 mills. We saved $660,000 a year by that one point of delay.

This committee is in favor of scientific research. There is not another committee in the House over the years, the 14 years that this committee has been in existence, that has supported scientific research any more diligently and aggressively than this committee. The progress of the Atomic Energy program is evidence that this tremendous scientific effort has been amply supported by this committee. This committee intends to continue to support scientific research. At the present time we have upwards of $150 million invested in accelerators. They are not all this kind of accelerator; I do not want to mislead the House. But the free world at this time has, as far as we know, the largest electron accelerators in existence. As far as we know the Russians do not have one. They have plans for building one, it is true; but as far as we know they are not building one. So we are excelling in this field at the present time. There is no doubt we can go faster. You can go faster in any program if you want to put the money into it. It is a problem of how much money you want to put in at the present time. How do you want to space your expenditures? Do you want to develop a balanced program or an unbalanced program?

Maybe the majority of the committee are wrong in estimating that this is the right way to go about it, the balanced way to go about it. We are furnishing $3 million in this program for further design and engineering studies and to give them a few more months to bring back the information which this committee wants and which the Blume Associates said they should obtain before they started their operations.

I know my friends on my left are interested in this subject just as I am. But I do not yield to them any greater degree of interest in the advancement of science in this country, nor does the majority yield to them any greater degree of interest in science. We believe we are proceeding in an orderly way. We believe that the program we have laid before you is an orderly program.

The Bureau of the Budget has approved $293,876,000 for the atomic energy program. This bill authorizes $211,476,000. This is a reduction of $82,400,000 from the request of the AEC and the Bureau of the Budget. We believe that we are justified in making that reduction at this time in view of the overall expenditures of Government and in view of the overall expenditures in the atomic energy program and in view of our position of competition in the world in this particular line of high energy physics.

So, Mr. Chairman, I am not going to take any additional time at this time. I understand that an amendment will be offered to increase the amount of this bill by $104 million. The position of the majority in bringing this bill to your attention is that we are against that particular amendment. I ask that the Committee consider the arguments that have been made on both sides and vote their conscience on this matter.

Mr. HOSMER. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I yield to the gentleman from California.

Mr. HOSMER. I would not want to have this House go away with the impression that we have pinned any economy merit badges on our chest in this authorization bill by cutting out $107.2 million for this linear accelerator below what the President requested.

When that went out, $35 million went in for various other projects, projects that will actually require expenditures this year by way of appropriations much greater than the $4 million-plus on the linear accelerator even if we did make a full authorization of it.

Mr. HOLIFIELD. The gentleman had better consult his figures.

Mr. HOSMER. I have consulted my figures and I have confidence in them.

May I ask this question: In view of the unanimous testimony that a linear accelerator of this size and power is a basic tool necessary for the Nation's scientific advancement, does the gentleman feel that there is any question about eventually building that machine in this country?

Mr. HOLIFIELD. The gentleman has very clearly stated that the position of the majority is not against the building of this type of accelerator at the proper time, but the position of the majority on this item is as it has been on other items, to properly and carefully look at the preparatory work that has been done and to select the timing to initiate such a gigantic undertaking. We are furnishing $3 million for them to start on their design and engineering work. They have testified before the committee they can spend only $2.2 million in that field. We feel that by the time they have spent the $3 million and brought back to us the other items of information that we want—and the gentleman is aware I have touched on only

a few; I could go into the patent position of the klystron tube and a few other things that have to be ironed out—when they bring that information back, I am sure this committee will exercise its good judgment and come back to this House with a timely item in its authorization bill.

Mr. Chairman, I rise in support of H.R. 11713, the AEC authorization bill for the fiscal year 1961 program which has been recommended by the Joint Committee on Atomic Energy.

As chairman of the Subcommittee on Legislation I sat through hearings on March 8, 10, 11, and April 5, 6, and 7, in which we explored every item in the bill very carefully. Vice Chairman DURHAM has given you a description of the scope of the authorization bill and the projects which the Joint Committee has added or modified.

The gentleman from Illinois [Mr. PRICE] chairman of the Subcommittee on Research and Development, has described particularly those research projects which the Joint Committee added to the bill.

I would like to endorse what the gentleman from North Carolina [Mr. DURHAM] has stated and to support all of the projects added and modified by the Joint Committee.

I would particularly call your attention to the Antarctic atomic power projects—project 61–d–10, page 3, lines 19 and 20—added by the Joint Committee as being a very necessary and desirable project. From the standpoint of economy alone they will pay for themselves after a few—2 to 5—years of operation in comparison with conventional fuel supplies. In addition they will save many lives which would otherwise be lost in transporting fuel for conventional power units. Over the last 2 or 3 years 17 planes have been wrecked, with a total of 17 lives lost and $10½ million in property damage. Moreover, having atomic powerplants at our Antarctic bases will undoubtedly enhance the prestige of the United States with the international scientific community which is represented by numerous expeditions in this important area.

Another project I would like to discuss is project 61–h–1, installation for support of biomedical research in atomic energy, $5 million.

This project covers miscellaneous additional facilities for the conduct of research in the field of radiation effects on biological systems, including the effects of radiation from radioactive fallout.

Included in this project are such items as a nuclear reactor to furnish bursts of radiation for the study of the effects of radiation on animals, radiobotany facilities to study genetic effects, animal quarters to study the effects of chronic radiation, radiobiological laboratory facilities, and modification of existing facilities in this field.

The Atomic Energy Commission requested $4 million for such facilities in its fiscal year 1961 authorization request. The Joint Committee increased this amount by $1 million, to a total of $5 million.

Last year the Commission requested $2 million for such facilities and the Joint Committee increased the request by $1 million, to a total of $3 million. The total $3 million authorized last year has been committed by the Commission for the support of work in this vital field.

The hearings held by our committee on the biological effects of radiation have brought forth the great need for additional data in this field. Solutions to the problems of radiation are absolutely dependent on the availability of additional experimental data on the biological effects of radiation.

The Joint Committee's Special Radiation Subcommittee, of which I am chairman, has scheduled additional hearings on this subject. These hearings are scheduled to start on May 24 and will extend through the first week in June. In these hearings we intend to get the information on our work in the field of radiation standards to clarify some of the confusion and misunderstanding by the public and the scientific community concerning the basis and use of radiation standards.

POWER DEMONSTRATION PROGRAM

This authorizes a total of $40 million for the atomic power demonstration program. Of this amount, $15 million is authorized for research and development assistance for unsolicited proposals for construction of private power reactors. The Southern California Edison Co. recently announced it is negotiating with Westinghouse for a large 360,000-kilowatt plant, which could be assisted under this authorization. Pacific Gas & Electric Co. is also interested in a large plant. The other $25 million is for an organic moderated prototype, or can be used for other projects under certain conditions.

It should be noted that the AEC did not request authorization of additional atomic power projects for fiscal 1961. There were one or two projects which the Joint Committee might have added—such as a $60 million natural uranium heavy water prototype. However, we decided to watch the development of technology from reactor experiments and research and development before taking this step.

Finally, I would like to mention the authorization of $3 million for further design and engineering for the Stanford linear accelerator. It is believed this is an adequate amount to make progress in the project, while at the same time firming up plans and estimates prior to authorization of construction. I expect to discuss this project at greater length later.

Mr. Chairman, I believe this bill is a good one, and deserves our support.

STANFORD ACCELERATOR PROJECT

I would like to mention the reasons the Joint Committee provided $3 million for further design and engineering on the Stanford accelerator project. I want to make it clear at the outset that the Joint Committee, and particularly its majority, is in favor of continuing design, engineering, and development of this project, and doing everything necessary—short of authorizing construction—to enable the project to go ahead after January 1961, providing proper justification of cost estimates, personnel, and program planning.

This Stanford accelerator project has had a rather peculiar history. When Stanford originally made its proposal to the Commission several years ago for this accelerator project, the cost estimate was $79 million. This, of course, is a lot of money. However, when the project was submitted to the Congress and the Joint Committee in May of 1959 the cost estimate was $105 million. Although the project was submitted too late in 1959 to be considered in conjunction with the AEC authorization bill we were admonished that we should consider the project thoroughly and authorize it if possible.

The Joint Committee did hold special hearings on the project. It became apparent that the cost situation did require some looking into. However, we were, as I say, requested to go ahead and authorize the project. Two examples, however, of questions on the cost may serve to indicate some of the things that troubled us at that time.

One of them was the cost of the 2-mile tunnel for the accelerator. We inquired whether the problem of stable ground conditions had been considered and whether enough attention had been given to special problems of tunneling. We were assured that they had been. However, AEC Chairman McCone, last fall, did institute a further engineering study that came up with the fact that the costs of the tunnel would substantially increase the cost of the project by several millions of dollars. In total the estimate, instead of being $105 million, would have been $126,700,000.

Another question that we raised last year concerned the cost of electric power needed for the operation of the accelerator. The estimate used by the AEC and its contractors was based on obtaining power at a rate of 9 or 10 mills from the private power company serving that general area. Chairman Anderson raised the question of whether or not it would be possible to obtain cheaper power from some other source since the amounts required for the operation of the accelerator were rather large—some 50,000 electrical kilowatts capacity being required initially and 120,000 kilowatts ultimately. It turned out after substantial study over the recess that the AEC has now arranged to get power from the Department of Interior for the Stanford accelerator at about 4½ mills thereby halving the original estimated operating costs for the accelerator. The net cost savings run from $660,000 to $1,300,000 per year.

Each of these examples of caution by the Joint Committee has saved millions of dollars in construction and operating costs for the Stanford accelerator.

This year we followed the pattern of last year in terms of the request for the authorization of the Stanford accelerator.

Instead of the project being submitted as a part of the AEC authorization bill we were told that there were differences

of opinion within the executive branch that needed to be ironed out before it could be submitted. Therefore, the project was not submitted until shortly before the conclusion of our hearings on the AEC authorization bill. Nevertheless the Subcommittee on Legislation did conduct hearings on the project and after considerable deliberation decided not to authorize construction but did provide $3 million to proceed with further design and engineering on the project. There are several reasons for this position taken by the Joint Committee with respect to the project.

It should be pointed out that the $107 million estimate is not the whole story. There is additional development work and other activities in conjunction with the accelerator which will cost approximately $46 million which the AEC has classified as "operating costs," which will also have to be incurred with the construction of the reactor. One of our Senate minority members suggested that perhaps this additional $46 million should be classified as construction costs rather than operating costs. In any event, this additional money will be required. This $107 million estimate, plus $46 million estimate, will also be increased by an additional $40–$50 million when, and if, the output of the accelerator is increased from 15 Bev to 45 Bev.

So as the project stands today, together with its acknowledged future increases in cost, it is already a $200 million project. If the experience we have had with other accelerator projects is followed, the ultimate cost of the project could go up another $100 million, since actual costs have generally doubled over the original estimates.

We believe that the cost estimates for this project have been improved as a result of further study by the Commission and its contractors over the recess. However, there are still certain aspects of the cost that would appear to require looking into.

As I mentioned, the cost estimate for the project, utilizing a tunnel for the accelerator, rose from $105 million to $126,700,000. As a result of this increase, presumably, it was determined that rather than utilizing a tunnel they would utilize the cut-and-fill method of construction with the accelerator housing lying on top of the land rather than in a tunnel. By this means, together with other cuts, the project estimate was pulled down from the $127 million estimate to $107 million.

However, with respect even to the cut-and-fill method, there may be some matters which should be further looked into. For example, only three test borings have been made for the particular site that is now recommended. It is recognized for the so-called cut-and-fill method, not as many test borings have to be made as for a tunnel. However, for a 2-mile cut-and-fill location it would seem that greater attention should be given to taking borings for the entire length of the acceleraor housing rather than at only one end of it as has been done.

Another question on the cost estimate involves the cost of the accelerator itself. In the hearings held by the Subcommittee on Legislation we inquired as to why the estimate for the accelerator proper rose from $23,789,000 to $27,635,000. The answer we received was quite vague and seemed to be more of a horseback guess.

Another reason for giving the AEC time to develop its cost estimates is to put the Stanford accelerator in proper relationship and balance to other high energy physics projects, as well as other basic research projects. The cost of high energy physics projects has increased tremendously in the last few years. The Joint Committee is in favor of proceeding with such projects but not at the expense of other desirable basic research projects. It should be noted that the various advisers to the President called attention to the need for insuring that low energy physics, for example, be encouraged and that the stress on high energy physics should not be at the expense of low energy physics. The AEC General Advisory Panel stated in regard to the high energy physics projects:

> We note, however, that the magnitude of Federal expenditure for high energy physics is reaching such a high level that it is important to insure that progress in this field does not interfere with the building up and orderly growth of other areas of basic science.

In this year's AEC authorization bill the Joint Committee, as the gentleman from Illinois [Mr. PRICE] has explained, has attempted to obtain a balance in basic research projects by adding projects on materials research and radiation to be carried on in private and State institutions. The Joint Committee has asked for a report from the Atomic Energy Commission on the high energy physics program which is due in January 1961, which, we hope, will cover the relationship and costs of these projects and other research fields.

Another aspect of the Stanford project, which is of some concern and we hope will receive attention during the recess is as to what the organizational arrangements will be for operating the project. The Joint Committee inquired into this last year and received only general answers. We were surprised this year to find that apparently no progress had been made in determining how the project was going to be run. It seems to me that we are entitled to know how a $105 to a $150 million project is going to be organized and administered.

Lastly, there were some problems relating to patents and conflicts of interest which were looked into during the recess. It appears that the patent problem has been largely taken care of. Whether or not the conflicts of interest problem has been adequately handled remains to be seen.

In conclusion, I would like to point out that the Joint Committee inquired of the AEC as to whether or not the $3 million provided for the Stanford accelerator was adequate to make progress on the project. The letter from the Acting Chairman of the AEC confirmed that progress would be made. This is contained on pages 10–11 of the committee report on the bill, as follows:

> It is the Commission's view that the amount of $3 million for design and engineering together with the operating funds for continued development work is adequate for the Atomic Energy Commission and Stanford to make progress on the project.

Mr. VAN ZANDT. Mr. Chairman, I yield 1 minute to the gentleman from California [Mr. YOUNGER].

Mr. YOUNGER. Mr. Chairman, I was greatly impressed a while ago when the majority leader told how this Congress appropriated $1,600 million for the Manhattan project without any quibbling or any information at all in order to achieve something that was necessary for the protection of this country. Here we are, even granting all of the figures given by the opponents, quibbling over a question of a few million dollars on a project that they say must be built, but they want it built in the future. I wish this Congress could rise to the heights that the Congress did when they were appealed to on the Manhattan project and go ahead and authorize this project which they all say is going to be built anyway.

Mr. VAN ZANDT. Mr. Chairman, I have no further requests for time.

Mr. DURHAM. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SEC. 101. PLANT OR FACILITY ACQUISITION OR CONSTRUCTION.—There is hereby authorized to be appropriated to the Atomic Energy Commission in accordance with the provisions of section 261a.(1) of the Atomic Energy Act of 1954, as amended, the sum of $211,476,000 for acquisition or condemnation of any real property or any facility or for plant or facility acquisition, construction, or expansion as follows:

(a) SPECIAL NUCLEAR MATERIALS.—

Project 61–a–1, modifications to production and supporting installations, $10,000,000.

Project 61–a–2, billet production plant, $1,800,000.

Project 61–a–3, heat treatment and inspection modifications, Fernald, Ohio, $2,500,000.

Project 61–a–4, development laboratory building, Oak Ridge, Tennessee, $766,000.

Project 61–a–5, plutonium reclamation plant, Hanford, Washington, $2,900,000.

Project 61–a–6, moderator purification improvements, Savannah River, South Carolina, $2,500,000.

(b) ATOMIC WEAPONS.—

Project 61–b–1, weapons production, development, and test installations, $10,000,000.

Project 61–b–2, high-velocity test track, Sandia Base, New Mexico, $2,100,000.

Project 61–b–3, special metals fabrication plant, $3,000,000.

(c, ATOMIC WEAPONS.—

Project 61–c–1, contaminated waste plant, Los Alamos, New Mexico, $2,000,000.

(d) REACTOR DEVELOPMENT.—

Project 61–d–1, additions and modifications to Chemical Engineering Building, Argonne National Laboratory, Illinois, $2,000,000.

Project 61–d–2, special purpose test installation addition, Santa Susana, California, $1,200,000.

Project 61–d–3, technical space for SPERT, National Reactor Testing Station, Idaho, $500,000.

Project 61–d–4, critical building, Brookhaven National Laboratory, New York, $600,000.

Project 61–d–5, fast reactor core test installation, Los Alamos Scientific Laboratory, New Mexico, $6,900,000.

Project 61–d–6, plutonium fuel service and development building, Los Alamos Scientific Laboratory, New Mexico, $600,000.

Project 61–d–7, test installation for Project Rover, $20,000,000.

Project 61–d–8, test installation for Project Pluto, $15,000,000.

Project 61–d–9, advanced test reactor, $24,000,000.

Project 61–d–10, power reactor plants for the Antarctic, $13,000,000.

(e) REACTOR DEVELOPMENT.—

Project 61–e–1, additions and modifications, MTR-ETR area, National Reactor Testing Station, Idaho, $800,000.

Project 61–e–2, site utilities, Brookhaven National Laboratory, New York, $1,250,000.

Project 61–e–3, quarters for visiting scientists, Brookhaven National Laboratory, New York, $550,000.

(f) PHYSICAL RESEARCH.—

Project 61–f–1, bubble chamber house, Brookhaven National Laboratory, New York, $1,660,000.

Project 61–f–2, Princeton-Pennsylvania accelerator addition, Princeton, New Jersey, $10,820,000.

Project 61–f–3, accelerator and reactor additions and modifications, Brookhaven National Laboratory, New York, $1,085,000.

Project 61–f–4, high flux isotope reactor, Oak Ridge National Laboratory, Tennessee, $12,000,000.

Project 61–f–5, accelerator improvements, Lawrence Radiation Laboratory, California, $500,000.

Project 61–f–6, major bevatron improvements, Lawrence Radiation Laboratory, California, $9,600,000.

Project 61–f–7, design and engineering, linear electron accelerator, $3,000,000.

Project 61–f–8, materials research laboratory, University of Illinois. $5,600,000.

Project 61–f–9, radiation laboratory, University of Notre Dame, $2,200,000.

(g) PHYSICAL RESEARCH.—

Project 61–g–1, metallurgy building extension, Brookhaven National Laboratory, New York, $655,000.

Project 61–g–2, addition to cyclotron building, Lawrence Radiation Laboratory, California, $500,000.

(h) BIOLOGY AND MEDICINE.—

Project 61–h–1, installations for support of biomedical research in atomic energy, $5,000,000.

(i) COMMUNITY.—

Project 61–i–1, real estate development, Los Alamos, New Mexico, $435,000.

Project 61–i–2, elementary school addition, Los Alamos, New Mexico, $145,000.

Project 61–i–3, steam transmission line, Los Alamos, New Mexico, $135,000.

(j) GENERAL PLANT PROJECTS.—$34,175,000.

SEC. 102. LIMITATIONS.—(a) The Commission is authorized to start any project set forth in subsections 101 (a), (b), (d), (f), and (h), only if the currently estimated cost of that project does not exceed by more than 25 per centum the estimated cost set forth for that project.

(b) The Commission is authorized to start any project set forth in subsections 101 (c), (e), (g), and (i), only if the currently estimated cost of that project does not exceed by more than 10 per centum the estimated cost set forth for that project.

(c) The Commission is authorized to start a project under subsection 101(j) only if it is in accordance with the following:

1. For community operations, the maximum currently estimated cost of any project shall be $100,000 and the maximum currently estimated cost of any building included in such project shall be $10,000.

2. For all other programs, the maximum currently estimated cost of any project shall be $500,000 and the maximum currently estimated cost of any building included in such a project shall be $100,000.

3. The total cost of all projects undertaken under subsection 101(j) shall not exceed the estimated cost set forth in that subsection by more than 10 per centum.

SEC. 103. ADVANCE PLANNING AND DESIGN.—There are hereby authorized to be appropriated funds for advance planning, construction design, and architectural services, in connection with projects which are not otherwise authorized by law, and the Atomic Energy Commission is authorized to use funds currently or otherwise available to it for such purposes.

SEC. 104. RESTORATION OR REPLACEMENT.—There are hereby authorized to be appropriated funds necessary to restore or to replace plants or facilities destroyed or otherwise seriously damaged, and the Atomic Energy Commission is authorized to use funds currently or otherwise available to it for such purposes.

SEC. 105. CURRENTLY AVAILABLE FUNDS.—In addition to the sums authorized to be appropriated to the Atomic Energy Commission by section 101 of this Act, there are hereby authorized to be appropriated to the Atomic Energy Commission to accomplish the purposes of this Act such sums of money as may be currently available to the Atomic Energy Commission.

SEC. 106. SUBSTITUTIONS.—Funds authorized to be appropriated or otherwise made available by this Act may be used to start any other new project for which an estimate was not included in this Act if it be a substitute for a project or portion of a project authorized in subsections 101(a), (b), and (c) and the estimated cost thereof is within the limit of cost of the project for which substitution is to be made, and the Commission certifies that—

(a) the project is essential to the common defense and security;

(b) the new project is required by changes in weapon characteristics or weapon logistic operations; and

(c) it is unable to enter into a contract with any person, including a licensee, on terms satisfactory to the Commission to furnish from a privately owned plant or facility the product or services to be provided in the new project.

SEC. 107. AMENDMENT OF PRIOR YEAR PROJECTS.—(a) Section 101(d) of Public Law 84–506, as amended, is further amended by striking therefrom "Project 57–d–1, high energy accelerator, $27,000,000" and substituting therefor "Project 57–d–1, zero gradient synchrotron, Argonne National Laboratory, Illinois, $42,000,000."

(b) Public Law 86–50 is amended by striking out the figure "$5,000,000" for project 60–e–12, alterations to Shippingport reactor facilities, and substituting therefor the figure "$9,000,000".

SEC. 108. PROJECT RESCISSIONS.—(a) Public Law 86–50 is amended by rescinding therefrom authorization for a project, except for funds heretofore obligated, as follows:

Project 60–c–2, special processing plant, phase II, Mound Laboratory, Ohio, $3,800,000.

(b) Public Law 85–590, as amended, is further amended by rescinding therefrom authorization for projects, except for funds heretofore obligated, as follows:

Project 59–b–4, special processing plant, Mound Laboratory, Ohio, $2,000,000.

Project 59–c–8, lineal acceleration tester, Livermore, California, $390,000.

Project 59–g–3, gamma process development irradiator, $1,600,000.

(c) Public Law 85–162, as amended, is further amended by rescinding therefrom authorization for projects, except for funds heretofore obligated, as follows:

Project 58–b–5, additions to scrap plants, various sites, $1,500,000.

Project 58–c–2, weapons special component plant, $6,000,000.

(d) Public Law 84–506, as amended, is further amended by rescinding therefrom authorization for a project except for funds heretofore obligated, as follows:

Project 57–a–7, modifications to existing production facilities for increased efficiency and safety, Hanford, Washington, $3,000,000.

SEC. 109. COOPERATIVE POWER REACTOR DEMONSTRATION PROGRAM.—(a) Section 111 of Public Law 85–162, as amended, is further amended by striking out the date "June 30, 1960," in clause (3) of subsection (a) and inserting in lieu thereof the date "June 30, 1961."

(b) There is hereby authorized to be appropriated to the Atomic Energy Commission the sum of $40,000,000 to be available, in addition to the funds heretofore authorized, for carrying out the Commission's power reactor demonstration program in accordance with the terms and conditions provided in Sections 110 and 112 of Public Law 86–50. The maximum amount of the program authorization, specified in subsection 110(b) of Public Law 86–50, is increased by $45,000,000. In addition to the amount authorized under subsection 110(c) of Public Law 86–50, the Commission is authorized to use funds not to exceed $15,000,000 in the aggregate, to provide research and development assistance in support of unsolicited proposals from the utility industry to construct nuclear powerplants.

(c) Section 110 of Public Law 86–50 is amended by deleting the word "two" in the first sentence of subsection (d).

SEC. 110. COOPERATIVE RESEARCH AND DEVELOPMENT PROGRAM WITH CANADA.—There is hereby authorized to be appropriated to the Commission, in accordance with the provisions of section 261(a)(2) of the Atomic Energy Act of 1954, as amended, the sum of $5,000,000 for use in a cooperative program of research and development in connection with heavy water moderated nuclear powerplants to be conducted under the Agreement for Cooperation Concerning Civil Uses of Atomic Energy Between the Government of the United States of America and the Government of Canada, signed on the 15th day of June 1955, as now or hereafter modified.

SEC. 111. DESIGN AND ENGINEERING STUDIES.—The Commission is authorized within its discretion to proceed with design and engineering studies to include, but not be limited to, the following:

(a) Facilities for food irradiation;

(b) Power reactor of steam-cooled type.

The Commission may submit reports on studies under this section to the Joint Committee on Atomic Energy by April 1, 1961.

Mr. HOSMER (interrupting the reading of the bill). Mr. Chairman, I ask unanimous consent that the further reading of the bill be dispensed with and that the bill be open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. HOSMER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HOSMER: On page 4, lines 19 and 20, strike out "Project 61–f–7, design and engineering, linear electron accelerator, $3,000,000." and insert "Project 61–f–7, linear electron accelerator, $107,200,000."

Mr. HOSMER. Mr. Chairman, we are at the point now where the issue is

drawn. It is drawn on a project that everybody agrees is a good one, a necessary one and one that has to be built—a project that will insure the scientific leadership of the United States. The only difference from the financial standpoint is whether we are going to spend $4 million on it this year or spend $3 million on it this year. But from the standpoint of getting a quality project and getting a topnotch machine that will pull together the scientific team that is needed to produce this, we are facing a much greater issue. We are facing an issue akin to that mentioned by the majority leader when he said that the Congress had risen to its duty in connection with the Manhattan project. We are also dealing with a much vaster issue because this particular machinery in the eyes of the scientific world is something that is incomparable from the standpoint of potential accomplishment; something that is incomparable from the standpoint of prestige of the country that undertakes it. So my colleagues for $1 million actual appropriations increase in authorization of the full project that this year would involve, you can buy that tremendous prestige; for the $1 million you can put that team of topnotch scientific experts together to do the job the way it should be done—the way that this United States of America ought to do a job. As a matter of fact, with that $1 million you will probably get $5 million or $10 million or $15 million in return because if you delay this thing, you are going to run into cost escalation factors that will exceed the $1 million many many times. This is a science issue—this is a science issue, my colleagues, and it is an issue of whether you are going to support the scientific community and support the Nation's scientific effort with this project or whether you are not. The Joint Atomic Committee contrary to the way some of the Members have talked today, when they issued their report on basic science in 1958, after listening to one Nobel Prize winner after another Nobel Prize winner, asked for and pleaded for and recommended that the expenditures in this basic science field for just this kind of research tools be doubled and trebled. And that is the issue today. Are we going to have this thing? Are we going to have the best? Are we going to keep our national scientific leadership?

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from Pennsylvania.

Mr. VAN ZANDT. The gentleman knows in order to eliminate some of the confusion concerning this project, the minority asked the Chairman of the Atomic Energy Commission to clarify the position of the Commission, and I would like to read what the Chairman of the Commission had to say:

> If the project were authorized in this session of the Congress for design engineering only and was not fully authorized until June of 1961, it appears that the most serious effect will be the lack of ability to recruit certain additional key scientists whom Stanford considers are essential for the development and design of the accelerator and experimental facilities.

Mr. HOSMER. I thank the gentleman. I hope every one of you can go home after this session is over and be able to say that his action today prevented a gap in U.S. science; that he would not permit this to lag by congressional default. There will be no lag and there will be no gap if action is taken favorably on this amendment today, and I plead with you to act favorably on the amendment which I have offered.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield further?

Mr. HOSMER. I yield to the gentleman from Pennsylvania.

Mr. VAN ZANDT. Does the gentleman know of any outstanding nuclear physicist in this country who is opposed to beginning the construction of this project at the earliest possible date?

Mr. HOSMER. There is none such. There is none such and there is no scientific leadership in the world that does not today look to the Congress of the United States to find out whether or not this country lives up to its role of leadership by boldly moving ahead with this project or loses that leadership by inaction today.

Mr. Chairman, I yield back the balance of my time.

Mr. DURHAM. Mr. Chairman, as I said in my opening statement, there is no one on the committee who is opposed to this project. It is a question of opinion. I think it is based on sound evidence and sound judgment, that we obtain a detailed cost estimate on this project. When we look at the list of construction of accelerators: cosmotron, bevatron, ZGS, Argonne, and Harvard, we see we started out with an initial cost of $4 million for the cosmotron and it went to $13 million. The others also had increases. The total cost was $72,300,000 at the start, and now it is $124,400,000. We have been trying at all times, all through this program, to bring to this Congress and to the country whatever was necessary to do the job. But we have always tried to do it based on evidence and based on facts, so that we would not get ourselves in a position of spending, as I said this morning, like we did on the wind tunnels, when we wasted a lot of money, we pulled the thing together and said, "No, we are going to have some judgment and some good estimates."

Now we have handled a very scientific matter that came out of the old Military Affairs Committee about 1940 or 1941. It began in the old days with the Fermi reactor under Stagg Field at the University of Chicago out of which has come all of this scientific development that we are discussing today. The Congress, in my judgment, has provided funds for these theoretical and experimental physicists to work with when they were ready.

I have talked to physicists all over the country.

We have heard talk about budget-busting. We do not want to throw this thing wide open without knowledge and without facts. All we are asking you to do is to give it study. I am not opposed to the project. I have stated that dozens of times. I offered an amendment giving them $3 million when they said they were only going to ask for $2½ million. There will be no undue delay in this thing.

I yield back the remainder of my time, Mr. Chairman.

Mr. WESTLAND. Mr. Chairman, I rise in support of the amendment to authorize in full the linear electron accelerator proposed by Stanford University.

In addition to the convincing arguments already made by my colleagues, I would like to emphasize two points:

First. This project has been thoroughly studied. The original proposal for this accelerator was made by Stanford University in 1957, after 4 years of serious study by the scientists and engineers at Stanford who had performed many experiments in this field and were working on similar machines of smaller scale. In 1958, a special National Science Foundation Panel on High Energy Physics reviewed and recommended the Stanford accelerator. Later, in 1958, the President convened a special panel of scientists consisting of members of the President's Science Advisory Committee and the AEC General Advisory Committee, and on November 16, 1958, this panel, after careful review of our entire high energy program as well as this project, recommended the Stanford accelerator as the next, and a necessary, step.

In May 1959, the President reviewed the previous studies and recommendations, decided that it was worthwhile, and accordingly the AEC requested congressional authorization.

In July and August 1959, the Joint Committee on Atomic Energy held detailed hearings, published as a 649-page document entitled "Stanford Linear Electron Accelerator," containing a multitude of technical details and data on the project.

But the Joint Committee decided, in 1959, that further study was needed. During the fall, the AEC conducted a thorough review, investigating all matters raised by the AEC and the Joint Committee. In March 1960, the AEC submitted a complete "Status Report" reprinted at pages 396–400 of the hearings this year entitled "AEC Authorizing Legislation, Fiscal Year 1961." The Status Report indicates that because of the thorough AEC review, all matters of possible conflicts of interest, power supply, site location, methods of construction, and cost estimates have been thoroughly studied and resolved.

With regard to cost estimates, I would like to quote from page 20 of the separate views in our minority report:

> Because the majority report states that "more design and engineering might result in better cost estimates," we believe it necessary to emphasize the thoroughness of the cost reviews already made. Volume 3, page XI–2 of the Blume report, contains a table entitled "Comparison of Project Cost Estimates—State 1 Construction," setting forth columns of estimated costs at five different sites, and demonstrating that the Sand Hill site would have the lowest cost. Then, beginning at page XV–7, there commences a table entitled "Sand Hill Site, Stage 1 Construction, Project Cost Estimates," which

sets out, for eight pages, a detailed cost breakdown and schedule, followed by a list of drawings and site location plans.

In January 1960 the special panel of scientists convened again and once more recommended the project in the following words:

In particular, this panel wishes to reaffirm its recommendation to start immediately the construction of the linear electron accelerator proposed by Stanford University, and to express its concern about the delay which has been encountered in authorizing this machine to date.

In April of this year, the Joint Committee held further hearings and AEC Chairman McCone and Commissioner John H. Williams testified once more in strong support of the project.

Second. This accelerator will be able to perform new and important experiments. Scientists have testified before our committee on the advances in recent years in understanding the fundamental constitution of matter—the structure of molecules, atoms, protons, neutrons, electrons, and strange particles. The study of the atomic nucleus is important, has led to important national defense discoveries in the past, and has aroused the interest of scientists the world over. This knowledge can be effectively advanced only through the use of ultrahigh energy accelerators of diverse capabilities. Dr. Leland J. Haworth, Director of the Brookhaven National Laboratory, stated at page 77 of the 1959 hearings concerning the Stanford accelerator:

The unique potentiality of the proposed accelerator lies, however, in the possibilities it affords for structural studies of elementary particles.

During the hearings this year, I asked some questions, understandable to laymen, of Dr. John H. Williams as to the type of particles that would be sought in this machine:

Representative WESTLAND. There is not one fundamental particle that you are seeking?

Dr. WILLIAMS. No. There are over 30 that we have seen. The fundamental difference between what we can do with existing machines and the so-called Stanford accelerator is that all the existing machines that get up to this energy are proton machines. There is no electron machine with the characteristics of the Stanford accelerator available. In other words, we believe by building this so-called linear electron accelerator we will be making the next and most important advance in the science of high energy physics.

I also asked Dr. Williams the difference between an electron and a proton machine and received the following answer:

Representative WESTLAND. What is the difference between an electron and proton machine? What do you hope to find in one that you don't find in the other?

Dr. WILLIAMS. There is a very specific difference between them. In the electron machine one is investigating the interaction of electrons. On this chart you will see the electrons are the lightest of the real particles with any finite mass. Interacting through its electric field with the field of protons and neutrons in the nucleus, is called an electromagnetic interaction. Because of the nature of the theory we understand that interaction better. If we talk about the interaction of a proton or neutron with other protons and neutrons in the nucleus, that is a description which we really don't understand fully. So there is quite a different thing between proton and electron machines.

The opinions of our scientists about the value of this machine, and its importance in our continuing scientific competition with Soviet Russia, has been amply and convincingly demonstrated during the hearings before our committee.

In summary, this project has already been thoroughly studied. Further study will serve no useful purpose, but will cause more delay and increased ultimate costs. This accelerator will be able to perform new and important experiments considered extremely important by our scientists which will greatly advance knowledge and aid us in our continuing scientific competition with Soviet Russia.

Mr. PELLY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, this is the second year President Eisenhower has requested construction authorization for a linear accelerator as a vital step in the field of high energy nuclear physics basic research. The United States is ahead in the field on a worldwide basis and to me it seems important that we stay out in front.

The action of the Joint Committee on Atomic Energy in failing to respond to the President's construction request will result in an unfortunate delay in obtaining such an accelerator. I support an amendment to H.R. 11713 for the project authorization. In other words, I favor the full request; not just $3 million for design studies. This is a fully tested and proven program and no good purpose will be served by a delay. On the contrary, the ultimate project cost would increase.

I hope the amendment will prevail.

Mr. GUBSER. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, on this Friday afternoon I would like to present a proposition to my colleagues which I think will be attractive. If you will listen to me intently on this one point for 2 minutes, I guarantee you I will be through. Here it is.

Everyone here this afternoon has said that this accelerator should be built, but the only question is, Do we have reliable cost estimates?

Now, where is the major area where the cost estimates are doubted? The majority of the committee has said that it is in the area of cooling and shielding. Most scientists agree. Even the civil engineers cannot start their calculations until they know how much dirt and how much cement and concrete is to be required to shield this machine. Now then, how are we going to get reliable cost estimates for the cooling and shielding unless we have the best people available?

I will close by quoting the people who will be doing this job. They argue against partial authorization and they say "As an example, it would be impossible to recruit experienced high-energy particle physicists who would be involved in more detailed calculations of shielding."

My point is this: The only question is the cost estimate. The major part, or the major area in doubt, is the area of shielding and cooling, and we must have the most reliable and best technical people you can find to get this data. We do not think we can get them unless we have full authorization. I ask your support of the Hosmer amendment.

Mr. VAN ZANDT. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise in support of the amendment offered by my colleague, Congressman CRAIG HOSMER, to authorize in full the linear electron accelerator proposed by Stanford University. I believe that this is a very important project. But more than that, I believe that Congress should support our scientists. When a program and a project have been thoroughly reviewed by a top panel of distinguished scientists, who have made a unanimous, and an enthusiastic, recommendation, I believe we should give them support, especially in view of our continuing scientific competition with Soviet Russia.

First. The $3 million design and engineering authorization will delay the project and increase the total costs. I would like to insert in the RECORD at this point a copy of a letter dated April 28, 1960, to me from the Honorable John A. McCone, Chairman of the Atomic Energy Commission. This letter indicates that, even assuming prompt authorization next year, commencement of useful experiments will be delayed an estimated 6 to 9 months, total estimated construction costs will be increased $2 to $3 million due to escalation, and possibly an additional $1 million more because of the uncertain status and inefficiency resulting from partial authorization.

Second. Staff recruitment will be difficult. As pointed out by this letter, it appears that the most serious effect of partial authorization will be "the lack of ability to recruit certain additional key scientists which Stanford considers essential in the development and design of the accelerator and experimental facilities." Many competent scientists have testified that the first step vital to a project of this importance is to recruit topnotch scientists and engineers. Under partial authorization this cannot be done.

Third. We are in a competition with Russia in the basic research fields. The scientists in our country, many of our best scientific minds, are terrifically excited and enthusiastic about the prospects of high energy physics—the discoveries which have been made, and the discoveries they feel can yet be made. I feel that if we in Congress falter, if we delay, if we give our scientists something short of complete, nonpolitical support, the United States will be the loser.

Our scientists tell us that funds for high energy physics should be increased, not decreased, and they are talking about this coming fiscal year 1961. I quote from the letter of February 5, 1960, from this special panel of scientists—pages 27–29 of our separate views:

At present the United States is leading the world in high-energy physics, one of

the most dynamic areas of science which, as a byproduct, is training some of our brightest physicists.

To maintain this leadership, to continue the growth of this science and to continue the training of some of our best minds, requires vigorous support by the Federal Government. The panel is concerned that the fiscal year 1961 budget for high-energy physics, as submitted to the Congress, is too low. The reduced construction obligation envisaged for fiscal year 1961, as compared with fiscal year 1960, implies a level of activity in the future which may jeopardize our present leading position in the world in this field. The authorization of the Stanford accelerator and other anticipated construction over the next 5 years, which the panel considers essential for an effective development of the high-energy physics field, will require an increasing annual expenditure for high-energy physics which may approach some $200 million by 1965.

With respect to project 61–f–7 in this bill—which the House will be asked to vote on this afternoon—the special panel of distinguished scientists clearly, forcefully, and unanimously stated its view, and I quote from page 27, appendix A to our separate views:

In particular, this panel wishes to reaffirm its recommendation to start immediately the construction of the linear electron accelerator proposed by Stanford University, and to express its concern about the delay which has been encountered in authorizing this machine to date. All the experimental potentialities of this machine, which the panel foresaw last year, still look as attractive as they did then. In addition, new potentialities have developed for which this high-intensity, high-energy electron machine is well suited.

The scientific point of view is clear. The project deserves support.

I urge all Members of the House to vote for the amendment to authorize in full the linear electron accelerator proposed by Stanford University.

Mr. HOLIFIELD. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I do not think it is necessary to carry the debate a great deal further as far as the majority side is concerned. I have pointed out that in one instance we had an estimate for an accelerator that started out at $15 million and has now grown to $42 million. This particular estimate of $105 million or $107 million may be an accurate estimate, and it may not. We do not know. I point out NASA just recently let a contract to 1 of 12 bidders. The contract was for $18 million. In this particular instance it has mushroomed to $105 million and they tell us that it is going even higher on this particular project.

So, this is not a matter of being for or against science. This is a matter of spending American public funds in a constructive and sound manner. This Congress cannot be accused of not being for science. We are authorizing more than $9 billion a year for research and development in the scientific field, in addition to another $9 billion that is being spent by industry. This Nation is spending close to $18 billion a year in scientific research and development. But there is a great deal of waste in that spending in my opinion and whenever a responsible committee of the Congress can look at this very difficult and complicated problem, and can see that we can save a few million dollars, as we have already on this project, then I think it is the duty of that committee to do so. The majority feels that they are handling this in an orderly, sound and timely manner.

Mr. Chairman, I ask that the Committee support the majority position of the Committee on Atomic Energy.

Mr. PRICE. Mr. Chairman, I rise in opposition to the amendment. The reason I do so is to allay the fears of Members who I know are interested in the advancement of our research program. If this amendment is defeated it will not in any appreciable way delay a sound program in the field of high energy physics.

I am afraid that the impression has been left that unless we authorize immediately the Stanford accelerator we will cause a serious gap in the high energy field particularly as it relates to electron acceleration. This is not correct because within a year and a half a 6 billion electron volt electron accelerator will be completed at Cambridge, Mass. This will be an effective machine for electron acceleration that will contribute greatly to our high-energy research while we are perfecting the Stanford project.

It may be argued that the Cambridge machine is not a linear accelerator, which is true. But some scientists believe that you are not going to get much more information out of the linear accelerator than you will out of the Cambridge type. I am not going to argue that point. I do not know whether there is any basis for the argument. But at least some scientists argue this. This is an indication of the type of data that the majority of the committee wanted to have before giving full and complete authorization to the project.

I personally favor further consideration of the project early next year and I personally will appreciate the opportunity within a short time of voting for full authorization for the Stanford accelerator. But I think that what has transpired in the past year in the study of this project indicates that the committee is wise in seeking more cost data before giving final and complete authorization.

We know they originally intended to build the accelerator in a tunnel and when the committee did not rush the authorization last year a restudy indicated that the tunnel would have been a very critical and serious mistake. As a result of the committee's diligence the plans were changed.

I feel that what the committee is doing here is proceeding in an orderly fashion so that when we do come to the House for authorization of the Stanford accelerator we will be able to give our colleagues assurance of what the final cost estimate might be.

Mr. HOSMER. Mr. Chairman, will the gentleman yield?

Mr. PRICE. I yield.

Mr. HOSMER. I wanted to clear up the matter of the Cambridge electronic accelerator. It is roughly a 6-billion-electron-volt job as compared to a 20-billion-electron-volt job. In other words, the power of the Stanford accelerator is infinitely greater. It would be like doing a job with a tack hammer when the job requires a sledge hammer, which is the big linear accelerator that we have been talking about today.

Mr. PRICE. The gentleman knows that the accelerator that we are talking about at the moment at Stanford is a 10-billion-electron-volt accelerator.

Mr. HOSMER. 10 to 20.

Mr. PRICE. The Cambridge accelerator can go up to 10 billion electron volts also.

Mr. HOSMER. I am sure it cannot go up to that figure because of the radiation loss.

Mr. PRICE. Scientists disagree with the gentleman. This would indicate that the argument is sound that we should proceed in orderly manner in all matters of authorization.

Mr. HOSMER. There is no argument among the scientists, there is only argument among the Congressmen.

Mr. PRICE. Only on whether we should authorize fully before we have all the data necessary to establish a firm cost estimate.

Mr. DURHAM. Mr. Chairman, I ask for a vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California [Mr. HOSMER].

The question was taken; and on a division (demanded by Mr. HOSMER) there were ayes 53, noes 86.

So the amendment was rejected.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. O'NEILL, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11713) to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes, pursuant to House Resolution 513, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

Mr. GUBSER. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. GUBSER. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. GUBSER moves to recommit the bill to the Joint Committee on Atomic Energy with instructions to report the same back forthwith with the following amendments: On page 1, line 7, strike out "$211,476,000" and insert in lieu thereof "$315,676,000"; and on page 4, lines 19 and 20, strike out "Project 61–f–7, design and engineering, linear electron accelerator, $3,000,000." and insert "Project 61–f–7, linear electron accelerator, $107,200,000."

The SPEAKER. Without objection, the previous question is ordered.

There was no objection.

The SPEAKER. The question is on the motion to recommit.

Mr. GUBSER. On that, Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 128, nays 195, not voting 109, as follows:

[No. 83]

YEAS—128

Adair	Devine	McIntire

Forand		

So the motion to recommit was rejected.

The Clerk announced the following pairs:

On this vote:

Mr. Miller of New York for, with Mr. Hébert against.

Mr. Mailliard for, with Mr. Hays against.

Mr. Corbett for, with Mr. Kitchin against.

Mr. Taylor for, with Mr. Pilcher against.

Mr. Weaver for, with Mr. Bailey against.

Mr. Van Pelt for, with Mr. Hoffman of Michigan against.

Mr. Canfield for, with Mr. Dent against.

Mr. Jackson for, with Mr. Ikard against.

Mr. Allen for, with Mr. Rogers of Texas against

Mr. Withrow for, with Mr. Walter against.

Mr. Lafore for, with Mr. Watts against.

Mr. Kilburn for, with Mr. Buckley against.

Mr. Fino for, with Mr. Anfuso against.

Mr. Pillion for, with Mr. Rooney against.

Mr. Wharton for, with Mr. Multer against.

Mr. Scherer for, with Mr. Farbstein against.

Mr. Reece of Tennessee for, with Mr. Zelenko against.

Mr. Rhodes of Arizona for, with Mr. Davis of Georgia against.

Mr. Merrow for, with Mr. Carnahan against.

Mr. Chamberlain for, with Mr. Celler against.

Mr. Moore for, with Mr. Teller against.

Mrs. St. George for, with Mr. Landrum against.

Mr. Short for, with Mrs. Blitch against.

Until further notice:

Mr. Rains with Mr. Ayres.

Mr. Scott with Mr. Martin.

Mr. Alexander with Mr. Michel.

Mr. Boggs with Mr. Schwengel.

Mr. KEARNS changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The SPEAKER. The question is on passage of the bill.

Mr. DURHAM. Mr. Speaker, on that I ask for the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 322, nays 2, not voting 109, as follows:

YEAS—322

Abbitt	Dorn, N.Y.	Kastenmeier

Mr. Thompson of Louisiana with Mr. Wharton.
Mr. Hemphill with Mr. Withrow.
Mr. Lennon with Mr. Moore.
Mr. Alexander with Mr. Jackson.
Mr. Burdick with Mr. Schwengel.

Mr. HOGAN changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GEN. MELVIN MAAS

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, Members of Congress, especially those of us who served with Gen. Melvin J. Maas when he was a Member of the House, who is the head of the physically handicapped group in the country, rejoice he was reappointed by President Eisenhower. He served in World War I. He was in Congress and left to serve in the Army. He returned after the war to the Congress and went back to serve in the Army in World War II.

In the House one day the Congress had an opportunity to witness his courage. One day I saw him catch a loaded revolver thrown down by a man, who was a mental case, in the gallery of the House, a very dangerous and brave thing to do. He has done an outstanding job for the handicapped. General Maas is blind which gives him a special understanding of those who have a physical disability. He has been an inspiration to them and to the entire country.

The President did well to reappoint him. He has done a marvelous job.

The following is the last sheet of the several days conference the President called:

PRELIMINARY PROGRAM

THURSDAY MORNING, MAY 5, DEPARTMENTAL AUDITORIUM

Presiding: Earl Gammons, former Vice Chairman, President's Committee.

8:30: Registration.

9:30: Musical selections, U.S. Marine Band.

10: Presentation of colors, Marine Corps Color Guard.

"Star Spangled Banner."

Invocation: Rabbi Harry J. Kaufman, Beth Sholom Congregation and Talmud Torah, Washington, D.C.

Introduction: Rollcall of States.

In memoriam: Vice Adm. Ross T. McIntire (MC), U.S. Navy, retired.

Welcome: Maj. Gen. Melvin J. Maas, U.S. Marine Corps Reserve, retired, Chairman, President's Committee.

Musical selections.

11:15: Introduction of the President of the United States.

Address by the President of the United States.

Presentation of awards by the President.

National essay contest winners.

President's trophy, "Handicapped American of the Year," Dwight D. Guilfoil Jr., Arlington Heights, Ill.

11:45: Lunch recess.

THURSDAY AFTERNOON, MAY 5, DEPARTMENTAL AUDITORIUM

Presiding: Earl Gammons, former Vice Chairman, President's Committee.

1:30: Address, Rudolph F. Bannow, president, National Association of Manufacturers.

2: Address by labor representative (to be selected).

2:30: Panel—Utilizing Handicapped Workers in Small Business.

Moderator: Philip McCallum, Administrator, Small Business Administration, Washington, D.C.

Members: "Selection, Training, and Assignment," Carl Strahle, Steiner & Co., Milford, Del.

"Promotion and Transfer" (to be selected).

"Supervision," Leo Weisfield, Weisfield's Jewelers, Seattle, Wash.

"Management's Relationship With Agencies Serving the Handicapped," Aaron Solomon, Ace Electronics Association, Inc., Somerville, Mass.

3:30: Discussion.

4: Recess.

5:30–7:30: Reception, Presidential Arms, 1320 G Street NW., Washington, D.C.

FRIDAY MORNING, MAY 6, DEPARTMENTAL AUDITORIUM

Presiding: Earl Gammons, former vice Chairman, President's Committee.

9: Musical selections.

9:15: Remarks, V. J. Skutt, president, Mutual of Omaha, Omaha, Nebr.

Film, "The Biggest Bridge in Action."

9:50: Report of executive committee, Earl Gammons, former vice chairman, President's Committee.

10:05: Address, Vivian Acord, public information director, Indiana Association of Mental Health.

10:25: Address, Waldo Stephens, chairman, Oklahoma Governor's Committee.

10:45: Cartoon varieties, Allen Saunders, chairman, Cartoonist Committee, Toledo, Ohio.

12: Lunch recess.

FRIDAY AFTERNOON, MAY 6, GRAND BALLROOM, WILLARD HOTEL

12:15: International luncheon.

Musical selections.

Toastmistress, Mrs. Raymond Clapper.

Invocation, Rev. John Graham, minister, Lewinsville Presbyterian Church, McLean, Va.

1:15: Addresses: Miss Jayne Shover, associate director, National Society for Crippled Children and Adults, Inc.

Miss Mary E. Switzer, Director, Office of Vocational Rehabilitation.

2: Benediction, Rear Adm. George A. Rosso, U.S. Navy, Chief of Chaplains.

This morning four gracious, devout, and inspired nuns who are teachers at Keith Hall in Lowell, where I live, brought with them the lovely girl, and her father and mother, who won an essay contest sponsored by the President Eisenhower Committee for the Physically Handicapped, and 48 fine young girls from their Keith Hall school. We breakfasted together and then saw a little of the beautiful Capitol before going to the Conference for the Physically Handicapped.

I felt very proud today of the young essay winner and the splendid Sisters and their group of students. Many fine compliments were paid to the group. I want the House to know the names of the Sisters and the girls of Keith Hall who came to the Capitol.

Sister Mary Ursulita, L.S.J., principal of Keith Hall, would have been proud of her group. I heard very many comments of approval, both of their behavior and their looks.

The Sisters are Sister Mary Agnello, Sister Mary Therezon, Sister Mary Fonthanne, and Sister Mary Gertruda.

The students are Betty Riopelle, Geraldine Perisino, Janice St. Onge, Maureen Rourke, Joan Zawodney, Mary Jane Gath, Mary Ann Nison, Antonia Elias, Maureen Shanahan, Martha Monazynski, Eleanor Poirier, Carol Sadowski, Catherine Dalton, Roberta McBride, Eileen Desmond, Leona McCaughey, Honey Blazonis, Phyllis Zaleski, Marilyn Sheahan, Sharon Coulter, Sandra McAleer, Barbara Milner, Maryanne Chibas, Dona Craig, Priscilla Frechette, Beverly Melanson, Margaret Cotter, Joyce Richey, Carol St. Jean, Francine Lynch, Gloria Girard, Linda Salce, Sandra Oliver, Dorothy McMahon, Marilyn McParland, Lana Brule, Carolyn Clark, Betsy Parent, Sue Parent, Dorothy Patenaude, Cathy Crane, Sheila McOsker, Lorraine Hebert, MaryJo Plumley, Judith Pulsifer, Mary Vieria—also Mr. and Mrs. Vieria and Anthony, her brother.

Mrs. Salce and Mrs. Oliver accompanied the group.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION APPROPRIATION BILL, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill H.R. 10809, to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes, with Senate amendments thereto, disagree to the amendments, and agree to the conference asked by the Senate.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana? [After a pause.] The Chair hears none and appoints the following conferees: Mr. BROOKS of Louisiana, Mr. MCCORMACK, Mr. GEORGE P. MILLER, Mr. TEAGUE of Texas, Mr. MARTIN, Mr. FULTON, and Mr. MCDONOUGH.

ADJOURNMENT OVER

Mr. BURKE of Kentucky. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

GENERAL LEAVE TO EXTEND

Mr. PRICE. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill H.R. 11713, the atomic energy authorization bill under consideration today.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

A LIBERTY BELL SHRINE

The SPEAKER. Under the previous order of the House, the gentleman from Pennsylvania [Mr. CURTIN] is recognized for 15 minutes.

Mr. CURTIN. Mr. Speaker, the district which I have the honor to represent is fortunate in many ways, not the least of which is the fact that we are pridefully endowed with a uniquely rich heritage of history. The counties of Bucks and Lehigh, which together make up the Eighth Pennsylvania District, have contributed immeasurably to the cultural and economic growth of this Nation since the founding struggles of our Republic.

What is not generally known, however, is that during a critical period in our Nation's beginning years the Liberty Bell, symbol of our American free way of life, was brought from Philadelphia and hidden in Zion's Church in Allentown, Lehigh County. This event occurred during the period between September 24, 1777, and July 10, 1778. The bell, then known as the State House Bell, was secretly removed from Philadelphia to guard against its capture by the British, who invaded Philadelphia after the battles of Brandywine and Germantown. There is no disagreement among historians as to the fact that the bell found a haven in a church basement in Allentown; the only controversy has centered on which of two men provided the team of horses to haul the bell.

Perhaps the best authority for the story of the flight to Allentown with the Liberty Bell can be found in the account written by Dr. Simon Sipple, pastor of Zion Church, 1910–47, and pastor emeritus until his death in 1956.

Dr. Sipple, in his book "History of Zion Reformed Church," points out that there are many people who do not know that the Liberty Bell was hidden in Allentown and others who only know a fragmentary bit of the account.

THE SIPPLE STORY

He wrote:

It was to Allentown (or Northampton Town, as the struggling village then was known) that the Liberty Bell made its first trip.

In September 1777, a little more than a year after the bell had fired the hearts of the patriots by proclaiming freedom throughout the land, the British became rather too numerous for comfort in the vicinity of Philadelphia.

At a meeting of the executive council it was decided to send the Liberty Bell * * * to some distant settlement. The British were in need of ammunition, and what a delight it would have been to them to convert the herald of freedom into cannon balls!

NORTHAMPTON SELECTED

The patriotism and loyalty to the Continental cause of the citizens of Northampton Town were well known to the Executive Council, and it was decided to entrust the Liberty Bell to the care of the people of this village.

In those days farmers from this region made frequent trips to Philadelphia. They would arrive in the city with wagonloads of produce and return emptyhanded.

WAGONS COVERED

On the returning farm wagons the bells were packed, they being carefully covered with potato sacks and the refuse of stables.

The announcement was then made that the Liberty Bell had been buried in the waters of the Delaware.

Many people are still under the impression that the Delaware was the hiding place of the bell, but that this is wrong is shown by the following entry in the diary of the Moravian Church, at Bethlehem, under the date of September 25, 1777:

WAGON BREAKS DOWN

"The bells from Philadelphia were brought in wagons. The wagon with the statehouse bell broke down here, so it had to be unloaded. The other bells went on."

John Jacob Mickley drove the team on which the Liberty Bell was loaded. After his wagon broke down Frederick Leaser, another farmer, came along and the bell was loaded on his wagon and the journey to Northampton resumed.

Arriving at this place the bells, together with the church chimes, were hidden underneath the floor of the old Zion Reformed Church, the pastor, the Reverend Abraham Blumer, assisting in the concealment.

RETURNED IN 1778

Here the bells remained until after the evacuation of Philadelphia by the British in the latter part of 1778, when they were taken back to Philadelphia.

The tablet, which recognizes that Frederick Leaser also deserves mention, was erected in Zion Reformed Church November 1908. It reads as follows:

In commemoration of the saving of the Liberty Bell from the British, September 1777.

Erected to the memory of John Jacob Mickley, commisary of issues and member of the central committee from Whitehall Township, Northampton County, Pa., who under cover of darkness and with his farm team hauled the Liberty Bell from Independence Hall, Philadelphia, through the British lines to Bethlehem where the wagon broke down, September 23, 1777. The bell was then transferred to Frederick Leaser's wagon and brought to Allentown, September 24, 1777. It was placed beneath the floor of Zion Reformed Church and remained secreted for nearly a year. This tablet is placed by order of the Assembly of the Commonwealth of Pennsylvania, June 2, 1907, under the auspices of the Pennsylvania Daughters of the American Revolution. Erected October 15, 1908. Mrs. Alfred G. Saeger, chairman; Miss Minnie Mickley, secretary, of the John Jacob Mickley Memorial Committee appointed by Mrs. Allen P. Perley, State Regent of Pennsylvania, N.S.D.A.R.

Only in recent months, however, has action been taken to bring this significant milestone out into the full light of public knowledge and appreciation. A committee of public-spirited citizens has established the Liberty Bell Shrine of Allentown, a group dedicated to the commemoration of the place where possibly the greatest symbol of freedom was protected to the everlasting glory of the whole world.

The Liberty Bell Shrine has wasted no time in making up for lost years. It is just a little over 1 year ago, on April 25, 1959, to be exact, that a handsome replica of the Liberty Bell was formally presented to Zion's Reformed Church—United Church of Christ—at impressive ceremonies in front of the original church on Hamilton Street, Allentown. The replica was presented by grant of the Commonwealth of Pennsylvania, and today may be seen proudly reposing in front of the church which served as a haven for the bell nearly 200 years ago.

The Liberty Bell Shrine of Allentown was incorporated as a nonprofit corporation by the Lehigh County court of common pleas on September 22, 1959, and

has been making remarkable strides ever since under the able chairmanship of Dr. Morgan D. Person. It should be noted that the group has been working in close liaison with the bicentennial committee of Zion's Church, which will observe the 200th year of the founding of Zion's Church in 1962.

Since last September and to the present date, the Liberty Bell Shrine of Allentown has been working zealously and with unselfish devotion to build a permanent shrine in which the replica of the Liberty Bell can be housed, preferably in the original surroundings beneath Zion's Church where the original bell was hidden. To this end, there will soon be launched in the city of Allentown and the general Lehigh Valley area a public subscription drive to raise sufficient funds to erect a fitting home in which to place the Liberty Bell replica. The realization of this goal of building a shrine will accomplish three things:

First. It will serve to mark for all time the place where the emblem of American liberty was kept—a unique instance of church and state working together to save an enduring symbol of freedom.

Second. It will function as a mecca for thousands, including young people, who visit the shrine and who will be reminded of this heritage of freedom that we enjoy.

Third. It will serve to challenge us to the renewed importance of always being worthy of our heritage.

The Liberty Bell Shrine of Allentown is confident that the public will respond promptly and generously to the building fund appeal. Certainly no cause is more deserving from the standpoint of enduring value and its meaning to future generations of Americans.

Still another event has recently taken place which is probably a first in the entire history of our Nation. I refer to the "Portrait of Freedom," in which a remarkable organization of artists working together as the Lehigh Art Alliance have collaborated with the Liberty Bell Shrine of Allentown to present a very fine project that has resulted in the creation of the "Portrait of Freedom" with the sitter being the Liberty Bell Shrine itself.

This "Portrait of Freedom" was unveiled to the public on Monday, April 25, on the main floor showroom of the Pennsylvania Power & Light Co. in Allentown. This is the seventh such community project undertaken by the Lehigh Art Alliance, and is proving invaluable in providing additional visual impact and significance of the shrine's meaning. This project has produced a very fine collection of paintings and other art works to a total portrait number of 47, the selections made from total entries of more than 100 by a distinguished jury comprising Ralph Somers Walter, curator of design, Pennsylvania State Museum; Charles T. Coiner, vice president and art director, N. W. Ayer & Son, Independence Square, Philadelphia; and Clarence H. Carter, well-known artist, Frenchtown, N.J.

With the presentation of the "Portrait of Freedom," Lehigh Art Alliance explores one of the oldest and most powerful of man's motivations since the beginning of his civilized existence—freedom. In the words of Quentin Smith, director of development for the art alliance:

> The sitter idea for this undertaking, seventh in the alliance's "Portraits of Our Times" series, has none of the well-defined shapes and patterns of industry which have characterized previous portraits presented during the past decade.
>
> Freedom has such a variety of meanings to each of us that few of the living artists of the world could hope to successfully encompass all of its many ramifications into one painting or piece of sculpture.
>
> Therefore, we have dared to assay its forms and meanings on a collective basis, hoping that, together, these works in oil, clay, and metal will merit their creation through worthwhile service in renewing and stimulating some greater present-day consciousness and appreciation of this priceless heritage that has been handed down into our safekeeping. The true measure of the success of this undertaking can only be found in the extent that this is accomplished.
>
> The Freedom Portrait was created by the Lehigh Art Alliance as a public service and, specifically, to service the aims of the Liberty Bell Shrine of Allentown—which is cooperating in making this first showing of these art forms possible.
>
> This organizaion of area citizens was founded for the purpose of developing a shrine to freedom, commemorating the flight to and sheltering of the Liberty Bell at Zion United Church of Christ, Allentown, during the British occupation of Philadelphia in 1777.
>
> At the same time Washington and his ragged troops were enduring that harsh winter encamped at Valley Forge, the bell, symbol of the hopes of all men aspiring toward freedom, had its own Valley Forge in Allentown.
>
> The development of a freedom shrine in this area merits the interest and support of every member of the community.
>
> With its realization we will be forging a local link into the chain of our Nation's history and creating a tangible and enduring reminder to our children that freedom is not an inheritance but a heritage to be cherished and won anew by each succeeding generation.

This portrait will be seen elsewhere in Allentown for the remainder of the month of May, and for the following 2 months will hang in the State museum in Pennsylvania's capital, Harrisburg. Eventually, we hope that it may be deemed worthy—as I feel certain it will—of being sponsored for audiences in other cities of the United States and for showing in countries overseas.

Mr. Speaker, Allentown and Lehigh County are to be commended for this splended contribution to an important and meaningful chapter in America's history. We are proud to have been the haven for the Liberty Bell at a critical time of history, and we look forward soon to seeing this eventful occasion being permanently memorialized in a proper setting—indeed almost the exact place where the Liberty Bell was kept safe from harm back in 1777. I congratulate the Liberty Bell Shrine of Allentown, the Lehigh Art Alliance, and Zion's Church for their unselfish advocacy of one of our country's finest traditions.

PRESIDENT URGED TO SIGN AREA REDEVELOPMENT BILL

The SPEAKER. Under the previous order of the House, the gentleman from West Virginia [Mr. HECHLER] is recognized for 30 minutes.

Mr. HECHLER. Mr. Speaker, the day before yesterday the House passed the area redevelopment bill, S. 722. This afternoon the other body accepted the House version of the bill, the bill is on its way to the White House.

I wish to issue an urgent appeal to the President of the United States to sign this bill which will mean so much to the economy of my State of West Virginia and, indeed, to the economy of the entire Nation.

Mr. Speaker, this is a modest bill which calls for loans and grants of $251 million which actually is only 6 percent of the $4 billion foreign aid bill which the President has asked this Congress to pass. Two hundred million dollars of the $251 million is in loans. I believe that the people in our own country are a very good risk for loans. I believe that if we can grant technical assistance to foreign lands, our own people deserve technical assistance too.

In my hometown of Huntington, W. Va., the unemployment rate is running around 13 or 14 percent. We have exerted all of the initiative we can through the united fund, through industrial development bodies, through the chamber of commerce, and through widespread local grassroots efforts which won the city of Huntington the title "All-American City" last year. We have done everything possible to solve this problem locally.

I believe we could use the type of assistance in retraining grants, community facilities grants, and loans for the development of industrial property that are contained in the area redevelopment bill. I therefore hope the President in his wisdom will sign this bill which will mean so much to West Virginia and to the Nation.

Mr. STAGGERS. Mr. Speaker, will the gentleman yield?

Mr. HECHLER. I gladly yield to my colleague from West Virginia.

Mr. STAGGERS. I would like to associate myself with the statement of my colleague from West Virginia as to the desirability and the urgency of the President signing this bill, because a majority of the elected Representatives of the people of the United States has voted for the bill after study and ample hearings, enough I am sure, to establish the merit and need of the legislation.

The area redevelopment bill, introduced as S. 722 by the Honorable PAUL DOUGLAS, passed the Senate on March 23, 1959, and by the House on May 4, 1960, is essentially a humanitarian measure. Appropriations set up the bill are relatively insignificant. The total amounts of loans and grants authorized, if used to the limit, will admittedly go only a short way toward providing jobs for every unemployed person in the United States. Their practical purpose is to initiate and set free local investment in industrial and business enter-

prises which will provide innumerable opportunities for jobs for the jobless. In doing this, the effect of the loans authorized will be multiplied indefinitely. Establishment of one industry in a depressed area will suggest to local investors other industries for which resources are available, and additional prospects for success and profits. It has always been the history of economic development that one industry breeds another. Industries tend to multiply and proliferate in given areas because one industry in a sense supports and protects another. Thus we can expect that the provisions of this bill, if utilized vigorously, will have far-reaching effects in economic rehabilitation of distressed areas, far more than the industrial building value of the small sum appropriated. Furthermore, since the loans constitute only 65 percent of the capital needed, and since they are repayable, the revolving nature of the fund will reduce the necessity for continued appropriations.

It has been argued that enterprises set up under the bill will be necessarily hazardous and that they are doomed to failure. On this point it is appropriate to remark that the bill stipulates full and complete analysis of the resources available for a proposed enterprise, together with study of market conditions and all other factors contributing to success, before a loan is approved. The enterprises set up under these conditions will be totally unlike small businesses set up on the hunch of some private individual or corporation. Conditions favorable to success, as determined by experts and not by untrained business amateurs, must be present before action is started. Our discussions have indicated that many possibilities for industrial development almost certainly exist in many of the distressed areas. But we do not propose to go into those areas and set up establishments haphazardly, even on the basis of facts that seem on their face indisputable. We propose that conditions and resources be thoroughly investigated by those who have the business know-how before we act. Our duty to those who supply a significant proportion of the required capital demands that we shield them as far as possible from disaster. We emphatically do not want them to risk and lose their money in unprofitable enterprises. Consequently the percent of failure in small businesses common to less carefully considered projects should be materially different for these Government-promoted operations.

The purpose of the statements offered above is to indicate that the practical effects of the moneys authorized by the bill will be vastly greater than the use of such small amounts for industrial development which would not be supplemented by local interest, drive, and capital investment. That is, the psychological consequences of the bill should overpower the practical consequences.

However, the psychological effects would fall with still greater force on the thousands of unemployed. The demoralizing effect of long and continuous unemployment is practically paralyzing on workers possessed of but a single skill or trade. They are completely helpless in finding another job or another trade. They read daily in the papers of efforts to relieve the distress of similarly situated people in foreign lands. They hear that the Congress is appropriating annually billions of dollars for that purpose, with the approval of the administration. They wonder why the Nation should not try to do for them what it is doing for other people no more in need, but thousands of miles away. Approval of this bill will provide a tremendous moral stimulant for them. They will be energized by the fact that their Government does care for them in some more practical way than in passing out a few trifling handouts of food. In fact, they do need a spur to action. A spur may well set them into individual effort in their own behalf, for they are not lazy, indifferent, and irresponsible people. They want to work and to make their own way in the world. They have simply been paralyzed by the staggering blow of unemployment until they can not initiate action of their own will and effort. This bill should offer them just enough help to get started again. That is all those of us who have supported the bill have hoped for.

Mr. CLEM MILLER. Mr. Speaker, will the gentleman yield?

Mr. HECHLER. I yield to the gentleman from California.

Mr. CLEM MILLER. I would like to second what the gentlemen from West Virginia [Mr. HECHLER and Mr. STAGGERS] have said. I served on the subcommittee which considered this legislation. I was extremely distressed during general debate in the House to hear certain Members indicate that this subcommittee had not discharged its responsibilities and was bringing irresponsible legislation to the floor for consideration. I do not believe anyone could have sat on that subcommittee and listened to the appalling testimony which we received, not of simple unemployment, not of continuous unemployment, but of unemployment which had become a cancer to those areas not for months, but for years without being concerned. I was amazed to hear Members say that the situation had so radically changed from last year, between the time this subcommittee reported the bill and when it reached the floor. We had evidence to indicate that these were areas of longtime suffering.

The gentleman from West Virginia [Mr. HECHLER] was one of the most eloquent witnesses in this regard. He brought tape recordings before our subcommittee of actual interviews with the people of West Virginia that would have brought tears to your eyes. How anybody could have made the assertions and the accusations which were made on the floor, how the Committee on Rules could have considered the matter in the way it did in light of this testimony, is beyond me. As a member of this subcommittee, and I attended every single one of the hearings, we brought a responsible piece of legislation to the floor of the House. We were soundly vindicated by the membership of this body at that time.

I wonder if anyone noticed the ambivalence of those who opposed the bill? Fifty percent said that there was no problem, that it was a depression measure for a situation which has cured itself. The other 50 percent said there was a problem, but nothing could be done about it. Which way is it going to be. I noticed that those who were closest to the facts revealed at the hearings took the latter view. To contend that we can do nothing about the situation is not merely defeatist, but begs the entire question. We cannot find out whether anything can be accomplished until we take the steps to find out. That is what this bill is for—to find the facts.

There is one other matter, I would like to raise, and that concerns charges that the administrator of the agency proposed by this legislation would be a czar or a dictator. Would he be any more so than any of the other administrators we now have for dozens of agencies? Of course he would not. He would have the same powers and limitations, he would have the same discretion to act, the same sense of responsibility to use appropriated funds wisely, in those areas where it is most needed. It is absurd to scare us with claims that these funds for area redevelopment would be lost in New York, Detroit, or Philadelphia. Certainly, we must have more confidence in the discretion and temperateness of any individual selected for such a job and approved by the Senate.

There is one more thing I would like to say with respect to this legislation. This is not a depressed area bill; this is an area redevelopment bill. I wish to emphasize that point because there were a number of challenges by opponents on the floor of the House Wednesday defying us to stand up and tell why this legislation was necessary. When I asked the gentlemen to yield in order to accept the challenges, I was put off. I am here to say now that I am prepared at any time to answer those challenges, and particularly with respect to the reasons for this legislation. The purpose of this legislation is to provide a workshop and a laboratory of knowledge about the cancer of continuous unemployment. This is not a bill for West Virginia, for Kentucky, for Pennsylvania, or for any other area which is suffering from unemployment in particular. This is legislation for the entire United States, for any area where technological unemployment might strike at any time in a serious manner, whether it be California, Texas, Arkansas, Minnesota—wherever there is technological unemployment. We must find out what can be done. We need facts.

I would like to remind the Members of this body that with the increasing speed of technological change, this is not going to be an occasional phenomenon, and hence, the need for facts will double and redouble. It is for this reason that I would like to join with the gentleman from West Virginia in urging the President to sign this legislation, not to relieve a specific area, perhaps, but to provide us with the raw material upon which we can develop the factual

information to combat and conquer this problem. I recall those who on the floor said that the funds for this problem were just a drop in the bucket; that this would not solve the problem in even one district of Pennsylvania. This is no reason to oppose the legislation. You have to learn basic facts before you can attack a problem wholesale. This is the logical, cautious way to proceed. We have heard all kinds of charges and countercharges about the usefulness or uselessness of an approach such as this. There is no evidence either way to back up the asseverations on one side or the other. This is additional reasoning why we need the data which the application of this bill would furnish us, to give us the backstopping to conquer this problem in a coordinated way. Again, I would like to urge that the President of the United States sign this legislation into law so that we can go forward with the job of accomplishing area redevelopment problems to solve the problem of technological change which is a national problem of the first magnitude, and promises to grow more serious as time goes on.

Mr. OLIVER. Mr. Speaker, will the gentleman yield?

Mr. HECHLER. I yield to the gentleman from Maine.

Mr. OLIVER. Mr. Speaker, I would like to join the gentleman from West Virginia and the other Members who have spoken here with reference to the need and desirability for the President to sign the legislation which I understand has gone down to his office today. It seems to me, Mr. Speaker, that the observations which were made by the gentleman from California just now are extremely pertinent, which indicate beyond any shadow of doubt that this legislation is needed, to take care of unemployment that has persisted over these many years in ever-increasing numbers in some areas, including my own. It is not only necessary to take care of that condition, but it is also necessary to take care of any future unemployment that could be caused by technological upsets or advances or by any changes in the patterns of weaponry in the various sections of the country. The people of my State, Mr. Speaker, have gotten a great deal of encouragement from the action which was taken by this House, and I know that they will get a similar reaction when they know about the Senate action today. They are hoping and expecting that the President of the United States will go along with the Congress in approving this highly desirable and I may say, much-needed legislation. I join with the gentleman from West Virginia in the observations he has made and I thank him very much for the opportunity to so express myself.

Mr. HECHLER. Mr. Speaker, on Thursday morning the Charleston Gazette carried this story, and I quote:

President Eisenhower has given assurances of lending a hand toward helping West Virginia with its economic problems, Governor Underwood reported yesterday from Washington after a conference with the President.

Governor Underwood said President Eisenhower promised to urge all Federal agencies "to do what they could to help West Virginia."

On the strength of that I have sent a telegram to the Governor of my State as follows:

HON. CECIL UNDERWOOD:

Hope you will personally urge President Eisenhower to sign S. 722 the area redevelopment bill which will mean so much to the State of West Virginia and the economy of the entire Nation. The bill has passed both the House and Senate and will soon be on its way to the President.

I believe the way to help immediately would be for the President to sign the bill.

Mr. MOELLER. Mr. Speaker, will the gentleman yield?

Mr. HECHLER. I yield to the gentleman from Ohio.

Mr. MOELLER. Mr. Speaker, I feel compelled to voice my concurrence in the statements of the gentleman from West Virginia with respect to the urgency of this legislation in the sincere hope that the President will be prevailed upon to sign it into law. Of the three counties in the State of Ohio that are terribly affected at the present time by unemployment, one of them is within the confines of my district. I feel there are a number of other counties in my district affected just as badly. Every time I go down to visit with the people there the question is always raised, "What can be done to help us get on our feet?" My people are not interested in handouts. They do not want donations from the Government. They do, however, wish to have the opportunity, a favorable opportunity, through loans to get on their feet economically. For that reason I feel it is of great urgency. I know my district is very much like the district which the gentleman from West Virginia so ably represents. Our people are in dire need at this time of help and I sincerely hope that the President will be prevailed upon to sign this into law.

Mr. HECHLER. Mr. Speaker, I thank my friend from across the Ohio River in the 10th District of Ohio.

Mr. KING of Utah. Mr. Speaker, will the gentleman yield?

Mr. HECHLER. I yield to the gentleman from Utah.

Mr. KING of Utah. Mr. Speaker, I should like enthusiastically to endorse what the gentleman from West Virginia has said, and to associate myself with him in his remarks. I come from a State, the State of Utah, which according to the committee report, would not receive one penny from this area redevelopment legislation, for the reason that there is not one community in Utah that would now qualify.

I endorse this legislation because it is basically and inherently right.

May I at this time commend the gentleman from West Virginia for the diligent, the vigorous, and the courageous fight which he has waged with others to secure the passage of this legislation. I have observed the gentleman. I have the privilege of sitting near him in the Space Committee. I have observed him in action. I know that he has raised his voice many times in behalf of this legislation. I know of his persuasiveness among his colleagues, and I have no question but that the passage of this bill has, in large measure, been due to his own particular efforts.

May I add this further thought. The President of the United States, just 1 day before this bill was taken up by this body, sent us a message in which he insisted, among other things, that action be taken in this general area of legislation.

I should like to quote one or two sentences from his message. The President said:

Area redevelopment legislation also needs priority attention. I have long urged legislation authorizing loans and technical assistance to help areas afflicted with long-term substantial unemployment resulting from technological changes. The purpose is to diversify these economies and thereby create new sources of private employment.

And he concludes by saying:

For this purpose I have recommended a Federal program amounting to $53 million to be expended for loans and technical assistance.

And so, Mr. Speaker, I make the assertion: If the President of the United States in delivering this message was sincere—and I am certain that he was, I do not question his sincerity for a minute—then this is the time for that sincerity to become manifest by his approving the bill that will be shortly placed upon his desk. I join with the gentleman from West Virginia in appealing to him to do this.

Mr. HECHLER. I appreciate the comment of the gentleman from Utah.

In that very same message which the gentleman from Utah cited, the President pointed out with reference to the mutual security funds:

Widespread chaos and misery cannot provide a world climate in which our free Republic can prosper and remain secure. There is for America no higher purpose nor greater need than to measure up to her world leadership responsibilities.

It seems to me that this is a challenge which applies not alone to the world but to our own front doorstep as well.

Mr. O'HARA of Illinois. Mr. Speaker, will the gentleman yield?

Mr. HECHLER. I yield.

Mr. O'HARA of Illinois. Mr. Speaker, I commend the gentleman in the well, the distinguished Representative from West Virginia, my good and valued friend, Mr. HECHLER, not only for voicing an appeal to the President at this time but for the fine, hard fight he has made for this legislation for many long, hard months. Few Members have contributed in fuller measure to the passage of the bill in the House.

Mr. Speaker, at this time everybody in America must be alerted to the condition that obtains in the State of West Virginia. This primary contest there has served to focus attention upon the plight of the people of West Virginia. I do hope that the President of the United States will have the heart and the vision quickly to sign into law a measure that is a matter of life or death to so many fine families in the distressed areas.

At the present time we do not have in my district the condition that is now

so widespread in West Virginia, but the day is not far off in this changing period, where one industry is folding up and another is expanding, when people must have available to them training to go from a job in one employment to another in a different field. So much now is needed in West Virginia, southern Illinois, parts of Ohio, and other States, but not immediately needed in my district. Yet very soon it will be needed in my district. I do hope the President of the United States will have the vision to contemplate what is ahead and the importance of this measure, not only for the present relief of the suffering of unemployed families, but for the safeguarding of the future in an age of automation.

Mr. HECHLER. I thank my friend from Illinois. I think his remarks and the remarks of my friend from Utah indicate that even though their districts are not directly affected they have the statesmanship to understand what this bill will do for the economy of the Nation. When Khrushchev says he is going to bury us he does not mean with bombs, he means economically. In order for this Nation to move forward economically we can no longer afford the luxury of chronic distressed areas, or pockets of unemployment.

Mr. LEVERING. Mr. Speaker, will the gentleman yield?

Mr. HECHLER. I yield to the gentleman from Ohio.

Mr. LEVERING. I rise to compliment my colleague from the State of West Virginia on the statement he is making urging the President to sign the depressed areas bill which passed the House and Senate and will be sent to the White House for the President's consideration. I think it is extremely appropriate that we consider this matter today especially in view of the policy of our Government of late to award defense contracts to foreign companies. I am sure we would all agree that if we are to successfully meet the threat of communism we must remain economically strong. It happens that at this very time I and other Members of the Congress are very much concerned about whether a defense contract for 39 locomotives for the Panama Canal Co. to tow ships through the locks will be awarded to the Plymouth Locomotive Co. in my district, a fine small company hiring less than 250 people, or whether it will be awarded to a Japanese firm, the Mitsubishi Co., one of the world's largest combines and with one of the cheapest labor markets in the world. We have been contending that we really ought to mean what we say about wanting to help small business in America under the terms of the Buy American Act and the Small Business Act.

Administration leaders have done a great deal of talking about how we want small business to participate in these defense contracts, but I am appalled day after day to see some of our fine small businesses having to yield to some foreign bidders on our defense contracts. I know in this particular case in Plymouth, Ohio, we have an unemployment situation now which is growing worse and fast approaching the condition of a critically distressed area. Again I say the gentleman's remarks are extremely appropriate today. The President ought to give favorable consideration to this legislation for the reasons he has so clearly stated. I am confident that the "anybody but America" policies of the administration—the policies which seem to suggest that we can afford anything for peoples abroad but cannot afford to meet the needs of our own, has helped to a great extent in causing distressed areas throughout this land of ours.

Mr. Speaker, the law firm headed by a former candidate for President of the United States, representing the Mitsubishi Co., I am told, is contending that the future of our relations with Japan may hinge on the decision in this Locomotive case. It seems to me this is hardly an endorsement of our foreign aid program under which we have spent some $2,526,000 since the end of World War II up to June 30, 1959.

Mr. Speaker, I have received a great deal of encouragement in my fight on behalf of Plymouth from the people in my own 17th Ohio District. This is only natural. But some of my colleagues and I have received many communications from all parts of the country in support of my position in this case. In this connection I insert in the RECORD at this point some typical messages which express the concern of our citizens about the threat from foreign competition to our own economic well-being:

Hon. ROBERT W. LEVERING,
House of Representatives,
Washington, D.C.

DEAR MR. LEVERING: I have written my Senator that my vote is for Plymouth Locomotive Works. This Nation is giving away all its money. Now it's giving away its jobs, we're holding up the world and letting our own down. We rose, and now we're falling fast (who will write of our "Rise and Fall"?).

A KEY WESTER.

MIAMI, FLA., *April 23, 1960.*

Hon. ROBERT W. LEVERING.

DEAR SIR: I read with interest, in my local paper, that you are blocking the Japanese Mitsubishi Co. from obtaining an Army contract.

As a former Japanese prisoner of war, captured on Bataan, I am with you 100 percent. Thank God for men like you, who know what it is to suffer in a war, who now have the opportunity to speak out and make themselves heard.

By all means give the contract to Americans. Perhaps, if some of the members of your opposition would have been subjected to some of that wartime Japanese hospitality, they wouldn't be so eager to please the Japanese businessman.

So keep up the good work, Mr. LEVERING, I know that I am not the only ex-GI that agrees with you.

Respectfully yours,

THOMAS ZOLEUSKI.

BROADWAY DISCOUNT SALES,
Alliance, Ohio, April 23, 1960.

Hon. ROBERT W. LEVERING.

SIR: In your fight to keep the Army contract in this country is something everyone should go along with. Just like in World War II, you are fighting for a good cause. Not every time money is the most important. I, like you, feel this contract should go to the Mansfield firm.

ROY C. GUESS.

OMAHA, NEBR., *April 27, 1960.*

GLENN CUNNINGHAM, Esq.,
Member of Congress,
Washington, D.C.

DEAR GLENN: One of your fellow Congressmen, ROBERT W. LEVERING from Ohio, is endeavoring to keep a contract to furnish our Army some 39 locomotives at $3,829,900, for use on the Panama Canal, from going to the Mitsubishi Co. in Japan. Mr. LEVERING is endeavoring to have the contract awarded to the Plymouth Locomotive Works, near Mansfield, Ohio for $4,741,867. The latter will pay the Government close to $500,000 taxes. For the difference in quality of materials and workmanship the Government will get a great deal more than the $500,000 in taxes. Mr. LEVERING puts up some excellent arguments why the Plymouth firm should be awarded the contracts and I agree with him 100 percent.

I hope, GLENN, you can find time to give Mr. LEVERING an "assist" on this.

Sincerely yours,

PHI T. GRAHAM.

Mr. LEVERING: You may be surprised to get word anybody out of your district, especially as far west as Omaha, could be interested in your effort, but I'm not a native of the Buckeye State for nothing. I still love it.

PHILIP GRAHAM.

(From Portsmouth.)

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. HECHLER. I yield to my distinguished majority leader, the gentleman from Massachusetts.

Mr. McCORMACK. While it is very well to urge the President to sign this bill, I am going to go further and say that the President should sign the bill. This bill is an investment in America. I wish the President would take a little time and go out and visit these depressed areas. He has traveled in South America, the Middle East, Europe, and now he is going out to the Far East—and that is all very well. He is going to a summit meeting, but he ought to have a summit meeting here in the United States in connection with legislation of this type. I hope the President will get the views of some forward looking and progressive Republicans before he acts on this bill. Having in mind the hundreds of thousands of people in West Virginia, Pennsylvania, Kentucky, Ohio, and other parts of the country who are looking with hope to the passage of this bill, a veto would show a heartless disregard for the best interests of the people in these distressed areas as well as a disregard for the best interests of our country as a whole. Only a few days ago, the President referred to this in his message. Of course, we know that his program is innocuous and inadequate. His program will in no way scratch even the surface of this problem. We, in the Congress, undertook to put through a program that he could sign and that he should sign into law. If we had a Democratic President, it would be a much bigger program—as it should be. This is a program calling for $200 million in loans and $51 million in grants. For the $200 million in loans, the local communities and the local interests will spend from 5 to 10 times as much on capital investments. Actually, an investment of $200 million will produce at least $1 billion in the operation of this program. The provision of $51

million in grants will operate in the same way. There again the local communities and the local businesses will spend from $5 to $10 for each dollar that the Federal Treasury puts out. Therefore, this is more than a $251 million program when it comes to its practical operation. The President sent his message to us last Tuesday, and that was rather unusual timing. I do not say the President knew that Calendar Wednesday business would be in order on last Wednesday and that we were going to call the bill up on Calendar Wednesday, but certainly he did send his message up on Tuesday and that made it more embarrassing for those of us who favored this legislation in getting the bill through on Wednesday. The President could have just as well sent his message up last week. He could have sent his message up on Thursday. But somehow or other, it was timed for Tuesday. The message had to be read word for word when on Wednesday the Journal was being read. As we all know, points of order were made that a quorum was not present and every time it was established that a quorum was not present, that meant three rollcalls—which all amounted to a filibuster in an effort to prevent the bill from being considered. Now I do not charge the President with sending up his message on Tuesday in order to interfere with the operation of Calendar Wednesday and to interfere with those of us who favored this bill, but it is an unusual coincidence, that it happened that his message should come to the House of Representatives on the day before Calendar Wednesday. In his message he asked for the cooperation of the Congress—of course, from the Democratic leadership. The other day I said that the President has never asked the Democratic leadership to come to the White House to talk to him about legislation to see where and how we could have a meeting of minds on legislation. This is his eighth year in office. The Democratic leadership on this side of the Congress has never been asked.

We have been invited down for briefings, but that is entirely different. That is entirely different from being invited down to discuss legislation.

Now, we put this bill through. It will be before the President in a short time. I hope he will study it. I hope he will try to get some information in those areas throughout the country where there is at present permanent unemployment and there are human beings, American families, there looking to the breadwinner to bring home food for the family and to pay the rent and take care of other household duties.

I hope the President will cooperate with Congress, and that means with the Democratic leadership. We have put the bill through. He has asked for cooperation, and we have given him the bill. Now let him sign it.

Mr. HECHLER. I appreciate the remarks of my majority leader. I was glad, as I know many Members were, to sit here Wednesday through the many quorum calls, because we could see victory in sight. It was sweet indeed on Wednesday evening, even though it took long hours of rollcalls and quorum calls. I ought to be back in the State of West Virginia right now, because I have a primary opponent in next Tuesday's election. But I believe I am serving the State of West Virginia and the Nation far better by getting up here before the House this afternoon and urging that the President sign this bill.

We have heard much talk about how to balance the budget. I believe in a balanced budget. I believe that we can balance the national budget if people can balance their individual budgets. I believe that can best be done by putting people back to work, through the assistance of the area redevelopment bill.

Mr. PROKOP. Mr. Speaker, will the gentleman yield?

Mr. HECHLER. I yield to the gentleman from Pennsylvania.

Mr. PROKOP. I am happy to rise and associate myself with my distinguished colleague from West Virginia and preceding speakers in urging the President to sign this most desperately needed legislation. In my particular district we have 16.6 percent of our labor force unemployed. During the last 10 years the people of my area have, through voluntary contributions, spent more than $10 million to try to help ourselves. I believe the people of my area are to be commended for the fine work they have been doing in trying to bring back employment. I believe the President should take heed at this particular time and sign this bill which is so urgently needed by the various sections of this Nation.

I again commend my distinguished colleague from West Virginia for the excellent work he is doing on this particular legislation.

Mr. HECHLER. I thank the gentleman from Pennsylvania.

Mr. Speaker, I close by urging the President of the United States to sign S. 722 for the interests of the entire Nation.

The SPEAKER pro tempore. The time of the gentleman from West Virginia has expired.

AREA REDEVELOPMENT BILL

Mr. BOW. Mr. Speaker, I ask unanimous consent to proceed for 15 minutes.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. BOW. Mr. Speaker, I have listened with interest to the remarks that have been made today calling upon the President to sign the Area Redevelopment Act. I did not expect to speak here today, but when I have heard some of the Members of this House indicate that the President of the United States had no interest or care for the underprivileged and those who are in need and in want, I cannot sit by and not speak out.

I do not believe there has ever been a President of the United States who has the concern of the people more deeply in his heart than has President Eisenhower; and when there is an indication made that President Eisenhower may not know of the want and the distress in some of the areas of the country I just wonder how anyone can make that statement, for the President has been deeply concerned with all the people, and he knows of the need.

The President sent messages here time and time again asking that something be done to relieve these situations. It has not been done until just the other day; and in 6 of the 8 years of the administration the Congress of the United States has been controlled by the Democratic Party with the majority on that side to put through these bills if they were so desperately needed.

Mr. HECHLER. Mr. Speaker, will the gentleman yield?

Mr. BOW. Not at this time; I will yield later.

The President asked for fifty-some million dollars and in came a bill for $350 million. I voted against the area redevelopment bill the other day with reluctance, because I may say to the gentleman from West Virginia, I know of the situation in his State and I want his people helped. I know of the situation in Pennsylvania, and I want those people helped, likewise in Kentucky. But as I pointed out on the floor the other day when the bill was being considered, instead of granting the $53 million asked for by the President, which would give adequate help in the areas where it was desperately needed, in came a bill for $350 million. The gentleman from California stated a few moments ago that he would answer questions and tell us how this money would be used. I would like an answer to the question of what you are going to do to rehabilitate Atlantic City, N.J., out of this $350 million.

Oh, it seems to me a shame that you will put in the report of a bill where the people so desperately need help such an item as the one for the redevelopment of Atlantic City. Are the taxpayers of the United States—and they are your taxpayers too—going to be called upon for redevelopment in Atlantic City?

Let me remind you of something I said here the other day. Here is another area that in this $350 million bill you say needs redevelopment, Bristol, Tenn. Let me just read to you briefly about Bristol. This is from the Bristol, Tenn., Chronicle of March 6, 1960. Now, this is an area where you need part of this $350 million to redevelop, you say.

"Area Builders Undergoing the Biggest Boom in History" is the headline:

> Despite the frigidity of one of the worst winters in years, the area's builders are in the midst of the biggest building boom in history.
>
> Either under construction now or planned for the near future is a total of $105,669,231 in major building projects. These projects are within a 50-mile radius of Johnson City.

And it goes on to tell of the great boom. Just look at the RECORD, page 9434, and you will find other areas of Tennessee who say they do not want this help; but they are in here. You say they need help; they say they do not. Many who are in need may suffer because of the irresponsible manner in which this bill has been brought to the floor.

Now, let us face up to the facts.

If the President's bill had been adopted, the bill of the man with a heart,

who believes in taking care of those who need help, calling for $53 million, it would have been signed. But you come to the floor and you beg the President, yes, some have demanded him, to sign a bill that includes in it boom areas and asks all of the people of the country to pay for the redevelopment of boom areas, including Atlantic City.

I said earlier today that they are going to be running the Kentucky Derby tomorrow out in Louisville, Ky. I hope all those people attending the Kentucky Derby will look around at that situation, for Louisville, Ky., is listed in this $350 million bill. If they had adopted the $53 million bill of the President, the man with a heart, who for months has been trying to get this Democrat Congress to do something about it, you would not be here today urging that your people who are so desperately in need be taken care of. It would have been done if you had followed the leadership of Dwight Eisenhower.

Another thing that was interesting to me was to hear it said here today that there were some quorum calls and roll-calls here the other day trying to block this bill. These statements by the same people who were accusing the President of the United States of not having a heart. But I ask you to look at the record. From which side of the aisle did those quorum calls and requests for votes come?

Mr. Speaker, I hope the gentlemen who today have said that the President of the United States has no heart for the people who are downtrodden or up against it or in need will correct that statement. We have had a lot said to us because we send money abroad and we ought to spend it here. With that I agree. My record is such that I can agree. I have not voted to send it abroad. I have always thought we should be doing more for our people. May I say to my colleague from Ohio I have been as much concerned about the Plymouth contract as he is. I think I was the first one to raise the question on the floor of the House. I was concerned about the steel question where steel was purchased abroad and sent over here. But, Mr. Speaker, if you will repeal the Reciprocal Trade Agreements Act that was started under the Democrat administration and continued on down and adopted by my administration, and when we get rid of the Reciprocal Trade Agreements Act, we will be able to give some real protection to American industry. We will not see some of our industries folding up, and we will not need these redevelopment bills.

So I ask you to join with the gentleman from West Virginia [Mr. BAILEY], on the other side of the aisle, and myself in this effort. The gentleman from West Virginia [Mr. BAILEY] is one of the great champions of protecting industry. I admire him so much for it for he has in his heart the thoughts of his own people.

Mr. HECHLER. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman from West Virginia.

Mr. HECHLER. I know my colleague wants to be fair. I do not believe in my statement I indicated that the President of the United States did not have a heart. I was merely appealing to him to utilize his heart, and sign the bill. I take it the gentleman from Ohio is opposed to the bill, and would like the President to veto it?

Mr. BOW. My vote will show that I voted against the $350 million bill and if the President vetoes that bill I will vote to sustain his veto. Then I hope the leadership on the Democratic side will bring in the $53 million bill. Let us pass it, let the President sign it, and give your people help, and not indulge in a lot of boondoggling in the amount of $350 million for a lot of areas that do not need it. Let us begin to get some fiscal responsibility.

Mr. HECHLER. Mr. Speaker, if the gentleman will yield further, I sat during weeks of hearings in the State of West Virginia last year on this bill, and the Governor of our State, Republican Governor Underwood, when asked which of these bills would be more efficacious and reach the root of the problems as they exist in West Virginia, responded in the hearings before the Senate subcommittee: "I do think it important and emphasize that the provisions in the bill which you mentioned offering assistance in retraining and economic studies are in my opinion very essential and very helpful." That is on page 995 of the subcommittee hearings.

I submit that the President's bill not containing those items would be of very little assistance in the chronically depressed areas.

I would like to ask the gentleman further, since he mentioned the source of the quorum calls, how he voted on them.

Mr. BOW. I voted wth them. I did not want to see the $350 million bill passed. I would have voted for the $53 million bill, and we could have passed a bill here this week that would have been signed by the President of the United States if you would have accepted it instead of going for the places that I have here pointed out in the boom areas. And, you will find them in the record. They are in the hearings.

Mr. HECHLER. I think, my friend, we have an honest difference of opinion.

Mr. BURKE of Kentucky. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield.

Mr. BURKE of Kentucky. I know the gentleman from Ohio wants to be eminently fair, and I think he is attempting to state the bill as it passed, but I call his attention on page 9458 of the RECORD where the amendment of the gentleman from Pennsylvania [Mr. FLOOD] was adopted. I appreciate the concern which the gentleman from Ohio has evidenced for my home district of Louisville, and calling attention to the events there tomorrow. But, the bill that passed the House, and the bill that passed the Senate, and the bill which will be before the President by virtue of the amendment offered by the gentleman from Pennsylvania [Mr. FLOOD], will not include my home city nor probably will it include Atlantic City, nor will it include upon application any other city where the employment level at the time of application is above the minimum set. I see how the gentleman, from looking at the committee report, and in looking at some of the things said earlier, might have reached the conclusion that he did, but the bill that was passed is not the bill which the gentleman describes.

Mr. BOW. I quite agree with the gentleman. It is not the bill I described. But, it is a bill that includes some of these areas. I think the final passage was over $200 million? What was finally passed by the Senate today?

Mr. BURKE of Kentucky. The vote on the bill?

Mr. BOW. No. I am talking about the amount involved.

Mr. BURKE of Kentucky. Two hundred and fifty-one million dollars.

Mr. BOW. As against $53 million. And, that $53 million, according to the studies that have been made, would have taken care of the needy.

I am delighted to see that the gentleman's area is not going to be in this bill; that you are in good shape now, and that the Derby will even help you more, because they tell me that the price of mint juleps has gone up, and most of that money stays right in Louisville. And, I am delighted to know that this new industry is flourishing in Louisville.

Mr. Speaker, in closing may I say again that the President of the United States, Dwight Eisenhower, has done more for the people of this country than any other in our history. This has been proven time and time again. What he does on this bill will be in the best interest of the United States.

To those who have implied the President has no knowledge of conditions, I can only say they are ill-informed or deliberately misstating facts in an effort to gain political advantage.

There should be no partisan politics where human suffering is concerned. It is unfortunate that the earlier remarks of some who have spoken are in that vein.

The SPEAKER pro tempore. The time of the gentleman from Ohio has expired.

Mr. BURKE of Kentucky. Mr. Speaker, I ask unanimous consent to proceed for 2 minutes.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. BURKE of Kentucky. Mr. Speaker, I will say to the gentleman that he has referred to a very old industry, and that the subject of this colloquy was called to my attention first today by the Associated Press. In pointing out to them the true nature of the bill, as being different from that which the gentleman described, I assured the press that the gentleman from Ohio is a very distinguished legislator, but that it was my opinion that as a purveyor of comedy he had poor writers.

FORAND BILL LOBBY BOGS DOWN

Mr. QUIE. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri [Mr. CURTIS] may extend his

remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. CURTIS of Missouri. Mr. Speaker, in my speech on the floor of the House on Monday, May 2, 1960, I pointed out the inaccurate reporting of the media concerning the pressures on the Congress for the Forand bill.

I hope the various columnists and editors who were telling the people and their Representatives in Congress that the old people were on the march will read the article from the St. Louis Labor Tribune of April 28, 1960, which I am now inserting in the RECORD as part of my remarks.

A LABOR REPRESENTATIVE SPEAKS OUT

(By Larry Connors, directing business representative, Machinists District No. 9)

WANTED: ACTION! ACTION! ACTION!

This is an emergency call for your help to get quick action on the Forand bill in Congress. Letters are badly needed.

The Forand bill is a top priority goal for the organized labor movement. It is urgently needed to help elderly persons meet the skyrocketing costs of sickness.

The bill would: Provide hospitalization, nursing home, and certain surgical benefits for those receiving social security payments. Increase employee and employer contributions by one-fourth of 1 percent of wages each, to pay for the program. Permit choice of doctors, hospitals, and nursing homes by the patient.

The first step in passing this bill is to secure approval by the House Ways and Means Committee.

Here's how you can help. Organize your family, your friends, the neighbors on your block, union members, and anyone else you can think of today, to start writing letters to Congress.

Make sure that all of the people who participate are registered voters. Write the letters in long hand even if your writing is bad. *Tell your* Representatives that you are counting on them to support and vote for H.R. 4700, the Forand bill. Be sure and give your full name and your home address, and give them some of your reasons for wanting the bill passed.

It would be a smart idea to organize some letter writing meetings at homes. Pass the hat around and let someone be responsible for getting the stationery and stamps together. Draw up some chairs to the tables, put on the coffee pot and while the aroma of the percolating brew is giving you inspiration, take your pens in hand and write something like this to your Congressman: (If you are not sure who your Congressman is, call the union office and ask, or call your local postmaster).

"Honorable John Doe,
"House Office Building,
"Washington 25, D. C.

"DEAR SIR: I am a registered voter. I live at (give your address and city).

"I hope you will support and vote for H.R. 4700 the Forand bill to help the aged.

"Very truly yours.

"JANE SMITH."

Then write to your Senators. Their letters should be addressed to the Honorable John Jones, Senate Office Building, Washington 25, D.C.

The above is just a sample letter. You can add to it or change it, whatever you wish. The important thing is to get the letters rolling in immediately and to let the Members of Congress know that you want this bill passed.

We especially urge those of you whose Representatives may be members of the House Ways and Means Committee to really see to it that they are flooded with mail. Here are the members names:

WILBUR MILLS, Arkansas; AIME FORAND, Rhode Island (author of the bill); CECIL KING, California; THOMAS O'BRIEN, Illinois; HALE BOGGS, Louisiana; EUGENE KEOGH, New York; BURR HARRISON, Virginia; FRANK KARSTEN, Missouri; A. S. HERLONG, Florida; FRANK IKARD, Texas; THADDEUS MACHROWICZ, Michigan; JAMES V. FRAZIER, Tennessee; WILLIAM GREEN, Pennsylvania; JOHN C. WATTS, Kentucky; LEE METCALF, Montana; NOAH MASON, Illinois; JOHN BYRNES, Wisconsin; HOWARD BAKER, Tennessee; THOMAS CURTIS, Missouri; VICTOR KNOX, Michigan; JAMES UTT, California; JACKSON BETTS, Ohio; BRUCE ALGER, Texas; and ALBERT BOSCH, New York.

There are many more signatures to the Forand bill that will benefit not only our neglected aged, but younger working people too.

SEVENTY-SIXTH BIRTHDAY OF HARRY S. TRUMAN

Mr. BURKE of Kentucky. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. ROOSEVELT] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. ROOSEVELT. Mr. Speaker, yesterday my colleague, the gentleman from Missouri [Mr. RANDALL], paid a well-deserved tribute to Harry S. Truman as he approaches his 76th birthday on Sunday, May 8.

I wish to associate myself with Mr. RANDALL'S remarks, for he certainly sets forth the fine caliber of the man and the fine caliber of a devoted public servant.

Mr. Truman is a man of decision, whether in or out of public office. He is a forceful reminder that in the complex, ever-changing world in which we live firm leadership is the pressing need of our time.

I salute the gentleman from Missouri on his birthday and wish him continued good health and happiness in the years to come.

INVESTIGATION OF EMPLOYMENT, UTILIZATION, AND RETENTION OF OLDER FEDERAL CIVILIAN EMPLOYEES

Mr. BURKE of Kentucky. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. LESINSKI] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. LESINSKI. Mr. Speaker, yesterday, May 5, 1960, I introduced House Resolution 522 which provides for a special investigation and study on the employment, utilization, and retention of older workers in the Federal Government. The purpose of the investigation and study will be to insure the adoption of a general policy by the Government for attracting and retaining the skills, abilities, and training possessed by older persons. Such a policy should contribute measurably to the economy and efficiency in the operations of the Government. Appropriate consideration of older persons should also facilitate more effective recruitment and retention by the Federal Government of an adequate work force of civilian personnel in positions at all levels of responsibility.

This study will be another step toward alleviating some of the more pressing problems of the aged which I consistently have been attempting to overcome by my support of legislation to increase benefits of the aged under the civil service retirement plan, social security, and Railroad Retirement.

It is well recognized that the average age of the population in the United States increases from year to year. By 1985, approximately one-half of the population of the country will be over 45 years of age. This means that an increasingly large segment of the work force and of the population available for appointment to new or different jobs in the Government service have the maturity, skills, and abilities, which come only from long experience in their chosen fields. It is essential that steps be taken to insure that the Federal Government does not fail to utilize these values in the older members of our work force as a result of shortsighted overemphasis on the recruitment of younger less-experienced trainee-type individuals for responsible positions in the Federal service.

The recruitment of young college-trained technical and professional people is essential to meet the needs of Government in these dynamic times. It is equally important, however, in my view, that we maintain a proper balance in the work force by giving attention also to the recruitment and utilization of workers whose special talents and skills have been enhanced by longer experience.

Some of the special problems relating to the older workers in Government were disclosed during recent hearings on office automation conducted by the Subcommittee on Census and Government Statistics, of which I am chairman. It was shown during these hearings that frequently the jobs which are eliminated as a result of automation are held by older employees with long years of service. The same kind of situation frequently is found where reorganizations occur as a result of changes in the missions of Federal agencies. It is important in these circumstances that there be continuing emphasis on programs for the training and retraining of such employees to insure the continued effective employment in the Government wherever possible. I am convinced that programs of this sort are necessary, not only to protect the equitable rights of the employees, but, also, as a practical matter to protect the substantial Government investment which is represented by the long careers of these valuable public servants.

A recent study conducted by the Bureau of Labor Statistics concerning the productivity of office workers disclosed that Government agencies had a higher percentage of employees over age 55 than do private companies. Conversely, the private concerns had a much higher ratio of employees under age 25. This results in part from certain measures which now exist to protect the interests of older persons in connection with Federal employment; for example, a maximum age limitation for most Federal jobs is prohibited by law. The procedures for conducting reductions in force also placed emphasis on length of service which tends to favor the older worker. While these and other measures had some effect, the investigation I am proposing would be directed to insuring that there be continuing attention to the problem of the older worker and that such additional measures as might be necessary are installed to insure that there is no discrimination on the basis of age in connection with the appointment or retention of persons in the civilian service of the Government.

ALL GROUPS AGREE ON A SOLUTION TO THE FARM PROBLEM—WHY NOT ADOPT IT?

Mr. BURKE of Kentucky. Mr. Speaker, I ask unanimous consent that the gentleman from Wisconsin [Mr. FLYNN] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. FLYNN. Mr. Speaker, there are approximately 360 million acres of land producing crops in the United States. Productivity of this land has increased faster than the population. Productivity has increased faster than the need of the people for the produce that is grown. We have attempted, at tremendous expense, to store, to hold in reserve, to sell to foreign countries or to barter away the surplus. None of these programs have worked and there has been much waste and the loss of billions of dollars annually to the American taxpayer in an attempt to solve the problem of overproduction and surplus.

The cheapest and easiest way of solving the problem of overproductivity and surplus and the best way of bringing domestic supply into balance with domestic demand is to remove from production, a sufficient number of acres to accomplish this result. When supply balances with demand, the economic laws governing all business will apply, and farmers will be able to receive a fair price for their products. I introduced a bill last year calling for the removal of 80 million acres of land from production. I discussed, at great length, this proposal during my last campaign. I am happy to see that in 1960, most major farm bills and almost all farm groups approve this method of solving farm surpluses and overproduction. The Agriculture Department now recommends the removal of 60 million acres of land from production. The Farm Bureau supports this position. The Poage bill, under the formula contained therein, would remove from 50 million to 80 million acres of land from production. The farmers union and the Grange support this measure. The Iowa farm conference last October recommended the removal of 70 million acres of productive land. Several farm bureau local organizations concur in the 70-million-acre figure. I believe that this shows that all major bills and groups have one common denominator in their approach to the solving of the farm problem. Why, therefore, can we not agree upon a farm bill that will use this basic approach as a means of solving the farm dilemma.

I have introduced bill H.R. 12005 and am having it printed at the end of this statement. I sincerely urge you to examine it. I believe that it will bring domestic production into balance with domestic consumption within 3 years, and that it will enable the Government to dispose of its existing surplus within another 3 years, or less. I believe that all of this can be done at a cost of less than $2 billion a year. This will be about 25 percent of the cost of the existing program. It will be a price that the American taxpayer and the urban dweller can afford to pay to assist the farm economy.

I propose to permit farmers to rent their entire farm minus the buildings not to exceed 5 acres of land. I propose to permit farmers to rent parts of their farm and I propose to remove the mandatory features that other bills contain. I propose to free the farmer from the dictation of bureaucrats operating out of local CCC offices. I propose to return the farmer as a free enterprise citizen to the complete control and usage of his farm.

Investigation has shown conclusively that there are three categories of farmers:

First. The elderly man that would be willing to lease his entire farm minus the buildings to the conservation reserve and use the annual rental as a retirement annuity.

Second. There is the middle-aged man who would be willing to reduce his operation by 25 percent or more and thus have some spare time which he could devote to other activities such as local politics or some outside business interest. I propose to let these individuals choose whether they desire to rent part of their farm or their entire farm.

Third. There is then the young married man who desires to farm a large acreage and who has the health and ability to do so. I propose to permit him to become as big as he desires. He will benefit from the fact that large acreage has been removed from production and he can look forward to receiving a fair price for the reason that supply will be in balance with demand on a national basis.

I have set aside 1 hour to discuss the farm problem, and this plan in particular, on Thursday, May 12, at the conclusion of all other business before the House. I would be pleased to have as many Congressmen as possible participate in this discussion in order that we might determine whether there is any common meeting of the minds on a plan that could be enacted into law during the present session.

H.R. 12005

A bill to balance domestic supplies of, and domestic demand for, agricultural commodities, and to prevent the loss of soil, farm labor, and farm capital resources, by providing for withdrawal of up to eighty million acres from agricultural production

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—GENERAL PROVISIONS

SECTION 101. This Act may be cited as the "Agricultural Production Stabilization Through Conservation Act".

SEC. 102. It is hereby declared to be the policy of the Congress to eliminate the recurrence in the future of burdensome surpluses of agricultural production by reducing the acreage in production to the extent necessary to bring into balance the domestic supply of, and the domestic demand for, agricultural products, and to prevent the loss of soil, farm labor, and farm capital resources. It is intended that existing surpluses be disposed of through such other programs as the Congress may by law authorize or direct, including the food stamp plan and the food-for-peace program.

SEC. 103. It is the intention of the Congress that the programs authorized by this Act be carried out in the various sections of the country as nearly as may be practicable in proportion to the competitive desires of producers to participate therein.

SEC. 104. For the purposes of this Act—

(1) The term "Secretary" means the Secretary of Agriculture.

(2) The term "Corporation" means the Commodity Credit Corporation.

(3) The term "county committee" means a county committee established under section 8 of the Soil Conservation and Domestic Allotment Act (7 U.S.C. 1831(d)).

(4) The term "acreage allotment" means an acreage allotment made pursuant to the agriculture laws of the United States.

(5) The term "farm" means the land constituting a farming unit as determined by the Secretary, taking into consideration the use of common work stock, equipment, labor, management, and other pertinent factors.

SEC. 105. In the execution of the programs authorized by this Act, the Secretary of the Corporation shall have due regard for the interests of tenant farmers and sharecroppers.

TITLE II—CONTRACTS

SEC. 201. Notwithstanding any other provision of law, the Secretary is directed to determine and announce the national conservation reserve goal and the program applicable thereto for each year not later than March 1 of the preceding year. Not later than thirty days after enactment of this title the Secretary shall announce the national goal and program for 1961. The Secretary shall enter into contracts pursuant to the provisions of this title at a maximum rate approximating twelve million acres increase per year, until such time as the conservation reserve shall reach the smaller of eighty million acres, or a level at which the Secretary finds that agricultural commodity surpluses are being diminished in an orderly manner. Thereafter new contracts or contract riders pursuant to section 203(b) shall be entered into which shall maintain the conservation reserve at such level not in excess of eighty million acres as the Secretary finds to be in the public interest. The Secretary shall not enter into contracts which will result in the conservation reserve acreage's exceeding one-third of the total cropland of any county in which crop production is a major factor in the economy of a

trade area without approval of a majority of those firms located in that trade area whose income is deemed to be substantially dependent on sustained crop production.

SEC. 202. Any such contract shall be of a duration of not less than five and not more than twenty years, and shall be with the person or persons (hereinafter referred to as the contractor) who own or control the farm which is the subject of the contract. Any such contract may contain such provisions relating to transfer of the property which is the subject thereof, assignment, and termination, and such other provisions, as may in the opinion of the Secretary be necessary or appropriate in the public interest and to assure equitable treatment of contractors.

SEC. 203. (a) Any such contract shall provide that the contractor shall place in the conservation reserve, subject to the provisions of subtitle B of the Soil Bank Act and regulations issued thereunder, an acreage which prior thereto accounted for at least 25 per centum of the total crop-producing capacity of the land in the farm which is eligible for the conservation reserve. And not recently cropped which is brought into cultivation within the three years immediately preceding the first year of the proposed contract period shall not be eligible for placement in the conservation reserve until three full years have elapsed.

(b) Any such contract shall describe the boundaries of the conservation reserve acreage, and such boundaries may not be changed without the consent of the Secretary.

(c) Any such contract which is approved after land has been prepared for the planting of an annual crop for harvest in the first year of a contract period, and which places such land in the conservation reserve, shall, at the option of the contractor, permit the harvesting or grazing of the crop for which the land was prepared. This privilege shall apply for only the first year of the contract period and no annual rental payment shall be made on that acreage for the year in which the harvesting or grazing occurs.

(d) Any such contract may contain such other provisions as the Secretary may deem necessary or appropriate to effectuate the purposes of this title.

SEC. 204. (a) (1) In consideration of the obligations imposed on a contractor pursuant to section 203, any such contract shall provide that the Secretary shall make payments to the contractor, in cash or in kind, as provided in this section.

(2) For each of the first five years the contract is in effect, the Secretary shall compute for the contractor an annual rental payment determined according to section 107(b)(2) of the Soil Bank Act. Such amount shall be specified in the contract prior to execution.

(3) Upon the expiration of each five-year period after the effective date of the contract, the amount of the annual rental payment shall be adjusted by multiplying the amount determined pursuant to paragraph (2) by the ratio of the Bureau of Labor Statistics Consumer Price Index as of the date of such adjustment to such index as of the first of the year for which the first annual rental payment is due under the contract. Notwithstanding the provisions of paragraph (2) and this paragraph, no annual rental payment in excess of $10,000 shall be payable in cash to a producer for all contracts within a State in which he has an interest.

(b) (1) In lieu of the annual rental payments specified in subsection (a) the Secretary shall make surplus commodities available to those contractors who have not placed all of their eligible land in the conservation reserve as specified in this subsection.

(2) Whenever, before land preparation begins for a crop year, the Corporation holds stocks of any commodity which it deems to be critical surplus stocks, the Secretary shall offer a contract rider for that crop year to those contractors with land which prior to being placed in the conservation reserve produced thereon crops currently deemed to be critical surplus crops. If accepted by the contractor the rider shall require reduction of the aggregate acreage of the designated critical surplus crops for the current year below the acreage thereof on the farm prior to placing land in the conservation reserve.

(3) In consideration of the aggregate reduction in critical surplus crops the contractor shall be eligible for a negotiable certificate for a stated number of dollars redeemable in one or more critical surplus commodities chosen by the contractor from those for which an acreage reduction was made in lieu of the cash annual rental which would otherwise be payable.

(4) The value of all negotiable certificates issued under a contract rider shall not exceed the amount obtained by multiplying the total rental under the contract that year by the ratio of the aggregate reduction of critical surplus crop acreage to the total conservation reserve acreage for the farm. In no case shall the value of all negotiable certificates exceed the total rental due under the contract for that year.

(5) Negotiable certificates shall not be redeemable during the normal harvest season of the commodity. Where a negotiable certificate is presented for redemption, the Corporation shall deliver the specified commodity which shall be considered to have a value not less than 80 per centum of the current market price determined by the Corporation at the time and point of delivery. The Corporation shall not be responsible for transporting the commodity from its current location in fulfillment of negotiable certificates.

TITLE III—ACREAGE ALLOTMENTS, MARKETING QUOTAS, AND PRICE SUPPORTS

SEC. 301. Paragraph (7) of the joint resolution of May 26, 1941, as amended (7 U.S.C. 1340(7)), is amended to read as follows:

"(7) A farm marketing quota for wheat shall not be applicable to any farm on which the acreage planted to wheat is ten acres or less."

SEC. 302. For the purpose of determining future acreage allotments and marketing quotas the cropland acreage and the acreage deemed to have been diverted from the production of any commodity in order to carry out a conservation reserve contract shall continue to be deemed to be cropland, or acreage of the commodity, respectively, after termination of the contract as long as the conservation cover or use is maintained in a satisfactory condition.

SEC. 303. The Secretary shall take steps to permit specified grain commodity prices to find their proper free market relationship one toward another as the expanded conservation reserve and surplus disposal programs progressively relieve the surplus situation. In order that adjustments in price relationships shall not be too rapid for any single commodity, the Secretary shall, notwithstanding any other provision of law, establish national average price support rates for barley, corn, dry edible beans, flaxseed, grain sorghums, oats, rye, soybeans, and wheat which shall be: (1) for 1961, 95 per centum of the rate in effect for 1960; (2) for 1962, 90 per centum of the rate in effect for 1960; and (3) for 1963, 85 per centum of the rate in effect for 1960. For 1964 and thereafter, price support shall not be offered for these commodities.

SEC. 304. Notwithstanding any other provision of law, any contractor who knowingly and willfully grazes or harvests any crop from any acreage in violation of a conservation reserve contract or contract rider shall, in addition to liability for penalties stated in section 123 of the Soil Bank Act, be ineligible for price support benefits that year on all farms in which he has an interest within the State.

SEC. 305. Section 211 of the Agricultural Act of 1956 is hereby amended by striking out the words "For a period of three years from the date of enactment of this Act," wherever they appear therein and inserting in lieu thereof the following: "Until directed otherwise by Act of Congress,".

LEAVE OF ABSENCE

By unanimous consent leave of absence was granted to:

Mr. ANFUSO (at the request of Mr. GIAIMO), for Friday, May 6, through Friday, May 13, 1960, on account of official business.

Mr. DENT, for Friday, May 6, 1960, on account of official business.

Mr. VINSON for 10 days, starting Monday, May 9, on account of official business.

SPECIAL ORDER GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to Mr. HECHLER, for 30 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. ULLMAN and to include extraneous matter.

Mr. VAN ZANDT and to include extraneous matter.

Mr. TABER and to include extraneous matter.

Mr. HOFFMAN of Michigan (at the request of Mr. GROSS) and to include extraneous material at the conclusion of general debate on the bill H.R. 11713.

Mr. BUDGE.

Mr. HARRIS and include an address he made to the Federal Trial Examiners Conference last night.

(At the request of Mr. BURKE of Kentucky, and to include extraneous matter, the following:)

Mr. PORTER.

Mr. RODINO.

(At the request of Mr. QUIE, and to include extraneous matter, the following:)

Mr. WEAVER.

SENATE BILLS AND CONCURRENT RESOLUTION REFERRED

Bills and a concurrent resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 1349. An act for the relief of Song Tai Song; to the Committee on the Judiciary.

S. 1857. An act to promote the foreign trade of the United States in grapes and plums, to protect the reputation of American-grown grapes and plums in foreign markets, to prevent deception or misrepresentation as to the quality of such products moving in foreign commerce, to provide for the commercial inspection of such products entering such commerce, and for other purposes; to the Committee on Agriculture.

S. 2087. An act for the relief of Janis Papulis; to the Committee on the Judiciary.

S. 2369. An act for the relief of Sachiko Kato; to the Committee on the Judiciary.

S. 2499. An act for the relief of Halina Konik Wojtusiak; to the Committee on the Judiciary.

S. 2528. An act for the relief of John Lipset; to the Committee on the Judiciary.

S. 2575. An act to provide a health benefits program for certain retired employees of the Government; to the Committee on Post Office and Civil Service.

S. 2618. An act to authorize the exchange of certain war-built vessels for more modern and efficient war-built vessels owned by the United States; to the Committee on Merchant Marine and Fisheries.

S. 2627. An act for the relief of Nicholas Anthony Marcantonakis; to the Committee on the Judiciary.

S. 2635. An act for the relief of Maria Genowefa Kon Musial; to the Committee on the Judiciary.

S. 2739. An act for the relief of Yu Sui Ling, also known as Yee Shui Ling; to the Committee on the Judiciary.

S. 2769. An act for the relief of John George Sarkis Lindell; to the Committee on the Judiciary.

S. 2792. An act for the relief of Luigia Mion; to the Committee on the Judiciary.

S. 2821. An act for the relief of Kristina Selan; to the Committee on the Judiciary.

S. 2822. An act for the relief of Low Wing Quey (Kwai); to the Committee on the Judiciary.

S. 2833. An act for the relief of Sadako Suzuki; to the Committee on the Judiciary.

S. 2857. An act to amend the Civil Service Retirement Act so as to provide for refunds of contributions in the case of annuitants whose length of service exceeds the amount necessary to provide the maximum annuity allowable under such act; to the Committee on Post Office and Civil Service.

S. 2886. An act for the relief of Nikolija Lazic; to the Committee on the Judiciary.

S. 2923. An act for the relief of Ki Su (Theresa) Moun; to the Committee on the Judiciary.

S. 2966. An act for the relief of Antigone Apostolaki Cassel; to the Committee on the Judiciary.

S. 2969. An act to authorize the award posthumously of appropriate medals to Chaplain George L. Fox, Chaplain Alexander D. Goode, Chaplain Clark V. Poling, and Chaplain John P. Washington; to the Committee on Armed Services.

S. 3081. An act for the relief of Irena Maria Koller; to the Committee on the Judiciary.

S. 3114. An act for the relief of Adolphe Herstein; to the Committee on the Judiciary.

S. 3327. An act for the relief of Joan Goedicke; to the Committee on the Judiciary.

S. Con. Res. 103. Concurrent resolution favoring the suspension of deportation in the cases of certain aliens; to the Committee on the Judiciary.

BILLS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills of the House of the following titles:

H.R. 7947. An act relating to the income tax treatment of nonrefundable capital contributions to Federal National Mortgage Association;

H.R. 8684. An act to provide transitional provisions for the income tax treatment of dealer reserve incomes;

H.R. 9660. An act to amend section 6659 (b) of the Internal Revenue Code of 1954 with respect to the procedure for assessing certain additions to tax, and for other purposes; and

H.R. 10234. An act making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

ADJOURNMENT

Mr. BURKE of Kentucky. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 16 minutes p.m.), under its previous order, the House adjourned until Monday, May 9, 1960, at 12 o'clock noon.

OATH OF OFFICE

The oath of office required by the sixth article of the Constitution of the United States, and as provided by section 2 of the act of May 13, 1884 (23 Stat. 22), to be administered to Members and Delegates of the House of Representatives, the text of which is carried in section 1757 of title XIX of the Revised Statutes of the United States and being as follows:

"I A B, do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God."

has been subscribed to in person and filed in duplicate with the Clerk of the House of Representatives by the following Members of the 86th Congress, pursuant to Public Law 412 of the 80th Congress entitled "An act to amend section 30 of the Revised Statutes of the United States" (U.S.C., title 2, sec. 25), approved February 18, 1948: HERMAN T. SCHNEEBELI, 17th District, Pennsylvania; DOUGLAS H. ELLIOTT, 18th District, Pennsylvania.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2128. A communication from the President of the United States, transmitting proposed supplemental appropriations for the fiscal year 1960 in the amount of $200,000 for the Department of Justice and $150,000 for the Treasury Department (H. Doc. No. 386); to the Committee on Appropriations and ordered to be printed.

2129. A letter from the Under Secretary of Commerce, transmitting a draft of proposed legislation entitled "A bill to provide for exceptions to the rules of navigation in certain cases"; to the Committee on Merchant Marine and Fisheries.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DADDARIO: Committee on Science and Astronautics. H.R. 11985. A bill to make American nationals eligible for scholarships and fellowships authorized by the National Science Foundation Act of 1950; without amendment (Rept. No. 1591). Referred to the Committee of the Whole House on the State of the Union.

Mr. WHITTEN: Committee on Appropriations. H.R. 12117. A bill making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes; without amendment (Rept. No. 1592). Referred to the Committee of the Whole House on the State of the Union.

Mr. MORGAN: Committee of conference. H.R. 11510. A bill to amend further the Mutual Security Act of 1954, as amended, and for other purposes (Rept. No. 1593). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. AVERY:

H.R. 12103. A bill to provide for the free entry of pilot plant grain cleaning and flour milling equipment for Kansas State University; to the Committee on Ways and Means.

By Mr. COOLEY:

H.R. 12104. A bill to amend the Agricultural Trade Development and Assistance Act of 1954; to the Committee on Agriculture.

H.R. 12105. A bill to authorize user charges for certain services performed by the Department of Agriculture and for other purposes; to the Committee on Agriculture.

By Mr. DONOHUE:

H.R. 12106. A bill to eliminate discriminatory employment practices on account of age by contractors and subcontractors in the performance of contracts with the United States and the District of Columbia; to the Committee on the Judiciary.

By Mr. FERNÓS-ISERN:

H.R. 12107. A bill to convey Fort Amezquita Military Reservation, P.R., to the Commonwealth of Puerto Rico; to the Committee on Armed Services.

By Mrs. GREEN of Oregon:

H.R. 12108. A bill to provide for Federal grants and contracts to carry out projects with respect to techniques and practices for the prevention, diminution, and control of juvenile delinquency, and for the training of personnel; to the Committee on Education and Labor.

By Mr. HARRIS:

H.R. 12109. A bill to amend the Interstate Commerce Act, as amended, so as to provide that the transportation of bulk commodities by railroad shall be exempt from regulation; to the Committee on Interstate and Foreign Commerce.

By Mr. LIBONATI:

H.R. 12110. A bill to provide judicial review of agency orders concerning biological products; to the Committee on Interstate and Foreign Commerce.

By Mr. McINTIRE:

H.R. 12111. A bill to amend section 2(a) of the Trade Agreements Act of 1934, as amended; to the Committee on Ways and Means.

By Mr. PRICE:

H.R. 12112. A bill to amend the Internal Revenue Code of 1954 to extend by 1 additional year the time within which a minister may elect coverage as a self-employed individual for social security purposes; to the Committee on Ways and Means.

By Mr. RODINO:

H.R. 12113. A bill to amend the Internal Revenue Code of 1954 to provide an additional income tax exemption for a taxpayer, spouse, or dependent who is physically handicapped; to the Committee on Ways and Means.

By Mr. TRIMBLE:

H.R. 12114. A bill to amend the Federal Trade Commission Act to provide for the issuance of temporary cease and desist orders to prevent certain acts and practices pending completion of Federal Trade Commission proceedings; to the Committee on Interstate and Foreign Commerce.

By Mr. GATHINGS:

H.R. 12115. A bill to extend the minimum national marketing quota for extra long staple cotton to the 1961 crop; to the Committee on Agriculture.

By Mr. PORTER:

H.R. 12116. A bill to provide for Federal contribution to the cost of election campaigns of candidates for Federal offices, conditioned upon effective control and publication of other sources of financing such campaigns; to encourage small individual campaign contributions and to reduce the importance of large contributions in Federal elections; to provide Federal financial assistance for State voters' and campaign pamphlets; and for other purposes; to the Committee on Ways and Means.

By Mr. WHITTEN:

H.R. 12117. A bill making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes.

By Mr. COLLIER:

H. Con. Res. 687. Concurrent resolution to express the sense of Congress that the United States should not grant further tariff reductions in the forthcoming tariff negotiations under the provisions of the Trade Agreements Extension Act of 1958, and for other purposes; to the Committee on Ways and Means.

By Mr. MOELLER:

H. Con. Res. 688. Concurrent resolution expressing the sense of Congress that the United States should not grant further tariff reductions in the forthcoming tariff negotiations under the provisions of the Trade Agreements Extension Act of 1958, and for other purposes; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. GOODELL:

H.R. 12118. A bill for the relief of Maloney Bros. Nursery Co., Inc.; to the Committee on the Judiciary.

By Mr. MINSHALL:

H.R. 12119. A bill for the relief of Otilia Maria del Rosario Michelena y Perez; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Helping the Handicapped

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, May 6, 1960

Mr. RODINO. Mr. Speaker, earlier this session Congressman ADDONIZIO introduced a bill to provide an additional $600 exemption for disabled individuals. Because I have received many letters on this problem, and because my personal experience persuades me that this is an excellent proposal, I wish to support Mr. ADDONIZIO today by introducing a similar bill.

For the past 2 years I have served as Essex County chairman for the Sister Kenny Fund, which in that time raised over $110,000 for the Sister Kenny Institute. In this capacity, I have had the opportunity to learn at firsthand the problems and almost insurmountable difficulties which face the disabled individual in his struggle to achieve economic independence.

The disabled person not only has trouble supporting himself; he has needs and expenses which the average person does not even contemplate. Even such a matter as buying shoes, which most of us take for granted, can become a terrible burden, when the shoes must be specially designed and frequently replaced. A sudden disability may make the family home inadequate, and the family may have to move to a one-story house for the benefit of the disabled member. Taxicabs for those who can no longer use public transportation suddenly become a necessity. Prosthetic devices, specially equipped cars and special equipment for the household are matters which the handicapped must take for granted.

In addition to unique needs and expenses, the handicapped individual faces an uphill struggle in obtaining employment. Attention is now being focused on this problem by the President's Committee on the Physically Handicapped, which is currently meeting.

All these reasons are cogent ones, in my opinion, for giving the disabled some tax relief and thereby helping his economic adjustment.

A precedent for this measure lies in the additional exemption already accorded the blind.

How Do You Stand?

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 6, 1960

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial by the Honorable BARRY GOLDWATER, Senator from Arizona, appearing in the May 3 edition of the Idaho Daily Statesman, published at Boise, Idaho.

The distinguished Senator from Arizona is to be commended for his forthright statement on Americanism. It is a statement which will further endear Senator GOLDWATER to millions of loyal Americans who look to the Constitution of the United States for the protection of their liberty.

The editorial follows:

HOW DO YOU STAND, SIR?

(By Senator BARRY GOLDWATER)

How did it happen? How did our national Government grow from a servant with sharply limited powers into a master with virtually unlimited power?

In part, we were swindled. We have elevated men and political parties to power who promised to restore limited Government and who proceeded, after their election, to expand the activities of Government.

But let us be honest with ourselves. Broken promises are not the major causes of our trouble. Kept promises are. All too often we have put men in office who have suggested spending a little more on this, a little more on that, who have proposed a new welfare program, who have thought of another variety of security. We have taken the bait, preferring to put off to another day the recapture of freedom and the restoration of our constitutional system. We have gone the way of many a democratic society which has lost its freedom by persuading itself that if the people rule, all is well.

The Frenchman, Alexis de Tocqueville, probably the most clairvoyant political observer of modern times, saw the danger when he visited this country in the 1830's. Even then he foresaw decay for a society that tended to put more emphasis on its democracy than on its republicanism.

He predicted that America would produce, not tyrants, but guardians. And that the American people would "console themselves for being in tutelage by the reflection that they have chosen their own guardians. Every man allows himself to be put in leadstrings, because he sees that it is not a person nor a class of persons, but the people at large that hold the end of his chain."

Our tendency to concentrate power in the hands of a few men deeply concerns me. We can be conquered by bombs or by subversion; but we can also be conquered by neglect—by ignoring the Constitution and disregarding the principles of limited government. Our defenses against the accumulation of unlimited power in Washington are in poorer shape, I fear, than our defenses against the aggressive designs of Moscow. Like so many other nations before us, we may succumb through internal weakness rather than fall before a foreign foe.

I am convinced that most Americans now want to reverse the trend. I think their concern for our vanishing freedoms is genuine. I think that the people's uneasiness in the stifling omnipresence of government has turned into something approaching alarm. But bemoaning the evil will not drive it back and accusing fingers will not shrink government.

The turn will come when we entrust the conduct of our affairs to men who understand that their first duty as public officials is to divest themselves of the power they have been given.

It will come when Americans, in hundreds of communities throughout the Nation decide to put the man in office who is pledged to enforce the Constitution and restore the Republic; who will proclaim in a campaign speech: "I have little interest in streamlining government or in making it more ef-

ficient, for I mean to reduce its size. I do not undertake to promote welfare, for I propose to extend freedom. My aim is not to pass laws, but to repeal them.

"It is not to inaugurate new programs, but to cancel old ones that do violence to the Constitution—or that have failed in their purpose—or that impose on the people an unwarranted financial burden.

"I will not attempt to discover whether legislation is needed before I have first determined whether it is constitutionally permissible.

"And if I should be attacked for neglecting my constituents' interests, I shall reply that I was informed their main interest is liberty and that in that cause I am doing the very best I can." How do you stand, sir?

Address Delivered by Hon. Hubert H. Humphrey, of Minnesota, at West Virginia University

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 6, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD excerpts from an address delivered by me at West Virginia University on Thursday, May 5, 1960.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

AN OPPORTUNITY FOR PROGRESS—WEST VIRGINIA UNIVERSITY, THURSDAY, MAY 5, 1960

Sometimes when I travel from region to region in this country of ours, I think of the hungry little boy who saw a tree full of ripe apples on the other side of the hill.

"Ain't no reason to go over there," the little boy said sadly. "I ain't got no wagon to bring any apples home to the family."

That is the story in too many regions of America today. We do not have enough wagons to haul the abundant resources of one area to meet the desperate needs of another area.

Some regions have more water than they need, while others lie wasted and unproductive in the sun.

Some regions have more food than they need, while others are strained to feed the people.

Some regions have more jobs than men, while other areas represent pockets of unemployment and inactivity.

There are many men who say that this is just a natural state of affairs. They say it is all very sad and unfortunate, but that nothing can be done about it.

Well, I disagree.

I say that an unbalanced water supply, or an unbalanced distribution of food or an unbalanced employment force, should not be ignored. I say that it is the responsibility of Government to balance the Nation, to see that the resources of one area are utilized fully to meet the needs of another area.

Now don't misunderstand. I am not talking about Government handouts or total Government control of the whole fabric and pattern of society. I am talking about Government with enough commonsense and heart to work for the healthy growth of every area, to help each area build its own security and prosperity.

Let me use an example all of you will understand—the unbalanced supply and demand of electric power, the vast supply of coal in West Virginia and the growing demand for electric power throughout the East.

I have seen solid proof of that demand, my friends. America's population is growing by leaps and bounds. Its cities are spreading over wider areas. New homes are springing up like wild grass and new business and industry are boosting their output to service the growing population. And 55 percent of all Americans live within 500 miles of West Virginia. This growing region needs power—and lots of it—to meet the demands of more people, more homes, more business.

West Virginia is in the center of this circle of growth. And West Virginia has the source for power—coal. The State produced 30 percent of the Nation's supply, but still has an estimated eight times the amount of coal it has already produced under the ground. West Virginia's coal can produce power—and lots of it—to meet the needs of the growing East.

The implication is obvious. West Virginia should be the heart of the East—sending out the life blood of any nation's growth, power. But instead, West Virginia and its vast resources are treated like an unnecessary appendage, getting smaller and smaller as the rest of the Nation's body grows and prospers.

You know the results. Coal output is down. Miners are unemployed. The whole State—and all its people—have suffered because the coal industry is the most important in West Virginia.

Despite the tragic effects of the industry's decline, West Virginians have not given up. You are a hardy, determined people, and you are not quitters. Like the little boy eyeing the apple tree on the other side of the hill, you are not going to move off to satisfy your own individual needs. You are going to stay put, and face the responsibility for taking care of your families, your homes, and your State.

And like the little boy who needed a wagon to carry the apples, West Virginia needs a new method for sending the power of its coal to the growing areas which need it.

The cost of hauling your coal to centers of consumption is just too high. The freight charge for transporting coal by traditional methods amounts to almost three-fourths of the average value of coal at the mine. Such costs represent a major competitive disadvantage for coal compared to other energy sources.

There is a new method to reduce such costs and increase the demand and production of coal. This is the establishment of power stations at the mines able to send electricity by line to the major consuming centers.

Traditionally, the cost of transmitting electricity over high voltage powerlines more than 200 miles has been greater than the cost of transporting the coal itself.

But today growing demand has established the need for huge "blocks" of power at specific centers of consumption. Sweden has demonstrated that it is economically feasible to transmit more than 500,000 volts more than 500 miles. And, yes, the Soviet Union has done the same thing.

It is obvious that "mine-mouth electric power stations" represent an exciting new possibility for the growth of the coal industry and the revitalization of West Virginia's economy.

The State is ideally located for such power stations. In time electrical power from your coal could hum steadily through the high lines stretching to America's great industrial and urban centers. The coal beneath your hills could then become the source of new wealth and economic security for West Virginians.

Just listen to one prediction, reported recently by the Federal Power Commission.

FPC experts estimate that 10 strategically placed mine-mouth generating plants could supply the entire area east of the Mississippi with sufficient electrical power. Those 10 plants could do the job done by 1,623 plants now scattered in various regions.

But much must be done. It is the job of the Federal Government to take the lead in encouraging construction of mine-mouth generating plants. We must embark on a bold new program to stimulate the use of West Virginia coal. We must immediately establish a mood of cooperation between Federal and State governments and private industry to accomplish that purpose.

Right now we have the chance to make a big start in this direction. Congress is considering legislation calling for a study of the electrical power supply situation in the United States. The study would pave the way for additional legislation to assure development of bulk power supply.

The establishment of mine-mouth power stations would not be a boost just for industry in other States.

West Virginia's great potential contributions would be vividly dramatized to the whole Nation. Others would come to understand—as I do—the wealth of this State.

Development of new, low-cost energy resources can be the single greatest attraction to new industry to move into West Virginia itself.

Paper and chemical industries which consume huge quantities of electrical energy and use coal, water and forest products could not resist the West Virginia location.

And—above all—others would come to appreciate the skills and reliability of West Virginia's labor force.

It is time for the Government to take action to balance the Nation. It is time for giant steps to balance the needs for power with the supply of coal here. It is time for transforming the potential wealth of West Virginia into real prosperity for her citizens.

Two Thousand One Hundred and Eighty Residents of the 20th Congressional District of Pennsylvania Participate in Post Card Survey of Public Opinion

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 6, 1960

Mr. VAN ZANDT. Mr. Speaker, over the past several weeks 6,000 residents representing a good cross section of the 20th Congressional District of Pennsylvania were invited to participate in a post card poll of public opinion on 15 vital issues being discussed by the American people and their representatives in Congress. It is encouraging to report that 2,180 of my constituents favored me with their opinions on the questions submitted, some of them taking the time to elaborate on their views by attaching explanatory letters which proved very interesting because the position often taken on a subject was the result of personal experience and observations. The number of replies received represents a response from over 36 percent of those polled which is recognized as a very fine average in a public opinion poll by mail. In a few instances, questions were not answered on the grounds that the person lacked adequate information to form a definite opinion.

The idea of using various mailing lists in conducting a survey of public opinion from the residents of my congressional district was an effort to obtain assurance that the sentiment expressed would represent a good cross section of opinion from constituents. The result has been that it has been possible to secure the benefit of the views of persons in all walks of life including ministers, doctors, dentists, veterans, teachers, farmers, members of various professions, housewives, businessmen, and members of labor organizations.

The number of persons participating in the post card poll in the three-county area was as follows: Blair County 1,095, Centre County 536, Clearfield County 549, making a grand total of 2,180 persons responding out of the 6,000 polled.

The question receiving the greatest number of favorable replies was the query concerning the advisability of concentrating on building an all-around defense rather than specializing on missiles. A total of 90.5 percent favored an all-around defense with 9.5 in favor of concentrating on missiles. On the question as to whether the Eisenhower-Nixon-Khrushchev meetings are a means of promoting world peace 78.4 percent favored such meetings while 21.6 percent doubted their value in restoring peace to a troubled world. A total of 80.6 percent of the 2,180 replies favored retention of the loyalty oath required for student loans under the national defense student loan program while 19.4 percent expressed dissenting opinions.

Concerning the proposal to extend Federal aid to depressed areas suffering from chronic unemployment 77.1 percent favored such assistance. With respect to the questions concerning Government controls over agriculture 79.1 percent favored their abolishment. The question of providing Federal aid to education revealed 57.9 percent in favor with 42.1 percent against such assistance.

Another question which resulted in a very close division in public opinion concerned the proposal to increase the hourly minimum wage from $1 to $1.25 with 50.2 percent favoring such an increase and 49.8 percent in opposition. On the subject of the so-called Forand bill designed to provide medical and hospital care to persons receiving social security benefits, the cost to be borne by an increase in payroll taxes, 39.3 percent went on record in favor of the proposal with 60.7 percent against it. In regard to favoring a pension at age 65 for World War I veterans, 65.5 percent were in favor of a pension, while 34.5 percent opposed it.

It is my desire to thank all of those who cooperated in my efforts to obtain a good cross section of public opinion on vital issues of the day. The letters that accompanied the post cards revealed a sincere desire to provide constructive criticism where it was felt that such action was merited. This attitude on the part of the participants in the poll is deeply appreciated, as some of the writers stated that they welcomed the opportunity to express their views through the medium of an opinion poll because of reluctance in writing a personal letter to their Representative in Congress. By aiding me in the poll the result has proven mutually beneficial.

The tabulation of the 15 questions representing the views of the 2,180 persons in the 3 counties in my congressional district is as follows:

1. Are the Eisenhower-Nixon-Khrushchev meetings a means of promoting world peace? Yes, 78.4 percent; no, 21.6 percent.
2. Should foreign aid in all forms be reduced? Yes, 69.2 percent; no, 30.8 percent.
3. Should the $1 Federal minimum hourly wage be increased? Yes, 50.2 percent; no, 49.8 percent.
4. Do you believe the loyalty oath now required under the national defense student loan program should be retained? Yes, 80.6 percent; no, 19.4 percent.
5. Do you favor Federal aid to depressed areas suffering from chronic unemployment? Yes, 77.1 percent; no, 22.9 percent.
6. Do you believe that Government controls over agriculture should be eliminated? Yes, 79.1 percent; no, 20.9 percent.
7. Are you in favor of increasing the postal rate on letters from 4 cents to 5 cents? Yes, 34.1 percent; no, 65.9 percent.
8. Do you believe the limitation of $1,200 on outside earnings of those drawing social security benefits should be increased? Yes, 68.2 percent; no, 31.8 percent.
9. Would you favor giving the President the right to veto or accept specific items in an appropriation bill instead of the present requirement that he accept all or nothing? Yes, 77.1 percent; no, 22.9 percent.
10. Do you think that the United States should try to place a man in space ahead of the Russians regardless of the cost? Yes, 13.9 percent; no, 86.1 percent.
11. Should we concentrate on building an all-round national defense or specialize on missiles? Yes, 90.5 percent; no, 9.5 percent.
12. Do you favor Federal aid to education? Yes, 57.9 percent; no, 42.1 percent.
13. Are you in favor of the proposal to provide medical and hospital care to persons receiving social security benefits and paying the cost by increasing payroll taxes? Yes, 39.3 percent; no, 60.7 percent.
14. Do you favor approval of a GI educational benefit program for peacetime veterans? Yes, 36.6 percent; no, 63.4 percent.
15. Do you favor a pension for World War I veterans when they reach age 65? Yes, 65.5 percent; no, 34.5 percent.

The Public Community Junior College Construction Act

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 6, 1960

Mr. ULLMAN. Mr. Speaker, I find that the interest across the Nation in my proposal for Federal assistance to States in carrying out a program of establishing and expanding community junior colleges continues to grow. I am receiving an increasing number of letters expressing support for my bill, H.R. 967, and asking for further information about it. So that my colleagues and others may have the benefit of a short explanation of my proposal, I wish, under leave to extend my remarks, to insert into the RECORD the brief statement I made before the Special Education Subcommittee of the House Education and Labor Committee earlier this year:

THE PUBLIC COMMUNITY JUNIOR COLLEGE CONSTRUCTION ACT

(Statement of Hon. AL ULLMAN before Special Education Subcommittee, House Education and Labor Committee, March 23, 1960)

Mr. Chairman, I am grateful to the members of this subcommittee for the opportunity to appear here today. The current and future needs of America's institutions of higher education certainly demand the kind of careful examination which you are now undertaking. I heartily commend the fine and very necessary work my colleagues are doing by holding these hearings to survey the needs and to consider what legislation would best serve them.

It is not necessary for me, I am sure, to repeat the statistical evidence of the rising enrollments in our institutions of higher education, the projections of even greater enrollments, and the resulting demands being made on the Nation's colleges and universities. The problems are manifold. The challenges of solving them are multiplying. And the diversity of American higher education implies that no single solution can suffice.

Last year I introduced H.R. 967—the Public Community Junior College Act—which I believe represents one method of approaching the increasing demands being placed on our institutions of higher education. This proposal also is intended to make education beyond the high school more readily available to many more of our young people. I do not presume, however, to imply that this proposal is the only way to meet the needs which confront higher education today. Our 4-year colleges and universities, of course, also require expanded facilities. Moreover, I endorse proposals which would assist this necessary expansion.

The fact remains, Mr. Chairman, that the 4-year colleges have not been able to grow in proportion to the tremendously increasing enrollments. Recognition of this fact is one of the major reasons behind my interest in the community college idea. The value and unique advantages of the community college have received considerable attention from educational authorities throughout the Nation. Dr. Edmund J. Gleazer, Jr., executive director of the American Association of Junior Colleges, accounts for the growing popularity of the community college idea with these facts:

1. They are economical to attend; tuition fees are either very low or nonexistent.
2. They are close to the homes of their students.
3. They are responsive to local needs.
4. Their programs are flexible yet thorough.
5. Through their adult programs they provide opportunities for continuing education.

In my opinion, one of the most significant benefits of the expansion of community college facilities is that such expansion would almost certainly encourage more of the Nation's high school graduates to pursue further education. The Nation needs more highly trained persons. The availability of public junior colleges would surely help to increase opportunities for such training. Furthermore, junior colleges also help to relieve freshmen and sophomore overcrowding at 4-year colleges and universities.

Another distinct advantage of the 2-year college is the semiprofessional or technical training which it provides. This is an especially attractive feature for students who wish to pursue courses of terminal instruction.

The community college also helps many students who plan to continue their studies in a 4-year institution by reducing their matriculation and adjustment difficulties.

Also significant is the fact that public community colleges strengthen the American tradition of providing educational opportunity for all since these institutions further extend opportunities for the fuller development of more students.

Two other very practical aspects of providing more public community college facilities are those of economy and geographical proximity. These institutions provide low-cost education for many capable students who otherwise would be unable to afford post-high-school education. Also, studies made in a number of States confirm the fact that proximity to an institution of higher education is directly related to student enrollment.

Mr. Chairman, at the present time there are 400 publicly supported junior colleges in the country serving over 800,000 students. In fact, one out of every four students who entered a college in 1959 enrolled in a 2-year institution. Since college enrollments continue to rise, obviously these junior college facilities must grow concurrently along with those of the 4-year institution.

But, just as clearly, the expansion of State educational programs on the junior college level cannot be undertaken by States and localities fast enough and on a large enough scale without Federal assistance. Letters which I have received from numerous persons in the field of junior college education and several discussions with others concerned with community colleges indicate a nationwide need for expanded facilities and the value of Federal financial support. For example, the superintendent of public instruction and director of education of the State of California, Mr. Roy E. Simpson, informs me that:

"We here in California are deeply concerned about the tremendous pressures we face with the expanding enrollments in post-high-school education. * * * Actually, this year the junior college enrollments exceeded the projection * * * and we now have over 91,000 full-time students enrolled. It is now our belief that we will have over 220,000 full-time students in the junior colleges by 1970. The increases in enrollments in the State colleges and the university are also serious problems. * * * At the same time we are building junior colleges we are also having to expand our State college system and also the campuses of the University of California, so we have a three-way burden.

"Actually, at the present time we have as many full-time students enrolled in junior colleges as we have in the total enrollments in the State colleges and the campuses of the University of California. We believe that the junior college is performing a very significant and unique higher education function in our State; and it is reaching a point where the financial strain of providing facilities for all three is causing deep concern. Your bill, H.R. 967, if enacted into law, would provide a very substantial relief to our problem of meeting post-high-school needs."

From the Midwest, Dr. Harvey D. Martin, of the Education Department of Keokuk Community College, Keokuk, Iowa, writes:

"The community colleges need help in meeting the demands placed upon them by the ever-increasing student body. Our own college, presently bursting at the seams with more than the projected anticipated enrollment for 1958–59, is a good example depicting the needs of the community colleges throughout the United States."

Mr. Chairman, my bill is specifically designed to meet these demands. It would provide assistance to the participating States for the initial establishment of public community junior colleges and for the expansion of those public 2-year institutions which now exist either as subsidiaries of senior institutions or as separate junior colleges. Of equal importance at this time is the assistance that the bill would make available for the public technical institutions which are, under great handicaps, providing us with a large percentage of the technicians and skilled persons our Nation requires.

Not only will this proposal help to meet the demands of increasing enrollments, but it will also encourage the States to expand their diversified educational programs and provide education for many more thousands at reduced financial costs to the student.

H.R. 967 proposes to establish a 5-year program of grants-in-aid to the States for construction and expansion of public junior colleges.

The total authorized appropriation for each year of the program would be $200 million, of which one-half or $100 million would be apportioned equally among the 50 States, the District of Columbia, and Puerto Rico. The remaining $100 million would be apportioned among the States according to the ratio of their total public elementary and secondary enrollment as compared with the national enrollment for these grades. The States would be required to match this second amount on a dollar-for-dollar basis.

I believe that the system of a flat Federal grant and a variable Federal grant allows for the greatest amount of equity in meeting the varying enrollment potential among the States. In other words, the flat Federal grant guarantees that each State shall receive at least a minimum amount of Federal assistance through the allotment of an equal share of $100 million. An equitable share of the other $100 million would be apportioned to each State on the basis of its public school enrollment. This provision gives special consideration to the States with the highest potential public junior college enrollment.

The bill also provides that funds apportioned shall be used only for the construction of public community junior college facilities, public technical institutes and junior colleges of public senior institutions of higher education, and for the expansion of the facilities of these institutions.

Bearing in mind the importance of reaching those areas within the States which need public community junior colleges the most, I have provided within the framework of the bill that consideration would be given under the State plan to those communities which: are geographically removed from other State colleges and universities; desire the establishment or expansion of a community college; are making an effort commensurate with their economic resources; and are unable, solely because of a lack of such resources, to finance the full cost of the needed facilities. H.R. 967 also would require that the State educational agency determine those communities in which the need for community colleges is most urgent. I believe that this bill offers a dynamic, workable, and positive approach to junior college needs of all areas of the Nation.

The construction cost of junior colleges, of course, would vary with the location of those colleges. However, it has been estimated that the average cost of expanded plant per student is $2,500, or 125 square feet per student at $20 per square foot. Using this estimate, for example, and calculating on the basis of an authorized appropriation of $200 million, H.R. 967 could provide for an expansion of public junior college facilities to accommodate approximately 80,000 additional students. This number is equal to almost 10 percent of all those enrolled in public junior college in 1958–59. Moreover, State matching funds provided for under the bill would further increase the number of classrooms available.

Of course, in view of projected enrollments the amount authorized under H.R. 967 is but a small portion of the funds which will be required for needed college classroom expansion in the future. The fact remains, Mr. Chairman, that legislation of this kind would certainly serve as a stimulus to the States and local communities in their efforts to meet the increasing demands for more and better education beyond the high school.

I wish to thank the members of this subcommittee once again for the opportunity to discuss this bill and my reasons for sponsoring it.

Secretary of the Interior Fred A. Seaton Outlines Dramatic Electric Power Gains Under Eisenhower Administration

EXTENSION OF REMARKS

OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. WEAVER. Mr. Speaker, under permission to extend my remarks, I would like to call the attention of my colleagues to one of the most important policy statements made by the Eisenhower administration concerning the development of hydroelectric power in the United States. Secretary of the Interior Fred A. Seaton made this statement before the American Public Power Association at its annual convention here in Washington on Wednesday May 4, 1960.

The speech was met of course by mixed reaction but on the whole most favorably. Afterward I heard many comments that this was the most forthright, hard-hitting statement of the administration's position on this vital subject in many years. In his speech, Mr. Seaton not only outlined the tremendous gains made in the orderly development of our natural resources under the Eisenhower administration, and more particularly under his own administration of the Department of Interior, but also pointed the way to a vital growing future in this area.

It is an honor and a real pleasure to present this speech to my colleagues. It follows:

The American Public Power Association represents a vital component of the electric power industry of the United States. For that, and other reasons, it is a great pleasure to participate in your program.

As Secretary of the Interior, by way of the Bureau of Reclamation, and the Southeastern, Southwestern, and Bonneville Power Adminstrations, I am myself directly involved in the great industry of which you are a part.

You and I have many interests in common. Most important of these, as servants of the American public, is our joint concern that this Nation always has sufficient electric power to meet its present and future needs.

In 78 years, electric power has moved from the status of just a new-fangled item of public curiosity to that of an absolute necessity.

Gone from use now, with only rare exceptions, are the gas lamp and kerosene lantern. In their place there is electricity, for use in lighting, for powering industry and the home, for making possible everything from the X-ray to our whole vast electronic system of communication. It affects our daily lives and even our national security in hundreds and thousands of different ways.

Today the annual electric energy requirements of the United States total more than

700 billion kilowatt-hours, almost double that of 10 years ago. By 1980, this Nation likely will need over 2,100 billion kilowatt-hours each year—three times more than today. Even so, there is no doubt in my mind as to our ability to stay ahead of this increasing demand. Two factors, in particular, warrant that conclusion.

The first is the tremendous technological progress of the industry itself.

Where Edison's original Pearl Street Station in New York had 6 dynamos, each with the capability of lighting 800 incandescent lamps, today the Nation's largest generator is turning out enough energy to provide electric power for a city of 500,000 people. And even larger generators are being designed and constructed.

It took 10 pounds of coal to produce 1 kilowatt-hour in 1882; last year about nine-tenths of a pound did the same job. In 1940, 16 cubic feet of natural gas were required to produce a kilowatt-hour; in 1958, 11½ cubic feet.

Taken together, these facts represent solid reasons to foresee more efficient generation, higher transmission voltages, advances in plant design, and a whole host of other improvements to come. Encouraging, too, is the fact that technological advances are now coming at a faster rate than ever before in your industry's history.

These achievements, coupled with the greater efficiency made possible by volume operations, have enabled you to meet an ever-increasing demand and at the same time reduce the cost of electricity. Thirty-four years ago the consumer paid just under 3 cents a kilowatt-hour. The average price today is a penny less. And I don't need to remind you that this was accomplished during a period when general living costs have skyrocketed.

Without question, your members have contributed materially to the operating practices and efficiencies which have brought these cost reductions about.

The second reason for my optimism that the United States will have enough electric power to meet its future needs is the record of accomplishment made by the several segments of the electric power industry during the past 7 years.

Less than a decade ago, you will recall, a serious power shortage existed in the Pacific Northwest. Mandatory curtailment of power consumption adversely affected the economic development of the area. Existing industry was seriously hampered, if not prevented from expanding. New industries were unable to locate in the region, simply because there was not enough available power. Most unfortunately, even important defense production was affected.

Such an intolerable situation demanded action—action which would put added kilowatts on the line rather than merely mouthing political promises of power sometime in an uncertain future.

You and I know there are no brownouts today. To the contrary, the Nation's power additions remain well ahead of predicted load growth.

Let's look at the record.

During the two decades from 1932 to 1952, additions to the net generating capacity of the United States were made at an average of 2,723,000 kilowatts per year. Over the last 7 years ending December 31, 1959, annual additions averaged in excess of 11 million kilowatts. In simple arithmetic, this represents a difference of 4 to 1.

Despite the fact that annual energy requirements almost doubled from 1952 to 1959, reserve capacity last year was more than four times what it had been in 1952.

Between June 30, 1953, and June 30, 1959, the United States added to its generating capacity 65 million kilowatts. That is the largest amount added in any 6-year period in this Nation's history. And it is 88 percent greater than the amount added in the last 6 years of the preceding administration.

The facts are that we have made a better record in every type of power: In Federal power, 10.4 million kilowatts to 5.6 million; in non-Federal power, 54.7 million to 28.9 million.

Within less than the short space of one decade, the United States has moved from a period of electricity shortage to one of plenty, and a firm foundation has been laid for expanding requirements in the future.

This accomplishment speaks for itself. The principal reason for the dramatic change is because the Eisenhower administration has created a climate for the development of water resources, including hydroelectric power, which has been favorable for a triple teamwork assault on the job.

In 1953 President Eisenhower freed our economy of stifling and needless controls. In the electric power field his action meant two very important things.

First, it abolished the futile and foolish Federal policy of preemption of all waterpower sites.

Second, it removed material controls which had made it difficult, to say the least, for your industry to design and obtain necessary equipment.

This administration believes that neither any area of Government nor of private industry has the exclusive right or responsibility for the construction of dams or the generation, transmission, and sale of hydroelectric energy.

We do believe that all licensed non-Federal development must be consistent with the overall requirements of wise and multipurpose use of our natural resources. When non-Federal projects meet that test, why then should the Federal Government insist on preempting the site and prevent either private or public organizations from making their contribution in the electric power field?

In the public interest, privately owned utilities are strictly regulated, and they should be. Consumer-owned utilities are, of course, responsible to the people they serve.

As to whether electrical energy should be supplied by a consumer-owned or a private agency in any particular area, I firmly believe that is a decision for the people affected to determine.

For instance, in my State of Nebraska, the people have themselves determined that all power distribution shall be by public and consumer-owned agencies.

In the State of Kansas, where I grew up, much of the production and distribution of power is in the hands of private utilities.

Each State, and the areas and municipalities within it, made its own decision. What is wrong with that?

As the Secretary of the Interior, I shall continue to support the right of any State to make its own choice and, consistent with State laws, for the right of any locality to itself decide whether it wants public or private or Federal power. But I will not support the fallacious and dangerous proposition that the Federal Government has a public utility responsibility, the inevitable end result of which could only be a Federal monopoly and a complete lack of local determination and control.

In the power field, as in all other areas, the proper function of the Federal Government is to do only that which must be done in the national interest and then only when non-Federal agencies cannot or will not do it.

With that principle firmly in mind, the Federal Government, by cooperative effort with other power services, is now setting an example in assuring the fullest possible utilization of the capabilities of all the elements in the power industry—public, private, and Federal. A longstanding example of this kind of cooperative effort is the Northwest Power Pool, pulled together largely by means of the Bonneville Power Administration's backbone transmission grid.

Another possibility of this kind lies in the Missouri Basin. Last December, a group of consultants, led by former Senator Arthur V. Watkins, recommended to me that steps be taken to bring about the general coordination of all Missouri Basin power supplies by means of pooling, integration, and interchange arrangements utilizing the Bureau of Reclamation's backbone transmission grid.

I am hopeful that this grid can be the means of working out arrangements to make the best possible use of all available power resources in this area.

I have read with much interest the article concerning the proposed upper Colorado storage project transmission system which appeared in your Public Power magazine for April 1960. The author states that the "biggest decision will be to determine who will build the backbone transmission system and to decide whether Arizona will be within the marketing area."

This past week the Bureau of Reclamation submitted to my staff for review recommendations upon which a decision as to the marketing area may be based. The Bureau also suggested basic data against which proposals for the construction of the transmission system may be weighed. Previously, the Department of the Interior had concurred with five basic principles which transmission system proposals must meet.

As of now, it seems highly unlikely that any non-Federal organization will be able to provide a backbone transmission system which will meet the necessary principles, and particularly the requirements of the project itself.

In any event, let me assure you that these decisions will be made promptly and that both the spirit and letter of the preference clause provisions of Federal law will be observed.

The provisions of Federal law which provide preference be given to public agencies in the sale and distribution of power generated at Federal installations do not have be spelled out to your association.

You and I regard the preference clause as the hallmark of the power marketing policy of the Federal Government. And I am opposed to repealing it by legislative action or eroding it by administrative noncompliance.

Here again, let us look at the record.

For example, Federal power sales to preference customers, for the fiscal year commencing July 1, 1959, totaled 37½ billion kilowatt-hours. Notwithstanding the fact that many public agencies throughout the United States materially increased their own generating capacity in the 7-year period, this is an increase of some 74 percent over 1952.

Furthermore, we have under way the largest water resources program in history. For fiscal year 1961 alone, $1.4 billion are programed. This fiscal year we are investing nearly $1.3 billion in these programs. Thus, we have set an alltime record.

It would be shortsighted and extremely wasteful if hydropower were not added to Federal water control and conservation projects wherever economically feasible. Therefore, the Corps of Engineers and the Bureau of Reclamation have programed, for the years 1960 through 1965, the installation of hydrogeneration in excess of 4½ million kilowatts.

All in all, the Eisenhower administration has already installed in Federal multipurpose projects generating units having a capacity of 5.7 million kilowatts.

In its 7 years, this administration has completed more than 7,000 circuit miles of transmission lines to transport power to market centers. This is almost one-third the circuit

miles completed by Federal agencies in the preceding half century.

Even more important to future prospects in the electric energy field, in my opinion, has been the stimulation we have given to consumer and privately owned non-Federal agencies for the development of hydroelectric projects.

During the 7-year period 1952–59, applications for non-Federal power projects having an aggregate capacity of more than 33 million kilowatts were filed with the Federal Power Commission. This is an amount far greater than ever applied for in any comparable previous period.

Outstanding projects being undertaken by consumer and private non-Federal entities, which have been licensed or for which applications have been pending, include the New York State Power Authority's Niagara project of over 2 million kilowatts—the largest single project of its kind in the country. Included also are the joint Ontario Province-New York State Power Authority's St. Lawrence project of 940,000 kilowatts; the private Coosa River project of about 420,000 kilowatts; and several projects, both consumer and private, in California and in the Pacific Northwest, totaling about 7 million kilowatts.

Non-Federal agencies are now able to act on their own initiative, always subject, of course, to proper licensing procedures. Each of you in your association can now plan your development program without having to beg someone in Washington for permission to do that which, in your judgment, is in the best interest of the public in your community.

Surely, most of us will agree that the strength of America, in large part, lies in the massive diffusion of power, of knowledge, of skills, and of initiative going down to the very roots of our economic and social systems.

If the day ever comes when any group, private or Federal, can monopolize control of the electric power field in this Nation, that day your segment of the industry at best will begin its decline. In the long run, it will lose its identity altogether.

In spite of all forces to the contrary, I am confident that your organization, following the traditions of this great Republic, will insist on preserving your role in power development for the future.

Against the Item Veto

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. TABER. Mr. Speaker, for nearly a century there has been agitation from time to time to give the Executive the power to veto individual items in appropriation bills. The item veto is a very bad proposition.

The gentleman from Missouri [Mr. CANNON], chairman of the Committee on Appropriations, an outstanding authority on parliamentary law and procedure, and who has been a Member of the House since 1923, has written an excellent article against the proposition. It appeared in the April 21 issue of the Harvard Law Record.

Under leave to extend, I include the article for the information of Members and others interested in the matter.

The article follows:

AGAINST THE ITEM VETO

(By Hon. CLARENCE CANNON)

(The Honorable CLARENCE CANNON from the Ninth District in Missouri has served in the U.S. House of Representatives since 1923. For many years he was Parliamentarian for the House and for the Democratic National Convention. He has authored many books and articles on procedure, including Procedure in the House of Representatives and the National Convention Parliamentary Manual. He is presently the chairman of the House Appropriations Committee.)

(This article presents the arguments against any proposal to give the President an item veto, thus answering the proposals of Senator KENNETH B. KEATING, which appeared in the RECORD on February 11, 1960.)

The proposition to clothe the President of the United States with power to exercise an item veto on appropriation bills was first introduced in the Congress in 1876. It has since been advocated and agitated many times. A number of Presidents have urged it. It is found among suggestions advanced by the major periodic movements of reform of the Federal fiscal or legislative machinery. But its failure of adoption after 85 years of repeated consideration is perhaps the best indication of its lack of merit.

The item veto proposition is advanced in the name of economy and for the purpose of disencumbering appropriation bills of so-called legislative riders. It is sometimes asserted by the Executive, whose power would be greatly strengthened, and others in sympathy with the idea, that the item veto would permit the Executive to prevent, or nullify, or at least discourage, actions characterized as "evils" of the legislative process in inserting appropriations or legislative riders not to his liking either as to amount or purpose, or both. Thus, the item veto would vastly increase the executive power while weakening the legislative control of the purse.

The Congress ought to concentrate on effective measures to strengthen its exercise of control of the national purse, not weaken it. In recent years, various devices—some sponsored by the executive branch—to get money out of the Federal Treasury through the side doors and the back doors, rather than the front door, have gained in popularity. Through these sundry methods of diffused action in response to the financial needs of the Government, the Congress has made such inroads on its traditional annual appropriations process that it has in practice deprived itself of a significant measure of effective control of the purse.

SUBSTANTIAL SEGMENT

A substantial segment of new authority to obligate the Government is insulated from effective annual determination in the appropriation bills by reason of such items as permanent appropriations, permanent contract authorizations, authorizations to expend from public debt receipts contained in legislative rather than appropriation bills, and specific formulas in various grant-in-aid and other programs in basic legislation beyond practicable reach of the annual appropriations process. Substantial amounts of authority to obligate, and even to actually spend, are granted in other than the regular appropriation bills. Basis for effective annual determination of expenditure levels is undermined. The Congress cannot continue to place large segments of the budget beyond reach of annual determination without further seriously impairing the practical limits of exercise of effective control of the purse through the traditional means of the appropriation bills.

The alleged evils for which the item veto is advanced as a cure are exaggerated. It is axiomatic that virtually every piece of legislation adopted in every Congress represents a compromise, whether an appropriation bill or a legislative bill. It would be a rare occasion, indeed, when Members of the House and the Senate did not disagree with one or more items in a bill sent to the President. Yet they often vote for passage of the bill because of concurrence with the major purposes or features or the great majority of items encompassed.

Proponents of item veto plead that without it the Executive must "accept the wasteful and extravagant items along with the useful and necessary ones." Wasteful and extravagant—in whose opinion? Useful and necessary—in whose opinion? In the opinion of one person—the President? [Possibly on occasions with advice of the special interest department with a gimlet-hole view of Government finances and the necessities of the occasion?] Or in the opinion of a majority of the directly elected representatives of the people?

Let us concede that there are wasteful and extravagant propositions in virtually every appropriation bill—in somebody's opinion. And the same is certainly true of the Executive budget from the President—in somebody's opinion. There has never been a budget that could not be reduced, and generally the Congress does reduce it—regardless of the party in control.

Under our constitutional separation of powers, it is the function of the executive to propose and the function of the legislative to dispose. And this power to dispose is final and absolute. Of all the legislative prerogatives, the power to appropriate is the most vital. Not a wheel of Government can turn without motivation of an appropriation. Basic authorizing statutes for the most part are broad in scope and grant to the executive rather wide latitude. The one continuing and recurring procedure for congressional control over governmental activities within such statutes is the annual appropriations review and legislative provision of funds.

MONEY BILLS

The annual money bills implement programs and activities previously authorized by law—programs which have in the legislative authorizing stage already run the gauntlet, including the opportunity for Executive veto. The subsequent act of appropriation thus represents the stage of final and, necessarily, conclusive action by the elected representatives of the people, each of whom must accept his own responsibility for his participation before his own constituency. Responsibility for appropriation of the people's tax funds would be unwisely diffused if impinged upon by an item veto.

The present budget system, enacted in 1921, greatly increased the executive power in Government finance matters. The executive budget concept was established. The budget is the President's budget. He has the sole power to include, or exclude, whatever items or amounts or restrictive provisions which in his judgment are necessary. Not the judgment of someone else; exclusively his own judgment. Under the law he is directed to include that which he deems necessary. But the item veto on appropriation bills would be tantamount to permitting the President to tell the Congress what to include in appropriation bills. It would, in effect, transfer from the legislative to the executive branch of the Government the control of the purse.

Incidentally, force of logic compels the suggestion that the item veto would be as appropriate in application to legislative authorization bills as to appropriation bills. And as far as is known, the President for the first time advocated this application in his budget message of January 1959. The genesis of the appropriating process is in the initial authorization statutes. The Executive is not infrequently—sometimes vigorously—

opposed to a specific item, provision, or restriction in basic authorizing legislation submitted for Presidential approval. The fundamental purpose of Executive veto is now fulfilled under the constitutional provision according the President oportunity to take exception to a proposition of legislation in the first instance. That same recourse is available to him on appropriation bills and he has used it at his discretion.

WITHOUT SUBSTANCE

Proponents of the item veto seek to justify it on the grounds that, without it, the President is reluctant to veto a bill providing for many necessary functions in order to register his objections to individual items or provisions. The argument is without substance, as the Congress has never, and certainly would never, adjourn without providing appropriations for the necessary functions of Government.

Furthermore, a vetoed bill assumes high privilege in the House and is almost always disposed of at once—in any event, expeditiously. More important, perhaps, is the record of disposition, for in the majority of instances of appropriation vetoes, Congress has yielded to the President and passed legislation omitting the offensive matter. There is no evidence that the public interest suffered by reason of delaying final settlement long enough to dispose of a vetoed appropriation bill.

The item veto would also encourage Executive capriciousness. We have seen this happen more than once through unwarranted use of the provisions of the antideficiency statute permitting the Executive, under certain defined conditions, to withhold expenditure of appropriations. An appropriation is not a mandate to spend every dollar provided, but neither was the impounding clause of the antideficiency law intended to provide the Executive with a statute to thwart the clear will of the Congress. To provide item veto power would be to give the Executive a club which could be held over individuals and Members and even whole delegations, to coerce their cooperation on wholly unrelated legislative propositions in which the Executive was especially interested.

MORE CHECKS

Legislative enactment of the appropriation bills is surrounded by far more checks and balances than is the preparation of the executive budget. As noted, the executive budget is whatever the President determines it shall be. It is prepared behind closed doors. It can include, or exclude, any proposition the President wants to include, or exclude—and in any amount. It is not subject to a parliamentary point of order. It is not materially restrained by any act of Congress or rule of either House.

In contrast, the appropriation bills are subject to several hurdles and must run a number of gauntlets at both ends of the Capital. Items not previously authorized by basic law and provisions of legislation are subject to deletion on objection of a single Member. Only by majority consent, or vote, are propositions of legislation included in appropriation bills, and most of these are administrative and facilitating, or restrictive, in character; and again, many of them will be found to have been recommended by the President in his budget. Furthermore, only by majority action in both Houses is the President's budget exceeded. But the President, without consulting anyone, can submit budget increases above the previous year's appropriation.

Drawing a suitable definition of an "item" would entail serious complications and dispute as regards its application to specific instances. What is to be embraced by the term "item"? Is it to be a separate paragraph of a bill or only a portion? Where many projects are financed in a single lump-sum appropriation, and thus not separately identified in the bill, is it the lump-sum total or only a portion? Would it apply to restrictive or prohibitive language intended to deny use of the funds for a certain object or to require their use in a specific manner and no other? Implicit in the legislative power of the purse is the right to prescribe the conditions of expenditure and to deny use of the appropriation for a purpose or object even though previously authorized by law. Would "item" veto embrace the power to strike such conditions or restrictions?

There have been instances where the Congress inserted appropriations and provisions not budgeted by the executive and the action proved beyond question to have been in the national interest. There will be others which the item veto could threaten.

Finally, the legislative appropriations process would resemble a one-way street if the item veto were adopted. The executive would have a greater voice, the legislative branch correspondingly less, in the final determination. We need just the opposite.

The constitutional separation of powers is a two-way street—the Executive to propose appropriations and related provisions he deems necessary, and the legislative to enact such appropriations and related provisions as it deems in the public interest. The legislative prerogative of the elected representatives of the people must not be diluted. To permit otherwise would impair Members' ability to act in response to the wishes of the people they are elected to serve.

A real grasp of the full dimensions of the one-way character of this proposition can be had from the following statement of the Director of the Budget, as principal spokesman of the executive branch, made to the Committee on the Judiciary of the House of Representatives in May 1957 in support of the item veto proposal:

"I think it ought to be made clear in whatever bill is reported that authority would be granted to veto legislative provisions as well as appropriation items, and that the authority to veto an appropriation item would include authority to reduce an appropriation—but only to the extent necessary to permit the disapproval of amounts added by the Congress for unbudgeted programs or projects, or of increases by Congress of amounts included in the budget."

The import of this statement is clear. Implicit in such reasoning is the assumption that the Executive is all wise and superior in judgment as to how much should be appropriated from the Treasury and for what purposes.

I am certain the Congress could never seriously entertain such an absurdity as the item veto.

Oregonians in the Fourth Congressional District Comment on Major Issues Before the Congress

---

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 6, 1960

Mr. PORTER. Mr. Speaker, earlier this year I mailed to 131,000 residents of Oregon's Fourth Congressional District a postcard questionnaire, requesting their opinions on major issues concerning them. The response was excellent. A total of 20,349 returns were tallied and each day a few more arrive.

I believe the opinions of my constituents deserve the widest possible distribution. For this reason, under leave to extend my remarks in the RECORD, I include the following questionnaire results. There were 12 questions. The results by number and by percentage follow each question. My opinion on each question is included.

The results of the poll were sent to members of the press and to each person receiving my newsletter. A copy of the press release appears with the results.

QUESTIONNAIRE RESULTS

I am grateful to the 20,349 constituents who answered my postcard poll. Thank you very much. I'm doing my best to finish answering the many letters sent along with the questionnaires. In case you're interested, my own answer to each question was "yes."

1. Do you favor a national seashore recreation area in the dunes region in the vicinity of Florence and Reedsport? Yes, 10,273 (57 percent); No, 7,909 (43 percent). I think the legislation now being improved will meet most of the objections.

2. Do you favor legislation as proposed in the Forand bill which provides medical care for social security retirees? Yes, 13,410 (73 percent); No, 5,028 (27 percent). My hope and my prediction are that Congress will soon act to meet these urgent needs.

3. Do you believe that the farm price support and crop control program should be ended? Yes; 14,176 (80 percent); No, 3,455 (20 percent). I am supporting the Poage-Ullman-McGovern farm bill.

4. Do you believe cranberry growers who are suffering as a result of Secretary Flemming's action should receive Federal payment for a portion of their losses? Yes, 10,444 (57 percent); No, 7,885 (43 percent). Almost all the cranberry growers did nothing wrong. Now they will receive some Federal help so they can stay in business.

5. Provided it was concealed by trees and thus entailed no disfigurement of the scenery, and no tax funds were required, would you favor an aerial gondola (i.e., an enclosed chairlift) traveling from the rim to the surface of Crater Lake? Yes, 9,490 (52 percent); No, 8,696 (48 percent). If this device would be a blemish on Crater Lake's incomparable beauty, I would oppose its installation. That is why a model is being built.

6. Do you approve putting labels on shoes listing the materials used? Yes, 16,476 (89 percent); No, 2,033 (11 percent). It is pretty clear that you would like to know what your shoes are.

7. Do you believe Congress should reform the income tax law to equalize the tax burden and eliminate loopholes? Yes, 16,818 (95 percent); No, 981 (5 percent). I told Representative WILBUR MILLS (chairman of House Committee on Taxes) that I could show overwhelming sentiment for tax reform.

8. Do you favor Federal financial aid, with no lessening of State and local control, for public schools? Yes, 10,076 (56 percent); No, 8,054 (44 percent). This is no handout, just a recognition that Federal tax collections have to be used along with local taxes to meet this great need.

9. Do you favor Federal assistance for the retraining and relocation of workers thrown out of jobs by automation? Yes, 7,067 (40 percent); No, 10,665 (60 percent). This important subject needs more discussion. How else are we to get displaced workers off welfare rolls and back into productive activity?

10. Do you favor an increase in communication with Red China? Yes, 5,955 (34 percent); No, 11,372 (66 percent). I believe strongly that increased communication with China is essential if we are to have any effec-

tive, safeguarded disarmament—and will reduce the chances of world war III breaking out. "Communication" in positive steps, starting with exchange of newsmen and other individuals, in my opinion, is long overdue.

11. Do you favor abolishing the draft? Yes, 4,799 (27 percent); No, 13,088 (73 percent). I disagree with the majority. We should pay our servicemen proper wages and develop more good career men and specialists—they will deter the enemy and win the wars, far better than thousands of boys who ought to be in school or learning jobs.

12. Do you favor an increase in Federal income taxes if it would mean more funds for education and scientific research? Yes, 4,211 (23 percent); no, 13,970 (77 percent). This was a tough one. All these questions tried to put complex issues into a few words. What education? What scientific research? All the questions suffered from this unavoidable defect, but even so I found the results and accompanying comments and letters useful.

More than 20,000 Oregonians participated in a post card opinion poll sent to 131,000 residents of the Fourth Congressional District by Representative CHARLES O. PORTER, Democrat, of Oregon. They strongly supported legislation providing medical care for social security retirees, ending farm price supports and crop controls, shoe labeling and income tax law revision.

They told PORTER they favored the draft, but disapproved any increase in taxes to provide more funds for education and scientific research or for the retraining and relocation of workers displaced by automation. They do not favor an increase in communication with Red China.

A majority of those responding to the questionnaire approved establishment of the Neuberger National Seashore Park and agreed that cranberry growers should have Federal assistance to help meet their marketing losses. They want Federal financial aid for public schools. By a narrow margin they approved the idea of a chairlift from the rim to the surface of Crater Lake.

Greatest positive response came to the question "Do you believe Congress should reform the income tax law to equalize the tax burden and eliminate loopholes?" The result: Yes, 16,818 (95 percent); no, 981 (5 percent). PORTER said he has informed House Ways and Means Committee Chairman WILBUR MILLS of the response to the question.

Southwestern Oregon residents also endorsed PORTER'S shoe labeling legislation. They were asked, "Do you approve putting labels on shoes listing the materials used?" They replied: Yes, 16,476 (89 percent); no, 2,033 (11 percent). PORTER said he felt it was pretty clear that consumers would like to know from what materials their shoes are made. His bill, H.R. 1320, proposes that shoes be labeled as to content. The idea originated with a resident of PORTER'S district, shoe repairman Wilbur Gardner, of Medford.

PORTER reported that his question "Do you favor an increase in communication with Red China?" drew this response: Yes, 5,955 (34 percent); no, 11,372 (66 percent). He said he believed strongly that increased communication with China "is essential if we are to have any effective, safeguarded disarmament—and that it will reduce the chances of world war III breaking out." He said he felt "communication in positive steps, starting with an exchange of newsmen and other individuals, is long overdue."

Earlier, PORTER released the tabulated results of the 13th question of his poll, which asked his constituents to name their presidential preferences. Vice President RICHARD NIXON and Senator WAYNE MORSE ranked first and second.

Some Problems of the Independent Federal Regulatory Commissions

---

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 6, 1960

Mr. HARRIS. Mr. Speaker, it was my honor and pleasure to address the annual dinner meeting of the Federal Trial Examiners' Conference on some of the problems of the independent Federal regulatory commissions. In that our committee has been studying these problems for some time and have proposed legislation under consideration, I know of no group which I think more appropriate than this distinguished group for discussion of these problems. Because of its importance and interest manifest in these problems, under unanimous consent I extend my remarks and include it therein:

SOME PROBLEMS OF THE INDEPENDENT FEDERAL REGULATORY COMMISSIONS

(Remarks of Hon. OREN HARRIS, chairman, House Committee on Interstate and Foreign Commerce, at annual dinner of Federal Trial Examiners' Conference, May 5, 1960)

Mr. President, members of the Federal Trial Examiners' Conference, honored guests, it is a great pleasure for me to appear as your speaker tonight, at the annual dinner of the Federal Trial Examiners' Conference. As you know, my duties as chairman of the House Committee on Interstate and Foreign Commerce and of two of its important subcommittees have brought me intimately into touch with many of the problems that confront you. Of course, our committee work has been concerned with the problems of the regulatory agencies administering statutes under the jurisdiction of the Committee on Interstate and Foreign Commerce. For that reason we have not focused on every problem that might face all of you, particularly those of you who serve as examiners in executive agencies. And yet I think that the matters we have had occasion to consider in connection with the adjudicatory functions of the independent commissions are pretty representative of many matters of professional interest to your whole membership.

Tonight I thought I would discuss with you four topics of relevance to the administrative process. I am sure most of you will recognize that these topics are roughly the same ones considered in the panel discussion hearings held last June before the Subcommittee on Legislative Oversight of the Interstate and Foreign Commerce Committee. At those highly instructive sessions, the subcommittee had the benefit of the views of several of you. You will remember that there was a good deal of difference of opinion on practically every point raised. In the matter of ex parte contacts, for instance, everybody professed to be against sin, but a number of our distinguished panelists seemed to prefer a little sin to any proposal that would do away with it. It is the belief of the committee, however, that from the give and take of opposing viewpoints set forth in the hearing record will emerge a workable approach to the ex parte and other problems.

As you know, we have tried to do just that in H.R. 4800, the bill I introduced in the first session of this Congress as a result of recommendations contained in the Legislative Oversight Subcommittee's report to the 85th Congress. I also introduced H.R. 6774, a bill proposed by the American Bar Association and also designed to cope with the problem of improper pressures on agency personnel. Now the legislative hearings we held in March and April of this year indicated a few imperfections in those bills. But I believe that the general approach is a sound one and that legislation in this field is essential.

I. REGULATORY COMMISSIONS AND THE ROLE OF HEARING EXAMINERS

First, I want to touch briefly on the role of the independent commission in the regulatory scheme, and to try to cast some perspective on the adjudicatory function of the hearing examiner. It is not my intention to justify the existence of the independent regulatory commission. While the commission as a regulatory instrument has its critics, I feel it has demonstrated that it has a permanent place in our governmental scheme. I think we'll all concede that no human arrangements are without their flaws. In recognition of this, we strive to diagnose them and to apply whatever remedies seem necessary and practicable. I simply do not hold with certain commentators on the administrative process whose proposals seem to me equivalent to burning up the roost to catch a chicken thief.

Many of us are in danger of forgetting that these regulatory commissions were established, not to fulfill some grandiose scheme of visionary planners, but to meet down-to-earth, practical difficulties. As time went by, experience amply showed that rail, water, and air transportation, electric power, interstate communications, security exchanges and the like would not adequately serve the public interest if left in the hands of large unregulated corporate owners. It became clear that the responsibility of the managers of these giant organizations to their stockholders must be accompanied by a corresponding responsibility to their customers and, indeed, to the public generally. Accordingly, the Congress, as representative of the public interest, intervened to redress the imbalances and dislocations in our economy brought about by the unfettered sway of these corporations affected with a public interest.

So it was for practical reasons that Congress delegated to regulatory commissions diverse broad discretionary powers limited by the confines of enabling statutes.

Formal adjudication is but one phase of the work of most regulatory commissions. In addition, they are directed to investigate, advise, prosecute, study, legislate, supervise, and enforce. The commission member must wear many hats. We hear it suggested, and the charge has some foundation, that occasionally a commission member forgets to take off his prosecuting or legislative hat when he is supposed to be deciding an adversary dispute.

The job of the commission hearing examiner is to see to it that such disputes are initially heard and decided in the proper judicial manner when the situation calls for judicial procedures. His duties are not concerned with the legislative, supervisory, prosecutory or enforcement functions of his agency. But when opposing parties compete for favors available through his agency or resist enforcement measures the agency seeks to impose, the trial examiner will be called upon to determine the rights of the parties. His determination must be based on substantial evidence taken at a hearing. He hears and observes the demeanor of the conflicting witnesses and counsel. He has a firsthand opportunity to appraise the credibility of witnesses and to make findings of fact based on his firsthand experience. In these matters his role is precisely analogous to that of a trial judge or master charged with finding the facts of a dispute without

a jury. As such, the agency hearing examiner's findings, if contested, should be entitled to considerable weight. It is no secret to you, however, that the weight given to the findings of fact and conclusions of law of hearing examiners varies widely from commission to commission.

Now without in any way trying to glorify trial examiners or pretending to magnify their importance all out of proportion, it is obvious that the examiner is of central and crucial importance to the success and integrity of agency adjudication. Both the agencies and the Congress, as well as your own Federal Trial Examiners' Conference, are constantly trying to devise means of improving the training and quality of hearing examiners and, correspondingly, of enhancing their compensation and prestige and of improving their working conditions. Of these matters I shall have something more to say later.

II. EX PARTE PRESSURES

The second point I want to take up with you is the problem of improper ex parte approaches to commission personnel. In our consideration of this problem, the Committee on Interstate and Foreign Commerce and the Subcommittee on Legislative Oversight have heard a wealth of commentary. Putting aside for the moment the very tough questions of propriety of ex parte contacts in connection with rulemaking proceedings, even adjudication has given us trouble. When, for example, does adjudication begin? Does it begin when either the agency or an outside party files a first pleading invoking agency action? Or does it begin only when a second party comes into the picture, that is, when a contest of some kind becomes inevitable? Is it sufficient to bar ex parte communications at the stage when the separation of functions provision of the Administrative Procedure Act takes effect, or may the damage not be done by that time? Is it sufficient to prohibit ex parte communications with "decisional personnel," or should the ban go farther? How can routine procedural matters and matters leading to settlements, stipulations, and more expeditious procedures be handled without leaving open the door to more sinister approaches? H.R. 4800 prohibits certain approaches concerning the "issues, merits, and disposition" of agency matters. Does this language go far enough? Does it attempt too much? Is it sufficiently clear to afford reasonable guidance to commission personnel and to the public?

What weight should be given the findings, rulings, and recommendations of hearing officers? What restraints should be placed on their powers to control their own proceedings? Do the hidden review procedures in certain commissions afford a means of circumventing the hearing examiner and thus effecting an improper result?

These are only a few of the questions raised in hearings before us during this session of Congress. Even more difficult questions arise concerning the uneasy borderland between adjudicatory and rulemaking proceedings. The latter are conventionally and, for the most part, properly likened to the proceedings of a legislative body. The agency, like the legislative body, is seeking information from all possible reliable sources to assist it in formulating as intelligently and fairly as possible rules to govern future conduct. The procedures associated with the trial of a lawsuit, with its limitations on parties in interest, evidence restrictions, and so forth, are as inappropriate to the quasi-legislative as to the legislative task.

We are becoming increasingly aware that the distinction made in the Administrative Procedure Act between adjudication and rulemaking in some instances breaks down. Recent developments have taught us that adjudication and rulemaking are not water-tight compartments. Rather, they are useful guides, readily applicable in the bulk of agency proceedings. But where, as in the celebrated Sangamon Valley case,[1] handed down in May 1959, the outcome of a rulemaking proceeding in effect determines the substantive rights of contesting parties, ex parte contacts with commission personnel should be strictly circumscribed. Too many people have gotten the idea that the sky is the limit if only they can tag the rulemaking label on a given proceeding. Perhaps the hardest task confronting the draftsman of legislation is to devise language to cover this type of borderland situation.

But despite the many vexatious questions raised by an effort to bring a higher level of integrity to commission proceedings, many of which I suspect merely conceal a desire to prevent any tightening up at all, our committee intends to go forward with its efforts. If H.R. 4800 or H.R. 6774 or some combination of their provisions cannot best do the job, modifications can be made that will strengthen existing law while recognizing certain criticisms as legitimate. Our hearings on this legislation were to some extent marred because of the failure of some critics to address themselves carefully to the actual language of the bills. In fact, I had doubts as to whether some opponents of the legislation had even read all the provisions they opposed.

III. EXCESSIVE DELAYS AND REDTAPE

The third general topic I want to mention tonight is the question of increasing redtape that is threatening to strangle the administrative process. Among the matters of overriding importance that have caused concern, even alarm, are the related problems of unduly protracted hearings and extensive length of hearing records, the high costs of commission proceedings, and the frequent lengthy delays in bringing agency matters to a conclusion. Apart from the inconvenience and financial loss caused by these factors to litigants, their representatives, and the agencies, they have been cited as an unintended inducement to ex parte activity. Many such contacts begin as a result of frustration and exasperation with interminable agency delays. As one experienced attorney told the Subcommittee on Legislative Oversight in 1958:

"Ethics in the administrative process is linked with efficiency in administrative operations. The climate for fast deals or sly arrangements is good when administrative operations are marked by excessive delays, inadequate procedures, complexity of regulations, poor public information provisions, and so forth.

"On the other hand, efficient operations tend to keep everyone on a straight and narrow path."

One agency for which the Legislative Oversight Subcommittee has figures is the Civil Aeronautics Board. The CAB issues some 175 opinions and orders a month, some 2,100 a year. At least 32 tons of this "green stuff," as the opinions and orders issued on green letter-size paper are called, are issued and distributed annually. In a recently heard route proceeding now awaiting an initial decision by the examiner, the written testimony and exhibits which should be required to be served on all parties were estimated by the subcommittee staff to weigh some 15 tons. We hear of proceedings dragging on over several years, and there is at least one instance of a hearing officer's decision that exceeded 650 pages.

The cumbersomeness of such procedures represents a burden that falls heavily on the hearing officer. People outside the agencies got a graphic idea of what this burden can mean from a photograph in the September 1959 copy of Fortune magazine showing one of your veteran members, the Chief Hearing Examiner of the Federal Power Commission, almost hidden behind a mound of hearing transcripts, briefs, exhibits, etc., for a single case.

These unwieldy proceedings are expensive, both to the regulated industry and to the commissions concerned. Ultimately, of course, the American people bear the heavy costs. The taxes they pay support the commissions, and they indirectly pay the industry bills through inflated rate bases, subsidies, and the like.

A number of causes are suggested for these problems: inadequate agency personnel, clumsy hearing procedures often stemming from inadequate power in the examiner to direct and control the hearing, excessive and secret intra-agency review of examiners' findings, obstructive tactics by parties and their representatives, inefficient and bureaucratic staff work, uncertainty as to limitations on parties in interest, abuse of the principle of the Ashbacker case,[2] and so on. Unquestionably all these factors and many others contribute to the confusion. The blame, if it is fair to ascribe blame for such a complex situation, lies in no one place. I think there are some respects in which the Congress could lend a hand. But the effort must be a cooperative one. Neither the Congress, the agencies, the examiners, the regulated industries, nor the bar alone can do the job.

I have tried to take at least a first step toward dealing with the situation. With the help of the staff of the Subcommittee on Legislative Oversight and representatives of each of the so-called "Big Six" regulatory commissions, we have established an Advisory Council on Administrative Procedure. The Advisory Council is in the process of collecting, sifting and evaluating a mass of detailed factual information respecting agency procedures. Our expectation is that the council will serve as a clearinghouse that will before long be able to advise the Congress as to concrete measures that might be taken, measures based on a careful appraisal of up-to-date, documented information.

Since one of the classical reasons advanced for resort to the administrative process was the need to avoid the unwieldy procedures of courts of law, it is clear that the situation I have described calls for corrective action. Increasingly we hear doubts as to whether the regulatory commissions can "do the job." It is up to all concerned to show that it can if it will.

IV. PROBLEMS OF HEARING EXAMINERS

Finally, I turn to my fourth point, a discussion of some questions of immediate practical concern to all of you—the role of hearing examiners in the administrative process.

Many factors enter into a determination of this role—the extent to which the agencies determine general questions of policy in advance of the decision of a particular case, the breadth of the discretion vested in examiners to control proceedings before them, the weight attached to their reports, the facilities and assistance furnished to them for the performance of their duties, and, above all, the caliber of the men chosen for these positions.

There is a widespread, though by no means universal, belief that examiners could function more effectively if the agencies gave them more policy guidance for the handling of specific cases. One of the most experi-

[1] *Sangamon Valley Television Corp.* v. *United States*, 358 U.S. 49 (1958) and, on remand, 103 D.C. App. 113, 255 F. 2d 191 (D.C. Cir. 1959).

[2] *Ashbacker Radio Corp.* v. *FCC*, 326 U.S. 327 (1945).

enced practitioners before the ICC, John R. Turney, has said that:

"The failure of administrative agencies, including the ICC, to engage in clear-cut policymaking has resulted in inconsistent and unsound decisions and doubtless, in some cases, in unjust or discriminatory treatment of parties in different proceedings."

I'm sure you are all familiar with the provocative memorandum submitted to the President by Mr. Louis J. Hector at the time of his resignation from the CAB. In that memorandum he placed much of the blame for the delay in the disposition of important cases on the fact that the board assigns them for hearing without any policy direction whatever.

I know you don't all agree with Mr. Hector's view, but I believe it is a point which deserves serious study by the agencies themselves and by Congress.

Another important aspect of the hearing examiner's function is the extent of his power to control the proceedings in cases heard by him. Lack of adequate authority for this purpose is assigned as one of the causes of delay and the inordinate length of hearing records. One experienced examiner in an agency which has given its examiners relatively little discretion made the off-the-record observation that he would probably let a Sears, Roebuck catalog go into the record if any one offered it.

The extent of the examiner's effective control depends not only on the text of the agency's rules. In practice, it also depends to a large degree on the weight accorded to his conclusions in the final disposition of the case. When the final decisions are drafted by anonymous reviewers who are free to disregard the hearing examiner's findings, the examiner is likely to have difficulty in obtaining cooperation of the parties in his efforts to define the issues and expedite the proceedings. This was recognized by the Attorney General's Committee on Administrative Procedures in 1941. That committee noted in its report that as the conduct of the hearing becomes divorced from responsibility for decision two undesirable consequences ensue. The hearing itself degenerates, and the decision becomes anonymous.

Testimony before our subcommittee has shown that the practice deplored by the Attorney General's committee persists in some form in many agencies today. In some the hearing examiner's report passes through the hands of a succession of reviewers, each of whom is free to disregard entirely the report prepared by the examiner and to substitute his own conclusions based on a reading of the cold record. Moreover, the Subcommittee on Legislative Oversight has heard testimony that in at least one agency proceedings before the examiner have been regarded as a costly waste of time, because the final decision is believed to be reached by members of the agency in response to representations made either on or off the record after the hearing examiner has made his report.

While I am not sure that I see eye to eye with all of you as to the extent to which administrative proceedings should be judicialized, I most emphatically agree that every proceeding should be what it purports to be. Any proceeding which by statute or regulation is required to be decided in a record should, in fact, be decided on the record made in open hearings or on written pleadings, evidence and argument available to all interested persons.

I also agree with the conclusion of the Attorney General's committee that the status of the hearing examiner "is the heart of formal administrative adjudication. It cannot succeed without competent and well-paid men exercising functions of responsibility and interest. This is necessary to protect both the public interest and the private interests which are concerned in the proceedings."

There was recently introduced in the House of Representatives a bill, H.R. 11669, which is designed to attract and retain the ablest men as hearing examiners. Although it was referred to another committee, the Committee on Interstate and Foreign Commerce is interested in it because of the central role played by examiners in administration of statutes within our jurisdiction. In addition to the higher salary scale provided for examiners generally, this bill has two other features which are significant to the administrative process. One is the fact that the statute itself prescribes the grade for examiners in each agency. Secondly, it places all examiners in any agency in the same grade. Both these changes take away discretion now exercised by the Civil Service Commission with respect to the assignment of examiners in various agencies to specific salary grades. I recognize that there are a number of arguments for and against the vesting of this discretion in the CSC. Two of the arguments in favor of withdrawing CSC discretion appeal to me as meriting particular study. One is that in determining whether to reclassify the position of an examiner in a given agency the CSC is alleged to give undue weight to the volume of the record made in proceedings handled by an examiner. Such a practice, if in truth it is followed, tends to defeat the objective of simplifying proceedings and shortening records. An examiner who hopes for a reclassification of his position or for promotion to a higher grade already allocated to the agency is said to face the dilemma of being penalized if he courageously exercises his authority to confine the testimony to the relevant and important issues, reducing its volume and sharpening the issues, or of being rewarded if he allows the parties to prolong the proceedings and encumber the record with a mass of irrelevant material.

A second point urged in favor of the proposed change is that where examiners in any agency are assigned to two or more grades, the CSC is believed to give great weight to the recommendations of the agency for the promotion of examiners. The result, it is said, is that in certain agencies examiners in lower grades are susceptible to pressure because of the fear that their opportunity for promotion will be jeopardized if they propose decisions contrary to the desires of senior staff members or of individual members of the agency. I refer to these matters not to pass judgment on their merits, but simply to indicate that they deserve serious attention in the consideration of H.R. 11669.

With respect to the proposal to assign examiners in the major regulatory agencies to a higher grade under the Classification Act of 1949, I was interested to discover that in 1941 the Attorney General's Committee on Administrative Procedure recommended that for major agencies, salaries for hearing commissioners should be $7,500 and for chief hearing commissioners, $8,500. Translated into the deflated dollars of 1960, these figures would, I believe, exceed the highest salary now paid to examiners in these agencies.

To make the best use of their examiners' time and skill, agencies must furnish them adequate working quarters, facilities, and assistance. Unhappily some agencies have not found it possible to do this. In such cases a modest investment in additional space equipment and clerical and technical assistance would probably pay large dividends in sounder decisions and speedier disposition of cases.

The Government, and the people, are fortunate in having men and women of your stature and dedication to duty who are willing to accept, even under adverse conditions, the responsibilities of adjudicating the almost unbelievably complex cases arising under statutes regulating various forms of business enterprise. The Subcommittee on Legislative Oversight has benefited greatly by the insight into the administrative process presented by members of your conference who have participated in its panel discussions. I bespeak your continued interest and cooperation in our efforts to hammer out legislation to improve this process and to put an end to the abuses which our hearings have revealed.

SENATE

MONDAY, MAY 9, 1960

The Senate met at 12 o'clock meridian, and was called to order by the Vice President.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Our Father, God, as we turn to Thee, from whom no secrets are hid, save us from softly spoken insincerities.

In the revealing mirror of prayer, all the speeding, jostling world which continually closes about us and impinges upon us is shut out, as in Thy presence we see only ourselves as we really are. As we look steadily at our own image, we pour contempt on all our pride.

Give us the grace to rebuke the unlovely things we try to forget or ignore, as we become so conscious of the faults of others. Give us boldness to disapprove that which we would be better without. We would that the best within us may come to rule our lives until we live as, in our highest hours, we really want to live, and until our daily deeds and our attitudes to others, near or half a world away, are the answer to our prayers.

In the dear Redeemer's name we ask it. Amen.

THE JOURNAL

On request of Mr. MANSFIELD, and by unanimous consent, the reading of the Journal of the proceedings of Friday, May 6, 1960, was dispensed with.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILL

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries, and he announced that on May 6, 1960, the President had approved and signed the act (S. 1751) to place in trust status certain lands on the Wind River Indian Reservation in Wyoming.

REPORT OF COMMISSION ON INTERNATIONAL RULES OF JUDICIAL PROCEDURE—MESSAGE FROM THE PRESIDENT

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which

was read and, with the accompanying report, referred to the Committee on the Judiciary:

To the Congress of the United States:

Pursuant to the provisions of Public Law 85–906, as amended, I transmit herewith for the information of the Congress the First Annual Report of the Commission on International Rules of Judicial Procedure covering the period ending December 31, 1959.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE.

EXECUTIVE MESSAGE REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate a message from the President of the United States submitting the nomination of Robert A. Bicks, of New York, to be an Assistant Attorney General, which was referred to the Committee on the Judiciary.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 10809) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. BROOKS of Louisiana, Mr. MCCORMACK, Mr. GEORGE P. MILLER, Mr. TEAGUE, Mr. MARTIN, Mr. FULTON, and Mr. MCDONOUGH were appointed managers on the part of the House at the conference.

The message also announced that the House had passed a bill (H.R. 11713) to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message further announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the President pro tempore:

S. 722. An act to establish an effective program to alleviate conditions of substantial and persistent unemployment in certain economically depressed areas; and

S. 1062. An act to amend the Federal Deposit Insurance Act to require Federal approval for mergers and consolidation of insured banks.

HOUSE BILL PLACED ON CALENDAR

The bill (H.R. 11713) to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes, was read twice by its title and placed on the calendar.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. MANSFIELD. Mr. President, under the rule, there will be the usual morning hour; and I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

CALL OF THE CALENDAR DISPENSED WITH

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the call of the calendar, under the rule, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. MANSFIELD, and by unanimous consent, the Foreign Relations Committee and the Committee on Interior and Insular Affairs were authorized to meet during the session of the Senate today.

AMENDMENT OF CHAPTER 37, TITLE 38, UNITED STATES CODE, RELATING TO IMPROVEMENT OF VETERANS' ADMINISTRATION LOAN GUARANTY PROGRAM

The VICE PRESIDENT laid before the Senate a letter from the Administrator, Veterans' Administration, Washington, D.C., transmitting a draft of proposed legislation to amend chapter 37 of title 38, United States Code, to improve the effectiveness of the Veterans' Administration loan guaranty program, which, with the accompanying paper, was referred to the Committee on Labor and Public Welfare.

PETITION

The VICE PRESIDENT laid before the Senate the petition of Mrs. H. W. Beatie, of Walnut Creek, Calif., relating to foreign and domestic aid, which was referred to the Committee on Appropriations.

CONCURRENT RESOLUTION OF SOUTH CAROLINA GENERAL ASSEMBLY

Mr. THURMOND. Mr. President, on behalf of myself and my colleague, the senior Senator from South Carolina [Mr. JOHNSTON], I present, for appropriate reference, a concurrent resolution of the General Assembly of South Carolina expressing the concern of the general assembly over the unfair competitive situation in which the textile industry of the United States finds itself and memorializing the Congress of the United States to take immediate steps to protect this industry which employs thousands of persons and is vital to the continued growth and prosperity of South Carolina and many parts of the Nation.

There being no objection, the concurrent resolution was referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

CONCURRENT RESOLUTION EXPRESSING THE CONCERN OF THE GENERAL ASSEMBLY OVER THE UNFAIR COMPETITIVE SITUATION IN WHICH THE TEXTILE INDUSTRY OF THE STATE FINDS ITSELF AND MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO TAKE IMMEDIATE STEPS TO PROTECT THIS INDUSTRY WHICH EMPLOYS THOUSANDS OF PERSONS AND IS VITAL TO CONTINUED GROWTH AND PROSPERITY OF THIS STATE AND MANY PARTS OF THE NATION

Whereas the textile industry of the State of South Carolina and many other States of the Nation finds itself in a highly competitive market with foreign goods priced from 20 to 50 percent under those made in the United States; and

Whereas the reason for this great differential in price is the cheap labor of foreign countries of a much lower standard of living which makes possible placing on the markets of the world products, the selling price of which is far below even the cost of production in the United States due to our higher wage scale and standard of living; and

Whereas the general assembly recognizes that if the flood of cheap foreign goods is not regulated to the extent where our own industry is placed on a basis of fair competition the textile industry will be forced out of business; and

Whereas the loss of an industry the size and importance of the textile mills will be a great blow to the progress of the State of South Carolina and other States similarly affected: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the general assembly does hereby express its deep concern over the flood of cheap foreign goods being placed on the markets of the United States and memorializes the Congress of the United States to take immediate steps to enact remedial legislation; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the Senate and the Speaker of the House of Representatives of the Congress and each U.S. Senator from South Carolina and each Representative from this State in the Congress of the United States.

RESOLUTION OF BUFFALO AIRPORT MANAGEMENT CLUB

Mr. KEATING. Mr. President, I want to call attention today to a resolution of the Buffalo Airport Management Club calling for the repeal of the Federal excise tax on transportation. I ask unanimous consent that this resolution be printed at this point in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

At its regular monthly meeting on May 3, 1960, the Buffalo Airport Management Club, by unanimous vote, directed that the following resolution be transmitted to you:

"Whereas there is presently pending before the Congress of the United States legislation which would repeal the tax on transportation of persons: Now, therefore, be it

"*Resolved*, That the Buffalo Airport Management Club representing approximately 90 individual members of management engaged in the community and business life of the Greater Buffalo International Airport, does hereby petition and respectfully urge you to enact into law such legislation as will repeal the 'wartime' excise tax upon the transportation of persons."

Very sincerely yours,

L. G. RILEY,
President.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. McCARTHY (for himself, Mr. McNAMARA, Mr. CLARK, Mr. RANDOLPH, Mr. YOUNG of Ohio, Mr. HARTKE, and Mr. McGEE):

S. 3505. A bill to revise, extend, and improve the unemployment insurance program, and for other purposes; to the Committee on Finance.

(See the remarks of Mr. McCARTHY when he introduced the above bill, which appear under a separate heading.)

By Mr. BRIDGES:

S. 3506. A bill for the relief of Athansia G. Koumontsos; to the Committee on the Judiciary.

By Mr. SMATHERS:

S. 3507. A bill for the relief of Capt. Ernest Mountain; to the Committee on the Judiciary.

S. 3508. A bill to amend and extend the provisions of the Sugar Act of 1948, as amended; to the Committee on Finance.

(See the remarks of Mr. SMATHERS when he introduced the last above-mentioned bill, which appear under a separate heading.)

By Mr. CLARK:

S. 3509. A bill to amend certain laws relating to the provision of private and public housing and the renewal of urban communities, and for other purposes; to the Committee on Banking and Currency.

(See the remarks of Mr. CLARK when he introduced the above bill, which appear under a separate heading.)

By Mr. DWORSHAK:

S. 3510. A bill to remove the restriction relating to public use placed upon certain land held by the Minidoka Irrigation District in Rupert, Idaho; to the Committee on Interior and Insular Affairs.

By Mr. BUTLER:

S. 3511. A bill for the relief of Vincent Lee Chebat; to the Committee on the Judiciary.

By Mr. WILLIAMS of New Jersey (by request):

S. 3512. A bill to amend the laws relating to cooperative housing; to the Committee on Banking and Currency.

NATIONAL STANDARDS FOR UNEMPLOYMENT INSURANCE SYSTEMS

Mr. McCARTHY. Mr. President, I introduce, for appropriate reference, a bill to establish national standards for the unemployment insurance systems and to provide for a degree of Federal responsibility for the long-term unemployed.

This bill is the outgrowth of the study made by the Special Senate Committee on Unemployment Problems. Joining me as cosponsors are the other members of the majority on the committee: the Senator from Michigan [Mr. McNAMARA], the Senator from Pennsylvania [Mr. CLARK], the Senator from West Virginia [Mr. RANDOLPH], the Senator from Indiana [Mr. HARTKE], and the Senator from Wyoming [Mr. McGEE].

The study of the Committee on Unemployment Problems has demonstrated that unemployment continues to be a serious problem. It is also clear that in many of its causes and effects it is a national problem. Unemployment is the result of complex and interrelated factors. It is influenced by the fiscal, monetary and trade policies of the Federal Government as well as by business practices, technological advances, changes in consumer preferences and cyclical trends in the economy.

There is a point at which the responsibility for protection against the hazard of unemployment is beyond the means and the duty of the individual employer or of the States. It becomes a Federal responsibility to establish standards and assist the State programs.

The problem of unemployment will continue to get worse unless a number of private and public measures are adopted. Over 4 million citizens were unemployed in March, nearly half of them men 25 years of age and over. The rate of unemployment has been 5 percent or more in 27 of the last 29 months. Automation is eliminating many unskilled jobs, and the labor force is expanding rapidly because of the larger number of new entrants. A series of positive policies and programs to meet unemployment problems is badly needed.

The Congress has regularly adjusted the old-age and survivors insurance provisions of the Social Security Act, but we have done very little to keep unemployment insurance in line with changes in the economy and changes in the types of unemployment and the needs of the unemployed. We have reached the point where revision of the unemployment insurance system requires immediate attention.

There is the need, first of all, to extend coverage. Some 46 million workers are presently covered but another 13 million who work for wages and salaries are not. This bill would not include all of these, since there are some unresolved problems about how to handle some categories of workers, but it would extend coverage to employees of small firms. It is a matter of serious concern that in March of this year only 2.2 million of the more than 4 million unemployed persons were eligible for benefits. The rest were ineligible, either because they had exhausted their rights or had been excluded from coverage in their previous job.

Insurance benefits vary widely from State to State, but the overall deficiency is indicated by the fact that in all States the maximum benefit, as a percentage of the average weekly wage is smaller now than it was 20 years ago. In 1939 maximum benefits of 60 percent or more of the average weekly wage were paid by 32 States. Today, only one State maintains this average. The bill being introduced today would set benefits at 50 percent of the employee's average weekly wage, up to a maximum of two-thirds of the statewide average weekly wage.

Perhaps the most serious deficiency which has developed in the unemployment insurance system is in regard to the duration of benefits. In 38 States the duration varies according to the worker's earnings during the base period and may be as low as 6 weeks, with the most common maximum duration of benefits being set at 26 weeks. This is inadequate to cope with the types of unemployment problems we are experiencing today. The problem of the long-term unemployed, especially in areas of chronic unemployment, is a most serious one. We cannot attain the purposes of the unemployment insurance program without more realistic provisions for the long-term unemployed. In March, for example, 1.2 million of the 4 million unemployed had been out of work 15 weeks or longer. The number of persons exhausting their State benefits rose from 125,000 in February to an estimated 155,000 in March. Even in 1957, a relatively prosperous year, 3 million of the 9.5 million persons who experienced some unemployment that year were unemployed 15 weeks or longer and about 1.5 million were unemployed 27 weeks or longer.

Under provisions of this bill all States would adjust their systems to permit eligible unemployed to receive up to 39 weeks of benefits. In recognition of the special problem created for industry and for the States by long-term unemployment, the bill provides for an unemployment reinsurance program to aid States whose reserves have been depleted by unusually severe unemployment. The bill also provides for a federally financed program for an additional 13 weeks of coverage to workers whose rights have been exhausted under State programs. This bill differs from many others which have been introduced in this and preceding Congresses chiefly in that it does provide for some degree of Federal responsibility for the long-term unemployed. However, the concept is not new. As far back as 1948 the Advisory Council on Social Security made a report to the Finance Committee of the Senate in which it suggested extended unemployment benefits financed "either on a joint State-Federal basis or by the Federal Government alone," for an additional 13 to 26 weeks.

Finally, serious weaknesses in financing the unemployment insurance systems have developed. Originally, as Members of the Senate know, the law set the maximum employer contribution at 3 percent of the first $3,000 paid an employee annually, and it was expected that this amount would be needed to meet the costs of the program.

As unemployment declined, as experience rating provisions took place, and as increases in benefit payments lagged behind the general rise in wages, the average employer contribution has declined. It was approximately 1.3 percent between 1956 and 1958 and 1.7 in 1959. The maintenance of the $3,000 limit has resulted in an uneven impact on industries and States, and it no longer raises sufficient revenue to provide the amounts required for reasonable benefits and duration of payments. The bill which I am introducing today provides for raising the base from $3,000 to $4,800, the figure used in the old age and survivors insurance system. The financing of the additional 13 weeks would also take a slight adjustment in the three-tenths of 1 percent now retained by the Federal Government. A preliminary estimate of the cost of the 13 weeks federally financed program is as follows: If all States had 39 weeks maximum duration and if they all provided for 50 percent of weekly wages up to a maximum of two-thirds of the statewide average weekly wage, then the estimated additional cost of the 13 weeks would have been $100

million in 1957, $500 million in 1958, and $200 million in 1959. Such payments would have been effective both in alleviating the suffering of the unemployed and in stimulating the economy during the recession.

Mr. President, this bill has the support of the majority members of the Committee on Unemployment Problems. I ask unanimous consent that the bill lie on the table for 1 week in order that other Members who wish to cosponsor it may have an opportunity to do so.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will lie on the desk, as requested by the Senator from Minnesota.

The bill (S. 3505) to revise, extend, and improve the unemployment insurance program, and for other purposes, introduced by Mr. McCARTHY (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Finance.

Mr. McCARTHY. Mr. President, I also ask unanimous consent that excerpts from the report of the Special Committee on Unemployment Problems be printed in the RECORD at this point in my remarks.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM REPORT OF SPECIAL COMMITTEE ON UNEMPLOYMENT PROBLEMS

INADEQUATE COVERAGE

About 46 million of the 72 million persons in the total labor force, including railroad and Federal workers and members of the Armed Forces, have unemployment insurance protection. On the other hand, some 13 million who work for wages and salaries are not protected. As shown in chart 13, these 13 million include:

	Million
Employees of small firms	1.7
Employees of nonprofit firms	1.3
Farm workers	1.9
State and local government employees	5.6
Domestic servants	2.5
Others	.3

If a worker moves from a job which is covered by unemployment insurance to one which is excluded, he loses protection with respect to the excluded employment; should he become unemployed, his benefits will be lower than they would have been if his employment earnings from both jobs had been counted.

The Advisory Council to the Senate Committee on Finance in 1948 pointed out that "the laundress and the cook in a hospital (not covered) have the same need for protection as those in a hotel (covered); [the same applies to] * * * the janitor in a private school and * * * in a retail store, or the elevator operator in a YMCA and * * * in a factory."

The beneficial effects of the unemployment insurance system are weakened by the exclusion of these millions of wage and salary workers.

BENEFITS

A basic concept of our unemployment insurance system is that a worker's weekly benefit should have a reasonable relationship to his regular weekly wages; it is commonly accepted that the benefit should be not less than half the regular wage. The States establish the relationship of benefits to weekly wages in various ways. In many States the individual weekly benefit is determined as a specified fraction of high earnings for a 3-month period, up to the permitted maximum. The fractions vary, but all produce a benefit of about half the claimant's weekly wage as averaged over a 3-month period. Eleven States provide additional amounts if the claimant has family dependents.

The individual benefit formulas, exclusive of dependent allowances, operate within a range defined by weekly minimum and maximum amounts. The maximum weekly benefit amounts vary considerably from State to State; the lowest is $26 and the highest $55. These maximums are higher than the maximums of 20 years ago, but they have not kept pace with the rise in wages; individual benefit formulas are now limited to a narrower range of wages than they once were.

It is sometimes argued that maximum benefits (related to gross wages) have actually maintained a constant relationship to takehome pay because withheld income taxes are higher now than they were 20 years ago. The great increase in nonwage remuneration (welfare benefits, vacations, etc.) tends, however, to offset increased tax deductions.

In every State the maximum benefit, as a percentage of the average weekly wage in covered employment, is smaller now than 20 years ago. The following table shows the 1939 and 1959 distribution of States according to maximum benefit amounts as related to average wages:

Maximum weekly benefit amount as a percentage of average weekly wage	1939		1959	
	Number of States	Percent of covered workers	Number of States	Percent of covered workers
Over 70 percent	16	15	0	0
60 to 69 percent	16	15	1	.3
50 to 59 percent	17	55	13	22.9
40 to 49 percent	2	15	27	50.9
Under 40 percent	0	0	10	25.9

Prepared from data supplied by Bureau of Employment Security, Department of Labor.

Maximum benefit amounts of 60 percent or more of average weekly wages were paid by 32 States in 1939, compared with 1 State today. The decline of these maximums as percentages of wages has weakened the role of the individual benefit formulas and prevented more and more beneficiaries from receiving benefits of half their own lost wage.

The unemployment insurance program has in effect changed from providing benefits in some relationship to the claimant's wages, to providing flat benefits for most claimants. In some States, the benefits of three out of four claimants are limited by the maximums to less than half of the actual wage loss.

The duration of benefits also varies from State to State. In 12 States, all workers who qualify are entitled to benefits for the same duration—20 to 30 weeks. The other 38 States and the District of Columbia vary the duration of benefits according to the individual's total base-period earnings, but establish an overriding maximum which is most commonly 26 weeks, but varies from 20 to 39 weeks. Because the duration of benefits varies according to earnings during the base period, workers in some States may be entitled to benefits for as few as 5 or 6 weeks. These short periods result from legal provisions under which workers qualify for benefits on the basis of various periods of prior employment and earnings. More adequate protection is provided in States whose laws require workers to demonstrate substantial attachment to the labor force and allow a uniform period of duration for all who meet this requirement.

The funds for unemployment insurance are raised by a tax on the employer's payroll. The maximum rate for which an employer can get credit against the Federal tax is 3 percent, but in practice the rate is much lower in most States, depending on the unemployment experience of the individual employer and on the rate and duration of benefits allowed by State law. For the system as a whole, benefit costs have been more than 2 percent of taxable wages in only 3 years since 1940; 1.5 percent or less in 12 years; and less than 1 percent in 7 years. In terms of total wages, benefit costs have been 1 percent or less in 13 of the past 20 years. Figures for the past 20 years indicate that our unemployment insurance system has been less expensive than was anticipated when the 3-percent maximum rate was set for employer contributions.

Unemployment insurance benefits made up about one-fifth of the wages lost through unemployment in the 1957–58 recession. The low ratio of benefits to wages declined during the recession, and an increasingly large number of workers exhausted their rights to benefits. During 1958, 2.6 million persons out of the 8.2 million who received benefits, or 1 out of 3, exhausted their rights before returning to their old jobs or finding new ones. Most States paid benefits for a maximum of 26 weeks to workers with good records of employment and earnings. But even if all States had paid 26 weeks of benefits to all beneficiaries who remained unemployed for at least that period of time, the number who exhausted their benefit rights would have declined by only 600,000, from 2.6 million to 2 million.

When the Federal temporary unemployment compensation program took effect in June 1958, exhaustion of benefit rights had so weakened the effectiveness of the system that only one-half of the 5.4 million unemployed at that time were receiving benefits. The danger of a complete breakdown of the system led the Federal Government to lend money to the States under a temporary program to provide additional payments for the unemployed who had exhausted their benefits. The temporary program extended the duration of benefits for half the original period; 17 States borrowed money under the act to provide these additional weeks of coverage. The program lapsed on July 1, 1959.

WEAKNESS IN FINANCING

When unemployment insurance was established in this country it was expected that an employer contribution of 3 percent of total wages would be required to finance benefits and administrative costs. Initially, the States collected 2.7 percent of employers' payrolls (up to $3,000 annually for each insured employee) to finance unemployment benefits. In subsequent years, as the experience rating provisions of State laws took effect and unemployment declined, employer tax rates also declined. The average employer contribution rate, which averaged about 2.7 percent of taxable wages in 1939 and 1940, declined to 2 percent in 1943 and 1944, to less than 1.2 percent by 1954, remained at approximately 1.3 percent between 1956 and 1958, and rose to 1.7 percent in 1959 as a result of increased recession costs.

The $3,000 wage-base limitation meant that the unemployment insurance tax applied to a decreasing proportion of total wages as wages rose during the last two decades. The tax applied to 98 percent of all wages paid in insured employment in 1938 and 1939, to only 80 percent in 1950, and to less than 66 percent in 1958. If the unemployment insurance tax had been applied to 98 percent of wages in 1959, as in 1939, it would have been necessary to raise the taxable wage base to nearly $10,000 a year. Thus, the relative cost of the program has been declining on two fronts—in the actual rate of contribution and in the proportion of wages to which the contribution rate is applied. In 1959, for example, the average tax rate was 1.7 percent of taxable wages, and represented only about 1.1 percent of total wages.

The $3,000 limitation has had an uneven impact upon industries and areas. Paradoxically, the employer in the lowest wage situations pays contributions on virtually all wages, while in high-wage industries the employer's tax burden in proportion to his

total wage bill is much lower. The financial burden of unemployment insurance has fallen unevenly among States, reflecting in part economic differences in such things as industrial composition and the impact of recession unemployment. The differences also reflect legislative choice in benefit provisions, and in the percentage of payroll subject to the unemployment insurance tax. In 1958, 14 States had average tax rates of less than 1 percent, while the rate in 3 States was 2.6 percent or more of taxable wages.

The present benefit system, financed by an average tax rate of slightly over 1 percent of total wages, permits the States to compete in establishing low contribution rates and discourages the adoption of adequate benefit provisions, since proposals to provide more adequate benefits are inevitably weighed against the effect of increased contribution rates on the competitive position of employers.

Competition among States in lowering tax rates has seriously affected the solvency of many State systems. A number of States had enough money at the end of 1958 to pay benefits for 7 to 8 years at the 1958 unemployment rate, but five others had less than 1 year's reserves. For the country as a whole, reserves have declined substantially in relation to potential liabilities, falling from over 10 percent of total wages in 1945 to under 4 percent by June 30, 1959 (chart 17).

A further illustration of the uneven financing of the unemployment insurance system among the various States is the fact that the Federal Government in 1958 advanced $600 million to States for temporary unemployment benefits, plus $200 million in interest-free loans, while, in the same year, it paid some $200 million in interest to States which had balances in the unemployment trust fund.

SUMMARY

In order to meet more adequately the needs of the unemployed the committee recommends the adoption of Federal legislation to accomplish the following changes in the unemployment compensation system:

1. Removal of restrictions on coverage based on size of firm and type of employment.

2. Establishment of maximum benefit formulas high enough to assure the great majority of covered employees in each State at least 50 percent of their regular weekly earnings.

3. Continuation of benefits for 39 weeks in all States for all eligible persons who have demonstrated a steady attachment to the labor force.

4. Establishment of a permanent federally financed, State-administered system for 13 weeks of supplementary insurance benefits for the long-term unemployed.

5. Revision of methods of financing this program:

(a) The taxable wage base should be increased from the present $3,000 to the $4,800 figure used in the old-age and survivors insurance system.

(b) States whose reserves fall below a determined level in relation to past benefit costs should be required to provide for suspension of experience rating or otherwise to assure sufficient statewide yield.

(c) Present Federal law should be amended to permit States to modify employer tax rates on a statewide basis as well as on the present individual-employer basis, as States find best suited to their needs.

(d) A nationwide reinsurance fund should be established to make grants to States with prolonged duration and high rates of unemployment.

HOUSING AMENDMENTS OF 1960

Mr. CLARK. Mr. President, I ask unanimous consent that I may be permitted to proceed for not in excess of 10 minutes, despite the fact that the Senate is in the morning hour.

The VICE PRESIDENT. Is there objection to the request of the Senator from Pennsylvania? The Chair hears none, and it is so ordered.

Mr. CLARK. Mr. President, I introduce, for appropriate reference, a bill entitled "Housing Amendments of 1960."

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 3509) to amend certain laws relating to the provision of private and public housing and the renewal of urban communities, and for other purposes, introduced by Mr. CLARK, was received, read twice by its title, and referred to the Committee on Banking and Currency.

Mr. CLARK. Mr. President, I should like to comment briefly on the high points of the proposed legislation.

This is a six-part comprehensive housing and urban renewal bill which will be considered during the hearings of the Housing Subcommittee of the Senate Committee on Banking and Currency, which hearings began this morning and will continue for the next couple of weeks.

This bill is a 1-year transition bill to tide us over until a new administration takes office in 1961. It contains enough authorizations and enough Treasury borrowing to provide adequately for the various housing programs until mid-1961.

FEDERAL HOUSING ADMINISTRATION

Mr. President, I wish to speak briefly about the Federal Housing Administration provisions.

The bill would authorize an additional $4 billion of mortgage insurance authorization. While the FHA has not used all of its existing authorization of $15 billion, officials testified both in February and this morning that the existing authority might not suffice to carry them beyond the first of next year.

Another provision in the bill would extend the section 220 program, which was designed to aid housing construction in urban renewal areas, so as to make it available to neighborhoods designated as conservation areas.

The bill also would provide higher loan-to-value ratios for certain types of mortgages in these areas.

This will represent a major new departure in the FHA program. The FHA has been spectacularly successful in the suburbs, but it has never been effectively used in the rehabilitation and conservation of older neighborhoods. From the standpoint of the total housing supply, a house saved is the equal of a house built. These amendments should make it possible for private builders to move aggressively into conservation and rehabilitation work as a phase of each city's urban renewal program.

FEDERAL NATIONAL MORTGAGE ASSOCIATION

Mr. President, with respect to the Federal National Mortgage Association, colloquially known as "Fanny Mae," an additional $150 million is provided for FNMA special assistance programs. This is the same amount sought by the administration, although the administration recommended that the funds be obtained through appropriations rather than direct borrowing from the Treasury, which has been the practice hitherto, ever since FNMA was set up.

The funds, which would be allocated at the discretion of the President, would be available for purchase of FHA-insured mortgages on housing constructed in urban renewal areas and for relocation housing for families displaced by urban renewal and other governmental programs, and would also be available to buy mortgages on housing constructed for the elderly.

URBAN RENEWAL

Mr. President, with respect to urban renewal, an additional $600 million would be authorized for this purpose. This amount is based on a survey made by the American Municipal Association and the United States Conference of Mayors, which shows that the local governments are prepared to carry on an urban renewal program at an annual rate of $600 million.

Mr. President, I ask unanimous consent that a letter of May 9, 1960, directed to me by Raymond R. Tucker, president, American Municipal Association, who is the mayor of St. Louis, and by Richard J. Daley, President, United States Conference of Mayors, who is the mayor of Chicago, be printed in the RECORD at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN MUNICIPAL ASSOCIATION,
Washington, D.C., May 9, 1960.

The Honorable JOSEPH S. CLARK,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CLARK: The American Municipal Association and the United States Conference of Mayors have just concluded a nationwide survey undertaken to determine the extent to which local governments are prepared to carry out urban renewal activity as authorized by the Housing Act of 1949, as amended. This is the third such survey we have conducted, and we believe the results will prove of considerable interest and value to you in considering and initiating legislative proposals to further improve the effectiveness of the renewal program.

Cooperating with AMA and the United States Conference of Mayors in carrying out the actual survey were such other public-interest groups as the National Association of Housing and Redevelopment Officials, the American Institute of Planners, and the National Housing Conference.

When the American Municipal Association originally, in 1957, conceived of the idea of carrying out a national survey of urban renewal needs, it did so to fill a very real need for this kind of information. It was not then, nor is it now, being gathered by any other agency or organization public or private. It was the judgment of the governing bodies of the two principal sponsoring organizations that unless such data were secured, it would be impossible for local government officials to take any kind of a positive and rational stand as to the kind of Federal program required to carry out vigorous and effective local urban renewal programs designed to achieve the progressive elimination of the Nation's slums and blighted areas—a task known to be of considerable dimension.

As you know, during the period from the enactment of the original 1949 act through most of 1957, capital grant authorizations were available in sufficient supply so that every city in every State which was prepared and anxious to undertake programs of urban

renewal was able to benefit from Federal grant moneys being made available. Since the latter part of 1957, inadequate grant authorizations have had the effect of unduly limiting program progress and expansion.

This year's survey shows a deficit of over $500 million in existing capital grant authorizations for only the communities surveyed. Further, the results again fully support the position taken by both the American Municipal Association and the United States Conference of Mayors, that a 10-year, $600 million a year program should be approved by the Congress and vigorously administered by the administrative branch.

It is our position that local governments must be positively encouraged to carry out urban renewal and that adequate grant money should be made available as the community is ready to move ahead. The alternative will be a nation saddled with an urban renewal program without end, urban communities burdened forever with slums and blighted areas.

Only through such a long-range program can the cities of the Nation purposely plan for the ultimate elimination of their slums and blighted areas and move toward the goal of the 1949 Housing Act—decent housing in a suitable living environment for every American family.

Very truly yours,

RAYMOND R. TUCKER,
President, American Municipal Association; Mayor of St. Louis.

RICHARD J. DALEY,
President, United States Conference of Mayors; Mayor of Chicago.

Mr. CLARK. Mr. President, I also ask unanimous consent that a "Summary of Results of the 1960 Urban Renewal Survey," conducted by the American Municipal Association and the U.S. Conference of Mayors, be printed in the RECORD at this point in my remarks.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF RESULTS OF THE 1960 URBAN RENEWAL SURVEY CONDUCTED BY THE AMERICAN MUNICIPAL ASSOCIATION AND THE U.S. CONFERENCE OF MAYORS

SCOPE OF SURVEY

Questionnaires were sent to all cities with a population of 35,000 or more, plus all other local governments in the 50 States and the District of Columbia (but not Puerto Rico) thought to be interested or considering the initiation of an urban renewal program.

Over 1,200 local governments were requested to respond by completing and returning the questionnaire. Local officials assigned the task of handling the survey were instructed to make all estimates "in line with your community's fiscal and relocation capabilities."

RESPONSE

By May 1, 1960, 446 communities had responded. A tabulation of the number of questionnaires mailed and responses on a State basis is attached.

Of the 446, 258 answered in some detail. Of this group, 198 had one or more Federal project programs under way, representing slightly over half of the total of 390 localities (exclusive of Puerto Rico) estimated as having been active in the Federal program as of December 31, 1959.

Although the remaining 188 communities returned no useful information on the survey form, 125 of this group did indicate positive interest in the Federal program and an intent to further consider the feasibility of local renewal action.

Almost three-fourths of the Nation's cities with a population of 50,000 or more filed a completed questionnaire. Of the 60 cities in this population group which did not respond, less than half were active in the program at the end of 1959.

SIGNIFICANCE OF SURVEY RESULTS

Thus while the survey totals probably include the estimated immediate needs of about three-fourths of the Nation's larger cities, they nevertheless are based on information furnished by less than half of the communities now actively engaged in renewal activity as provided for under the Housing Act of 1949.

The survey totals do not include any estimates of needs other than those furnished by the community. The totals do not include any projections from the sample responding.

Total estimates of needs, by States, for the periods covered are included in the attached tabulation.

SUMMARY OF SURVEY RESULTS

Forty-seven cities indicated that they had applications pending with URA for increases in existing capital grant reservations amounting to $132 million.

Thirty-eight cities indicated that they had applications pending for new projects with URA which they estimated would require $173 million in Federal grant funds.

Of the over 430 communities now participating in the program, 108 indicated that they intended to file applications during calendar 1960 covering projects which would require $458 million in Federal capital grant funds.

In addition, 93 cities indicated that they would, sometime in the near future, file applications for $44.5 million in grant funds to carry out community renewal programs as authorized under the Housing Act of 1959.

Thus, for calendar 1960, local governments will request URA to act on applications for either increases in existing grant reservations for existing projects or for new projects involving in excess of $763 million.

Of the over 430 local governments now active in the Federal program responses from 131 indicated intent to file applications for new projects during calendar 1961 in the amount of $424.2 million. Assuming one-half of these applications will be filed during the first 6 months of 1961, i.e., $212.1 million, it is estimated the total Federal grant funds required between the 18-month period from January 1, 1960, to July 1, 1961, will exceed $1,019 million, which amount includes the additional $44.5 million in grant funds it is expected will be requested from URA for the completion of community renewal plans during this period.

Against this total need of $1,019 million there currently exists in unreserved funds from 1960 an estimated $200 million, plus the $300 million which will become available on July 1, 1960. The net deficit amounts to approximately $517 million—this is the amount needed to accommodate only the communities which were able to file responses to our questionnaire. This amount does not provide for those communities which were unable to file need estimates nor does it provide for the needs of the new communities which will be initiating new programs during this period.

FUTURE NEEDS

One hundred and eighty-one of the communities responding were able to provide estimates as to their anticipated grant needs for the 3-year period, 1962 through 1964. The total amounted to $969.8 million, or an annual average need of $323.3 million.

For the 5-year period, 1965 through 1969, 170 communities estimated their grant needs at $1,765.9 million, or an estimated average annual grant need of, for these local governments alone, $353.2 million.

Considering the relatively small number of communities able to make estimates as to future needs at this time and in anticipation of further increases in number of communities participating in the program, a $600 million annual authorization of Federal grants seems fully justified.

[1] Community with an active renewal program.

Mr. CLARK. Mr. President, in connection with urban renewal, a most interesting article was recently published in Architectural Forum for May 1960. I point out that this is one of the publications of the Luce empire.

The article summarizes a study made by ACTION, the American Council To Improve Our Neighborhoods.

The American Council To Improve Our Neighborhoods, on whose board of directors I have the honor to serve, consists largely, although not entirely, of farsighted and intelligent businessmen who are interested in the problem of shelter for all of our people.

The former president of ACTION is Mr. Andrew Heiskell, formerly the publisher of Life magazine, and presently president of Time, Inc., the holding company for the Luce publications.

The present active president of ACTION is Mr. Roy Johnson, who was at one time executive vice president of the General Electric Co., and who has only recently resigned from a position of the greatest importance in connection with our missile and space programs in the Department of Defense.

This study, I think, can be taken as having been sponsored by conservative business as well as by a few of us politicians and by an occasional social worker and labor leader. It is estimated that the total cost of desirable urban renewal is $42 billion a year in excess of current spending. This means current spending by private industry and commerce, by local governments, by State governments, and by the National Government.

Mr. President, I ask unanimous consent that this article from Architectural Forum be printed in the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ACTION PUTS COST OF TOTAL URBAN RENEWAL AT $42 BILLION A YEAR OVER CURRENT SPENDING

What would it cost to accomplish the normal expansion of all urban centers of the United States, the elimination of all of their slums, and the renewal of all of their deteriorating areas to a modest standard of desirable, safe, sanitary, and decent conditions during the next 10 years?

Would the combined expense for this growth and regeneration have inflationary effects on the national economy, or would the economic activity it stimulated increase national prosperity?

The gross cost would be approximately $100 billion a year, or $42 billion a year more than outlays of about $58 billion annually now being made for these purposes (estimated as of 1958), according to a research report made last month to a directors meeting of ACTION (the American Council To Improve Our Neighborhoods) in Boston. At the same meeting, however, there was little agreement on whether spending for these purposes at this rate would prove a blessing or a burden on the economy.

The cost estimate, reported by Martin Meyerson, vice president and research director of ACTION, and director of the MIT Harvard Joint Center for Urban Studies, was developed from an intensive case study of an east coast city of about 300,000 population made by Reginald R. Isaacs, professor of city planning at Harvard, and John W. Dyckman, University of California economist. Projected on a national scale, the Dyckman-Isaacs study estimated that total renewal could be achieved by the following increased outlays in major categories of building, modernization, and community improvement:

For private expenditures for ordinary maintenance, repair, and rehabilitation, a boost from today's rate of $15 billion to $25 billion a year.

For Federal, State, and local public expenditures for official redevelopment and urban renewal projects, an advance to $5 billion a year from the current spending at a rate of less than $1 billion. (Meyerson later suggested that this $5 billion projection might be higher than necessary, inasmuch as it was based on conditions found in an old eastern city, whereas many newer western cities would require relatively less public renewal activity.)

For private expenditures that are generated by official public redevelopment and renewal projects, an increase from $4.5 billion to $13.5 billion a year.

For regular new private building for normal community growth, an advance from $26 billion to about $31.5 billion a year.

For new schools, public buildings, community facilities, and roads, sewers, and utilities, an increase from $10 billion to $20 billion a year.

For all other miscellaneous spending for improving urban environments, an increase from $1.5 billion to $5 billion a year.

The $58 billion spent for all types of urban growth, development, and renewal in 1958 represented 13 percent of the gross national product that year, said Meyerson. If the Nation's economic growth continued at a rate of 3 percent a year, he pointed out, expenditures of $100 billion a year in 1970 would then represent 16 percent of gross national product. But if a 5-percent growth rate were achieved, by 1970 the expenditure of $100 billion a year would still represent only 13 percent of gross national product.

After Meyerson had outlined these proposed expenditures for urban growth and total renewal, Walter E. Hoadley, Jr., treasurer of Armstrong Cork Co., told the ACTION meeting that one of the Nation's biggest problems during the sixties would be how to meet all of its needs, including extensive urban renewal, without incurring inflation, or, "how to balance our unlimited desires with our limited resources." Without disputing the need or desirability of urban renewal, Hoadley stressed that both private and public expenditures ultimately must be financed out of national savings. He noted that if debt is incurred, in an unbalanced relation to income or savings, inflation will result, savings will decline, and the entire economy could be disrupted.

On the other hand, Gustave Amsterdam, chairman and president of Bankers Securities Corp., of Philadelphia, suggested that the public purpose served by urban renewal justified increased Federal expenditures for this purpose. In the latest Federal budget, he said, roughly 60 percent of expenditures are allocated for defense; 8 percent for agriculture, representing 12 percent of the population; 7 percent for veterans, representing 37 percent of the population; and 0.2 percent for urban renewal, representing 64 percent of the population. The population explosion is concentrated in its metropolitan areas, said Amsterdam. Federal expenditures for renewal, at least up to a rate of $1 billion a year, would not be inflationary, he declared, nor would such Federal assistance involve any local loss of freedom.

There is no question that spending for urban growth and renewal ought to reach $100 billion a year by 1970, said Jervis Babb,

chairman of the area development committee of Committee for Economic Development. But he made no estimate about what portion should be public. Babb said his committee is still drafting a policy statement on the public interest in urban renewal to be submitted for approval by the full CED. John Nixon, director of CED's area development committee, likewise avoided giving any clue to the stand this committee or the full CED might take on urban renewal. As a teaser, he deliberately ended a talk on economic base studies and urban renewal with a question. Noting that "the automobile has depopulated cities of taxpayers and allowed both industry and upper-income families to move to taxfree suburbia," he asked: If cities could develop practical means for taxing those who have moved to the suburbs, but who benefit from the fact that they are still within the metropolitan area, would this be preferable to the present system of Federal taxes and Federal grants to help finance the writedown subsidies involved in public urban renewal programs?

Those who took up Nixon's question felt that local area taxation might be preferable, but that it would be impractical. Effective, equitable metropolitan taxation would be possible only through metropolitan government, and the widespread introduction of that is still largely unattainable. In the meantime, as it was pointed out by Joseph W. Lund, chairman of the Boston Redevelopment Authority and former president of the National Association of Real Estate Boards, the continuing erosion of the $300 billion of real estate values in central cities, if urban renewal programs are not pressed, will be just as much a loss and just as detrimental to the national economy as the deterioration or loss of any other national resources or assets.

LOW-RENT PUBLIC HOUSING

Mr. CLARK. Mr. President, the bill I have introduced would deal with low-rent public housing by making available the unused 100,000 units originally authorized by the Housing Act of 1949. Moreover, it would make it possible for low-rent housing authorities to accept more elderly persons. Such a provision is needed, because of the low incomes of the elderly people as a group.

The bill would authorize an additional subsidy of $120 per elderly family, where this is necessary to prevent the project from operating at a loss.

I wish to point out, Mr. President, that this provision results from a recommendation made by the Special Subcommittee of the Committee on Labor and Public Welfare, under the chairmanship of the distinguished senior Senator from Michigan [Mr. McNAMARA] on which subcommittee I had the honor to serve.

The bill would also authorize public housing authorities to sell units to tenants in cases where the income of the tenant rises above the ceiling permissible for public-housing occupants. This sales provision is particularly designed for projects which consist of scattered single-family houses, rather than multi-family units.

There is a philosophical question involved in this on which the Senate has heard debate in the last few years. I hope we shall have an opportunity, when the bill comes to the Senate for consideration, to make a case in support of this provision.

HOUSING FOR THE ELDERLY

The bill increases the authorization for housing for the elderly, under the new FHA program enacted last year, from $50 million to $100 million.

It also adds a provision requiring that all projects for the elderly, whether carried out under FHA or by public-housing authorities, include special facilities to serve the health, social, and recreational needs of elderly persons.

Both of these provisions carry out recommendations of the Subcommittee on Problems of the Aged and Aging, headed by Senator PAT MCNAMARA, Democrat, of Michigan.

PLANNING SCHOLARSHIPS AND FELLOWSHIPS

The bill authorizes $500,000 annually for 3 years for scholarships and fellowships for the graduate training of professional city planning and housing technicians and specialists. This provision was passed by the Congress last year in housing bills which were vetoed by the President.

This provision has been strongly urged for many years by the distinguished junior Senator from Alabama [Mr. SPARKMAN]. I need only say that the short supply in which cities and metropolitan areas find the planning provision is one of the very real deterrents to further appropriate progress in the general field of metropolitan development and urban renewal.

Mr. President, I ask unanimous consent that there may appear at this point in my remarks a section-by-section analysis of the bill I have just sent to the desk for referral.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

SECTION-BY-SECTION ANALYSIS OF THE PROVISIONS OF S. 3509, HOUSING AMENDMENTS OF 1960

FHA INSURANCE PROGRAMS

Section 2(a) increases FHA's general mortgage insurance authorization by $4 billion.

Section 2(b)(1) amends section 220 of the National Housing Act to make it clear that the program may be used to accomplish conservation and prevention of deterioration of housing in addition to being used for housing rehabilitation purposes.

Section 2(b)(2) amends section 220 of the National Housing Act to make the program applicable outside of urban renewal areas in those neighborhoods in which a municipality is carrying out a code enforcement program under an approved workable program and undertaken on an area basis, with the approval of the HHFA Administrator.

Section 2(b)(3) amends section 220 of the National Housing Act to permit, in the case of dwellings designed principally for a two or more family residence, the FHA Commissioner to approve a mortgage involving a principal obligation in an amount equal to the sum of 97 percent of $13,500 of the Commissioner's estimate of the appraised value of the property and (2) 90 percent of such appraised value in excess of $13,500.

FEDERAL NATIONAL MORTGAGE ASSOCIATION

Section 3 provides an additional $150 million mortgage purchase authority under the special assistance function of the Federal National Mortgage Association. These funds, which are allocated at the discretion of the President, would be available for the purchase of FHA insured mortgages on housing constructed in urban renewal areas and for relocation housing and housing for the aged.

URBAN RENEWAL

Section 4(a) provides an additional $600 million Federal capital grant authorization be made available immediately upon enactment.

Section 4(b) increases from $3,000 to $5,000 the amount business concerns may be paid for their reasonable and necessary moving expenses and any actual direct losses for which they are not compensated resulting from their displacement as a result of urban renewal or certain other governmental activities.

Section 4(c) provides that land already acquired as a part of an urban renewal project may be used for public low-rent housing purposes in addition to land so acquired as a part of future projects.

Section 4(d) amends section 110(c) of the Housing Act of 1949 to provide that loans and grants may be made to local Public Agencies for the purpose of carrying out pilot rehabilitation programs within renewal areas limited to no more than (1) 50 dwelling units or (2) 2 percent of the total number of dwelling units designated for rehabilitation under the renewal plan, whichever is less.

Section 4(e) provides for certan technical amendments relating to the program established in 1959 to assist colleges and universities to carry out programs of blight elimination in areas to be developed by them to handle expanding needs for essential facilities.

LOW RENT PUBLIC HOUSING PROGRAMS

Section 5(a) authorizes the payment of an additional annual Federal contribution in respect to each elderly family of not to exceed $120 per year, provided such additional contribution is required in any year to avoid a deficit in project operation.

Section 5(b) makes available the remaining balance of the annual contribution authorization contained in the Housing Act of 1949. The effect of this restoration would be to permit contracts with local housing authorities for about 100,000 dwelling units in addition to the 37,000 units authorized by the Housing Act of 1959.

Section 5(c) adds a new paragraph to the U.S. Housing Act of 1937 to stipulate the terms on which a low-rent dwelling unit may be sold to a public housing tenant. The tenant would be required to pay local taxes, amortize the full purchase price of his home, and pay interest at not less than the cost the local agency must pay to borrow money. The local agency would have an option to repurchase a dwelling if the family fails to carry out its contract. This plan is permissive with local agencies. If any agency finds it is not feasible to operate under this plan, it could permit overincome tenants to remain in occupancy if the local agency determines that it is impossible for the family to rent or buy a decent private dwelling, and if an unsubsidized rent is paid.

Section 6(b) requires that projects for elderly persons constructed under section 202 of the Housing Act of 1959, section 231 of the National Housing Act and section 10(m) of the U.S. Housing Act shall contain special facilities to serve the health, social and recreational needs of elderly persons, as the respective administrators determine to be necessary.

PLANNING SCHOLARSHIPS AND FELLOWSHIPS

Section 7 authorizes $500,000 annually for a 3-year period to be used by the HHFA Administrator to provide scholarships and fellowships in public and private nonprofit institutions of higher education for the graduate training of professional city planning and housing technicians and specialists.

LOANS TO SCHOOLTEACHERS FOR SUMMER SCHOOL COURSES—ADDITIONAL COSPONSORS OF BILL

Under authority of the orders of the Senate of May 5 and May 6, 1960, the names of Senators CLARK, MORSE, MCGEE,

RANDOLPH, MURRAY, LONG of Hawaii, KEFAUVER, LUSK, HENNINGS, SYMINGTON, GRUENING, MUSKIE, and DODD were added as additional cosponsors of the bill (S. 3481) to amend the National Defense Education Act of 1958 in order to make student loans under title II of such act available to teachers attending summer sessions in institutions of higher education, introduced by Mr. YARBOROUGH (for himself and Mr. MCCARTHY) on May 5, 1960.

GRANT OF FURTHER TARIFF REDUCTIONS IN FORTHCOMING NEGOTIATIONS—EXTENSION OF TIME FOR CONCURRENT RESOLUTION TO LIE ON DESK

Mr. KERR. Mr. President, on Wednesday, May 4, with my good friend, the Senator from South Carolina [Mr. THURMOND], as cosponsor, I submitted the concurrent resolution (S. Con. Res. 104) expressing the sense of Congress that the United States should not grant further tariff reductions in the forthcoming tariff negotiations under the provisions of the Trade Agreements Extension Act of 1958, and for other purposes, and asked that it lie on the table through May 8 for additional cosponsors. I ask unanimous consent that it lie on the table through Wednesday, May 11.

The VICE PRESIDENT. Without objection, it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. HAYDEN:

Address entitled "Foreign Economic Policy—On the Road to Peace," delivered by Senator SYMINGTON before the Sunday evening forum at Tucson, Ariz., on May 1, 1960.

By Mr. WILEY:

Address delivered by him recently over radio station WGM, Chicago, on the need for public understanding of East-West conference issues.

THE SHOOTING DOWN OF THE U.S. PLANE OVER RUSSIA

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at this time I may proceed for 6 minutes in addition to the time permitted under the order entered as to length of statements.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, the facts in the plane incident are now becoming clear. They are not pleasant facts, and we shall do well to face them as the President and the Secretary of State are doing. Acknowledgment of the identity of the plane and its general purposes was the only honorable course to pursue in this situation. I commend both the President and Mr. Herter; and I commend the Soviet Premier, too, for his perspicacity in recognizing that the President had no advance knowledge of this action.

These attitudes may help to put the incident in the larger perspective of the critical need of mankind to find a way out of the deadly morass of incipient nuclear war. The attitudes would appear to make possible the convening of the summit conference as scheduled and, I would hope, would permit the President, if he so desired, to go to Russia this summer.

Let it not be assumed, however, that this incident will soon be forgotten and that, after a little while, we can go back to cold war as usual. I hope the Russians no less than ourselves will grasp the larger and lasting significance of this incident. If I may say so, that significance is not to be found in treaties on the immorality of spying. It is not for the Russians to lecture us on that subject. For there is spying and there is spying, and he who is with sin in this matter ought not to cast the first stone.

I shall not take the time of the Senate, nor Mr. Khrushchev's—if these remarks should come to his attention—to review the history of Soviet espionage in this country and throughout the world during the past quarter century. If one wishes to speak of immorality and provocations, there is more than enough to go around. But there is no point in raking recriminations out of the sorry ashes of the past.

That is precisely the point which this incident should bring home to the Russians no less than to ourselves. We are dealing in this incident, as in the many variations of espionage which have already been indulged in by all, not so much with acts of immorality, but with acts of desperation, with unwise, foolish acts, perhaps, but with the inevitable acts of mutual terror, which stem from the fearful situation into which the world has been allowed to drift.

That is the larger significance of this incident. We will make a great contribution to the peace of mankind if we recognize that significance rather than attempt to minimize the incident by proclaiming that the Russians have done worse in the past. Mr. Khrushchev, too, will make a great contribution to the peace of mankind if he concentrates on the fearful world situation which gave rise to the incident. To do so, however, he will have to forgo the urge to don the robes of the pulpit and deliver sermons on morality. He will have to resist the obvious temptation to milk this incident of the last drop of propaganda value.

That may be asking a great deal, for I cannot say in all honesty that we have done very well on this score in the past. Nevertheless, if the Russians, no less than ourselves, mean to have peace, if we mean to put an end to the fearful situation which gives rise to these incidents, then they, no less than we, must make an end to the childlike, black-and-white, cowboy-and-Indian, gangster-and-policeman interpretation of the world and its peoples and what transpires among them.

For us, for this Nation, there are other reasons—national reasons—why this incident cannot and must not be put aside lightly. There are implications in this incident which go to the very heart of our system of representative, responsible government.

The record will show that I have supported, as firmly as I have been able, the preservation of the primary powers of the Presidency, through Republican and Democratic administrations, in matters pertaining to the conduct of foreign policy and defense. The record is available in the debates on the Formosa resolution, on the Eisenhower resolution, and on other matters. That support, Mr. President, however, was contingent on the assumption that the powers of the Presidency would be exercised by the duly elected, duly constituted President. It is one thing for an elected, popularly responsive President to exercise these enormous powers. It is another for the nonelected, nonresponsive bureaucracy to take upon itself these powers.

The President has made it quite clear that he had no knowledge of the flight of the plane involved in this incident. Yet somewhere in this Government, in some fashion, orders were given, a chain of command was followed. And the net result was to bring about the most serious damage to our efforts to promote peace. The President has been undercut on the eve of a major international conference at a moment of world crisis. The worldwide adverse repercussions to the foreign policy of the United States have only begun, but they will be heard loudly and ominously from Norway to Japan. Moreover, this incident or any other of this kind might well have accidently set off the holocaust of nuclear conflict which we have been striving at great cost and sacrifice to prevent.

All of these consequences—these damaging consequences—have derived from the exercise of the powers of the Presidency in foreign relations and defense, but the powers have been exercised without the knowledge of the President and, as far as I am aware, without the knowledge of even a member of the Cabinet. These consequences, in short, may well have derived not from an act of responsible representative government, but from what on other occasions I have tried to define as government by agency rivalry or agency accommodation.

It is this problem to which the plane incident compels us to address our attention firmly and relentlessly. The President played no part in the particular incident, but the administration, any administration, nevertheless, does bear a grave responsibility, for it is incumbent on it to provide politically responsible leadership to, and popularly responsible control over, the bureaucracy. Nor is Congress without responsibility. For, while the administration conducts the foreign relations and defense of the Nation, Congress can and does color this conduct in providing for the agencies which serve the President in this connection.

The need, now, as it long has been, is to see to it that the actions of the agencies of this Government reflect the foreign policies which should be laid down by the President through the Secretary of State. The need is to see to it that

when the President and the Secretary of State give voice to policies of peace, no agency presumes to undo what they say—by accident or design.

It would not be difficult, I suppose, to find scapegoats for this incident. Nor would it be difficult to make political capital of it. The interests of the Nation and the hope for peace, however, will hardly be served by either course. I hope all of us will eschew either a blood lust for scapegoats or the temptations of political advantage in this incident. I hope the administration and the Congress together will strive to get at the dangerous flaws in the structure of the executive branch of this Government, at the grounds of irresponsibility which give rise to incidents of this kind, and put an end to them before irreparable damage is done to the freedom and safety of the Nation and to the prospects for peace.

Mr. DIRKSEN. Mr. President, I had intended no comment on the incident that was so generously ventilated in the press yesterday. Whatever I have to say, I say entirely on my own responsibility, and I speak for no one other than myself.

It is now a little over 40 years ago that I served in the Army Intelligence Service in Germany. I became familiar with our intelligence operations, and I know what their general object is, and that they proceed in a most realistic fashion.

One reason why the Central Intelligence Agency was created, and why it has been functioning for a good many years, is that we recognize the need for intelligence service in the Army, in the Navy, and in the Air Force; and in maintaining such a service, we assume a realistic posture, and take account of something that is as old as Biblical history. I think there is reference in the Bible to spies who were concealed, of long ago. Those spies, of course, were trying to secure information, which one may well assume was designed for the security of the people whom they represented.

I have read a great deal in this field. Every country is forever trying to implement and to fortify its security by obtaining information, wherever and whenever it can, which will be useful in the cause of security and defense.

I have no comment to make upon this particular incident, but if it fits into that pattern it certainly would not be singularly strange, I would say. I am speaking now as one who served in the Intelligence Service of the Army; namely, G–2. The business of the service was to try to procure information wherever it could and whenever it could, from whatever source it could, to serve the interests of the country.

I am confident that M. Charles de Gaulle, the President of France, is a realist in that field. I am confident that Prime Minister Macmillan of England is an absolute realist in that field. I am certain, having listened to the words of and had an opportunity to ask questions of the Premier of Russia, Mr. Khrushchev, in the Committee on Foreign Relations, that he is an absolute realist.

I will remember as long as I live something of Mr. Khrushchev's irritation when I continued to pursue a line of questioning with respect to censored dispatches from Moscow. He finally turned off that line of questions by saying simply, "How would we know whether these correspondents were not spies?"

We know the Russians take a pretty realistic estimate of who comes to their country, what their business is, and whether they are procuring information which may be useful for security and defensive purposes.

I add that the President of the United States and the military leaders of our country are realists as well. In that concept and in that estimate they have followed a pattern which is as old as the relationships of human beings of different groups and tribes, which go back thousands of years.

Without commenting specifically upon the incident, since I would rather ascertain, if I can, what all the facts are, I think the statement I saw as an official statement yesterday was marked by complete candor and simply took account of the verities which are involved. I am certain that in due course there will be clarification and there will be some amplification, to set it all in proper perspective.

The acting majority leader is very sincerely correct when he says this is no occasion for moralizing upon the morality or immorality of the business of procuring information by means of whatever intelligence services are at the command of the country. Such conduct has been followed for a long time. We have been supplying the funds which are necessary. We do not pry too deeply into the techniques, the methods, and the approaches which are employed, but we are certain that other countries, including the Soviet Union, are doing the same thing, probably to a degree that makes some of our efforts pale perhaps not into particular insignificance, but at least makes them measure up as being much smaller than the amount of money, time, and energy which other nations devote to the work.

The Soviet Union's security network, as everyone knows, is really a very, very tight network. We have had occasion to see how it works. As a member of the McCarthy committee long ago, I remember a good deal of the testimony which was offered at that time, which had a direct bearing upon the efforts going on in this country to secure information which might be useful to the Soviet Union.

Mr. HRUSKA. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. HRUSKA. Reference has been made by the minority leader to Mr. Khrushchev as being an absolute realist in this field.

In view of the fact that the provisions of the Litvinov-Roosevelt agreement, entered into in 1933, provided for the abolition of the Comintern, and that the Soviets would refrain from espionage work in this country, could it not be said that there has been constant violation rather than observation of that agreement?

Considering all we know about the present efforts of espionage and subversion in this country, at the hands of the Communist Party of America, and others, would it not also be in order to refer to Mr. Khrushchev as being a practicing realist and a currently practicing realist in this field?

Mr. DIRKSEN. The record is an open book on that point.

Mr. President, I yield the floor.

Mr. ROBERTSON. Mr. President, about 8 o'clock last Saturday evening at my home in Lexington I received a call from a reporter of the Roanoke Times asking if I knew that an American plane manned by a Virginia boy had been shot down in Russia. I said I had heard that news at 6 o'clock. The reporter said the Associated Press reported the flight was authorized.

I said, "I cannot believe that is true, for any officer to order a man into Russia is equivalent to signing his death warrant. For any flier to go voluntarily into Russia is to commit suicide."

I had been hearing testimony presented before the Committee on Appropriations by the Central Intelligence Agency for 13 years. Never during that time were we told what the money was to be used for. It was a deep, dark secret. I did not know, and today I asked a number of members of our Defense Subcommittee if they knew that the Central Intelligence Agency owned and operated planes, and they said they did not. Consequently, I was positive it was a military plane, and that no officer would have directed the pilot of a military plane to fly over Russia.

The only satisfaction which I have from the tragic mistake is the one mentioned by the distinguished Senator from Montana [Mr. MANSFIELD], that our President and our Secretary of State knew nothing about it and had no responsibility. However, somebody made a tragic blunder. It was not only a tragic blunder of trying to send a plane across the continent of Russia, but in violating the neutrality of two friendly nations, for the morning paper indicates that the flight was to start in Pakistan and to end in the friendly country of Norway. That was a gap. Someone made a terrible mistake in ordering the flight, and it is the second costly mistake in recent years. I point that out because we had no notice that the Communists of North Korea were poised to attack South Korea, and when we called representatives of the Central Intelligence Agency before us, they said:

> We reported to the President, to the Secretary of State, to the Pentagon, and to all the branches of the military service that the North Koreans had assembled close to the border an unusual quantity of heavy artillery and tanks, but it was not our responsibility to evaluate that information.

The attack started and we knew nothing about it. We never got any explanation, when it would have been so easy to have divulged such information. We had no information at all that the attack was coming in North Korea when it did, catching us flatfooted. We almost lost the war before we could get into it and bring the necessary troops to bear for our defense.

As has been pointed out by the distinguished Senator from Montana [Mr.

MANSFIELD] on the eve of a momentous international peace conference. we have a decision to make which is very embarrassing. As I said, it embarrassed me not to know that the CIA had planes, and I made the statement in all good faith that I was shocked, and I would not believe that anybody had sent a pilot into Russian territory, as alleged, and as has since been admitted by our State Department.

Mr. YOUNG of Ohio. Mr. President, I listened with intense interest and approval to the statement made by the distinguished assistant majority leader, the junior Senator from Montana [Mr. MANSFIELD], and to the statement made by the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN], regarding the incident of the young man in our plane which was shot down over the Soviet Union.

Of course, I regret that this plane was shot down and the young man had to parachute to safety within the Soviet Union. It is to be regretted that on the eve of the conference at the summit the dictator of the Soviet Union should gain a propaganda advantage from this incident.

However, I am neither surprised nor shocked by the fact that it is necessary for those who have the defense of this Nation as their responsibility to be compelled to penetrate the Iron Curtain in any manner possible, and thus penetrate the secrecy which surrounds the activities of the Soviet Union within its borders.

We know that the Soviet Union has submarines off our shores. We know that the Russians are engaged in surveillance within the borders of the United States. We know that they have spy rings operating within this country. We know that it is comparatively easy for those in command in the Soviet Union to obtain information on the missile strength, the submarine strength, the jet air strength, and the rocketry of the United States.

However, we in the United States are confronted with a different situation. We can obtain that kind of information with reference to the Soviet Union only by agents within the Soviet Union, by intelligence that we are able to gather from the Soviet Union, and perhaps by aerial reconnaissance.

Therefore, the latest incident is not shocking to me. Those constituents of mine in Ohio who have written to me, saying that we should forego the summit conference because of this incident, are completely wrong, in my opinion.

It was with a considerable feeling of pride that I read the candid and truthful statement issued by the Secretary of State, Mr. Herter. Years ago I served in the House of Representatives with him. He was my colleague there. I regard him as a good Secretary of State, in the tradition of Cordell Hull, Dean Acheson, and other great American Secretaries of State.

I take comfort from the fact that in any conference in which the U.S. Government will take part, it will be represented by our determined, honest, and highly patriotic Secretary of State, Mr. Herter. I am sure that he is fully capable of dealing face to face with any leader of the Soviet Union.

Of course, the summit conference should be held. If I were to make a prediction about the fate of the young man who had to parachute to safety inside the Soviet Union, my prediction would be that, instead of being executed, it is just as likely that Mr. Khrushchev will issue a statement on the eve of the summit conference that this young man will be given safe conduct out of the Soviet Union.

The people of America are entitled to know the facts. Our country is great because of the courage, industry, intelligence, and enterprise of the people back home from whom the authority in this country comes, not because of a comparatively few people who are in a position of authority in Washington.

How was it possible for us to ascertain the fact that the Soviet Union now has a missile lead over this Nation, has more intercontinental ballistic missiles in operational status within the Soviet Union, capable of striking targets within this country in perhaps 15 or 20 minutes, except by our intelligence penetrating behind the Iron Curtain? How do we know that at the present time the Soviet Union has a submarine fleet of perhaps 450 or 500 submarines, with perhaps a 3-to-1 supremacy over us—and we must remember that Hitler started aggressive warfare with fewer than 70 submarines—except by the enterprise and courage of men in our Central Intelligence Agency and in our Armed Forces? It is through their reports that we in the Senate secure the facts and are able to bring those facts to the knowledge of the American people.

That is why such activities are needed. Unfortunately, this Nation is engaged in a cold war with the Soviet Union. It is not of our will. It is regrettable that even a few are losing their lives in it. But we should face the facts.

We in America are living in a grim period of international anarchy. Those of our leaders who participate in conferences at the summit with the leaders of the Soviet Union will be much better off if they are fully informed. The only way in which they can be fully informed is by intelligence. It is unfortunate if a plane is shot down, and the dictator of the Soviet Union boasts about a new rocket which scored the hit. We should be comforted by the thought that because of the intelligence we are able to obtain, we may also have rockets and intercontinental ballistic missiles which are fully capable of hitting their targets.

I am sorry to assert that at the moment, largely because of duplication in our Armed Forces, the progress of the United States is behind that of the Soviet Union in rocketry, intercontinental ballistic missiles, and submarine strength. We in Congress must close our ranks in order to close that gap. We must encourage meetings at the summit and conferences with the leaders of the Soviet Union. The more often those conferences take place with our delegation, headed by men of determination, buttressed by information obtained through our intelligence, the greater the likelihood will be that we may eventually have complete disarmament, with adequate safeguards. Then the leaders of the Soviet Union will be compelled to abide by and obey the agreements which they enter into.

So, in this hour, instead of being critical, instead of saying that we are shocked with this matter, let us be realists, as are the distinguished assistant majority leader and the distinguished minority leader. Let us close our ranks and back up with determination our leaders who will participate in the summit conference. We want them to confer with the utmost determination for the welfare and safety of the American people. I am confident that they will do just that.

Mr. McCARTHY. Mr. President, I wish I might agree with the distinguished Senator from Ohio [Mr. YOUNG], but I find it difficult to close ranks behind the President in the case of an incident about which the State Department and the administration say he knew nothing.

It seems to me that the decision to fly a plane across the heartland of Russia is one which should have been made at the highest levels of Government in this country. I will not dispute the statement of the administration that the President knew nothing about it. But if he did not—and I hope he did—I say that that fact is a worse indictment than if he had knowledge of it and had approved it.

I introduced early in this Congress a resolution for the establishment of a Joint Commission on Intelligence Information. Similar proposed legislation has been introduced by other Members of Congress in this Congress and in previous Congresses.

In 1953, the Hoover Commission undertook a study of intelligence and information services in the United States and recommended that a joint committee be established, so that Congress might exercise some kind of continuous surveillance over the intelligence activities of our Government.

It seems to me that the events which have occurred since 1955, when this recommendation was made, underscore the wisdom of that recommendation.

In the case of the Suez crisis, we were told that our Intelligence Service had no advance knowledge, and that we had not anticipated any such action.

Again, in the case of the Hungarian revolt, the indications were that our intelligence had really not anticipated that any such event would occur, even though we were told that the Voice of America and Radio Free Europe were giving what were taken to be assurances of some kind of support from the United States in the event that revolts did occur in the middle European area.

When the Vice President went to South America and was the object of several unpleasant incidents in that country, our Government received conflicting reports. Some said that intelligence had warned against his going; some said that intelligence thought he was going to receive a most pleasant reception.

In general, Russian progress and advancements in the field of science seem to have been unknown to our Intelligence Agency. The administration expressed surprise at the great progress which was being made. With the launching of the Russian sputnik in 1957, our Government became aware that Russia was no longer a country in which science was in its primitive stage.

In general, the intelligence which we have received, or at least that which has been given to Congress and the public with regard to Soviet activities has been inadequate and behind the times.

Now we have been confronted with an incident which has been variously reported and variously explained. A test pilot for Lockheed, we are told, was flying an intelligence mission over the heart of the Soviet Union. I think Congress has the responsibility to ascertain what the facts are in this case.

Is our intelligence now being let out on contract to private enterprise? Is this the explanation we are to accept? I urge the chairman of the Committee on Foreign Relations to hold hearings on this question. I hope he will hold hearings on the proposition of establishing a Joint Commission on Intelligence and Information. I think this is a responsibility which rests on the entire Congress, Democratic and Republican alike, but one which rests particularly upon the Democratic majority of the Senate and House of Representatives.

Mr. CANNON. Mr. President, will the Senator yield for a question?

Mr. McCARTHY. I yield.

Mr. CANNON. I, too, am disturbed about the comment that the aircraft in question was being piloted by a Lockheed test pilot having civilian status. I am also disturbed about the position which NASA may play in this particular picture, as evidenced by one of the newspaper articles.

I am certain the Senator from Minnesota recalls that in 1958 Congress authorized NASA as an independent agency, and declared that it was the policy of the United States that activity in space should be devoted to peaceful purposes, and authorized NASA in the authorizing legislation toward that end.

It was further declared that such activities should be directed by the Space agency, and that the Department of Defense would assume all responsibility in connection with the peace and security of our country in connection with military operations.

I ask the distinguished Senator from Minnesota whether, if NASA is actually involved in this matter, it would appear to him that they have far exceeded their constitutional authority as designated by Congress in the Space Act of 1958.

Mr. McCARTHY. They certainly would be in clear violation of the intent of Congress and would prejudice the position of NASA, both in the United States and throughout the rest of the world, as an agency having potentially great influence for peace.

Mr. CANNON. Mr. President, will the Senator from Minnesota yield further?

Mr. McCARTHY. I yield.

Mr. CANNON. In one of the newspapers I saw an article in which it was stated that perhaps NASA had loaned the airplane, which presumably it owned, to some other agency, for operation in that area.

I should like to direct the attention of the Senate to section 201(e)(4), of title II of the National Aeronautics and Space Act of 1958. Subsection (e) of section 201 covers the specific duties of the President, and provides, among other things:

> In conformity with the provisions of section 102 of this act, it shall be the duty of the President to—

And now I drop down to subsection (4)—

> (4) provide for effective cooperation between the National Aeronautics and Space Administration and the Department of Defense in all such activities, and specify which of such activities may be carried on concurrently by both such agencies notwithstanding the assignment of primary responsibility therefor to one or the other of such agencies.

In view of that provision and also in view of the statement of the Senator from Minnesota that the President disclaims any knowledge of, or responsibility for, this incident, would it appear that if NASA has, in effect, engaged in a cooperative agreement with the Department of Defense, without the knowledge or authority of the President, NASA has thereby exceeded its authority, insofar as this act of Congress is concerned?

Mr. McCARTHY. I certainly must answer the Senator's question in the affirmative, and must say that the President, either himself or through his agents or representatives, has failed to meet the responsibility which the Congress has imposed upon him by means of that act.

But this is not surprising, because the thesis under which this administration seems to operate is one which has developed under the French monarchy, which was that if anything went wrong, the King was not to be blamed, but the fault was to be placed on one of his advisers. It was said that that led to civil obedience. But it did not lead to good government.

I fear that the same thesis is being followed by the present administration of the Government of the United States.

Mr. CANNON. Mr. President, will the Senator from Minnesota yield further to me?

Mr. McCARTHY. I yield.

Mr. CANNON. I should like to ask the Senator whether, in view of these circumstances, it appears that at least this incident was very poorly timed, most ill conceived, and very improperly handled, regardless of who assumes the responsibility or is chargeable with it, at a time when we are trying to negotiate in good faith, in order to derive some benefits and some good out of the forthcoming conference.

Mr. McCARTHY. I certainly agree with the Senator from Nevada. The accuracy of his conclusions and observations is obvious; and I thank the Senator for his contributions.

Mr. SCOTT. Mr. President, as an American, I am most gratified that, with regard to the plane incident, the majority leader of the Senate has made a prompt appeal for national unity, and has said this is a time for all Americans to keep their heads and to dedicate themselves to the unity of the country. I am also very proud of the fact that the majority whip [Mr. MANSFIELD] has assumed—as he always does—a responsible attitude in a time of the occurrence of critical developments in our national life.

I particularly deplore any attempt to make political capital out of a situation which evolves from the fact that it is the duty of the intelligence forces of the United States at all times to protect the security of the United States.

I suggest that this would be a very good time to look at the other side of the coin, and to ask ourselves what kind of furor would arise if our forces were not alert; what sort of reaction would be expected from the country and from the Congress if it were to appear that explosions, the development of new and terrible weapons, or secret activities of a menacing and hostile nature, were taking place on the part of the Soviet Government, and we were unaware of them.

Mr. President, in the Second World War, I was a naval intelligence officer in the Pacific; and I think it is the height of naivete for anyone to contend that espionage is not practiced by all major nations at all times.

Not to admit that we are embarrassed by this event would be a lack of candor. Not to admit that we have violated the 11th commandment—namely, Thou shalt not get caught—would also be a lack of candor.

But, Mr. President, it would be far worse if our country were not alert to detect any activity, anywhere in the world, which menaces the security of the United States.

I suppose it is to be expected that some people, at some times, in some places, will attempt to make political capital of an event of that kind. The responsible leadership of this body has not done so. I would not in the least be surprised to find someone writing in the press or some other person attempt to link this incident to the West Virginia primary or to some other unrelated event.

But, Mr. President, the plain facts, as I view them, are that we are supporting, and we must support, the intelligence activities of the United States; and that if those intelligence activities have fallen short, we have the right to inquire and to investigate. I raise no objection to having the Congress inform itself fully of the circumstances in connection with this matter.

But there is a great difference between investigating to determine the facts and investigating for political advantage.

I suggest that the Congress, and this body in particular, inasmuch as I speak as a Member of this body, confine itself to a determination of the facts, and that such inquiry be at all times carefully limited to protecting the security of the United States and to protecting the military and civilian methods by which we

assure that security, and that at all times we be sure that we strike the proper balance between the proper administration of the program and the necessity for the program itself.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, in connection with my remarks, an editorial published in the New York Tribune and an editorial published in the Philadelphia Inquirer, both bearing this date.

The PRESIDING OFFICER (Mr. CANNON in the chair). Is there objection?

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, May 9, 1960]

OUR PLANE WAS SHOT DOWN

There is no obscuring the fact that the prestige of the United States has received a blow. When the Russians shot down a reconnaissance plane deep in their territory, captured the pilot and his films and discovered his flight plan, Premier Khrushchev exploited the event with great shrewdness to undercut the American stand at the summit.

The special difficulty at this time is that the summit conference is generally expected to deal mostly with intangibles. The chief hope of the world is for some relaxation of tensions springing from the meeting of the heads of government. To achieve that and to avert pressures which the Soviet Union is expected to exert for a change in the status of Berlin and Germany, the West must bring into play all the moral authority it can muster.

In the eyes of very many that moral authority has been impaired at a critical moment. Even those who accept the absolute necessity of maintaining intelligence services to learn as much as possible about the massive military machine poised against the free world by the Soviet Union must question why this particular flight—on the face of it a very dangerous one—was made at this particular time.

Perhaps the answer may never be known to the public. In the nature of things, intelligence activities are secret in virtually all their aspects—if any of the latter become known, it is almost always an error. In this instance, the United States must face up to the consequences of such an error. But the consequences should not be overstated.

In the first place, the downing of the American plane, however costly its diplomatic and propaganda effects, is no argument whatever against intelligence work in general. The world in which we live makes such work supremely necessary to the security of this Nation and all its allies.

The number of Communist spies who have been caught, the ramifications of their network of espionage, sabotage, and subversion are common knowledge. To meet this by the most efficient possible system of intelligence and counterintelligence is a first responsibility of any free government.

In the second place, however gleeful Mr. Khrushchev and the Soviet press may be over the episode, whatever doubts it may stir among the uninformed, it does not affect in the slightest the basic goals of the United States and the West.

The freedom of 2 million residents of West Berlin is no less important because of the public revelation that the United States has engaged in a form of reconnaissance that both sides have practiced for years. The safeguarding of West Germany is no less significant. The need for controlled disarmament is even more evident.

Finally, while many Americans will be disturbed and unhappy over the equivocal position in which their Government has been placed, there is no disunity here. The American people insist that their guardians be alert. If that involves errors or incidents the price may be high—but not as high as being taken unawares by aggression. Senator LYNDON JOHNSON, in offering his support and that of the Democratic Party to the President in this crisis, put the fundamental American reaction well:

"We do not know just how far Premier Khrushchev intends to push his saber rattling. But we do know just how far Americans intend to go to preserve their freedoms—right to the limit. And by that I mean all Americans—Republicans and Democrats alike."

[From the Philadelphia Inquirer, May 9, 1960]

FACING UP TO REALITIES

The State Department has made the best of a bad situation in explaining the mission of the U.S. plane that Premier Khrushchev says was shot down over Russian territory.

Millions of Americans are shocked by the State Department's pronouncement. Some find it hard to believe this country would engage deliberately in activities intended to learn secrets behind the Iron Curtain.

Serious errors of judgment may have been made somewhere in the ranks of U.S. intelligence when the American plane was permitted to fly over the Soviet border so close to the scheduled opening of important East-West summit talks in Paris 1 week from today. The United States and allies find themselves in an extremely embarrassing and disadvantageous position as Mr. Khrushchev gloats over the alleged capture and confession of an American spy.

It would be unfair, however, to condemn whoever was responsible for this flight until all the facts are known. The situation is muddled at the moment. While a serious blunder appears to have been made by someone, it should be borne in mind that a function of intelligence is to safeguard the Nation against surprise attack at all times.

Suspension of U.S. flights near the Russian border during the presummit period would seem on the surface a wise move to avert precisely the kind of crisis which now has arisen. But an important question is whether the plane was sent aloft for some purpose essential to American security.

Suppose, for example, that U.S. intelligence operations along the Iron Curtain had been suspended until after the summit conference in the interests of peace and goodwill. And suppose that Russia took advantage of this lapse in American security to stage a surprise foray aaginst, say, the Middle East. Under such circumstances the very persons who now loudly condemn U.S. intelligence officers for sending a plane over Russia would protest even louder their failure to be constantly on the alert.

Hardly a week goes by without someone in Congress quoting the latest intelligence estimates of Russian military strength. It has long been obvious that such information is obtained through a system of espionage, whether conducted from the air or on the ground. As the State Department said, "Intelligence collection activities are practiced by all countries and the Soviet Union has not been lagging behind in this field."

Disclosure of the U.S. plane's real mission does not necessarily reflect bad faith on Government spokesmen who previously said the aircraft was on a weather research flight. It is common procedure for intelligence operations to be disguised and many persons in official capacity may have thought the purpose was weather research.

Of immediate urgency is the need for a personal interview with the pilot of the plane by American Embassy officials in Moscow. This might shed new light on the story of the pilot's confession.

Senator LYNDON JOHNSON, we believe, performed a service to the country and gave good advice to the American people in issuing a prompt appeal for national unity. The Democratic majority leader of the Senate did not exaggerate in the slightest when he said "there is no doubt that a serious international crisis may be in the making." This is, as JOHNSON said, a "time for all Americans to keep their heads" and "dedicate themselves to the unity of the country."

It is a time, too, for all Americans to face up to the grim realities of the cold war and not be misled by Khrushchev's self-righteous sneers at the integrity of the United States.

DISARMAMENT AND THE RECENT AIRPLANE INCIDENT

Mr. WILEY. Mr. President, I received in this morning's mail from the University of Wisconsin a resolution in relation to disarmament. This resolution, and bearing in mind the facts which developed yesterday in relation to the United States plane that was shot down over Russia, caused me ask myself a few questions. I remember back in the early 1930's when the Japanese walked out on the League of Nations. I remember that the great talk then was disarmament, and after the First World War we did partially disarm. We dismantled a great deal of our Navy, and the hopes and the prayers of all the people were toward the end that war would be no more.

Then I remember that, after the Japanese walked out at Geneva, they started building up their forces. I remember that Pearl Harbor then came upon us. We were asleep, and thought it could not happen. I remember listening to President Roosevelt give his tremendous challenge, and we declared war.

Another question that came to my mind was: What was the effect of the shooting down of our plane? Would it affect the summit conference? In my humble opinion, the answer is, "No." We have been playing poker too long. Khrushchev is one of the great international poker players on the world stage. He came over to this country. We took him in. He went back. A few months ago we thought everything was going to be as sweet as honey, and then he started in with his abuse. The result was that we received letters from people telling us that the thing to do is disarm.

Mr. President, in my humble opinion, every man who will sit down at the council table and everyone who will be associated with the negotiations will be men who know history. The plane incident undoubtedly has had a great effect upon the people in America, whose eyes were again closing, as they were before Pearl Harbor.

I am satisfied that all the bluster of Khrushchev is some more of his poker-playing attitude. He knows that for a long time we have had our airplanes along the boundary line.

As was stated on the floor today, Khrushchev's agents are right in the

United States. They are in South America. They are in every capital of South America. They are in the espionage game 24 hours a day. If we read some of the comments in the European papers, we would think the common people of Europe have their eyes closed to the realities of life. Why do we have our Army over there? Why do we have our bases in Turkey, Greece, and elsewhere? Why do we have our airplanes there? It must be that we feel it is necessary to establish a deterrent. It must be, as a Senator said on the floor a little while ago, that it is necessary for us to know what is going on behind the so-called Iron Curtain. Khrushchev knows what is going on on the other side of the Iron Curtain in every nation in Europe—in fact, in every nation in the world. Consequently, when people talk about this incident having a bad effect upon the summit conference, I cannot agree. In my humble opinion, it means there are going to be realists there; and the greatest realist of all will be Khrushchev himself.

The President, after Camp David, of which Khrushchev talked so much, and after the experience of the last several months with Khrushchev, is certainly alert.

One other word, Mr. President. Some persons want to place responsibility for this incident somewhere. I ask them again, Why do we have airplanes in Europe? Why are we training some of our young men in the intelligence field? Of course, we are not supposed to invade another country, but we are living in a time when it is important for us to know what is going on behind that Iron Curtain. As was stated, we have had reconnaissance planes for a long time. What about Russia? Does Russia have some? Yes. Do those airplanes cross the boundary lines? Well, we have not shot any of them down, but they do not have to fly across the boundary lines to get the information they want, because they have their people in every nation of the world.

The PRESIDING OFFICER. The Chair wishes to remind the Senator from Wisconsin that the Senate is operating under the 3-minute limitation. Does the Senator wish to ask for more time?

Mr. SMATHERS. Mr. President, I ask unanimous consent that the able Senator from Wisconsin may proceed for another 5 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator from Wisconsin may proceed.

Mr. CLARK. Mr. President, if the Senator from Wisconsin will yield, I have no desire to urge him not to complete his speech, but how much longer does he wish to take? I have something to present for the morning hour.

Mr. WILEY. I shall finish in about 60 seconds.

Mr. CLARK. Please take more than that.

Mr. WILEY. Such courtesy by the Senator from Florida and the Senator from Pennsylvania is really beyond the stage at which I can thank the Senators for their complimentary attitude, but I do wish to express my gratitude.

I was reasoning out loud, Mr. President, about the effect of the news of the shooting down of our plane. I think more than ever it will mean we will be alert. The American people will be alert. The Armed Forces will be alert.

It may have an effect on the coming conference, that those who are engineering the deal will become more realistic and will realize that some kind of a solution must be found which will bring about a partial disarmament—not a partial disarmament of alertness but a partial disarmament in the weapons of war.

Mr. President, I ask unanimous consent that following my remarks the resolution of the University of Wisconsin be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE UNIVERSITY OF WISCONSIN—MILWAUKEE

To the Honorable Christian A. Herter, Editors of the Milwaukee Journal and Sentinel, the Governor of Wisconsin, the Senators and Representatives of Wisconsin in the Congress of the United States:

The current disarmament negotiations at Geneva and the impending summit talks impel us, members of the faculty of the University of Wisconsin, Milwaukee, to recommend to your attention the following statement, originally prepared and endorsed by 105 members of the faculty of Johns Hopkins University and Goucher College. This statement represents our personal views:

"Never have the peoples of the world spent so much on armament in time of peace and never have they been so insecure. During the past year the arms competition between the United States and the Soviet Union has become more intense than ever. The continuing spread of nuclear weapons to an enlarging circle of nations increases the danger of war and makes disarmament ever more difficult. The survival of civilization requires the control of armaments of unlimited power and their eventual elimination as instruments of national policy.

"The Soviets in disarmament negotiations have shown suspicion of American proposals for inspection and control, and our own representatives have been reluctant to consider any scheme that would not eliminate every risk of deception. But every alternative open to the United States involves risk. Insistence upon a perfect system only insures that there will be no inspection and no control; the result must be an unrestricted arms race which sooner or later will almost certainly bring about unrestricted nuclear war. The present impasse must be broken.

"Serious as are the conflicting interests between the United States and the U.S.S.R., both countries, we believe, have been too preoccupied with their differences and not enough concerned with their common goals. Americans need not shed all their skepticism about Soviet words and actions; successful international agreements are based more on mutual advantage than on trust. Although the prevailing attitude of distrust has made agreement difficult, the American and Soviet positions on a test ban are now very close as a result of mutual concessions. Any resolution of the remaining differences is preferable to the dangers which would follow a breakdown of negotiations.

"The United States and the Soviet Union have a strong common interest in preventing the spread of nuclear weapons, which appears inevitable without an agreement to stop testing. Recent administration suggestions that such weapons be furnished to American allies would, if carried out, jeopardize further negotiations to end the arms race.

"We believe that the test ban is an essential first step toward comprehensive arms control. In view of the gravity of the present situation we are convinced that the United States should, if necessary, accept considerable risks to achieve the goal of general disarmament in order to avoid the far greater risks attendant upon continuing the arms race."

Dale Chastain, Instructor of Political Science; Justin Replogle, Instructor of English; Peter Sinclair, Instructor of Art; Mrs. C. Shannon, A. Clarke Hogensuck.

Mr. SMATHERS. Mr. President, I know all of us were tremendously shocked to read in the paper and to hear over the radio the account of the shooting down of an American plane over the Soviet Union. The one thing that we must derive from this incident is that the cold war is still going on. We must remember that Communist dogma, doctrine, and philosophy is pledged to the destruction of all that we in the free world hold dear. We must remember that the Soviet Union is continuing to seek ways and means of subverting us and taking us over, destroying our system in whatever way may present itself to them. They obviously know a great deal about us. They have not only an efficient espionage system, but we in this democracy and free world continue to reveal facts and figures about almost everything which we have anyway. They do know a lot about us. Those in our Government whose responsibility it is to protect and defend us against what might be at any moment an onslaught from the Soviet Union have a responsibility to try to find out everything that is possible to find out about the capability of the Soviet Union. If they did not do so, those who are charged with the responsibility, which I presume are the CIA and, in some measure, the Defense Department, I believe would be dilatory in their respon-

sibility to provide protection to the people of the United States. The unfortunate fact about this particular episode is that this particular plane was shot down, and the world is now reminded that we live in a cold and difficult world, that things have not eased off a great deal despite the fact that we have a lot of soft conversation and soft and appeasing words from time to time from the leaders of the Soviet Union. But ideology hardness still exists. They have pledged and dedicated their resources to the destruction of democracy, and particularly to the destruction of the system under which we live. It is unfortunate that events have turned out the way they have, but I believe the lesson we must remind ourselves always to keep in mind is that while from time to time the cold war gets a little colder and then moves into a hot stage—fortunately, not a shooting stage—nonetheless the hard, ideological fact still exists that the Communists are seeking ways to get advantage of us, and in our own interest, to protect ourselves from them, we must continue in every way we can to learn what are their intentions, and specifically what are their capabilities.

I hope this particular episode will not necessarily put us on the defensive when the President of the United States and the Secretary of State go to the summit conference. I do not think it need put us on the defensive. I believe this is a fact of life which almost everybody realized was going on. Almost everyone realized that we are trying to gather information about the Soviet Union wherever and whenever we can. That we are doing so is now before the public. We would be ashamed of ourselves if we were not pursuing this course. We would be derelict in our duty if we were not attempting to learn everything that we could about them. Now that it is out, I do not think there is any great cause for us to go on the defensive. It is unfortunate the information has been revealed in the manner in which it was. Nevertheless I think the long and established record demonstrates that our whole purpose and intention is defensive in nature. We have not over the course of 20 years sought to be aggressive against any country. We have not sought to take over any country, either through military aggression or subversion, and when we seek information it is only in the nature of acquiring exact information so that we may defend ourselves and so that we may defend other nations who are incapable of defending themselves and whom we list in the free world bloc. I believe we have the duty to learn everything we can about them. Therefore I hope and expect that this incident should not put us on the defensive, and I hope the people of this Nation will not think it has.

I hope the people of this Nation will not think it has put us into a difficult situation with respect to the forthcoming developments at the summit conference.

Mr. YOUNG of North Dakota. Mr. President, will the Senator yield?

Mr. SMATHERS. I yield to the Senator from North Dakota.

Mr. YOUNG of North Dakota. Mr. President, I wish to be associated with the position taken by the Senator from Florida [Mr. SMATHERS]. I would like to add that if the Russians were half as tolerant and free in letting American citizens travel over Russia as we are toward Russian citizens traveling over the United States, events like this would not occur. Only about a year or two ago an aerial picture of the Washington area was published in a Washington newspaper. I suppose every Russian could get an aerial picture of every city in the United States without having to fly military planes over the United States. They have access to all this information, and yet we are denied any information as far as Russia is concerned.

Mr. SMATHERS. Mr. President, I completely agree with the able Senator from North Dakota [Mr. YOUNG]. We give information to the Russians which they, of course, do not give to us, and yet we in our own interest have to find out what we can about what they are doing, and if our people did not do so, they would be derelict in their duty and exposing us to an unnecessary danger.

Undoubtedly the plan did not work as undoubtedly somebody had planned it would work. I suppose it was planned so that the men would not be detected. However, I do not believe there is any justification for us suddenly to throw up our hands in holy horror and say, "This should not go on."

In this practical world in which Soviet Russia is pledged to destroy us and are building capabilities to destroy us we have to know what they are doing, and I am sure the Secretary of State, Mr. Dulles of the CIA, and the President will move on in their efforts to demonstrate, probably from this particular incident, that it would be better all around if we could have inspection as we have asked for of what is going on in their country, so that we can on that inspection bring about a disarmament proposal by which we would disarm and they would disarm, so that this kind of action would not be necessary. It lends emphasis to the thought that we should pursue a meaningful and useful disarmament program coupled with a proper inspection program so that we can lessen attention and do away with this kind of espionage system on their part as well as on ours.

Mr. CAPEHART. Mr. President, I have not discussed this matter with any other member of the Foreign Relations Committee; therefore, what I shall say at this time represents my own thinking.

As a member of the Foreign Relations Committee, I feel some responsibility in connection with international developments; and I strongly urge that the administration suggest to the Secretary of State, to the head of the CIA, Mr. Allen Dulles, and to others, that they tell us what happened in Russia, particularly in the case of the plane that was shot down.

I understand they have limited the explanation, at least at this time, in particular, to the leadership of the Senate and to the chairmen and the ranking minority members of the Foreign Relations Committee and the Armed Services Committee.

As one member of the Foreign Relations Committee, I wish to protest against this situation—not against the giving of the information to them, but against the fact that the information is not being given to every member of the Foreign Relations Committee.

This Russian matter is very serious, very embarrassing, and very humiliating. If members of the Foreign Relations Committee are to accept their responsibility in connection with service on that committee, it seems to me they are entitled to have the facts, and to have them today, not tomorrow.

So I want the other members of the Foreign Relations Committee to know how I feel, and I want the Senate to know how I feel, and I want the administration to know how I feel.

I believe the time has come for us to tighten our belts and tighten up our activities and our actions and our thoughts, and to clarify our policies, and to know in what direction the country is going and what is occurring, and not constantly be put in the position of being embarassed and humiliated and having to deal without knowledge of the full and complete facts in connection with incidents which develop from time to time, and which prove embarassing to me, both as a citizen and as a member of the Foreign Relations Committee.

Mr. LAUSCHE. Mr. President, the execution of one's duties as a member of the Foreign Relations Committee depends completely upon the accuracy of the information and the knowledge he has concerning the problems which are to be solved. If knowledge of what is happening is not in the possession of a member of the committee, his ultimate judgment can be rooted only in guesses, and never in facts. If it happens that his judgment is rooted in facts, it comes only as an accident. That would be a most dangerous method of trying to execute his duty.

I would like to know the basic facts surrounding the incident that occurred in the Soviet. It does not necessarily follow that I at this time condone or do not condone what has happened. I will not believe that at this moment there are not in the United States many representatives of Communist Russia and other Communist nations that are gathering information about what we are doing.

In our system of government the ability to get information is simpler for the Soviet to get than it is for our Government to get it from the Soviet. Hence, the Soviet, though it is complaining, should remember that in its methods of operation it undoubtedly has, within the boundaries of our country, persons who are spying and trying to get possession of information that will serve the cause of Russia. That fact, however, does not mean that I at this time condone what has happened. I would like to know. We have a Central Intelligence Agency. We rely upon it for information given to the Aeronautical and Space Sciences Committees and the Foreign Relations Committee.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. LAUSCHE. Yes.

Mr. CAPEHART. The Senator from Ohio will agree with me that as members of the Foreign Relations Committee, as he and I are, we ought to have the facts; will he not?

Mr. LAUSCHE. I have already said that.

Mr. CAPEHART. The Senator has stated it. I wanted to emphasize that fact. That was the purpose of my saying what I just said. We do not get the facts.

Mr. LAUSCHE. I concur in what the Senator has said.

Mr. CAPEHART. We cannot pass judgment upon these facts. Why they would ignore every member of the Foreign Relations Committee except two is something I shall never understand. Are we second-class members of the committee, or second-class citizens? My people of Indiana want me to have the facts as best I can ascertain them as a member of the Foreign Relations Committee. I am sure that is true of the able Senator from Ohio. We do not get the facts. I am not criticizing anybody for what happened over there, because I do not know the facts. I am just pleading to get the facts, and I know that is what the able Senator from Ohio wishes to have.

Mr. LAUSCHE. At this morning's meeting of the Foreign Relations Committee, I suggested to the chairman that Secretary of State Herter and Mr. Dulles should appear before our committee. I made that suggestion on the basis of wanting to learn the background and the circumstances of the incident in the Soviet. About 5 or 10 minutes ago, the Senator from Florida [Mr. HOLLAND] told me that Mr. Dulles, of the Central Intelligence Agency, and Secretary of State Herter were in a meeting room downstairs, to be attended by the members of the Foreign Relations Committee and one other committee. I went to that room and gained admittance only to be told it was a closed meeting for the leaders of the Senate and the leaders of the House and two members of certain committees. I do not know which committees they were. To my embarrassment, I had to leave. A newspaperman asked me why I was leaving, and, facetiously, I said I was thrown out.

Mr. CAPEHART. Mr. President, will the Senator yield further?

Mr. LAUSCHE. Yes.

Mr. CAPEHART. That is my position. I would like to know who was responsible for limiting the meeting to just a few. If I remember correctly, it is the entire committee that passes upon matters before the Foreign Relations Committee, as well as the Armed Services Committee. Why should those attending the meeting be limited to just a few? It makes one sort of suspicious as to what the purpose of it is.

Mr. LAUSCHE. I do not know that it makes me suspicious at all——

Mr. CAPEHART. Perhaps that was not a good word.

Mr. LAUSCHE. But I do agree with the Senator from Indiana that, as a Senator burdened with certain responsibilities, and required to answer questions of the citizens of my State, I ought to know in the fullest degree possible what happened.

Mr. CAPEHART. In my opinion, there are too many mistakes being made. As the Senator well knows, I was publicly opposed to the Khrushchev-Eisenhower-Nixon visits back and forth, and I think history is proving I was right.

I do not know about Ohio, but I just came back from Indiana, and our people are very much concerned about this matter. It is a serious matter. They are beginning to wonder if we in Washington know what is going on in the world. It is about time that the administration, which must accept the responsibility for this sort of thing, took the Senate and the House of Representatives into their confidence. Perhaps we could be of some help to them. God knows, they need it, if I can read the record and the times correctly.

Mr. LAUSCHE. With respect to giving us information about how much money we should spend for national defense and for mutual aid, we have had the Central Intelligence Agency representatives testify before our committee. When those representatives came before the committee, I assumed they implied they were getting information about the Soviet. That fact would lead to the question, How are they getting the information? Is it being gotten through voluntary revelation by the Soviet of what it is doing? The answer to that question manifestly would be in the negative. The next question is, If you are giving us information, how should we assume you got it?

I would like to know, in discussions that would be had in an adequate meeting. I am disappointed in the fact that we have not been given the right to attend the meeting. However, I do not want to conclude that that right will not be made available to us. The justice of the position taken by the Senator from Indiana to me would indicate that it is indispensable that the members of the Foreign Relations Committee hear what has happened.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. LAUSCHE. Yes; I yield.

Mr. CAPEHART. There is not any question about it. We ought not to be on the committee unless we are entitled to all the facts; and it is within the next 24, 48, or 72 hours that decisions ought to be made on what to say and how to handle this matter. A summit conference is coming up a week from today, and yet we find now that we do not have the facts. We cannot attend the meeting. I do not want to say anything more about it, because I do not want to do anything that is in any way going to give any satisfaction to Mr. Khrushchev; but I believe I know that the people of this Nation want to know what has happened, and they are entitled to know what has happened, because we are being pushed around all over the world, even by a little fellow named Castro, down in Cuba.

How long will this go on? The people are beginning to wonder, and I think rightly so. One of the reasons I think they wonder is that we in the Senate, who serve on committees responsible for these things, do not have the facts.

Mr. LAUSCHE. I want to separate the two propositions. First, is our right to know what is going on, our right to hear the testimony of the persons who allegedly know. Second, is the question, What should be our realistic course?

When we approach the second question, of course, in a measure we have to be influenced by our knowledge of what the Soviet Union is doing. Is the Soviet Union keeping people in our country—perhaps even sitting in the galleries of the Senate—to learn what is going on? That is the second question.

Mr. CAPEHART. I do not think there is any question that the Soviets do have spies in our country. We have spies in their country.

Mr. LAUSCHE. Yes.

Mr. CAPEHART. Why have we had so much misinformation in connection with the matter? The first day it was one thing, the second day it was another thing, the third day another thing, and the fourth day another thing. There are a lot of questions which ought to be answered.

Mr. LAUSCHE. My hope and expectation is that shortly the members of the Committee on Foreign Relations will be accorded the right, to which they are entitled, to hear a narration of what actually happened.

Mr. CAPEHART. Mr. President, that was the purpose of my rising, to make the remarks I did.

Mr. LAUSCHE. The Senator from Indiana and I are not engaged in a hostile exchange of views.

Mr. CAPEHART. No. The Senator from Ohio and I are 100 percent together on this matter. We think alike, and have been talking alike. We are 100 percent together. I know exactly how the able Senator feels, because I feel the same way.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. LAUSCHE. I yield.

Mr. HOLLAND. I will say to the able Senator from Ohio, I am sorry if I brought the Senator information which later proved not to be exactly correct. I simply presented information which a newsman in a crowded corridor, waiting for the "cloak and dagger" arrival of the head of the CIA and of the Secretary of State, told me. I was trying to be helpful and friendly to my distinguished friend from Ohio.

I think we could all blow this matter way up out of proportion, if I may say so. It seems to me my distinguished friends on the Committee on Foreign Relations, disappointed as they are in not being included, have probably no greater cause for disappointment than the members of the Committee on Appropriations, of whom I happen to be one, or the members of the Committee on Armed Services, or perhaps members of other committees we could mention.

Since the House of Representatives is also represented at this meeting in this small cloistered chamber in the catacombs of the Capitol, I assume that we will all learn in due time something about the matter.

In the meantime, we are in good company, because the first announcement was that the President did not know anything about it. I think there is nothing for us to feel left out about. I must say again, it is not unusual that this great free country shows itself not to be very adept at "cloak and dagger" tactics.

I must say also, I think we are very adept at the poorest timing which could possibly be practiced. It seems to me anybody engaged in practical politics, as well as anybody engaged in military life, must know that timing is all important. Somebody has committed a mistake, but I do not think we should be too disturbed about it.

I remember that now a colonel of the Russian establishment is languishing in jail because he was spying upon us in our country. I remember other incidents which I will not attempt to recount at the present time.

I think all of us must recall that we have a tremendous stake in this summit conference. No one has quite the stake in it which the President himself has. Much as we might be inclined to voice our disappointment, that we did not know about this, and our regret that we are not learning all about it at once, the best thing we can do, I think, is to suffer in silence until we are told.

In the meantime, we should let the whole world know that the Senate, the Congress, and the country stand behind the effort to attain some degree of peace, and that by all means, regardless of party, we stand behind the efforts of the President. I am sure every Senator on the floor agrees completely with that point of view.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. LAUSCHE. I yield.

Mr. CAPEHART. I have no quarrel with what the Senator has said. I simply say that perhaps as a result of our colloquy today we can help in the situation a little bit, to make certain that these things do not happen in the future. Perhaps we can be of some help to the administration, if it will give us the opportunity, if it will give us the facts and the information. That is my position. I said, and I repeat, we have been making too many mistakes.

Mr. LAUSCHE. Mr. President, I yield the floor.

UNYIELDING AMERICAN POSITION ON GERMANY AND BERLIN

Mr. KEATING. Mr. President, I wish to call attention to the AFL–CIO magazine supplement entitled, "American Labor Seeks Peace and Freedom," published in Sunday's issue of the New York Times. This supplement contains a number of excellent and informative articles on American foreign policy, with emphasis upon the promotion and maintenance of peace and freedom throughout the world.

Mr. President, the publication of these articles, written by several distinguished Americans noted for their knowledge of international affairs, indeed constitutes an important and valuable contribution to greater understanding of America's position in the world in which we live. The introductory statement to the articles notes that the publication of the supplement is in conjunction with the AFL–CIO Conference on World Affairs and is an effort to maintain and encourage an informed public opinion.

Mr. President, I ask unanimous consent that the introductory statement be printed at this point in the RECORD in connection with my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FOR AN INFORMED PUBLIC OPINION

The American Federation of Labor and Congress of Industrial Organizations believes that in a democracy informed public opinion must participate and lead in the development of foreign policy. Our Nation's foreign policy, if it is to have public understanding and support, cannot be created and fashioned behind closed doors.

We believe, quite frankly, that a large part of America's difficulties in world affairs stem from the fact that the American people have too often been kept in the dark about the developing stages of major foreign policy. This is particularly true of a large part of the American press which rarely prints serious news about foreign affairs.

As the world crisis deepens, it becomes more and more imperative that the American people be better informed and more informed on the issues of foreign policy, particularly as it concerns our relations with the Soviet Union. The AFL–CIO and many of its constituent unions have devoted much time and money in an endeavor to keep their memberships abreast of foreign policy developments. That is why the AFL–CIO called its recent conference on world affairs. That is why we are publishing this special supplement which includes excerpts from addresses by speakers at the conference so that those who seek information can find it readily.

The AFL–CIO hopes that our contributions to the great debate will alert the American people to the urgency of the world crisis and the necessity of creating a positive program which will prevent further totalitarian encroachment and at the same time aid countries, now emerging from colonial bondage or struggling for existence, to achieve progress and prosperity and to become viable free societies.

To the success of this struggle, to the achievement of human rights, peace and freedom for all mankind, this special supplement is dedicated.

Mr. KEATING. Mr. President, I wish to call special attention to an article by the Under Secretary of State, Mr. Douglas Dillon, which appeared in the AFL–CIO supplement. Secretary Dillon addressed himself to what he termed the "central issue confronting the Soviet Union and the Western nations"—namely, the problem of Berlin and Germany.

Mr. Dillon's article is an excellent and clear-cut enunciation of America's determination to hold firm in our support of a united Germany, and stanchly opposed to the "isolation and engulfment" of West Berlin. Mr. Dillon states explicitly that "in the long run, the problem of Berlin and Germany can only be solved through German reunification."

Mr. President, there is absolutely no question that the regime in power in East Germany does not represent the hopes and aspirations of the people it so arbitrarily controls. Secretary Dillon rightly points out that "it is doubtful that these rulers could remain in power for a single day without the support of Soviet bayonets."

Mr. President, I commend Secretary Dillon for his thoughtful treatment of a subject which is recognized by many to be the most important and far-reaching issue of the cold war. I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IF PEACE IS TO BE KEPT

(By Douglas Dillon)

The central issue confronting the Soviet Union and the Western nations at the summit is the problem of Berlin and Germany. No issue on earth today is more critical. It involves the immediate fate of two and a quarter million West Berliners and the ultimate destiny of about 70 million Germans. It bears directly upon the future stability of Central Europe and the possibility of a lasting European peace. It represents a critical test of the integrity and dependability of the free world's collective security systems—because no nation could preserve its faith in collective security if we permitted the courageous people of West Berlin to be sold into slavery. It also represents a critical test of Soviet good faith in all areas of negotiation. For the goals of disarmament and the general improvement of East-West relations have no prospect of attainment if we find that the Soviet rulers or their East German puppets are prepared to use force or the threat of force in an attempt to isolate and eventually to subjugate West Berlin. Finally, we must recognize that the issue of Berlin and Germany, if it cannot be resolved through negotiation, may involve the gravest of all issues: the issue of peace or war.

In the long run, the problem of Berlin and Germany can only be solved through German reunification. This the Soviets have so far rejected, fearing to put their rule in East Germany to the test of a free vote. But we cannot abandon our goal or abate our efforts toward its achievement, because we know that a divided Germany will remain a powder keg so long as the division persists. Meanwhile, we are willing to consider interim arrangements to reduce tensions in Berlin and lessen present dangers. But we are determined to maintain our presence in Berlin and to preserve its ties with the Federal Republic. We will not accept any arrangement which might become a first step toward abandonment of West Berlin or the extinguishing of freedom in that part of Germany which is a free, peaceful, and democratic member of the world community.

It would be highly optimistic to pretend that prospects of an early agreement are bright. Mr. Khrushchev has had a great deal to say recently which bears upon Berlin and Germany, and his words leave the inescapable impression that the Soviet view of Berlin is far removed from the facts. Let us examine some of his comments:

He begins with the assertion that West Berlin lies on the territory of the so-called German Democratic Republic. This is not only false, it is contrary to the pledged word of the Soviet Government. While it is true enough that the Soviet-occupied portion of Germany surrounds Berlin, it is equally true that Berlin was given separate status under the occupation agreement—which the Soviets themselves formulated, together with the British and ourselves. Moreover, the so-called German Democratic Republic is one of the outstanding myths in a vast Communist web of prodigious mythology. Its puppet rulers are totally under the control of

Moscow. Despite tireless efforts to build a local Communist apparatus in East Germany, it is doubtful that these rulers could remain in power for a single day without the support of Soviet bayonets. The East German regime is not recognized as a government by any non-Communist nation. Both legally and as a matter of geographic fact, West Berlin is entirely independent of the so-called German Democratic Republic—and it will remain so.

Mr. Khrushchev continues to insist that Western forces leave West Berlin and that it be declared a "free city." He ignores the fact that West Berlin is already a free city—the lone island of freedom within the sprawling Communist empire. When he speaks of making West Berlin a "free city," his meaning is only too clear: he desires West Berlin to be free from protection, free from security, free from its commercial and cultural ties with West Germany—and cut off from freedom itself.

Mr. Khrushchev has also complained that the situation in Berlin is abnormal. With this contention, we can wholeheartedly agree. It is indeed abnormal when one million East Berliners are forcibly divided from more than two million fellow citizens in West Berlin—when they are constrained to live under a totalitarian regime unlawfully imposed by a foreign power—and when even family units are divided by an arbitrary boundary imposed in the name of a foreign ideology.

But the abnormal situation in Berlin is merely one facet of the greater abnormality created by the artificial separation of the east zone from the remainder of Germany. The monstrous nature of this abnormality has been strikingly demonstrated by the fact that more than two and a third million East Germans and East Berliners have, during the last 10 years, exercised the only franchise available to them and have voted with their feet against Communist rule by fleeing to West Berlin and the Federal Republic.

The abnormality of which Mr. Khrushchev speaks can be cured only by permitting the whole German Nation to decide its own way of life. The only practical way in which they can exercise this right is through free elections. Mr. Khrushchev and other Soviet spokesmen have often proclaimed their devotion to the principle of self-determination. This pretense is exposed as an empty gesture when they refused to apply the principle of self-determination to Berlin and Germany.

Mrs. Khrushchev has also argued that we must move rapidly to liquidate the leftovers of the Second World War—among which he includes what he describes as the occupation of West Berlin by American, British, and French forces. We are even more anxious than Mr. Khrushchev to liquidate the leftovers of World War II, but Mr. Khrushchev must recognize that these leftovers are rather numerous:

Is the Soviet Union prepared to remove its forces from East Germany and the eastern European countries on which they are imposed? Is it willing to grant self-determination to the East Germans and to permit the peoples of the Soviet-dominated states in Eastern Europe to choose their own destiny? Is it willing to withdraw support from the Communist regime in North Korea and to permit the whole Korean people to reunite under free elections supervised by the United Nations? Is it at last willing to cease obstructing the operation of the United Nations Charter—to which the Soviet Union pledged itself in San Francisco—and whose application it has consistently frustrated by a series of vetoes in the Security Council?

The United States and its Western Allies would be happy indeed to see these leftovers of World War II liquidated. But we are not prepared to begin this process by permitting the isolation and engulfment of West Berlin.

We have repeatedly informed Mr. Khrushchev that we will not negotiate under duress. Yet in his recent statements about his intentions to sign a separate peace treaty with the so-called German Democratic Republic unless an East-West agreement is reached on Berlin, he is skating on very thin ice. We are approaching the summit with every intention of seeking a mutually acceptable solution of the German problem, including Berlin, of seeking just settlements of other international differences, and of exploring ways to improve relations between the Western World and the Soviet bloc.

CZECHOSLOVAK NATIONAL COUNCIL URGES FATE OF CAPTIVE NATIONS BE DISCUSSED AT SUMMIT MEETING

Mr. KEATING. Mr. President, last week representatives of the Czechoslovak National Council of America presented me an important memorandum concerning the forthcoming summit conference. They also conferred with officials at the State Department about the part our Government should play at this vital meeting.

It is important for the United States to grasp every opportunity to discuss the fate of the captive nations and to press for the holding of free and honest elections behind the Iron Curtain. We cannot, and must not, accept the present state of affairs, when so many noble peoples are being subjugated by Communist tyranny. I am hopeful this whole subject will be explored at the summit conference.

Because it contains a message of vital importance to all concerned with our friends behind the Iron Curtain, I ask unanimous consent that the memorandum to which I have referred be printed at this point in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM OF THE CZECHOSLOVAK NATIONAL COUNCIL OF AMERICA CONCERNING THE SUMMIT MEETING

On the eve of the summit meeting, scheduled for May 16, 1960, we wish to declare that countless Americans of Czechoslovak descent shall give again—as they have always done in the past—their wholehearted support to any U.S. policy designed to restore freedom and justice to the people now living under Communist rule.

We recall with satisfaction many earlier efforts of our Government and are hopefully confident that a persistently vigorous policy along the same lines might ultimately yield the desired results.

The U.S. policy, as we see it, is based on the following assumptions:

(1) There is no freedom in the captive nations and the division of Europe (not only of Germany) is unnatural.

Captive Nations Week resolution of July 1959: "* * * the enslavement of a substantial part of the world's population by Communist imperialism * * *."

The Bermuda Declaration of December 8, 1953: "We cannot accept as justified or permanent the present division of Europe."

(2) The interest of peace and justice requires a discussion of the captive nations with the U.S.S.R.

President Eisenhower replying to Premier Khrushchev in 1958: "Surely the Hungarian developments and the virtually unanimous action of the United Nations General Assembly in relation thereto show that conditions in Eastern Europe are regarded throughout the world as much more than a matter purely of domestic scope. I propose that we should now discuss this matter. There is an intrinsic need of this, in the interest of peace and justice, which seems to me compelling."

(3) The U.S. Government has a moral duty and right to concern itself with the problems of the captive nations.

This right is based, among other things, on the following documents:

The Atlantic Charter, endorsed by the Soviet Union on January 1, 1942, containing the principle that the signatory powers shall "respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

The Teheran Conference of December 1, 1943, stating that the "three governments will jointly assist the people in any European liberated state * * * (c) to form interim governmental authorities broadly representative of all democratic elements in the population and pledged to the earliest possible establishment through free elections of governments responsive to the will of the people; and (d) to facilitate where necessary the holding of such elections."

The treaties of peace concluded with Hungary, Bulgaria, and Rumania on February 10, 1947:

"Hungary (Bulgaria, Rumania) shall take all measures necessary to secure to all persons under Hungarian (Bulgarian, Rumanian) jurisdiction, without distinction as to race, sex, language, or religion, the enjoyment of human rights and of the fundamental freedoms, including freedom of expression, of press and publication, of religious worship, of political opinion, and of public meeting."

(4) The U.S. Government wishes to see free elections to be held in the now captive nations.

This desire is based not only on the principles of our democratic traditions, but also on the spirit of the United Nations Charter and the Universal Declaration of Human Rights, adopted December 10, 1948:

"The will of the people shall be the basis of the authority of government. This will shall be expressed in periodic and genuine elections which shall be by universal and equal suffrage and shall be held in secret vote or by equivalent free voting procedures."

(5) Unless such elections are held and liberty and independence restored, the people of the United States are not prepared to accept the present status quo of the captive nations as just and permanent.

Captive Nations Week resolution: "It is fitting that we clearly manifest to such peoples through an appropriate and official means the historic fact that the people of the United States share with them their aspirations for the recovery of their freedom and independence."

The Potomac declaration of June 29, 1954: "We will not be party to any agreement or treaty which would confirm or prolong the subordination of the formerly sovereign states of central and eastern Europe, now held in bondage by the U.S.S.R."

The logical sequence of the previous assumptions is found in the three following points, which thousands of American citizens of Czechoslovak descent wish to be our policy at the forthcoming summit meeting:

(1) That the U.S. Government insist on a discussion of the fate of the captive nations.

(2) That the U.S. Government refuse to recognize the present status quo in central and eastern Europe as just and permanent.

(3) That the U.S. Government demand that free elections under international control be held throughout the captive nations.

PROFESSOR WESTIN SUPPORTS EAVESDROPPING LEGISLATION

Mr. KEATING. Mr. President, yesterday's New York Times contains a very important letter to the editor from Prof. Alan F. Westin, of Columbia University. Professor Westin has served as a consultant to the Senate Subcommittee on Constitutional Rights, on the subject of wiretapping and eavesdropping, and has given a great deal of study to this whole problem.

The point of Professor Westin's letter is that a comprehensive eavesdropping statute, such as the one I have introduced—S. 1292—would be very helpful in combating unauthorized private eavesdropping. This is an aspect of the subject which frequently is overlooked by those who have an adverse, emotional reaction to all legislation in this field. The truth is that under present law the private citizen has practically no protection against electronic snooping, while, at the same time, law-enforcement agencies are completely stymied in legitimate efforts to obtain evidence of crime plotted by telephone.

Professor Westin, in his other writings, has made the point that it is not outside "traditional justice" to permit wiretapping and other forms of eavesdropping under the safeguards of a court order. My comprehensive bill—S. 1292—based on the law in New York, would impose this requirement on all law-enforcement officers, and at the same time would add important protection against unauthorized invasions of privacy under any other circumstances. The provisions of the more limited bill which Representative CELLER and I have introduced in the House and in the Senate—S. 3340—are likewise designed to permit State wiretapping only under the same limitations.

Professor Westin's letter indicates that this is a reasonable approach to the problem, and is enforcible. I commend his letter to the attention of all Members of the Senate who are interested in this important subject; and I ask unanimous consent that the letter be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PROSECUTING WIRETAPPING—RECORD OF INDICTMENTS UNDER FEDERAL STATUTE NOTED

(The writer of the following letter, associate professor of public law at Columbia University, has published a number of articles on the subject of wiretapping.)

To the EDITOR OF THE NEW YORK TIMES:

In the current discussion of wiretapping practices and prospective legislation, there is one matter on which virtually all commentators, including several Federal judges and legislators, have made unintentionally misleading statements. This relates to the record of prosecutions under section 605 of the Federal Communications Act of 1934, the existing national wiretap statute.

Most remarks on the application of this statute have asserted that only one or two prosecutions have been brought under the statute in recent years.

Actually, a survey made by this writer shows that since 1953 at least 10 persons have been indicted in 7 separate cases in 6 different Federal districts stretching from New York to Oregon.

In six of the seven cases the defendants pleaded guilty or were convicted after trial; a private detective in Albuquerque, N. Mex., who tapped telephones in two family investigations; a private detective in New York City who tapped in a divorce case; a gambler and his employee who used telephone taps and room recordings in the course of an intragang dispute also involving city officials in Portland, Oreg.; a San Antonio, Tex., investigator who wiretapped in a divorce case; a private detective who tapped the telephone of the mayor of New Orleans, La., during a political campaign; and an attorney and detective agency owner in Cincinnati, Ohio, who tapped in several family investigations.

RANGE OF SENTENCES

Sentences in these cases range from a $500 fine to 2 years in prison. In only one case, that of Teamsters officials James Hoffa and Owen Brennan, and wiretap specialist Bernard Spindel, were the defendants acquitted.

It is possible that other prosecutions have taken place since 1953 which this survey did not uncover. However, the important fact is that after a hiatus of 14 years during which not a single private wiretapper was indicted by Federal attorneys, the shift in public opinion against free enterprise wiretapping has resulted in a widely distributed set of successful prosecutions, under even as leaky a statute as section 605.

This indicates that much more wiretapping can be discovered and prosecuted successfully than some commentators have assumed.

If a carefully drafted and comprehensive Federal antieavesdropping law, such as the Keating-Celler bill, were enacted by Congress, much more private eavesdropping could be reached.

Equally important, with a clear law stating when Federal officials can and cannot tap, and under what minimum safeguards State wiretapping may be authorized, U.S. attorneys may begin to move against officials who eavesdrop illegally. Until such a new Federal law is passed, the record of prosecutions of official wiretap violators will remain what it has been since 1934—zero.

ALAN F. WESTIN.

NEW YORK, *May 4, 1960.*

ON TO THE SUMMIT

Mr. CASE of South Dakota. Mr. President, of course the summit conference should go on and President Eisenhower should attend it. I have no doubt that he will—and I, for one, expect something from it.

Mr. President, I went to a baseball game a few nights ago and, unless I am badly mistaken, the coaches on both sides were trying to steal the other's signals. And I found myself trying to figure out when the coach on the third base line tugged his cap and passed his arms over his chest just what he was trying to tell the batter—whether a fast ball was coming or a curve, and whether he should take it or not. That happens every day, and probably in every league.

But the knowledge that the coach and the players may be trying to get a line on what the other team has and whether its pitcher is throwing a fast ball or a floater does not prevent the managers from getting together for an understanding to prevent a competitive game from turning into a knockdown and drag-out fight.

The United States of America, Mr. President, and the Union of Soviet Socialist Republics represent competitive economic and social systems. Neither of them is going to abandon its system in our generation. But it is infinitely to the self-interest of the people of both nations, as well as to the other peoples of the world, that the heads of these nations get together and, with the heads of state of the other nuclear powers, work out an understanding that will relieve the tensions which exist today.

They may or may not, at this first summit meeting, define a rule for every circumstance or dispose of every troublesome question. As the President of France, General de Gaulle, so wisely said in his speech at the joint meeting of Congress:

> All things have to have a beginning • • • only a detente is now possible and necessary. In the peaceable climate which could be created, objective solutions would little by little come into view.

So, Mr. President, now that the whole world knows we as well as the Russians have been trying to find out a little bit about how the ground lies and perhaps to learn something of the pitching ability of a rival, let the President proceed to a meeting with the heads of state from these other great powers with confidence, and with the clear backing and support of the people of the United States. Our hopes and our prayers will go with him, and all mankind will applaud whatever improvement of the international climate may follow.

Let us remember that it is as much to the interest of the Soviet Union that there should come a relaxation of tension and a lifting of the burden of an arms race as to any other country. The self-interest if not the altruism of every nation represented should contribute to a good result.

Mr. DIRKSEN. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from South Dakota yield to the Senator from Illinois?

Mr. CASE of South Dakota. I yield.

Mr. DIRKSEN. Apropos of this discussion, I simply wanted to add one statement because the summit conference has been mentioned.

Our international intercourse is marked by constant conferences. When we think about missile gaps and deterrent gaps, I also think of an intelligence gap. I do not want to see an intelligence gap occur in our operations at any time. So who shall say when these things happen that they must necessarily be related to some kind of conference, because nothing more

untoward could happen than to have a gap in our intelligence operations, wherever they may be carried on.

ATTACK AIRCRAFT CARRIER FUNDS

Mr. ROBERTSON. Mr. President, I ask unanimous consent to proceed for 5 minutes to speak on the subject of the other gap of our defense, the attack carrier.

The PRESIDING OFFICER. Is there objection? The Chair hears none.

Mr. ROBERTSON. Mr. President, the House has seen fit in its military appropriations bill to delete funds that had been requested for construction of a new attack aircraft carrier badly needed by the Navy.

The modern attack carrier is the very life's blood of American naval striking power, now and indefinitely. Manned combat aircraft in naval warfare cannot be replaced by inflexible ballistic missile systems.

The modern carrier provides a mobile base to take jet planes to the scene of crisis or conflict, concentrate this force where it is needed, keep it there as long as the need exists, and then move it to another location.

The modern carrier is the least vulnerable of any base for airpower, particularly in terms of surprise ballistic missile attack. Its very mobility provides effectively for its safety.

The carrier is essential to our balanced antisubmarine warfare effort. Carrier airpower provides the primary means of destroying sea-based enemy submarine support vessels.

The carrier is the most effective instrument of naval striking power. Each carrier can deliver from 40 to 60 nuclear weapons on target. A carrier can fight in any type of war, but is exceptionally important for limited objective wars. This is vital as the probability of all-out war diminishes.

A point of added importance that may be overlooked in this connection is that the aircraft carrier constitutes sovereign United States territory, which can be established off the shores of any country without treaties, commitments, or monetary grants.

Overall, the modern attack aircraft carrier represents a capital investment in security that pays dividends for well in excess of 20 years, a feature unique in this respect among U.S. weapons systems.

Now, Mr. President, the Navy has an inventory of 14 attack aircraft carriers, including 4 of the modern *Forrestal* class, 3 of the modernized *Midway* class, and 7 of the World War II *Essex* class. Under construction are two more carriers of the *Forrestal* class and one nuclear powered carrier. In 1962, the Navy's operating carrier inventory will include six *Forrestals*, one nuclear, three *Midways*, and four *Essex* class ships.

The Navy's prime need now is to start one additional *Forrestal* class carrier, with operating facilities for 90 modern jets and improved landing safety features, to replace one of the *Essex* carriers in 1962. As new attack carriers join the fleet, they replace carriers that are then designated for antisubmarine warfare. Thus, both the attack carrier strength and the strength of the antisub carrier fleet are kept at requisite levels through a single carrier building program.

As to the powerplant of the proposed new carrier, the Navy advises me that nuclear propulsion is far down the list in relative importance among other features. The carrier deck and modern aviation facilities are of primary concern. If the proposed new carrier is conventionally powered, an estimated $130 million will be saved for use in other programs.

Some misunderstanding may have arisen, Mr. President, over the language contained in the House committee report as to the need for an additional carrier at this time. The report said, on page 56:

> The committee action on the request for an additional attack carrier is directly related to the number of carriers which are necessary to meet the operational requirements of the Navy and whether or not the carrier force in being, plus the three now under construction, are adequate for the present time.

Taking into account the leadtime involved in the construction of a ship of this size and complexity, we must appropriate for the foreseeable future, not merely for the present time. Four full years are required to construct a new carrier. If a new one is not authorized this year, there will be a gap of more than 3 years after the commissioning of the nuclear-powered *Enterprise* before the next modern replacement carrier could join the fleet.

By that time, the four remaining World War II ships still forced to operate as attack carriers will be on the brink of unserviceability for the operation of modern aircraft. This would constitute a serious deficiency in the Navy's readiness for either limited or nuclear warfare.

In considering the carrier fleet's readiness for action at any given time, a clear understanding also must be grasped of the magnitude of necessary maintenance and upkeep of these enormously complex mobile air bases and their complement of planes.

At any given point of time, two of our carriers will be laid up for overhaul, repair, and refitting. This means that the remaining 12 attack carriers must be deployed throughout our fighting fleets in areas of assignment best calculated to maintain for the United States her traditional position of supremacy on the seas.

I heartily approve the action of the House in providing additional funds for the expansion of the Navy's antisubmarine warfare capabilities and for the construction of additional Polaris firing submarines.

In addition to these items, I hope, for the reasons I have stated to see the Senate restore the funds requested in the President's budget for the construction of another vitally needed attack carrier.

BANK MERGER LEGISLATION

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the RECORD at this point a statement in which I commend, during my unavoidable absence from the Senate last Friday, the work of the Senator from Arkansas [Mr. FULBRIGHT] and other members of the Committee on Banking and Currency in calling up and securing concurrence in the action of the House of Representatives on the bank merger bill, which had been pending before the Senate on and off for the last 5 years.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR ROBERTSON

Last Friday the Senator from Arkansas [Mr. FULBRIGHT] was kind enough to bring up for me S. 1062, the bank merger bill, and the Senate accepted the House amendments and sent the bill on to the President for his signature.

I appreciate the kindness of the Senator from Arkansas in doing this. I am glad that he had the opportunity to present this bill to the Senate, because it is a subject in which he has had great interest, going as far back as 1956, when he introduced S. 3911.

I should like to make it clear in the RECORD that I am in entire accord with the views expressed by the Senator from Arkansas in urging the Senate to adopt the House amendments, and I agree entirely with his statement to the Senate of the effect and meaning of the amended bill. I also want to make it clear that the answers to the questions posed by the Senators from Utah, Mr. BENNETT, and New York, Mr. JAVITS, which have been printed in the RECORD express my views in response to those questions. The Senator from Utah, Mr. BENNETT, and the Senator from New York, Mr. JAVITS, have, through these questions, made a contribution to the proper understanding of the bill, both in the Senate at the time of its passage, and in the banking agencies which will be administering the act when it becomes law.

Other members of the committee, too, especially Senator FREAR and Senator BUSH, have been most helpful in connection with this bill, and I should like to thank them also.

I appreciate particularly the kind words of the majority leader in connection with the passage of S. 1062. He did not underestimate the delays and difficulties which this legislation has met, and I am glad that he is able to take satisfaction in the final passage of the bill.

REPLY BY ABBOTT LABORATORIES TO LIFE MAGAZINE ARTICLE ON THE PHARMACEUTICAL INDUSTRY

Mr. DIRKSEN. Mr. President, on February 15, 1960, there appeared in Life magazine a 7-page article entitled "Big Pill Bill To Swallow."

The Abbott Laboratories, a very reputable and substantial pharmaceutical producer located in North Chicago, Ill., responded with a paid editorial to the Nation's doctors on this article, and pointed out what it deemed to be errors of fact affecting both the medical profession and the pharmaceutical industry.

Inasmuch as this matter is under investigation by the Senate Subcommittee on Anti-Trust and Monopoly, I believe

this article merits inclusion in the CONGRESSIONAL RECORD; and, therefore, I request consent that it be made a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG PILL BILL TO SWALLOW

On February 15, Life magazine carried a seven-page editorial feature on the ethical pharmaceutical industry. Implicit in this article were errors of fact, affecting both the medical profession and the pharmaceutical industry.

In the March 7 issue, Life carried this correction in the "Letters to the Editor" column:

"Life misfilled its pill bottle. Our reporter was told there were only 10 pills in each $3 Temaril bottle. The correct figure is 20".—Ed.

Unfortunately, Life misfilled more than its pill bottle. The first sentence of the February 15 article told of 4-year-old Jimmy Porter taking a "30 cent pill, a Temaril pill prescribed to relieve the itching * * * of chicken pox." Fact: This tablet (which is not made by Abbott Laboratories, incidentally) sells on prescription at an average price of 11.3 cents—not 30 cents.

Life said the tablets were given to each of the five Porter children every 3 hours. Fact: If this happened, the children were getting twice the dosage recommended by the manufacturer.

Life said the chicken pox epidemic in this family cost "more than $50 in drugs alone." Fact: To spend $50, it must be assumed that all five children took the anti-itching tablets for more than 4 days at twice the recommended dosage and at a cost of 30 cents a tablet. Typical treatment for five youngsters with this particular drug, even for a full week, would cost $15.40 in all, not $50.

Life said the Porters spent a tenth of their income on medical care last year, and that their problem, on a vast scale, is a problem of "all American families." Fact: Per capita expenditures for drugs in 1959 came to about $18, and about $94 for all medical care. The average prescription price last year was only $3.08. We do not know whether the Porters had more, or less, illness than usual.

What is important—to all Americans—is how many illnesses and hospital stays were shortened or prevented by doctors and drugs, how much pain was alleviated, how many lives were saved. Can present drug expense of $18 per person be too heavy in a nation that spends $52 per person (over 14 years of age) on tobacco and $87 per person (over 21 years of age) on alcoholic beverages?

Life implied that drug prices are too high because of the "advantage of selling to captive consumers." Fact: The physician, who is ethically bound to prescribe in the best interests of his patient, is the only man professionally capable of diagnosis and treatment. If the patient has a real financial problem, the physician, as part of his obligation, may provide drug samples he may have on hand or, in extreme cases, he will contact social or government agencies.

Life said that "in a single day a doctor may collect $40 worth of free drug samples." Fact: This figure might be true—if the doctor opened all of his mail, and interviewed all detail men, on just one day of the week. Samples inform the doctor about new drugs or remind him of old ones. Life did not mention what eventually happens to samples. Physicians treat patients with them—the indigent, the aged, the unfortunate, those in charitable institutions.

Life compared the costs of drug promotion (14 percent) to the "less than 3 percent" spent on new car promotion by manufacturers. Fact: Ethical drug advertising in medical journals and direct mail varies from year to year between 3.9 and 4.7 percent. And this, of course, is carried on entirely by the manufacturer. New car advertising is sponsored by manufacturer and dealer, so there is no comparison here at all.

Life said "the average doctor is deluged with sales talk, either through direct mail or visits from drug firm representatives known as detail men." Fact: It is true that the doctor receives, and reads, a lot of direct mail, and many medical journals. He also sees, and listens to, many detail men. This is one way he can keep up with the rapidly changing pace of medical progress—one form of education which enables him to give his patients the best possible medical attention. Medical advertising already is, and must continue to be, the best-policed of all advertising. It deals with human lives.

Life quoted a pharmacologist to the effect that new products are introduced "because they are profitable, not because they have a medical advantage over the products of preceding years." Fact: Pharmaceutical houses routinely produce drugs which have a limited market—and at little or no profit. The criterion is simply whether the drug is needed to prevent or cure disease. Products which do not deliver real benefits to doctor and patient alike soon pass out of the medical market. Good products survive.

Life quoted another pharmacologist to the effect that "extraordinarily few important new drugs have been originated by American drug houses." Fact: In the last decade alone, American pharmaceutical houses have developed 392 new medicinal chemicals, including tranquilizers, steroids, antibiotics, diuretics, antihypertensives, etc. Useful drugs discovered elsewhere have been developed to clinical usefulness within the industry. Penicillin is a classic example. So was insulin. So are some of the new tranquilizers. Without tremendous research and production efforts by the industry, many modern drugs would still be just medical curiosities.

Life showed a pie chart allocating the consumer's drugs dollar, with company profit taking 15 percent of this dollar. Fact: This is reasonably accurate—but only when you consider just a few products. Further, Life neglects to mention that half of this profit goes into taxes. On these products the purchaser pays about 7 cents toward profit. On others he pays much less. These are the pennies which provide the incentive for developing effective drugs—drugs which ease pain, prevent or cure illness, prolong life.

Life said "a good part of the blame for the high price of prescriptions must be borne by the physician," and that "better informed consumers" should "pressure the doctors into using finer discrimination." Fact: Such assertions belittle the scientific knowledge and judgment of every doctor. He is indicted for prescribing medications only he is competent to judge as best for each patient. The pressure Life suggests would bring chaos to medical practice.

Life stated there is no real difference between brand name drugs and equivalent generic name drugs. Fact: Many unbranded drugs have been proven inferior, as a scrutiny of Food and Drug Administration citation would show. A physician typically prefers not to take a chance on unbranded drugs, especially with those turned out by firms operating within a State and therefore not subject to Federal food and drug laws. With most things we buy, we rely on the quality and integrity of brand names. In the case of drugs, this is even more important than with other consumer items, since the health, and even the life, of a patient may be at stake. The brand name is the physician's assurance that the drug he prescribes is the exact drug the patient receives.

Abbott Laboratories believes the American people want to retain and improve our present system of medical care. We believe they want to keep the same kind of doctor-patient relationship, with its freedom of choice, which has done so much to take us to our present astonishing levels of national health. Progress depends upon further effort and teamwork among all the health professions. This must continue. To this all of us are dedicated by tradition, purpose, and training. For the greatest medical challenges—and the greatest triumphs—still belong to the future.

This is our report. It is not our intention to vilify Life. We accept that it has the right to a viewpoint. Our concern is that the conditions it reported, and the interpretation put to them, are not consistent with the facts.

THE WHEAT AND RICE AGREEMENT BETWEEN THE UNITED STATES AND INDIA

Mr. DIRKSEN. Mr. President, last week at the White House the President of the United States and the Government of India's Minister of Food and Agriculture, the Honorable S. K. Patil, signed an agreement, under the Public Law 480 program, which will provide India with almost 600 million bushels of wheat and 22 million bags of rice during the next 4 years.

This is a truly historical occasion. History is being made, not because of the gigantic size of this program, but also because of its aims. In simplest terms, the conclusion of this agreement means that the United States is using its agricultural abundance on a forward basis to buttress the determined efforts of the Indian Government as it moves ahead during the next 4 years to provide a better diet for its people from its own resources. We, as Americans, could not have shown more evidence of our sincere faith and interest in the Indian effort to be self-sustaining than by means of the action which was taken last week.

Much will be said about the value of this program to American farmers. Much will be said about its importance to the Indian economy. Certainly, these aspects are extremely important. But I should like to call the attention of the Senate to one fact—namely, that this agreement did not just happen. Somebody in the U.S. Government and somebody in the Indian Government had to work on this idea and plan for many, many weeks and months before anything was ready for signature. And judging by the size of our exports of agricultural commodities over the last few years, this process of day-in and day-out work leading to occasions such as this one has been going on for some time. Although Public Law 480 is a complicated program requiring participation by many agencies, primary responsibility is centered in the U.S. Department of Agriculture; and within the Department, it rests with the Foreign Agricultural Service. This is a relatively small agency, totaling considerably less than 1,000 persons stationed in the United States and abroad; and I have had brought to my attention, on many occasions, the efficient work that this group does in developing and carrying out the Public Law 480 program.

I know that a lot of night and weekend work went into the planning and drafting of the agreement which was signed last week. I want to thank those in the Department of Agriculture and the Foreign Agricultural Service for their efforts. They have made a notable contribution to the cause of world peace, and I know they will continue to do so.

USEFUL WORK

Mr. CHAVEZ. Mr. President, in the Washington Post of today, in the column "These Days," written by George E. Sokolsky, appears an article entitled "Useful Work." The article acclaims the wonderful work of the Albert and Mary Lasker Foundation in the field of medical journalism, as it relates to cancer and heart ailments. I ask unanimous consent to have the article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 9, 1960]

THESE DAYS

(By George Sokolsky)

USEFUL WORK

Rich men do not always know what to do with their money, particularly after they die. They work hard accumulating a fortune and then it often goes to encourage profligacy, waste, and appalling dissipation. The value of the foundation is that it makes it possible for a rich person to put his money to use for some purpose other than for himself or his family.

Albert Lasker was an advertising man and industrialist who served his country ably in World War I. He amassed a fortune and desired to leave it for useful purposes. Mary Lasker, his widow, is a person of unusual perspicacity and social consciousness who devotes herself to good works in a very sensible manner.

Of particular value, I think, are the awards to medical journalists. This is a new and increasingly popular field of bringing news to the public.

The two big killers are heart ailments and various cancers and with regard to both nothing can be more damaging than ignorance. Physicians and surgeons do what they can, but too often they are resisted by frightened patients, by those who so fear death that they stand in the way of continuing life. The advantage of knowledge is that it can, under favorable circumstances, eliminate this element of fear.

I have had a very thorough experience with both these killers and I must say that somehow I was never terrified by them. The word, cancer, neither frightened nor distressed me and when I was permitted to return home, I knew that I should be examined twice a year for about 5 years. These examinations are now as routine as going to a dentist for a cleaning. I have to see my heart man, Dr. O. Alan Rose, on stated occasions, and a delightful technician shows up every other Tuesday morning to stick a needle into my left arm to discover by blood chemistry whether I am sinning. (I use doctors' names purposedly to break down a stupid tradition of anonymity.)

Perhaps this will go on for the rest of my life. It is a routine that interferes with nothing, that is gentle and at times even jolly, and there it is.

The value of the Albert and Mary Lasker Foundation awards to medical journalism is that it stimulates bringing everything out in the open. Alcoholics Anonymous discovered that talking about our illnesses and weaknesses is a form of therapy. And presumably that is, to a degree, true about so many of our illnesses. Perhaps that is why elderly ladies enjoy sitting on hotel verandas talking about their operations. It helps them get over their troubles.

I find when I use the word "cancer," a look comes into the listener's eye. It is as though I were a disembodied spirit, some ghostly creature returned from Sheol. But when I say that the best way to get over one's aches and pains is to have a cancer clipped out, the listener regards my levity as unseemly. The other day, I heard Arthur Godfrey talk about his cancer and I thought that he took it altogether too seriously. One need only thank God and the doctors and the needle-stickers that one is still alive and kicking and to leave it at that.

The Albert and Mary Lasker Foundation is to be congratulated for promoting medical journalism. Ignorance is not bliss; it can be a frightful pain in all the wrong places. The more we know, the less we fear—unless we enjoy fear, which some do. Who shall deprive such a one of his pleasures? Mary Lasker looks like a fearless person who has discovered all the joys of giving and who gives not only generously but with unusual wisdom.

PREVENTION OF TYRANNY BY MAJORITY

Mr. TALMADGE. Mr. President, the May issue of Nation's Business contains an excellent article entitled "Right To Speak Prevents Tyranny by Majority," written by Felix Morley. I ask unanimous consent that the article may be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RIGHT TO SPEAK PREVENTS TYRANNY BY MAJORITY

(By Felix Morley)

In the year of a presidential election Congress necessarily works within the confines of a rigid timetable. Because many of its Members are politically instrumental, the legislative body must adjourn before the nominating conventions are called to order. That deadline is especially pronounced this year, with four Democratic Senators contending for first place on the ticket of their party.

Decision on this nomination will be made at Los Angeles in the week of July 11. So only a scant 2 months remain for winding up congressional business, including appropriations that demand close scrutiny yet cannot be postponed. Since the agenda is overloaded this means that a good deal of it is going to be lost in the shuffle. This, because of the nature of some of the pending measures, is certainly no unmixed evil.

Blame for the congestion is naturally being laid on the bloc of 18 southern Senators who fought a stubborn, and largely successful, battle against the civil rights legislation proposed by the administration.

This one issue consumed almost 2 months of the Senate Calendar, contrary to the desires of a majority of that body. By using every possible parliamentary device, including outright filibuster, the compact southern group was able to stand off the less concentrated will of 82 percent of the Senate Members. Not all of the civil rights proponents favored the legislation in the form presented by Illinois Senator EVERETT M. DIRKSEN for the administration. But except for the protection afforded to the minority by the Senate rules, some compromise bill would have gone through as expeditiously as happened under the more democratic procedure of the House.

Anticipation that the two-thirds majority necessary for cloture would be difficult to obtain seems to have been the basis of Senator LYNDON JOHNSON'S clever strategy throughout. He could exert effective leadership for moderate legislation, confined to the voting issue, primarily because moderation was as unsatisfactory to northern as to southern diehards. While southerners wanted no civil rights legislation at all, others wanted it to include penalties for continued school segregation, provision for the extension of nationalized education and even for the control of local employment policies by Washington. Early cloture would have muzzled the expression of this viewpoint and was therefore, though for opposite reasons, as distasteful to Senator DOUGLAS, of Illinois, as to Senator RUSSELL, of Georgia.

So the moral pointed by the protracted debate on civil rights is that few Senators, whether of right, left, or center, are willing to compromise a strongly held viewpoint in order to reach an agreement. And this obduracy, within limits, is justified by the very nature of the Senate. That body, giving equal representation to every State regardless of population area, or wealth, was specifically designed to represent the States as such. From the beginning, the Senate's function in our Federal system has been quite other than that of the more democratic House, planned to reflect the majority opinion of the Republic as a whole. It is too often forgotten that this fundamental difference in the representative character of Senate and House is an important aspect of the principle of checks and balances.

The debate over civil rights, so quickly terminated in the House, so long dragged out in the Senate, should consequently be regarded as an outstanding illustration of the ingenuity of our form of government. To appreciate this lesson at full value, it must not be obscured by personal feelings on the nature of the issues immediately involved. Indeed the emotions aroused, in both North and South, should rather serve to emphasize the importance of a parliamentary system that gives such healthy protection to the expression of discordant viewpoints.

Seen in this light, the device of the filibuster becomes something very different from the merely obstructionist trick which many critics both foreign and domestic have painted it to be. Although sometimes grossly abused, as when the late Huey Long utilized it to recite endless recipes for "potlikker," the provision for unlimited Senate debate is in principle a guarantee that a State shall not be deprived of the right to present its local viewpoint simply because this may not accord with the opinion of the Nation as a whole. The fifth amendment, as a vital safeguard for the individual, is not likely to be abolished because it has often been twisted to protect unsavory persons. Similarly, the practice of unlimited Senate debate may be expected to continue even though it occasionally produces arguments that are anathema to many.

The very bitterness of the civil rights controversy, moreover, should serve to focus attention on the underlying problem of government for any people who value freedom. How can the protection of minorities, which may on occasion be right, be reconciled with the acceptance of a majority opinion, which sometimes may certainly be wrong? In a true democracy—which our Government is not—minorities have no effective protection against the will or passion of the majority. But in a federal republic, as established by our Constitution, the potential tyranny of the majority is severely circumscribed. One of the safeguards is certainly the Senate's stubborn adherence to its time-honored practice of unlimited debate.

Because the filibuster has been most often employed by southern Senators, many regard

it as an undue protection for a particular regional viewpoint.

The explanation is that the former slave States have for a century been on the defensive in their social attitudes, and therefore prone to take advantage of every parliamentary device that serves their cause. That is to be expected. Were a liberal northern Democrat elected President, with a Congress highly responsive to pressure from organized labor, one might anticipate a filibuster by conservative Republicans, perhaps to prevent complete repeal of the Taft-Hartley Act. Indeed, many actual instances could be drawn from our history to show that the filibuster is in nature wholly nonpartisan. It may best be defined as a tactic to check a legislative steamroller, regardless of the direction in which it is moving. Because of its applicability to any situation, the demise of King Filibuster, to use the bygone phrase, seems most unlikely.

Of course, those who do not believe that the minority has rights will always be hostile to the practice of unlimited debate. During the recent debate in the Senate the Communist radio worked overtime to prove this point. Peiping's criticisms were particularly unbridled, defining the filibuster as "a traditional dirty trick of American politicians—one of the typical farces of bourgeois democracy."

Certainly the filibuster is not democratic under the Communist definition of this nebulous word. And if by democratic we mean a system in which the minority has no established rights, then the filibuster is not democratic in any sense. But most of us will feel that condemnation by the People's Democracy of Communist China is an argument for the practice.

For 171 years Americans have maintained a governmental system under which free men have prospered as nowhere else in either place or time. The assurance of unlimited Senate debate has throughout been an integral part of that system. When the Communist dictatorships have accomplished as much, then but not before, it will be reasonable for them to attack the filibuster.

All our privileges demand discretion in their use. This applies to freedom of speech as a principle, and to its particular application in the form of unlimited Senate debate. Between affirmation and denial of free expression, however, the choice is clear. Mistakes may result from discussion at the expense of action. But the irreparable blunders come from acting without adequate consideration in advance.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

CONSTRUCTION OF MODERN NAVAL VESSELS

The Senate resumed the consideration of the bill (H.R. 10474) to authorize the construction of modern naval vessels.

EX-PRESIDENT SYNGMAN RHEE, OF KOREA

Mr. SMATHERS. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial which appeared in the Evening Star of Friday, April 29, written by William S. White, entitled "Some Thoughts on Behalf of Rhee."

Mr. President, I commend this editorial to the attention of Senators, because I cannot help thinking that it points out with great clarity and persuasion the double standard we have developed in this country, unfortunately, in our estimation of dictators.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Evening Star, Friday, Apr. 29, 1960]

SOME THOUGHTS ON BEHALF OF RHEE—PAST HEROISM OF KOREAN AGAINST REDS PROMPTS A RESERVATION ON HIS DEMISE

(By William S. White)

The old man of Korea has gone out of office in heartbroken disgrace. The world's most exclusive club is shrunken yet a little more as Syngman Rhee passes from its membership. This is the Association of Indestructible Elder Statesmen.

Chancellor Konrad Adenauer of Germany, who is 84, leads the surviving band of those who, past 70, still carry crushing responsibilities. With him are Prime Minister Ben-Gurion of Israel (74) and Prime Minister Nehru of India (70 plus some months).

At 85, Mr. Rhee has ceased to be President of the Republic of Korea. And so has come to its close a career of 65 years as a public man.

Much has been written that this aged symbol of Korea's long struggle for independence had overstayed his time. It is said, no doubt rightly, that he permitted police brutality, and worse, to stain his regime. It is said, no doubt justly, that a farce of "democracy" was being made in his country. So it is said that he had to go, and the United States was wholly justified in helping to push him out.

There is no quarrel with this reasoning—so far as it goes. To the world Korea is our creation and thus our responsibility. For Korea's sake (and for the sake of collective security everywhere) was shed the blood of so many of our people in a bitter war a decade ago.

Perhaps it is possible, however, without defending corruption and antidemocratism, to raise reservations about this episode. Is the U.S. Government as ready to act to maintain the future integrity of Korea from Communist penetration as it was ready to oust bad old Mr. Rhee?

Is our righteous decision to overturn one regime—which was at any rate a determined regime—matched by equal determination to insist on a fair and strong successor regime? And having acted against Rhee on standards that are valid enough—that he had become a rightwing despot—are we ready for one other action?

Are we ready to apply these same standards to the leftwing despot in another country in which there is an undeniably close and historic U.S. responsibility? Will we now help to oust the Communist-backed dictator in Cuba, Fidel Castro, as we helped to oust the supposedly pro-Fascist dictator in Korea, Syngman Rhee?

Or is there a double standard here? The Eisenhower administration has no difficulty in justifying a naked intervention in Korea, call it what we will. But that administration finds enormous difficulty in even thinking about intervening in any way, naked or polite, in Cuba. After all, other Latin American nations might not like it. And the Organization of American States would "forbid" it anyhow.

A nation which wants to act can find the fine print oddly hard to read. A nation which does not want to act can find the print compelling, indeed.

So this one columnist is not quite able to join the almost universal and unqualified satisfaction that we have succeeded in casting out old Syngman Rhee in his 86th year and sending him off to end his life in the House of the Pear Blossoms in Seoul. It has been a famous victory. But one columnist, not denying the evils connected with the old man, also does not forget the past heroism of that old man against imperialist communism.

This much, anyhow, history must grant him. How much does history owe to Castro whose victims in Cuba are quite as dead as Rhee's victims in Korea? How much of the free world's struggle against imperialist communism has Fidel Castro ever borne?

MODERNIZATION OF THE EXISTING SUGAR ACT

Mr. SMATHERS. Mr. President, I am introducing at this time for appropriate reference a bill to amend and extend the Sugar Act of 1948. The proposal incorporates some reforms in the current sugar legislation which are long overdue, and which are particularly urgently required in the light of present day conditions.

The proposed legislation would insure adequate supplies of sugar by broadening the base from which these supplies are obtained and encourage foreign countries to make purchases in the United States by adopting a new formula for allocating sugar quotas which takes into account their foreign trade relationships with the United States. It is a 4-year proposal.

For many years, our sugar legislation has given a virtual monopoly of the foreign share of the U.S. sugar market to one country. This, in itself, represents a basic weakness in the present sugar law since it is conducive to monopolistic manipulation of prices and to predatory competition on the world market.

A wholly disproportionate share of the U.S. quota in the hands of a single country, and I refer of course to Cuba, has enabled that country to use the premium paid by U.S. consumers to subsidize sales to Russia and to Red China and other Iron Curtain countries at prices beneath the world market price; in fact, at prices beneath the cost of production in Cuba.

In my opinion, the Congress simply must face up to the fact that the time has come to reduce the Cuban monopoly of our foreign sugar supply. I believe I have been rather candid in my criticism of the present regime in Cuba. What I say with respect to proposed changes in the Sugar Act, however, would be true regardless of who happened to be in power there. This particular statement is not intended at this time in criticism of the present Government of Cuba.

The proposed legislation would effectuate certain much needed reforms. It is not politically motivated and it is not a measure against Cuba, as I said, although I am in my mind not certain that some measures should not be taken to protect the interests of the U.S. investors in the Republic of Cuba.

The New York Times of March 5, 1960, reported a speech by Maj. Ernesto Guevara, president of the National Bank of Cuba, made at Havana University, in which Major Guevara stated that the premium paid by the United States for

Cuban sugar amounted to "economic enslavement." According to the New York Times:

> Major Guevara charged that the United States "gave us an apparent gift" of a higher price, but demanded in exchange "preferred tariffs for their manufactured products, making it impossible for native products or the manufacturers of other countries to compete."

This statement was made in face of the fact that in addition to the premium price which Cuba receives for sugar, of 5½ cents a pound, when the world price is nearly 3 cents a pound, Cuba enjoys a 20 percent tariff preference on sugar imports to the United States.

The United Press International reported from Havana on March 20, 1960, that the same Major Guevara had stated:

> The great friend of Cuba is the U.S.S.R.

I could multiply many times the hostile and inflammatory statements against the United States made by leaders of the present Cuban regime. This is not my purpose, however. The bill which I have introduced is in no sense a reprisal against Cuba. It is a very conservative bill. It is an attempt to correct certain basic deficiencies in existing law in a way which will make the law work better while at the same time recognizing the equities of our own domestic industry and of friendly foreign nations.

In brief, the proposal would make the following changes in the existing sugar law.

It would restrict Cuba's quota to the basic quota established for Cuba under the 1956 act. The incremental quotas accruing to Cuba by virtue of the growth of the U.S. market since 1956, some 310,695 tons, would be distributed among domestic U.S. suppliers and friendly foreign suppliers.

Of this amount my bill would distribute 200,000 tons to the domestic producing areas, of which 150,000 tons would go to the beet-producing areas and 50,000 tons to the mainland cane-producing areas. This is the same allocation to the domestic areas as made in the bills introduced by my distinguished colleagues, the senior Senator from Utah [Mr. BENNETT] and the Senator from Louisiana [Mr. ELLENDER].

The remaining 110,695 tons would be distributed among other foreign suppliers including new countries seeking to enter the U.S. market for the first time, on the basis of an index which takes into account their average annual purchases from the United States as well as their existing statutory quotas, if any, in the U.S. market. I think it is extremely important to establish in the Sugar Act a trade principle as a basis for administering the distribution of foreign sugar quotas. I certainly believe in a policy of buying from the people who buy from us insofar as it is economically feasible to do so.

At the same time this criterion, as employed in the bill is tempered by taking into account to an equal degree the existing statutory quotas enjoyed by foreign sugar suppliers, so that adjustments are not made entirely on the basis of trade; although I would like to point out that it is my hope that eventually we can arrive at a formula by which the sugar quotas granted to foreign suppliers will be based entirely on the basis of the relationship which the amount of purchases which each country seeking a sugar quota has made in the United States bears to all the purchases made by countries seeking sugar quotas.

The underlying formula of the proposed legislation represents a weighted average of the statutory sugar quotas and trade with the United States as a reasonable and rational means of distributing quotas among friendly foreign nations.

It should be noted that after this distribution is made Cuba is still left with the lion's share of foreign participation in the U.S. market. It would still enjoy a quota of more than 2,800,000 tons which is almost three times the quota of the next largest foreign sugar supplier, the Republic of the Philippines, and almost five times the quotas of all of the full-duty countries combined.

When it is realized that a quota of 2,800,000 tons represents a premium to Cuba over average world market prices in the amount of approximately $140 million per annum, it is clear that the proposed legislation is not a reprisal against Cuba. The second basic change which would be made by the proposed bill would be to remove from Cuba its present share in the future growth of the U.S. market.

The Cuban share of the growth in the U.S. sugar market presently amounts to approximately 30 percent. The bill would distribute one-third of that growth to new areas in the continental United States for the production of domestic sugar beet or mainland cane.

There are many areas in the United States in such States as Washington and Idaho, and other Western States which are ideally situated for the growing of sugar beets and there is no reason why these areas should be foreclosed from our demestic markets. At the same time in the State of Louisiana and my own State of Florida there are persons who are ready, willing, and able to produce additional mainland cane if afforded the opportunity. The bill would afford that opportunity.

The proposed legislation would set aside 10 percent of Cuba's present share of the U.S. market growth for distribution among the producers of sugar in the various States throughout the Union.

On the basis of the annual growth experience over the past several years this would provide quotas of 15,000 tons per annum for distribution by the Secretary of Agriculture to new and additional acreage in the manner I have just indicated.

Such new areas would be given quotas equivalent to 60,000 tons in the fourth year of operation of this legislation. Cumulatively over the entire operation of the bill, it would enable such areas to sell in the U.S. market a total of 150,000 tons. I submit that this is a very significant contribution to the development of new domestic sugar industry.

The remaining portion of Cuba's share of the growth would be distributed among other foreign suppliers including not only present suppliers but also new countries seeking to enter the U.S. market for the first time. This distribution also would be made on the basis of an index derived from average annual purchases from the United States over the past 4 years and existing statutory quotas. For the first time, it would also give the Republic of the Philippines a share in the growth of the U.S. market. The new countries included for a share in U.S. market growth by virtue of this reform would include Brazil, Colombia, El Salvador, Ecuador, and Guatemala.

None of those countries has any quota in the U.S. market at present. Also, the Philippines, by virtue of the growth factor, would be given an additional quota.

The third basic change would be to give the President power to further reduce the quota of Cuba in any calendar year when he finds and proclaims that such action is necessary in the public interest or to insure an adequate supply of sugar. Any reduction so made would be effective only for the calendar year in which the President made such a finding, and would not change permanent quotas. The replacement purchases would be distributed 65 percent to domestic sugar-producing areas and 35 percent to foreign sugar-producing areas.

The fourth major change is a reform of the deficit allocation provisions.

The bill allots to the domestic beet sugar areas and the mainland cane sugar areas any deficits derived from Hawaii. This is the same as provided in the proposals introduced by Senators BENNETT and ELLENDER.

It allots to all foreign suppliers except Cuba deficits derived from Puerto Rico and the Virgin Islands.

The deficit allocations to the foreign countries again take in new suppliers and are again based on an index of the 4-year purchases of all of these suppliers from the United States and their existing quotas. Moreover, the proposal would insure that each of these new suppliers is permitted to make sugar sales in the United States of at least 5,000 tons annually.

Finally the bill would reduce the amount of direct consumption sugar which may be imported from Cuba from 375,000 tons to 75,000 tons. While this provision will have no effect upon the amount of sugar Cuba can otherwise sell in the U.S. market, it will insure that at least 300,000 tons of additional sugar imported into the United States come in in raw form and be refined in the United States by U.S. refineries.

I have heard it said that any measures which would tend to diminish the Cuban share of the market, even conservatively, might lead to a sugar shortage in the United States. Nothing could be further from the truth. The fact is that as of the beginning of this year there was in this hemisphere alone, available for export, at least 4 million tons of sugar, not

considering Cuba, and this quantity is rising rapidly.

The following is a recapitulation of the export capacity of these Western Hemisphere countries and the Philippines at the beginning of the present harvest season:

Sugar available for export, 1960

[Thousand short tons, raw value]

Country:	
Argentina	368
Brazil	1,227
Costa Rica	5
Dominican Republic	930
Guatemala	5
Haiti	58
Mexico	589
Nicaragua	5
Panama	5
Peru	638
Philippines	282
Total	4,112

These figures were compiled from the Statistical Bulletin of the International Sugar Council and the U.S. Department of Agriculture publication entitled "Foreign Crops and Markets," dated February 25, 1960.

The proposal is a relatively conservative bill. It reduces Cuba's share of the U.S. market by less than 10 percent. Yet it embraces much needed reform in existing law to cope with present-day conditions.

If the changes suggested in the proposed legislation are not adopted and the present law is extended, as has been proposed, then Cuba in a single year would benefit by additions to quotas of approximately 195,000 tons or in pecuniary terms, would be given an additional subsidy of $9,750,000 in the first year of the extension.

That, of course, is in addition to the roughly $387 million a year which Cuba gets from us by the sale of some 3,100,000 tons as her regular quota in the domestic market. Assuming a 4-year extension of the present act and a continuation of present deficits, these additions to Cuban sales would amount to approximately 1 million tons, or an additional monetary premium or subsidy in the amount of approximately $50 million.

Under existing law, unless corrective measures are taken, the Secretary of Agriculture will be forced to allot to Cuba this summer an addition to its regular quota in an amount of about 150,000 tons as a result of deficits in Puerto Rican production.

I suggest that it would be intolerable for us to continue along this path, especially in view of current circumstances in Cuba. It is a path which is not only manifestly unfair to U.S. interest, but is also unfair to other friendly foreign suppliers as well.

The measure that I have proposed would result in a more equitable division of the foreign share of our sugar supply among many friendly foreign countries and still leave Cuba with about 30 percent of the total U.S. market.

Assuming that deficits continue to run at approximately the same average annual figure as in 1959, and the growth of U.S. consumption continues to rise at an average of 150,000 tons per annum, the proposed bill would result in the following tonnages for the year 1961:

Domestic areas:	
Domestic beet	2,349,243
Mainland cane	726,940
Hawaii	999,199
Puerto Rico	987,090
Virgin Islands	16,528
New areas	15,000
Total	5,094,000
Cuba	2,808,960
Philippines	1,017,360
Total	3,826,310

With respect to Cuba and the Philippines, Cuba does not pay full duty, and the United States has a separate and special treaty with the Philippines.

Full-duty countries:	
Brazil	46,688
Colombia	25,816
Costa Rica	11,239
Dominican Republic	119,013
Ecuador	4,943
El Salvador	4,943
Guatemala	8,231
Haiti	14,707
Mexico	167,251
Nicaragua	25,578
Panama	15,084
Peru	163,211
Taiwan	17,831
Other countries	5,417
Total	629,690
Grand total	9,550,000

Brazil certainly deserves a quota. Brazil has been and continues to be our friend. Brazil never before has been privileged to sell sugar in the United States on a quota basis. She would be provided, in the proposed legislation, with a quota of 46,688 tons.

Colombia would be granted a quota for the first time.

Neither Ecuador nor El Salvador has had a quota previously. Heretofore Guatemala has not had a quota.

Haiti's quota heretofore has been below 7,000 tons.

Mexico would receive a sizable increase. Mexico carries on a large trade with the United States. She is almost our principal customer in the world. So, based on her trade with the United States, Mexico would be entitled to a sizable sugar market in the United States.

This distribution would represent significant increases for friendly foreign sugar suppliers. For example, purchases from Haiti would increase from 7,000 tons in 1960 to 14,700 tons in 1961; Peru from 95,500 tons to 163,200 tons; Mexico from 65,000 tons to 167,200 tons; Taiwan from 3,600 tons to 17,800 tons; and the Philippines from 980,000 to 1,017,400 tons.

In addition, countries not presently sharing at all in the market would be enabled to make initial sales in our market estimated as follows:

Brazil	46,700
Colombia	25,800
Ecuador	5,000
El Salvador	5,000
Guatemala	8,200

Assuming the continuation of the current rate of deficits and of growth in the U.S. market, these areas would enjoy sales in the United States, during the first year of the bill, amounting to 90,629 tons. Based on the same assumptions, their sales in the fourth year would be 116,624 tons, and cumulatively over the 4-year period would amount to 414,506 tons. I know, from my recent visit to Latin America, this assistance would be of great value to these countries, and would make many friends for the United States, in the Central American area and in the South American area.

In conclusion Mr. President, let me reemphasize what the proposed bill would accomplish.

First. It would grant the President power, if needed, to deal with special emergency situations which might be brought about as a result of the present unsettled situation in Cuba. Obviously the motivation behind that request by the President was the conditions which have developed in Cuba. The bill would give the President the right to deal with Cuba in any way he wanted, other than to increase Cuba's quota above 2,800,000 tons. But the bill would give to the President, when he thought it was in the public interest, the right to reduce Cuba's quota to any point he thought advisable, or, if necessary, even to eliminate it completely.

Second. It would extend to domestic producers of sugar more adequate relief and assistance than is provided for under existing law or in the proposals as introduced by my distinguished colleagues, the senior Senator from Utah [Mr. BENNETT] and the senior Senator from Louisiana [Mr. ELLENDER]. The proposal would make provision for the addition of new domestic beet and mainland cane acreage, by allotting one-third of the present Cuban share in U.S. growth for this purpose. This would provide an additional 60,000 tons of quota for such domestic areas in the fourth year of the bills' operation; and cumulatively, over the life of the bill, 150,000 tons for such new areas of sugar production. It would also allot to domestic sugar-producing areas 65 percent of any reduction the President may find it necessary to make in the present Cuban quota. Under the Ellender and Bennett proposals, all of this reduction would go to the benefit of foreign suppliers.

Third. It would make a modest reduction in Cuba's present U.S. quota, amounting to less than 10 percent of its present sales to the United States, while preserving to Cuba approximately 30 percent of the U.S. sugar market.

I may add that this is in keeping with the general philosophy of the so-called GATT conference—the General Agreement on Trade and Tariffs—to which we and most of the other countries of the world belong, whereby it was agreed, in all those conferences, that any one country can reduce by 10 percent the permissive quota it allows other countries, and may do so without negotiating a new treaty with such country.

This may be done with respect to Cuba, thereby staying within the 10-percent principle.

Fourth. It would increase the share in our sugar market of many friendly foreign countries, and would permit entry into that market of five new suppliers which need the assistance that this trade would provide.

Fifth. It would decrease the amount of direct consumption sugar entering our market, thereby increasing the amount to be refined in the United States by U.S. refineries.

Mr. President, it is my sincere opinion that the bill represents a vast improvement over existing law and pending sugar legislation, and would bring about reforms which experience under present law has shown to be urgently required. It would also serve to cement friendly relations with a great number of foreign countries which need, and would appreciate, the trade which this bill would afford.

It is a reasonable proposal, a modest and conservative proposal, and a proposal which is in the national interest of the United States.

I sincerely trust that the Finance Committee and the Senate will act promptly and favorably on it.

Mr. President, I yield the floor.

The PRESIDING OFFICER (Mr. CANNON in the chair). The bill will be received and appropriately referred.

The bill (S. 3508) to amend and extend the provisions of the Sugar Act of 1948, as amended, introduced by Mr. SMATHERS, was received, read twice by its title, and referred to the Committee on Finance.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, May 9, 1960, he presented to the President of the United States the following enrolled bills:

S. 722. An act to establish an effective program to alleviate conditions of substantial and persistent unemployment in certain economically depressed areas; and

S. 1062. An act to amend the Federal Deposit Insurance Act to require Federal approval for mergers and consolidation of insured banks.

ADJOURNMENT

Mr. SMATHERS. Mr. President, I move that the Senate stand in adjournment until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 2 o'clock and 26 minutes p.m.) the Senate adjourned until tomorrow, Tuesday, May 10, 1960, at 12 o'clock meridian.

NOMINATION

Executive nomination received by the Senate May 9, 1960:

ASSISTANT ATTORNEY GENERAL

Robert A. Bicks, of New York, to be Assistant Attorney General, vice Victor R. Hansen, resigned.

HOUSE OF REPRESENTATIVES

MONDAY, MAY 9, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Revelation 3: 20: *Behold, I stand at the door and knock; if any man hears my voice and opens the door, I will come in, and sup with him and he with Me.*

Almighty God, who art the source and inspiration of the true, the beautiful, and the good, in the plans and labors of this new week, may we be receptive and responsive to the voice and leading of Thy divine spirit, seeking to bless us with a happy, a useful, and more abundant life.

We are bringing unto Thee our fears and our foreboding thoughts about these days in which we are living and our apprehensions for humanity, earnestly beseeching Thee that we may appropriate by faith those resources of spiritual power and poise which will enable us to remain strong and courageous.

Grant that the demons of hatred and ill will, which have assailed and invaded the life of the nations and torn apart their unity, may be driven out and the heart of mankind may be opened to give lodgment to the blessed spirit of the Prince of Peace.

Hear us in His name. Amen.

THE JOURNAL

The Journal of the proceedings of Friday, May 6, 1960, was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Ratchford, one of his secretaries, who also informed the House that on May 6, 1960, the President approved and signed a bill of the House of the following title:

On May 6, 1960:

H.R. 8601. An act to enforce constitutional rights, and for other purposes.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Carrell, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 3019. An act to provide for certain pilotage requirements in the navigation of U.S. waters of the Great Lakes, and for other purposes.

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 4049. An act to amend the Federal Aviation Act of 1958 in order to authorize free or reduced-rate transportation for certain additional persons.

The message also announced that the Senate agrees to the amendments of the House to a bill of the Senate of the following title:

S. 1062. An act to amend the Federal Deposit Insurance Act to provide safeguards against mergers and consolidations of banks which might lessen competition unduly or tend unduly to create a monopoly in the field of banking.

TOWARD A PROPER USE OF MISSOURI RIVER WATER

Mr. McGOVERN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from South Dakota?

There was no objection.

Mr. McGOVERN. Mr. Speaker, I call the attention of the House to some startling information which I recently have received from the Army Engineers and the Department of Interior.

The facts disclosed to me forecast serious consequences for my State of South Dakota and its neighboring States in the Missouri River Basin. As I believe all of the Members of this body know, the most critical difficulty facing the people of South Dakota today is the plight of our agricultural economy. Positive and aggressive action is urgently needed to correct the conditions which are making it impossible for the family farmer to earn a fair return. That is why I have joined with a number of my colleagues in sponsoring legislation designed to assure farmers a fair price and to halt the buildup of Government-owned farm surpluses.

The second threat to the successful development of our economy is the improper use of the scarce water supply which is available to us.

The very sad truth is that there is no need for us to be burdened with either of these misfortunes. When we remembered how the farmer fared before 1952, we realize that to a very large extent the farmer's present predicament results from the ill advised policies which have been followed by Mr. Benson.

I am sorry to report that our water problems are likewise aggravated by the unwise management of the waters of the Missouri River by the Corps of Engineers and the Bureau of Reclamation.

These agencies have performed a superb construction job in building the projects which were so wisely authorized by Congress. The projects are of untold benefit to the people of the Missouri Basin. Only recently they have prevented millions of dollars in property losses and the loss of many lives when the lower basin suffered from one of the greatest floods on record. But despite this outstanding record in the field of construction, both of these agencies have permitted waste in the use of water, which has accumulated in reservoirs made possible by citizens of South Dakota and other Upper Missouri Basin

States who have given up highly productive land. Precious water stored in the reservoirs is being released to make possible the maintenance of a free flowing 9-foot navigation channel downstream, at the very time we have dire need for that water in our State.

We need the water for many purposes. Last year was one of our driest years on record. More and more farmers will have to turn to supplemental irrigation. With the passage of the Conservancy District Act of 1959, great steps forward will be taken in the developments of the South Dakota irrigation program. Our progressive Governor, the Honorable Ralph Herseth, highlighted these steps in his recent appearance before the House Appropriations Subcommittee.

We need more water for domestic and municipal use. We are not going to be able to attract new industries to our State unless we are able to provide them with an adequate supply of the quality of water they need. Fortunately, water in sufficient quantities to take care of these needs can be stored in the reservoirs on the mainstem of the Missouri. Unfortunately, the waters have not been permitted to accumulate in sufficient quantities to fill those reservoirs to the desired levels because the engineers have insisted in releasing the water for downsteam navigation purposes.

In addition to the water uses I have referred to previously, our economy receives a great impetus from the availability of the low-cost electric power and energy which is generated at the dams which back up the water in the reservoirs on the Missouri. If it were not for this hydropower, a large percentage of South Dakota farms would never have enjoyed the blessings of electricity because they are located in such sparsely settled areas and because our costs of steam generation are so high. If we could avail ourselves of greater quantities of this low-cost electricity we could develop much new industry.

But here is what is happening: Of the approximately 1,600,000 kilowatts of electric generating capacity installed at those dams, the Bureau of Reclamation has allocated less than 1 million kilowatts to be sold as firm power. To a considerable extent this is the result of the water being released at the wrong times for downstream navigation. As a result, our farmers and other users of that power are going to have to obtain almost one-fourth of their electricity from other sources at an additional cost of several millions of dollars per year.

Now for the distributing information I referred to at the beginning of my remarks. In answer to an inquiry from me, General Barney of the Corps of Engineers has written to me stating that the estimates in their last annual operating report indicated less dependable peaking capacity and energy to the extent of approximately 100,000 kilowatts of firm power for the next 4 years. He blames the lower estimates on the subnormal water supply.

In another letter, the Assistant Secretary of the Interior stated, in reply to my inquiry, that—

> The Corps of Engineers recently prepared a new estimate of the project capability, which forecasts that under adverse water conditions the peaking capability would be about 125,000 kilowatts less in 1962 and 1963 than was indicated in the former forecasts upon which the recent allocation was based.

You will remember even that allocation required the preference customers to obtain a part of their power elsewhere. If those allocations are now reduced as a result of the Army's new estimates it will cost the cooperatives and municipalities approximately $2 million per year in added power costs. Also the inability of the Government to sell these kilowatts as firm power will cause the Government to lose approximately $2,750,000 per year.

Despite the attempt to blame this loss of revenue to the Government and the added burden of costs to the consumers on poor water years, the fact is they both could be avoided if the flow of water were managed properly. We are being deprived of this water which rightfully belongs to us by the practices followed by the Corps of Engineers and acquiesced in by the Bureau of Reclamation.

I am very pleased to tell you that Governor Herseth has decided not to sit idly by and watch the economy of South Dakota being stifled by having our waters taken away from us by the actions of Federal agencies. He proposes to do something about it and I am determined to do all in my power to make certain that the people of South Dakota get the benefits from the Missouri to which the Congress has said we are entitled.

Under the leadership of Governor Herseth, the South Dakota State Water Resources Commission has employed experienced counsel to study the legal rights of the State to the use of the waters of the Missouri. The results of that study were presented at a meeting of the Missouri Basin Interagency Committee in Grand Forks, N. Dak., on April 20. After a thorough review of the legislative history of the Flood Control Act of 1944 and other pertinent statutory and case law, counsel expressed the categorical opinion that under the O'Mahoney-Millikin amendment, South Dakota and all other States lying wholly or partly west of the 98th meridian have priority to the use of the waters of the Missouri River Basin for all beneficial uses, including the generation of power, as against the use of those waters for navigation. The study quotes many excerpts from the congressional debates which clearly shows that was the intent of Congress. Also, Senator O'MAHONEY has stated that power has priority over navigation to the use of the waters of the Missouri under the terms of his amendment.

I insist that the Army Engineers and the Bureau administer this law as passed by Congress. I request the help of the members in seeing that they do so. I wish to emphasize that all that I have said about South Dakota applies to the other States of the upper basin.

While I have said that we are determined to protect our rights and to insist that the law be administered as written, I do not want to create the impression that we are not anxious to cooperate with the downstream States. We definitely are. For that reason I sponsored a resolution which was approved by the Public Works Committee under the able chairmanship of the gentleman from New York [Mr. BUCKLEY] which authorized the Army Engineers to make a study of the Missouri River from Yankton to the mouth to determine whether a slackwater system of navigation would be economically feasible. If it is, such a system would remove any possibility of conflict between the upper and lower States. It would greatly improve the navigation facilities and would eliminate the heavy current with which river traffic now must contend. It would allow the water to be stored in the reservoirs to fill them to the proper level. The requirements for this better navigation system would be only a fraction of what they now are for a free flowing channel. There would be sufficient water for irrigation purposes in the upper States as well as for the other necessary purposes. Moreover, the amount of firm power which could be sold from the hydroplants would be greatly increased.

The President's budget for next fiscal year asks for $10,000 to commence the slack-water study on the Missouri. This is an absurd figure since the Army estimates that the study will cost approximately $300,000 and that it would require about $75,000 in the first year. A group of members from the Missouri Basin have requested the Appropriations Committee to increase the budget figure to $75,000. We ask for the support of the House for this amount.

In closing my remarks, I wish to emphasize again the desire of the people of South Dakota to live in harmony with our friends in the States downstream. We hope they will work with us in making possible the development of a slackwater system of navigation which will be a boon to their economy as well as ours. Until that solution is reached, however, we want to be equally emphatic in informing the Army Engineers and the Bureau that we insist the intent of Congress be carried out in administering the laws relating to the Missouri and that our waters not be wrongfully taken from us.

THE COLORADO RIVER LAWSUIT: ARIZONA IS VINDICATED

Mr. UDALL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Arizona?

There was no objection.

Mr. UDALL. Mr. Speaker, this is a day of triumph and vindication for the State

of Arizona. Today ends the most important phase of one of the most complex and massive lawsuits in the history of this country between Arizona and California over the waters of the Colorado River. Nine years ago the Congress turned the State of Arizona down when we presented a great reclamation project to make the desert blossom and to bring the waters of the Colorado River to central Arizona. Congress said we should acquire the water rights first and they sent us to the courts.

We have now successfully completed the first phase of this litigation. I am confident that the Supreme Court will confirm the findings of the master, Judge Simon Rifkin, of New York.

Mr. Speaker, I express the hope today that my colleagues from California will join with us once the Supreme Court speaks and help Arizona secure congressional approval of a project to deliver our share of Colorado River water to the fertile valleys of central Arizona.

TRUNK AIRLINE SUBSIDIES SHOULD BE DISCONTINUED

Mr. MACK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. MACK. Mr. Speaker, I have today introduced a bill to prohibit payment of Government subsidies to any domestic trunk airline for flight service in the United States. My bill would permit continued subsidy payments to local service airlines and U.S. overseas carriers.

The Federal Government has spent nearly $200 million in subsidizing the trunklines since 1938. There are very few industries which have received such lavish assistance. It seems to me that after 22 years, a continuation can no longer be justified on the theory of helping these companies get started.

Most of the carriers have prospered. They are large corporations with great revenues. The original Civil Aeronautics Act of 1938 was passed to help them get on their feet and they should not be entitled to any help from the taxpayers.

My bill would lift from the shoulders of the taxpayer of this country the constant burden of subsidizing airline competition. This legislation would mean that route awards by the Civil Aeronautics Board would henceforth have to be based on a more careful analysis of the economic factors. This, in turn, would reduce regional and local pressures for airline service which cannot be justified by any true test of public convenience and necessity.

Requests for subsidy are caused either by bad management or by an airline route structure which does not make economic sense.

You cannot attribute it to accidents or weather or other transitory features. Weather affects everybody and it does not last very long. And, despite accidents, the industry's business has been growing by leaps and bounds year after year. Every knowledgeable person knows that the effect of accidents on traffic is a matter of a few days or weeks at the most. Furthermore, you cannot use such transitory factors to explain losses in 4 successive years when other carriers were showing profits.

I hope that Congress, through enactment of my bill, will not permit one more penny to be spent on subsidizing the trunk airlines. I hope that the Civil Aeronautics Board will make this clear. I hope that it will acknowledge that the Department of Commerce has practically said as much in its recent recommendation against any subsidy, once a carrier has been off subsidy for 5 years.

I hope that the Board will face up to realities and make route adjustments as may be necessary in order to carry out this policy. I believe the Congress is tired of excuses for costly and unnecessary operations, and determined to see that the hard but realistic decisions are made. This is not a case of taking advantage of companies which have come upon difficult times. It is quite the reverse, for it is the companies which would continue to take advantage of the U.S. taxpayer, irrespective of the true transportation requirements of the Nation. This we should not permit, for we do not need subsidy to operate the best competitive trunkline system in the world.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. MACK. I yield.

Mr. VANIK. Mr. Speaker, I want to take this opportunity to join my distinguished colleague, the Honorable PETER F. MACK, JR., of Illinois, in introducing a bill to prohibit subsidy payments to any U.S. domestic airline.

The purpose of trunk carrier subsidy was to develop a vital American industry until such time as the industry would be self-sustaining. Subsidy was never expected to be a Federal guarantee against loss of the private investment involved.

Since 1951 no trunk carrier has been on subsidy, and there is no reason why any trunk carrier, facing financial problems because of inefficient management and overambitious route extensions and overscheduling, should assume that its losses, resulting from its bad judgment, should be passed on to the American taxpayer.

Although trunk airlines have not reported glowing profits and although net returns have been quite low because of expensive investment in more modern equipment, the fact is that few American businesses face as bright a future.

Fifty-six million people traveled on the domestic airlines last year. In the next decade at least 700 million persons will be traveling on the domestic airlines. This tremendous passenger volume, coupled with accelerated airfreight revenues, should make the future bright indeed for well-managed domestic carriers. It would certainly be wise that future route determination by the Civil Aeronautics Board be based on the economic factors involved. Public convenience and necessity today demand a reduction in subsidies and a reduction in Federal taxes.

FIRST ANNUAL REPORT OF COMMISSION ON INTERNATIONAL RULES OF JUDICIAL PROCEDURE—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on the Judiciary.

To the Congress of the United States:

Pursuant to the provisions of Public Law 85–906, as amended, I transmit herewith for the information of the Congress the First Annual Report of the Commission on International Rules of Judicial Procedure covering the period ending December 31, 1959.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 9, 1960.*

INVESTIGATION OF THE FEDERAL POWER COMMISSION

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. DINGELL] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. DINGELL. Mr. Speaker, the impending investigation of the Federal Power Commission highlights a particularly unsavory situation in that Federal Regulatory Agency.

Natural gas pipeline companies have collected $662 million from the Nation's gas consumers through self-imposed rate increases which have not yet been passed on by the Federal Power Commission. This vast sum will climb past the one billion mark later this year with pipelines filing new rate boost applications faster than the Commission will rule upon them. This immense backlog of pending gas rate cases stems in almost equal parts from lack of ability on the part of members of the Commission and from an outright disinterest in any real or effective regulation of the industry. The inaction, disinterest and disregard of responsibility in this agency have caused hardship on the consumers and on the industry regulated alike.

These so-called temporary rate boosts are often actually funds to finance gas pipeline expansion. This is the only industry anywhere which can avoid borrowing or raising new equity capital by sale of stock by using such a device. Action of this sort is a kind of enforced investment by consumers and gas distributors alike.

The historic record indicates that only about 40 percent of these so-called bonded rate increases will be allowed and that the balance will be at some future

date ordered refunded to the consumers from whom taken.

Rate increases of pipelines have run from 20 percent to 40 percent over the past 3 years and will continue to rise far beyond any justification as long as the Federal Power Commission continues to administer its responsibility in this slapdash, slovenly and irresponsible manner.

Formerly the pipelines were required to strictly segregate funds collected from rate boosts and to hold them available for refund to consumers. The Federal Power Commission now permits pipeline companies to commingle such money with their own capital funds. They are free to use, and do use, such temporary rate increases for expansion or similar purposes.

The Tennessee Gas Transmission Co. tops all pipelines with three rate boosts totaling $70.7 million a year. This is an increase of about 36 percent in its rate since 1957.

El Paso Natural Gas Co. is second with rate increase requests pending for three rate boosts totaling $67.7 million a year. Its rates have gone up some 39½ percent since 1957.

Other pipelines have big rate boosts pending. United Gas Pipeline has $45.7 million in increases requested; United Fuel Gas has requests for $38 million in rate increases; Panhandle Eastern has requests for some $34.9 million; Texas Eastern has requests for some $28.2 million in rate increases. These rate increases are being paid by the consumer while they are being decided on by the Federal Power Commission.

Chairman Kuykendall has said that the Commission was powerless to forestall successive gas rate increases unless the Natural Gas Act is amended. This is not in comport with either fact or law. However, since the only protection which can be given the American consumer is by legislation so long as such an irresponsible do-nothing Commission regulates the power sources of this country, I have introduced a bill which will prohibit any rate change going into effect while there is already a rate increase pending by a natural gas pipeline which has not been decided by the Federal Power Commisison. It is to be hoped this will stop some of the solvenliness within the Federal Power Commission and perhaps stimulate that agency to act as something other than a high cost repository for official looking documents.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. SCOTT (at the request of Mr. FOUNTAIN), from May 9 through June 1, on account of official business.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. BOWLES in two instances.

Mr. BUDGE.

Mr. DAVIS of Georgia and to include extraneous matter.

Mr. UDALL.

Mr. COLMER and to include extraneous matter.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 3019. An act to provide for certain pilotage requirements in the navigation of U.S. waters of the Great Lakes, and for other purposes; to the Committee on Merchant Marine and Fisheries.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 722. An act to establish an effective program to alleviate conditions of substantial and persistent unemployment in certain economically depressed areas; and

S. 1062. An act to amend the Federal Deposit Insurance Act to require Federal approval for mergers and consolidation of insured banks.

ADJOURNMENT

Mr. McCORMACK. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 11 minutes p.m.) the House adjourned until tomorrow, Tuesday, May 10, 1960, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2130. A letter from the Secretary of Defense, transmitting a draft of proposed legislation entitled "A bill to amend title 10, United States Code, to authorize certain persons to administer oaths and to perform notarial acts for persons serving with, employed by, or accompanying the Armed Forces outside the United States; to the Committee on Armed Services.

2131. A letter from the Secretary of Defense, transmitting a draft of proposed legislation entitled "A bill to reassign officers designated for supply duty as officers not restricted in the performance of duty in the Marine Corps; to the Committee on Armed Services.

2132. A letter from the Comptroller General of the United States, transmitting a report on the review of the Government's rights and practices concerning recovery of the cost of hospital and medical services in negligent third-party cases; to the Committee on Government Operations.

2133. A letter from the assistant to the president, the American Academy of Arts and Letters, transmitting the official report of the American Academy of Arts and Letters for the year 1959, in compliance with section 4 of their charter; to the Committee on House Administration.

2134. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in cases where the authority of the Immigration and Nationality Act was exercised in behalf of such aliens, pursuant to the Immigration and Nationality Act; to the Committee on the Judiciary.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANFUSO:

H.R. 12120. A bill to provide for grants-in-aid to the States for the treatment of narcotic drug addicts in closed institutions; to the Committee on Interstate and Foreign Commerce.

By Mr. MACK of Illinois:

H.R. 12121. A bill to amend section 406 of the Federal Aviation Act of 1958, so as to eliminate authority for the payment of subsidies for domestic trunk air transportation; to the Committee on Interstate and Foreign Commerce.

By Mr. VANIK:

H.R. 12122. A bill to amend section 406 of the Federal Aviation Act of 1958, so as to eliminate authority for the payment of subsidies for domestic trunk air transportation; to the Committee on Interstate and Foreign Commerce.

By Mr. BENTLEY:

H.J. Res. 702. Joint resolution providing for the establishment of an annual Youth Appreciation Week; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of Mississippi, memorializing the President and the Congress of the United States to safeguard and preserve established State and individual rights to the use of water within the separate States; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of South Carolina, memorializing the President and the Congress of the United States relative to the general assembly expressing its deep concern over the flood of cheap foreign goods being placed on the markets of the United States, and requesting that immediate steps be taken to enact remedial legislation; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. HALEY:

H.R. 12123. A bill for the relief of Comdr. Chester B. Peake; to the Committee on the Judiciary.

By Mr. SHELLEY:

H.R. 12124. A bill for the relief of Victoria M. Poquiz; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

455. The SPEAKER presented a petition of Joseph J. Cooley, city clerk, Buffalo, N.Y., expressing approval of the provisions of the Forand bill in dealing with the problem of providing adequate medical care for our senior citizens, which was referred to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

Let Us Remember Our Unknown Soldiers

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1960

Mr. DAVIS of Georgia. Mr. Speaker, on May 30, many of our citizens will pay homage to their war dead in Memorial Day services.

Originally conceived soon after the Civil War as an occasion on which graves of the fallen would be visited and decorated with flowers by citizens of a grateful nation, Memorial Day takes on a special significance here in the Nation's Capital because of the special tribute paid to America's three unknown soldiers in the simple but impressively beautiful Amphitheater of Arlington National Cemetery.

Although Memorial Day is not universally celebrated on May 30, mostly for historical reasons, these small differences detract nothing from the great fact that we as a nation have a single purpose as we recall the supreme sacrifices of all American wars. This purpose is symbolized by the several patriotic private organizations which have undertaken to insure that our honored dead in 96 cemeteries in the United States and 14 oversea memorials receive at least a token of remembrance on this special day.

But I sometimes wonder if we do not have far more unknown soldiers than we would care to admit. We sometimes seem to forget how much we owe to our soldiers—many of them literally unknown—who lie silently in our national shrines.

In Arlington National Cemetery, by far the best known of our national cemeteries, more than 103,000 of the Nation's honored dead lie buried. Yet I am informed that on Memorial Day last year, no more than one-third, or about 35,000 of these soldiers of democracy and their immediate family members, were fittingly remembered with floral tributes.

I hope that this fact is not typical of our national, and even more international, observance of Memorial Day. I do not know. Arlington is one of our oldest national cemeteries, having been established in 1864. In some cases, family lines may have died out. But I find it hard to believe that sufficient reason exists for our failure to remember more than 65,000 of our dead. With our modern means of communication, which has made possible the sending of flowers by telegraph and other convenient means, it would seem that a great gap exists between what we intend and what we do.

To me it is more important than ever before that we keep fresh in our minds why these men and women died. Events since 1945 have demonstrated how perilously close we are to still another great war, one in which all of us would stand in the front lines so gallantly filled in the past by those at Arlington and elsewhere who sacrificed everything for us.

It may be that we have not done enough to enshrine in the hearts and minds of our people what our brave sons did for us. Yet renewed remembrance must spring from the people themselves if it is to have lasting value, particularly the strengthening of America for whatever uncertain future lies ahead.

With this thought in mind, I urge all citizens of this Nation, wherever they may be, to mark Memorial Day 1960 as a day of reaffirmation; a day on which to renew our pledge to Americans who have gone before, and who have made it possible for us to hand to the world a torch blazing with the fire of freedom.

At Arlington on May 30, we can speak with a single national voice to the world, in terms which will be an unmistakable sign that the spirit of our gallant dead lives on.

Supreme Lack of Coordination in U–2 Incident

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1960

Mr. BOWLES. Mr. Speaker, under leave to extend my remarks, I include a statement which I released earlier today on the controversy over the U–2 incident. The statement follows:

SUPREME LACK OF COORDINATION IN U–2 INCIDENT

People throughout the world have been profoundly shocked and disturbed by the news that an American espionage plane was shot down over the Soviet Union. There is no doubt that our Government has suffered a serious setback at a critical moment. As an incident this one is likely to go down in history as the greatest single item of national embarrassment in the 8 years of the Eisenhower administration. As a symbol of what is basically wrong with the present conduct of our foreign policy, it is of even greater importance. I am conscious of the delicacy of the situation itself. I am aware that while the administration has been embarrassed by these events, all Americans are embarrassed with it. I do not wish to add personal or partisan fuel to the controversy which will be raging for weeks ahead on this issue. Nor do I wish, in anything I say, to imply that I have any more information, official or unofficial, on the intelligence aspects of this case than does any other American citizen.

As I said on television yesterday afternoon ("Meet the Press," NBC–TV, Sunday, May 8, 1960):

"I don't think any one of us as outsiders can know what is essential in the way of espionage. We are all realists. We all know that this is a difficult and complex world. We know we are at a disadvantage, that the Soviet is a closed police state and has certain very great advantages over us. I don't know the inside story of how much information we have or what we lack or what risks should be required to get it. I would assume that we should not do this sort of thing for a marginal gain.

"But we are preparing for a summit meeting. The whole history of the world may depend upon our ability to negotiate with the Soviet Union. We are in a very delicate position and certainly this would be a time to be far more circumspect than obviously these people have been. I think they have committed a very gross case of misjudgment and I think it is highly reckless, dangerous, and hurtful."

Here, as I see them, are the unalterable, embarassing facts which now face us.

1. The State Department has been caught in a dramatic falsehood. The Department may have been the victim of misinformation provided by other Government agencies. Nevertheless, foreign governments—both friendly and otherwise—are bound to press the point that the word of the U.S. State Department can no longer be trusted. In international negotiations, as in personal relationships, lack of trust is damaging and costly.

2. If the flight really was not authorized in Washington, the incident demonstrates that the President has been kept in ignorance of critically important developments and activities within our own Government. This, in turn, seriously undermines the prestige of the President at a time when the world urgently needs his strength and influence in behalf of peace.

3. The Russian suspicions of our good faith in negotiating the control and inspection systems which are essential to disarmament programs have been increased. As a result, we will find them even more difficult to deal with on these critical questions at the Summit.

4. We have placed ourselves in a defensive position in our efforts to negotiate a step by step relaxation in cold war tensions. In contrast the Soviet position has been greatly strengthened. It is safe to assume that the Kremlin will use its advantage to the limit in mustering world opinion against us.

Hence this incident adds up to a devastating loss of faith in the quality of American leadership: A loss of faith in the reliability and straightforwardness of official U.S. statements; a loss of faith in the President's role in the conduct of critical policy matters; and a loss of faith in U.S. sincerity in easing tensions in advance of the summit meeting.

The role of clandestine operations is inherently difficult for a democracy. I do not underestimate it. But that is an argument for greater Presidential control, not less. The astonishment and incredulity of many millions of Americans today over the headlines is magnified by the knowledge that our President and his administration are simply not in control of their own operations. The bumbling nature of this whole incident—the supreme lack of coordination between one department of our Government and the others—this is what is so serious and what merits our strongest dismay.

It symbolizes what is chiefly wrong with this administration's record in foreign policy. Indeed we can generalize from this instance.

The administration is uncoordinated. No one is in control. The State Department is not—it doesn't even know what some of our military and intelligence people are doing. The President is not a master in his own house. Each sector of the administration undermines another.

This has been the story all along—on defense, on disarmament, on foreign aid. No one has a firm grasp on where we are headed. Lacking overall goals, we continually let

means get in the way of ends. Our military policy defeats our economic policy. Our intelligence policy defeats our diplomatic policy. Our short-term requirements defeat our long-term ones.

This Government and this Nation simply cannot survive piecemeal, uncoordinated administration where our vital national interests are clearly at stake.

This incident, embarrassing, dangerous, and damaging as we know it to be, may in the long run prove to be worth while if it will wake America and the world to the hideous dangers of this cold war struggle.

Every thoughtful person must now see that we are walking a tightrope in world affairs. Miscalculations either in Moscow or in Washington could plunge us all into a war that no one wants, that no one could win, and from which few could survive. The stupendous dangers we face have been clearly dramatized.

What is required of us now is a bipartisan effort to break the logjam in world affairs and to embark on a new study of methods to ease our way gradually out of the impasse into which the world has stumbled and to begin to lay the foundation for a meaningful peace.

In saying this, I do not suggest that peace will come easily. On the contrary, the difficulties are enormous. I simply say that it is time that mankind took charge of its own destiny while we still have the opportunity to act rationally.

Foreign Economic Policy—On the Road to Peace

EXTENSION OF REMARKS
OF
HON. CARL HAYDEN
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, May 9, 1960

Mr. HAYDEN. Mr. President, on May 1, the distinguished junior Senator from Missouri [Mr. SYMINGTON] appeared before the Tucson, Ariz., Sunday Evening Forum, a public-affairs forum of national stature, and spoke to an audience of over 2,000 on the need for a long-range foreign economic policy.

His remarks that evening are especially timely if one hopes to understand the interrelationship of tariffs, foreign aid, and foreign investment in developing a dynamic American foreign policy. Therefore, I ask unanimous consent that the text of his address be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOREIGN ECONOMIC POLICY—ON THE ROAD TO PEACE

(Address by Senator SYMINGTON, Sunday Evening Forum, Tucson, Ariz., May 1, 1960)

Whether we like it or not, the United States is no longer an island of freedom and strength, safely surrounded by great oceans on the East and West, and great friends on the North and South.

The freedom and strength are still here, and so are the oceans and our friendly neighbors. But distances between nations have shrunk almost overnight—and the oceans are hidden tunnels for potential aggressors.

The subject of foreign policy is no longer a weekend exercise, and the alternative of noninvolvement is no longer ours.

We are involved—and the involvement is bound to become greater, not less.

Our lives, and the lives of our children and grandchildren, will of necessity become increasingly affected by what happens all over the world, and—let us not forget—throughout space as well.

This we can readily see—whether it be a threatened attack upon one of many nations with which we have defense commitments or whether it be the prestige effect of Soviet satellites upon uncommitted nations.

There is, however, another interrelationship in world affairs—one which is too often overlooked. I refer to the interrelationship between tariffs, foreign aid, and foreign investments.

Each of these affects the other. None can be handled in isolation, any more than we can have a policy about the unification of Germany without regard to the pronouncements from the Kremlin.

THE RELATIONSHIP OF EXPORTS AND IMPORTS

Yet, so far as I can discover, our Government has no policy which meshes these important things together. Nor has it explained their interrelationship to the American people.

Rather, the question of imports of goods is treated as a special type of economic invasion of our country—for the purpose of depriving American laborers of their jobs and American stockholders of their profits.

Exports, on the other hand, are considered to be good business, and any effort of some other nation to undersell us abroad is termed unfriendly—and even Communist-inspired.

Of course, any sound businessman knows that his sales are a total loss unless he gets paid for them. The same is true in the world of foreign trade. Imports are the means of payment for our exports; hence, anything that cuts down on imports makes it more difficult to export. A policy which tends to encourage exports and another policy which tends to discourage imports are operating against each other.

In the short run, there is little difference between exports for which we do not receive comparable value of imports in return, and foreign aid grants. The latter are also exports, generally, of goods produced here in the United States—but given away, rather than paid for by returning imports.

Yet, if you were in Washington, you would soon see that the same organization, or even the same Government official, urges an expansion of exports, a curtailment of imports, and a decrease in foreign aid.

To understand the interrelationship of these things, however, does not automatically solve the problem.

Take the businessman who is having difficulty competing with foreign imports. It doesn't help him to know that some other businessman is benefiting because such imports are the means by which the latter businessman gets paid for his export sales.

A TWO-EDGED TARIFF POLICY

I believe we should have a two-edged tariff policy, based on a full realization of the economic significance of both edges.

First, for good practical reasons we should keep down our tariff barriers. The reasons are as follows:

1. Tariffs are taxes paid by American consumers—not by foreign sellers.

2. Tariffs are inflationary. They are taxes added onto the price of imported goods; or, if they are sufficiently protective, they permit higher prices for domestic goods.

3. Tariffs encourage other countries to raise barriers against our export goods and therefore cost us part of our foreign market.

4. Tariffs encourage the investment of American capital abroad. Some of this money could well be used in building up our own country.

5. Tariffs may even cause unemployment in the United States, in that they decrease sales of our most efficient large-scale production industries.

The other edge of the tariff policy, however, should be this: when commodities flow into our country, underselling U.S. goods and threatening the employment of U.S. labor and capital, the facts in each individual case should be examined carefully to see if the damage to our own people is such as to merit an exception to the general tariff policy and give that industry at least temporary added protection.

In each case in which such a decision is made, the Federal Government should cooperate with local governments and private organizations to see if new industries and new production cannot be introduced into the areas which have been hurt by the foreign competition.

The argument that tariffs protect domestic industries and their profits and therefore cause a greater flow of income tax revenue to the Government is, to put it bluntly, nonsense.

Curtailment of international trade decreases income tax revenue to the Government.

Nonetheless, I would not make individual tariff judgments on a Government revenue basis, but on how the people in the areas concerned are affected.

I am convinced that the added tax revenues from increased exports would be more than sufficient to foot the bill for the research and the Government financial assistance which may be necessary to modernize those industries which find they cannot beat foreign competition.

The United States is the greatest exporter of goods in the world. We undersell other countries in a large volume of goods. It is obvious that we could do this only if our costs and prices were lower in those goods. Otherwise, foreigners would buy them someplace else.

There is no basis for complacency in this situation, however, as an examination of our recent trade statistics reveals. We have to keep improving both quality and our production efficiency if we are to maintain the advantage we have held for so many years.

SOVIET COMPETITION

There is, moreover, an increasing concern—and rightly so—about the threat of economic competition from Soviet Russia. So far, this is not serious in the sense of free competition, because no one seriously considers that Russian costs of production are generally as low as ours. For example, some of the top production men from our steel industry visited Russia recently, went through their plants, and examined their techniques. Their conclusion was that Russian costs of producing steel—a commodity so basic to the production of other goods—was far above ours.

The serious aspect of Soviet competition lies in the fact that their prices are not determined on the basis of cost. Rather, they are set by the dictator at whatever level he considers would best serve the aims of this foreign policy.

As example, the Russians put the aluminum industry into something of a frenzy last year by the simple process of dumping a small amount of aluminum on the world market at a price well below the existing level. This was done even though Russia has not enough aluminum to meet its own needs, and undoubtedly offered the aluminum at a net loss if figured in our own accounting terms.

With a population about 15 percent greater than ours, and a gross national product about 55 percent less than ours, Russia is in no position to take away much of the world market from the United States. Yet,

we are in danger of losing it anyway if we don't change our policies.

If our Government continues to push up interest rates, and certain of our large basic industries continue to take advantage of their semimonopolistic position to set high prices, we will lose customers. It will not help to blame the Communists.

AN AMERICAN ECONOMIC OFFENSIVE

Anybody who doesn't believe that this country, with its free labor market, its vast amount of investment capital, its successful business experience, and its wealth of natural resources, cannot meet competition with other countries, bases his conclusion on fear and not on facts.

Curiously enough, our export business is threatened more by our own policy weaknesses than by any Soviet dictator, or low-wage rates in other countries.

I hasten to emphasize that I do not minimize the significance of either the Communist economic potential or the occasional advantages which may accrue to those whose labor costs are lower than ours.

But, I am convinced that, with sound policy leadership in our Government and astute management in our private businesses, the United States can launch an economic offensive which cannot be matched by any country or any combination of countries throughout the world.

FOREIGN AID

Closely related to the foreign trade problem is the matter of foreign aid.

This question is greeted with fewer facts and more emotion than almost any other issue before the country.

Mostly, foreign aid is viewed as an unnecessary tax burden or as an example of undue generosity on the part of the United States.

It is true that foreign aid costs money, and therefore the taxpayers have to pay for it. It is not necessarily true, however, that economic foreign aid over the long run adds to the total tax burden. Whether it does or not depends more on our foreign aid policies and how they are administered than on the amount of money involved.

Most Government grants as well as loans to foreigners increase our exports of goods. Almost all of the money we spend for foreign aid is spent in this country—to buy our agricultural surpluses, our machinery, and our other manufactured goods.

In addition, to the extent that foreign assistance builds up underdeveloped countries, we are adding potential customers for more of our goods through commercial channels.

If everyone who consumed alcoholic beverages in the United States cut out every third drink—and I do not take a position on that one way or the other—the amount saved would pay for our entire foreign aid programs, both military and economic.

I mention that just to put the size of the program in perspective.

The entire mutual security appropriation will amount this year to less than eight-tenths of 1 percent of our gross national income.

With the exception of emergency gifts of medical supplies, food, and similar essentials, there is little room in a foreign aid policy for what might be called altruism or generosity for generosity's sake.

Rather, we should evaluate each foreign aid program on the basis of whether it will benefit the citizens of this country. This is only reasonable, and is the only fair approach as far as our taxpayers are concerned.

In talking about foreign aid, I want to emphasize that assistance to our distressed areas here at home must always have a higher priority than aid to other countries.

On that premise, it is my belief that well administered foreign aid can do several things, all of which can benefit this country.

First, it can help build up the underdeveloped countries and forge ties of trade and friendly relations with the United States.

Second, it can blunt the Communist propaganda and economic offensives, or at least make these Communist programs very much more expensive to the Soviets.

Third, it can establish a realistic basis for uncommitted countries to support the United States as the free world leader in the United Nations, as well as in high level international negotiations.

If the less fortunate countries of the world could achieve, through the stimulus of a well managed foreign aid program, a per capita income increase of 1 percent a year during the coming decade, they could well offer to the United States alone a $14 billion market for our goods. This would amount to double the present market in those areas.

It is a matter of good business sense, if you want to increase your sales, to look for new markets.

So far as the makeup of a foreign aid program is concerned, I favor an increased proportion of the total aid to be economic rather than military, and believe such aid should be primarily in the form of long-term loans rather than outright grants.

LONG-TERM PLANNING NEEDED

Such programing should be on a long-term basis—not chopped into annual, unplanned segments, as is currently the situation.

For example, to get the best return on our investment, our Development Loan Fund should be financed over a period of a minimum of 5 years.

One major feature of a long-term program could and should be an increased flow of our surplus agricultural commodities. It is my belief that this could be accomplished much more effectively on a 5-year basis than on a 1-year basis.

The foreign assistance-investment program of the 1960's should be a cooperative venture of all free industrialized nations. To be most effective, such cooperative efforts should be directed toward investment to stimulate growth—not toward investment for immediate profit returns. Before such investment can bring real growth, both time and money must go into what are called preinvestment activities.

Such activities should be carefully planned and programed, and should range from labor and resource surveys to educational and technical assistance.

High on the list of such programs would be those which would raise the skill level of the labor force in those countries.

Along with such training should go a clear understanding of the benefits of private enterprise and the knowledge that benefits from economic improvement can be enjoyed by the population as a whole only under democratic types of government.

SOUNDNESS OF THE DOLLAR

We can have a sound overall foreign economic policy without impairing the integrity of the dollar. It is true that in the last few years there has been some outflow of gold—and even some talk of devaluing the dollar.

The facts are that this outflow of gold has in no way affected our economic growth or the soundness of our financial structure. Incidentally, we still have more than half of the total supply of gold in the free world. If such an outflow were to continue indefinitely, there might come a time when we would have to worry about it.

However, that time has not come—and there is no reason for it ever to come.

Until the last 7 years, the rate of economic growth in the United States has been such as to attract foreign investment; and those who accumulated funds here as a result of sales of goods and services have been eager to invest those funds in our thriving economy.

Recently, however, our growth rate has slowed to a walk and has been surpassed by other countries. Hence, there has been some encouragement for those who accumulated balances here to withdraw them in the form of gold, and either hoard them in their banking systems or invest them elsewhere.

I am convinced that we can and we must, with firm leadership in our Federal Government, reinstate the previous high growth rate.

If we do that, the steady outflow of gold will cease and gold in international finance will revert to its customary role of adjustment of international banking balances.

It is my conclusion that there is nothing wrong with our international economic position which sound foreign policies and firm leadership will not cure and cure promptly.

Hon. Graham A. Barden, of North Carolina, Honored

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1960

Mr. COLMER. Mr. Speaker, on April 30 last the American Good Government Society, a nonprofit, patriotic institution, dedicated to the cause of good government in these United States, held its annual dinner and made its annual awards to two outstanding Americans. Each year this splendid institution presents the George Washington Award to two outstanding American patriots. This year these highly coveted honors went to the Honorable GRAHAM A. BARDEN, a Member of the U.S. House of Representatives from the State of North Carolina, and to the Honorable BARRY GOLDWATER, a Member of the U.S. Senate from the State of Arizona.

The dinner was held in the Sheraton-Park Hotel. In attendance were some 600 or more guests who are interested in seeing good government perpetuated in this Republic. The American Good Government Dinner speaker was the Honorable Maurice H. Stans, the highly respected Director of the Bureau of the Budget.

The Honorable STROM THURMOND, a Senator from the State of South Carolina, made the presentation of the award to his colleague, Senator GOLDWATER.

The Honorable CHARLES A. HALLECK, the minority leader of the House of Representatives and a distinguished Member of that body from the State of Indiana, made the presentation of the award to the Honorable GRAHAM A. BARDEN.

Mr. HALLECK's remarks in presenting this highly coveted award to Mr. BARDEN, together with the text of the award of the society to this splendid North Carolinian follows:

REMARKS OF HON. CHARLES A. HALLECK

This is one of those occasions which finds me happy and somewhat sad at the same time.

I'm happy that the chance has come my way to join in tribute to a great American,

the Honorable GRAHAM A. BARDEN, of North Carolina. But I am sad in the knowledge that this high honor is coming to him at the close of a distinguished career in the Congress of the United States.

You know, GRAHAM, some people—who don't think I have the right philosophy of government—have announced that they are going to end my political career come next November.

But I think maybe the people of the Second District of Indiana are going to have something to say about that, and I expect to be back down here next January.

But, folks, things won't be quite the same as far as I'm concerned.

Our honored guest and beloved friend has announced his decision to retire, and I shall miss him more than I can tell.

I know of no Member of the Congress of the United States who more richly deserves this recognition from your fine organization than my long-time friend and colleague.

"HAP" and I were both freshmen in the 74th Congress. But he has a few months' seniority on me, because I won a seat in the House of Representatives in a special election just after the Congress convened.

Through the years he has been a generous, warmhearted, loyal friend of mine, and I have come to feel a devotion toward him that can only be appreciated by men who have stood side by side and shoulder to shoulder through the smoke and fire of legislative battle.

The fact that he is a Democrat, and I am a Republican by allegiance, has never been a consideration, as we have fought together for common ideals, common principles, and a common faith in the inherent strength and majesty of our constitutional way of life.

Early in my career in the Congress I saw in GRAHAM BARDEN a public servant who could be counted upon to put the well-being of his country above private or party considerations.

I saw in him a stalwart American who had the courage to stand up and be counted when the chips were down on issues vital to the maintenance of the freedoms we cherish as citizens of this great Republic.

I saw in "HAP" BARDEN an able, articulate and dedicated representative of the people, who time and again brought his considerable talents and energies to bear against what on many occasions seemed to be an irresistible tide of political radicalism.

As I look back over the years of our service in the Congress together, I am well aware that in spite of our best efforts there seems to have been an erosion of some of the old-fashioned virtues that made this country the greatest on the face of the earth.

Thrift, self-reliance, faith in the future, the willingness to put forth sustained effort, and the courage to face adversity, seems, in too many instances, to have been abandoned in favor of what has been falsely sold as the easy way of life—let Washington do it.

But I am convinced of this: It is to the everlasting credit of men like GRAHAM BARDEN that this Nation of ours has not gone the whole way of so many other liberty-loving people: into socialism or something worse.

And I am also convinced of this: We are now witnessing a reawakening of our citizenry to a sense of values we might well have lost forever.

And I foresee that with the continuing support of the kind of people here tonight—citizens who recognize the worth of men like "HAP" BARDEN—we will see a steady resurgence of support for those principles of government for which he has fought so nobly and so long.

"HAP", my most sincere congratulations to you on the occasion of this recognition you have so well earned by your distinguished contributions to the cause of good government.

And before I read this citation I just want to say one more thing:

If you don't invite me to come down your way to help you catch some of those fish you are going after in your leisure I'm going to publicly repudiate all of the nice things I've said about you tonight.

Now, it is with a deep sense of personal satisfaction that I read this citation symbolic of the American Good Government Society's award for 1960:

TEXT OF THE AWARD TO HON. GRAHAM A. BARDEN

Patriot, jurist, and legislator, has devoted half his years to the service of his native State of North Carolina and to the Nation—more than a quarter-century of them in the U.S. House of Representatives.

Courage, integrity, and wisdom have made him a major constructive force in the movement for responsible labor legislation and tower of strength against one-sided and unbalanced proposals, destructive of the mutual interests of employees, employers, and the public. In the field of education he has been a steadfast leader in the continuing struggle to keep control of public education in the States and their communities.

Representative BARDEN, over the years of his service, has exerted a powerful influence for good on the work of the Congress of the United States. In well-earned retirement, he will be long remembered as one of North Carolina's most illustrious sons.

U–2 Plane Incident

EXTENSION OF REMARKS
OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1960

Mr. BOWLES. Mr. Speaker, under leave to extend my remarks I wish to include excerpts from yesterday's NBC–TV program, Meet the Press, containing my remarks in answers to questions on the controversy over the U–2 plane incident. The panel members were Peter Lisagor of the Chicago Daily News, Chalmers Roberts of the Washington Post, John Steele of Time-Life, Inc., and Frank Bourgholtzer, NBC news. The moderator was Ned Brooks. The excerpts follow:

Mr. BROOKS. Now, Congressman BOWLES, if you are ready, we will start the questions with Mr. Bourgholtzer.

Mr. BOURGHOLTZER. Mr. BOWLES, if you were foreign policy adviser to a President, rather than a candidate, would you advise him in this situation where an American pilot has been shot down by the Russians and has admitted being a spy, would you advise just admitting that he was a spy as has been done?

Representative BOWLES. You have asked a very tough question. It seems to me that the administration did about all it could with a very difficult, very unpleasant, and highly embarrassing situation. It is pretty clear that Mr. Khrushchev knew what was going on. He appears to have the evidence with which he could confront the world and presumably persuade the world. I think it is a very bad situation. I think it would have only made a bad situation worse if we had tried to cover it up.

Mr. BOURGHOLTZER. On the same question there are a lot of aspects but I am wondering particularly what your viewpoint would be, particularly thinking of the upcoming administration, to the point of the President being unaware of such an activity, as apparently is the case in this incident. Do you think the President should be kept purposely unaware of certain intelligence operations?

Representative BOWLES. Well, let's start with the fact that I believe this will go down in history as probably the most embarrassing and in some ways shocking occurrence in the last 7 or 8 years. We are going to hear a lot more of it.

I wish I were talking about it 2 or 3 days from now when, perhaps, we will have a better chance to settle down and think it through. Certainly I want to be sure that anything I say is very responsible and thoughtful, because no one has any desire to make this worse, certainly not for partisan reasons.

But it seems to me that the whole situation has placed the State Department in the position of having deliberately told a falsehood. I assume they did not know the actual facts, that these facts were initially simply given them.

I would go on to say that the President himself is placed in the position of not appearing to know a very major development in regard to our foreign policy. The Soviet Union has been encouraged to be suspicious of us—they are already very suspicious—on this whole matter of controls and inspections. They have always charged that the reason we want inspection in disarmament agreements is for spying work and espionage generally.

They now have been granted a beautiful opportunity, and they will certainly use it very adroitly to weaken our already weak position as we approach the summit. The whole world has been given a very deep contrast between our professed desire for peace, our desire to try to negotiate, while carrying on this kind of activity almost simultaneously. I think it is a very bad situation.

Mr. STEELE. Mr. BOWLES, I want to get one thing straight. Are you criticizing the activities of the plane or are you criticizing the pilot getting caught?

Representative BOWLES. Well, let me say this. I don't think any one of us who is simply an outsider and a newspaper reader, as I am, can know what is essential here in the way of espionage. We all are realists. We all know that this is a difficult and complex world. We know we are at a disadvantage, and that the Soviet Union is a closed police state which has certain very great advantages over us.

However, it seems to me that this is not really the point here. Espionage may be necessary under certain circumstances, depending of course on the technical problems, of how great our lack of knowledge really is. The point is the timing. The point is we are preparing for a summit meeting. The whole history of the world may depend upon our ability to negotiate with the Soviet Union, to talk with them with at least some degree of mutual trust. By timing this particular excursion at this particular time, we have certainly gone a long way to undermine that hope.

Mr. STEELE. Well, now let's see if I understand. You mean these activities are all right except when we have an international meeting; is that correct?

Representative BOWLES. I don't know that they are all right at all, Mr. Steele, because I don't know the inside story of how much information we have or what we lack or what risks should be run to get it. I would assume that we should not do this sort of thing for a marginal gain but only if the gain was so very vital that it could be justified to the utmost degree on the basis of our national security.

But the point is that we are now in a very delicate position and certainly this would be a time to be far more circumspect than these people obviously have been. I think

they have committed a gross case of misjudgment. I think the flight was highly reckless, dangerous, and hurtful.

Mr. STEELE. Mr. BOWLES, you are the foreign policy adviser to Senator KENNEDY and presumably will become the Secretary of State if he is elected President.

Representative BOWLES. I wouldn't presume that for 1 minute.

Mr. STEELE. You would not presume it?

Representatives BOWLES. No. There will be lots of possibilities.

Mr. STEELE. There has been talk of keeping the candidates informed about developments in foreign policy. Have you been kept informed as to these flights, either as Senator KENNEDY'S foreign policy adviser or as a member of the House Foreign Affairs Committee?

Representative BOWLES. No, I have not heard of them. I have not been kept advised in any way, and I doubt that he has. I am very sure that none of us have.

Mr. LISAGOR. On another point, Mr. BOWLES, in Milwaukee last night I believe you made a speech blaming a good deal of Mr. Khrushchev's bitter blasts at the United States recently on what you called China and the extreme rightists within the Soviet Union, suggesting, according to the accounts I read, that these people want to torpedo a summit conference.

Now how do you square that kind of a statement with the general belief here in Washington that Mr. Khrushchev needs peace and needs certain relaxation in order to get his 7 year plan to work?

Representative BOWLES. I haven't seen the paper, the quotation wouldn't be quite accurate if that is the way it appeared.

I asked the question, How much influence have the Chinese had in this situation? How much influence does the old Stalinist regime still have within the Soviet Union? I asked that as a question, and I think it is a very proper question, too.

The Chinese have always timed a lot of their intransigence in the Far East, Quemoy and Matsu and the rest, for the periods when we were trying to negotiate and talk with the Soviet Union. It is my guess that Mr. Khrushchev would really like to try to develop an easier atmosphere here. I felt this strongly when I saw him and talked with him a little over 3 years ago in Moscow. I had a long 3-hour talk with him, and I came out of it quite convinced that he wanted a détente. He wanted to see the situation ease. He felt the need of it for his own country, but was highly suspicious and was feeling his way.

It would seem to me that this development is not necessarily in the interests of the Mao Tse-tung government in Peiping. They naturally want to keep the cold war between the Soviet Union and the United States just as active and vigorous as they possibly can, because this assures them of a flow of material and loans and the other things they need from the Soviet Union.

I would assume that there is at least a potential clash here between Chinese Communist interests and the Kremlin's interests.

Mr. LISAGOR. But do you not believe that Mr. Khrushchev is secure enough today in Russia so that he can move on toward relaxation if he so chooses at a summit conference?

Representative BOWLES. I don't think we really know. I hope so.

I visited Belgrade in November. I wanted to go there to talk to some of the Yugoslavs who often follow pretty much the Soviet line. For instance in regard to Berlin, their line is almost identical with the Soviet position. But they do have some insight on what is going on in the Soviet Union and also in China.

I found a general feeling in Belgrade that Mao Tse-tung's government in Peiping had some contracts and some hope for support for an extreme position from certain elements in the Soviet military. They were inclined to feel that this was the case.

How Do You Stand?

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1960

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial appearing in the May 2 edition of the Idaho Daily Statesman, published in Boise, Idaho.

Written by the Honorable BARRY GOLDWATER, Senator from Arizona, the editorial is a short history of our Government from the days of the drafting of the Constitution down to the present time. It shows what the Founding Fathers intended, and what we have done to those intentions.

The distinguished Senator from Arizona has shown how far we have drifted away from the precepts of those noble patriots who gave the United States the greatest form of government in the history of the world.

Mr. Speaker, we should return to them immediately.

The editorial follows:

[From the Boise (Idaho) Daily Statesman, May 2, 1960]

HOW DO YOU STAND, SIR?

(By Senator BARRY GOLDWATER)

To understand the importance of the Federal Constitution, we must recognize that it is primarily a system of restraints against the natural tendency of government to expand in the direction of absolutism.

We all know the main components of the system. The first is the limitation of the Federal Government's authority to specific, delegated powers. The second, a corollary of the first, is the reservation to the States and the people of all power not delegated to the Federal Government. The third is a careful division of the Federal Government's power among three separate branches. The fourth is a prohibition against impetuous alteration of the system—namely, article V's tortuous, but wise, amendment procedures.

Was it then a democracy the framers created? Hardly. The system of restraints, on the face of it, was directed not only against individual tyrants, but also against a tyranny of the masses. The framers were well aware of the danger posed by self-seeking demagogs—that they might persuade a majority of the people to confer on government vast powers in return for deceptive promises of economic gain.

And so they forbade such a transfer of power: first, by declaring, in effect, that certain activities are outside the natural and legitimate scope of the public authority; and secondly, by dispersing public authority among several levels and branches of government in the hope that each seat of authority, jealous of its own prerogatives, would have a natural incentive to resist aggression by the others.

But the framers were not visionaries. They knew that rules of government, however brilliantly calculated to cope with the imperfect nature of man, however carefully designed to avoid the pitfalls of power, would be no match for men who were determined to disregard them.

In the last analysis their system of government would prosper only if the governed were sufficiently determined that it should.

"What have you given us?" a woman asked Ben Franklin toward the close of the Constitutional Convention. "A republic," he said, "if you can keep it."

We have not kept it. The system of restraints has fallen into disrepair. The Federal Government has moved into every field in which it believes its services are needed.

The State governments are either excluded from their rightful functions by Federal preemption, or they are allowed to act at the sufferance of the Federal Government. Inside the Federal Government both the executive and judicial branches have roamed far outside their constitutional boundary lines.

There are a number of ways in which the power of government can be measured.

One is the size of its financial operations. Federal spending is now approaching a hundred billion dollars a year (compared with 3½ billion less than three decades ago).

Another is the scope of its activities. A study recently conducted by the Chicago Tribune showed the Federal Government is now the biggest landowner, property manager, renter, mover and hauler, medical clinician, lender insurer, mortgage broker, employer, debtor, taxer, and spender in all history.

Still another is the portion of the people's earnings Government appropriates for its own use: nearly a third of earnings are taken every year in the form of taxes.

A fourth is the extent of Government interference in the daily lives of individuals. The farmer is told how much wheat he can grow. The wage earner is at the mercy of national union leaders whose great power is a direct consequence of Federal labor legislation. The businessman is hampered by a maze of Government regulations, and often by direct Government competition.

The Government takes 6 percent of most payrolls in social security taxes and thus compels millions of individuals to postpone until later years the enjoyment of wealth they might otherwise enjoy today. Increasingly, the Federal Government sets standards of education, health, and safety.

The Constitution is not an antique document. It is as pertinent today as it was when it was written. Our great error has been in departing from the letter and the intent of the Constitution as a document to restrain the concentration of power. How do you stand, sir?

Need for Public Understanding of East-West Conference Issues

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 9, 1960

Mr. WILEY. Mr. President, for some time now, the world has looked hopefully toward the upcoming summit conference.

As realists, we have not expected panacea-type solutions to East-West differences. Nevertheless, it has been hoped that at the summit conference involving and comprised of Premier Khrushchev, Prime Minister Macmillan,

President de Gaulle and President Eisenhower, we can at least make some progress toward resolving East-West differences.

Now, the flight of a U.S. pilot deep into Soviet territory has raised significant questions.

Apparently, the authorization for such a cross-country flight was not made in Washington. The President, the Secretary of State, and the Nation deserve an answer not only for scheduling of such a flight, not only for such deep penetration into Soviet territory, but also for reaching such a decision at this critical time in international affairs.

To meet the situation forthrightly, I believe we might well adopt the following course:

First, acknowledge to the Soviet Union the flight, designating that the decision was not made in Washington.

Second. Urge the Soviet Union to retain all data and information in possession of the pilot they deem necessary to their security.

Third. Point out that the pilot's armaments—a small, .322 caliber pistol—could hardly be a military threat to the Soviet Union, particularly in competition with what Mr. Khrushchev calls his "remarkable missiles."

Fourth. Request the return of the pilot to the United States for appropriate action in accordance with the situation.

Fifth. Again, stress—as President Eisenhower has done—the need for lessening of international tensions to allow greater freedom of airspace.

Regrettably, Soviet activities in subversion, espionage, and other similar activities has created the need for counterefforts to obtain information to protect ourselves against possible sneak attack—presumably the reason for the flight.

What effect will all this have on the proposed summit conference?

As yet, it is not possible to say. After the sensationalism of the incident has simmered down—and all the facts are in—perhaps it will be easier to assess the situation.

For the most part, I believe we—and the world—must attempt to put the incident in perspective—that the flight of one plane, over one country certainly is not enough to upset the global applecart.

We can expect, of course, that Mr. Khrushchev will play the incident to the hilt for propaganda purposes. However, perhaps a greater question in the whole affair now is whether or not Khrushchev will go off the deep end far enough to make it appear questionable as to whether a summit conference, scheduled to open on May 16, should be held at all.

If, however, it still appears that such a meeting would have a chance to lessen world tensions, there are, I believe, fundamental issues which would need to be considered at such a time.

Recently, I was privileged to review a few of the major issues in an address over radio station WGN in Chicago reviewing the situation. I ask unanimous consent to have the text of my address printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS OF ADDRESS BY SENATOR WILEY

WILEY STRESSES NEED FOR PUBLIC UNDERSTANDING OF EAST-WEST CONFERENCE ISSUES—SAYS WORLD OPINION WILL BE FIFTH POWER AT CONFERENCE

Friends, I welcome the opportunity to discuss with you the major challenge facing America and the world—that is, keeping the peace; or conversely, preventing World War III, which would wound, dismember, if not destroy mankind.

If a major war can be averted, however, then we can all look forward to a better, brighter future.

In the modern world, the idea of a fortress America, go-it-alone kind of policy has been made obsolete by development of jet planes, missiles, nuclear bombs, and other modern weapons of destruction that eliminate distance, oceans, and terrain as barriers. As a result, we cannot close our eyes; pull in our personal, family, and community interests around us; and hope that the dangerous ogre, communism—the major threat to world peace—will vanish.

To the contrary, we must either face its threat and defeat its purposes of world conquest—if possible in a peaceful way—or become its slaves.

Outlook for summit conference—opening May 16, 1960

As you know, the summit conference, comprised of President Eisenhower, Prime Minister Macmillan, President de Gaulle, and Premier Khrushchev, will begin meeting in Paris, France, on May 16—about a week from now. The world is waiting, watching expectantly and prayerfully, hoping that these leaders of two conflicting ideologies will find a way: to resolve some of the international differences, and to establish a pattern of followup action—perhaps by successive top—or lower—level conferences to continue efforts to ease the tensions between the East-West blocs.

In reviewing the summit outlook, I shall not attempt to be a prophet—to be all knowing on such crucial international matters affecting us.

In an election year—with a ringful of hats for the Presidency; and a corral full of dark horses for both the No. 1 and No. 2 spots—there are more than enough self-styled experts floating around the country declaring, condemning, criticizing, admonishing, at the tops of their voices—with the last word on every issue.

As a Senator and citizen, and a human being who, along with each of you, deeply desires peace, I believe, however, we all must obtain as clear an understanding as possible of the challenges ahead, and the alternative ways in which to meet such challenges.

World opinion—Fifth power at summit

Generally, the summit will be considered a conference of four great powers. However, I believe there will be a fifth power at the conference—that is, world opinion. Neither the East nor the West can ignore this fifth power.

Around the globe there is a deep-seated yearning in the hearts of almost all people for the dawning of a peace in which the dark-cloud threat of nuclear annihilation will be lifted from above the heads of mankind.

During the negotiations, this great worldwide will for peace will, I believe, make its presence—and its force—felt by both East and West.

Whatever agreements may be reached at the summit affecting the destiny of mankind, I believe, will bear the invisible signature of this fifth power.

Major issues of the conference

Now, what are the major issues at the upcoming conference?

The gamut of East-West differences, of course, is widespread and complex.

First, a major issue confronting the East-West conference is the problem of Germany, including Berlin. Why? For the following reasons: A lasting peace in Europe depends upon protecting the freedom and integrity of the 2¼ million West Berliners and finding a realistic solution for German unification. Unless this is done, Germany will remain a powderkeg for years to come.

Settlement of the German question, too, represents a test of whether or not the Soviets can be depended upon to adhere to agreements—which are already established in relation to West Berlin—or whether again they will be treatybreakers.

Second, attaining safeguarded agreements on reduction of armaments, including bans on nuclear testing, is essential to reducing tensions and lessening the possibility of war.

While these constitute major challenges at the Paris summit meeting, additional issues—really as farflung as the world fronts—include:

Third, curbing the propaganda warfare by the Communists, which in itself constitutes a form of aggression.

Fourth, reaching agreements on limitation of arms shipments to such areas as Asia, Africa, and South America and other places in the world where "invasions of such military arsenals" would serve to stir up greater tensions and possibly create open conflicts.

Fifth, the question of the future status of the so-called captive nations, too, is legitimate subject matter for discussion. As in the past, however, we can expect that the Soviets will be reluctant to discuss this topic.

And a wide variety of other East-West differences that require ultimate solution—before there will be peace in the world.

East-West seek different objectives

The job of obtaining realistic achievements at the summit is made particularly difficult because the East and the West leaders—although they will discuss the same issues—are actually seeking different goals.

The West—in accordance with its traditional policies—is attempting to obtain a settlement of the problem relating to Germany, of reduction of armaments and other major issues to establish a just and lasting peace.

By contrast, the Communists—although they give "lip service" to peace—have not yet disavowed their ultimate goal of world conquest.

Consequently, this narrows the field of possible agreements to areas in which negotiations—or perhaps even mutual concessions—may service different objectives.

As humans, we, of course, wish for a panacea-type solution to the struggle: "Let's settle it and forget it." Unfortunately, the outlook is for no such accomplishment.

Even if the conference attained a high degree of success, it would still leave a great many unsolved problems.

Among other goals, the conference will need, I believe, to attempt to establish a pattern of future negotiations to carry forward efforts for resolving the multitude of problems that will still exist between the free and Communist worlds.

Major free-world goals

Unfortunately, in the complex jungle of East-West negotiations—including false Communist propaganda and our efforts to refute it, we—and the world—may lose sight of our goals in international affairs. Consequently a restatement of United States and Western objectives would, I believe, serve a useful purpose.

The major objectives include:

1. A unified Germany, free to elect its own government by vote of the people.

2. Existence of the European nations—now the so-called captive nations—under self-determined governments.

3. The attainment of realistic agreements for reduction of armaments to: reduce the fear of war, and enable nations to channel more of their resources, manpower and brainpower to benefiting—not threatening to destroy—mankind.

4. Creating greater respect for, and willingness to abide by, international law, to preserve peace and order on the globe.

5. A redefinition of world relations—as recently emphasized by Under Secretary of State Douglas Dillon—declaring that coexistence among nations should not necessarily be by international agreement. Rather, the rights of separate states and systems to exist should be unquestioned—so long as the respective governments are determined by the people within each country.

Coexistence has always been, and should continue to be, a minimal condition of peaceful international relations—not a subject for negotiation or for ratification by the Kremlin.

6. A restatement of our willingness, as evidenced by postwar programs, and reaffirmed recently by President Eisenhower—to channel more of our resources—particularly savings resulting from safeguarded agreements for reduction of armaments, to aiding the less developed nations of the world to create a better way of life for their people.

In essence, this would mean emphasis on our adherence to a philosophy, not just of live and let live, but also to help others live better.

Overall, there are a great many ways—economic, intellectual, cultural, spiritual—in which nations, instead of threatening to destroy each other, could cooperate constructively to provide a better climate and a brighter future.

Government "of, by, and for the people"—not communism—most revolutionary

Prior to concluding, I would like to knock down one more strawman created by Communist propaganda: that is, that communism is a new, revolutionary political-economic system, designed to create a better life for people under its dominion.

Actually, this is contrary to the truth.

Communism, as we know it today, is really totalitarian dictatorship. Throughout history, dictatorial ideas and individuals have paraded behind many facades and masks to attain their goal of absolute power—and that means the decisions, not just of rights and privileges, but of life and death (and too often, the latter) over a people.

The Soviet Union and Red China, representative of modern-day communism—are no different from the bloody tyrannical regimes of the past that have subjugated peoples, deprived them of fundamental rights—and yes, annihilated them if it served the purposes of the state.

Realistically speaking, our form of government—"of, by, and for" a free people—is the most revolutionary in history.

As a novel adventure in self-government by a people—vigilant to preserve for themselves the maximum freedom consistent with an orderly society—our free system stands unique.

Only by constant vigilance and selfless dedication to high principles and ideals—consistent with our traditions—however, can we expect to remain a free people.

Conclusion

Today, we are beseiged by the Communist menace, employing all kinds of tactics, military and nonmilitary, to attain its objectives of world domination.

Can we defeat it?

Yes, I believe we will prove that freedom is the superior system.

To accomplish this, however, will require an ever-greater understanding by our citizens—you and me—of the scope of the danger; as well as a rededication of time, manpower, brainpower, and resources to further strengthen our system for withstanding one of the great tests of its life.

As we face this great challenge, however, I am confident that we will come through with flying colors.

U.S. participation in the summit conference—with President Eisenhower representing us—illustrates, once more, the President's willingness—reflecting the will of our people to go the "extra mile"—if it offers promise of promoting lasting peace.

Thank you for listening.

The Presidential Candidates and the People: NBC's Statesmanlike Proposal

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1960

Mr. UDALL. Mr. Speaker, the President, as a student of our history recently wrote, is the one authentic trumpet in the American system. Out of regard for the importance of the Presidency, and concern over the overriding urgency of the presidential election of 1960, earlier this year I sponsored a bill (H.R. 11260) which would have required the networks to provide free radio and television time for the candidates of both major parties during the campaign this fall.

It gives me great satisfaction to report that Mr. Robert W. Sarnoff, chairman of the board of the National Broadcasting Co., has voluntarily put forward a plan which would achieve the main objectives of my bill—and identical legislation sponsored by 21 Members of the other body. I am happy to commend Mr. Sarnoff for this statesmanlike proposal and am reproducing below an address which he delivered before the Academy of Television Arts and Sciences in New York on April 21 in which he outlined his plan, together with a letter which I wrote him a few days ago in response to his proposal.

The speech and letter follow:

When I received my invitation to address the academy, I felt not only honored but heartened to be reminded that those respectable handmaidens of civilization, art and science, may still be mentioned in the same breath as television. I am glad to see that you are still meeting openly in public places.

It is no laughing matter, but this may go down in the more light-hearted histories of broadcasting as the season that a funny thing happened on the way to the studio. And, indeed, it has not been without its lighter side. For example, the popular pastime of deploring television has made some strange bedfellows: David Susskind and Jack O'Brian; Walter Winchell and Walter Lippmann; James Hoffa and the Attorney General of the United States; Henry Luce and Clare.

It is now 6 months since the open season on television began with a vengeance. We are not out of it by any means but we have lived through this critical period long enough to make a sober accounting of just what has been happening, to assess the damage that may have been done—and the good—and while nursing our wounds, to count our blessings and take a clear-eyed view of the hopes and hazards ahead. In the 6 months since the quiz-show disclosures struck the industry with full force, we have witnessed a curious confusion between ethics and taste.

The quiz rigging posed a grave and clear-cut ethical issue upon which honest, thoughtful men could not differ. Those cynical malpractices on the part of some producers and contestants not only abused the confidence of the public but set a premium on dishonesty and blurred the difference between right and wrong. The most striking single evidence of the social damage represented by these malpractices, as well as the thoroughness of their concealment, is the fact that they prompted scores of men and women to commit wholesale perjury before a grand jury. The issue of ethics is clearly involved in any form of deception that goes beyond the limits of traditional artifice in the field of entertainment.

But what began as a sense of indignation over dishonest practices in one corner of television has been rubbed off increasingly on all of television. An ethical judgment on wrongdoing has been distorting an evaluation of the overall quality and character of television programing. It is a classic case of guilt by association.

The charges that have been aired so vigorously against television in recent months are long-familiar charges of mediocrity, imbalance, violence, and overcommercialism. There is no firmer basis for these charges now than there has ever been, but those who press them are now armed with the cudgels represented by the quiz-show deceptions, and they are making the most of them.

IRONY OF THE PRESENT CLIMATE

Certainly this medium has its faults and frustrations. We often deserve criticism and we need it. Yet, in my opinion, the great irony of what we have come to call "the present climate" is that it has descended on us at a time when, in most respects, television has gone further than ever in raising its sights. This is the season that television has presented more special news, public affairs and cultural programs during peak evening viewing hours than at any time in its history. These enlarged efforts grow out of the steady progress of the past; they are not a sudden reflex to new pressures. As professionals in this medium, you know that such major projects in a season's schedule have to be planned, organized and committed long before the season begins.

Speaking for one network alone, this is the season that has seen the doubling of a pioneering effort to teach college-level courses in science for academic credit; the season that operas in English have returned in force and won sponsorship for the first time in 10 years; the season that has given "The Tempest" the biggest audience Shakespeare has ever had; the season that has offered more specials, more sports, more color than ever before; the season that is lavishing the finest creative resources on provocative live drama as controversial as the story of Ira Hayes and the Sacco-Vanzetti case. This month alone viewers are being offered Mozart's "Don Giovanni," Gilbert & Sullivan's "The Mikado," an adaptation of Joseph Conrad's "Victory," a biographical drama about Andrew Carnegie, an Easter documentary retracing the Way of the Cross, other documentaries ranging from the America of Mark Twain to the one Charles de Gaulle will start visiting tomorrow. And these are only highlights of what one network is offering. We hear so much about what's wrong with television; it may not be amiss to remember what's right with television.

RESULTS OF SELF-REGULATION

What are some of the lessons of the climate in which broadcasters have been living? We were caught unprepared by the quiz-show disclosures, but in swift and decisive response to the discovery of deceptions, we faced up to the sins of omission that helped make them possible. We have long since taken vigorous and thorough measures to clean our house, and to keep it clean. These have been measures of self-regulation so that, in some respects, they have differed from one network to another, but they reflect a solid determination to keep broadcasting ethically above reproach.

And they are working effectively. In the case of quiz and audience participation shows, for example, it was our conviction at NBC that these programs could and should be presented with integrity to the millions of viewers who find them enjoyable and instructive. Such shows are now operating under rigorous safeguards and they have passed the acid test with the public. Today six of the seven programs in this category on the NBC daytime schedule lead their opposition in popularity, and the seventh is a close contender for first place in its time period. On our evening schedule, two shows of this type are among the most popular in all of television.

In a larger sense, there is another significant verdict on television by the viewing public. The major audience measurement services report there have been more sets in use this season than last, and more time spent watching them in the average telesion home. These facts hardly support the notion of some observers that the public is losing interest in television or turning away from it. On the contrary, they make clear that the vitality of the medium is strong, and the public is responding to its powerful attraction.

Still the clamor of criticism goes on. Indeed, we have been entering a new and more dangerous phase in the period that began 6 months ago—a phase that makes this more than ever a time for reason.

LEGISLATIVE PROPOSALS

Seen in proper perspective, the disclosures of wrongdoing developed by Chairman HARRIS' House subcommittee represent a genuine service to the public and the industry. By the same token, much of the proposed legislation introduced in the wake of these disclosures reflects an earnest and constructive effort to create legal sanctions to deter such wrongdoing in the future. For example, Chairman HARRIS and his associates are conscientiously seeking to cope with the difficult, complex problems of legislating against payola, and are considering various bills to set up criminal penalties against quiz-show rigging, along lines that we at NBC were the first to urge.

But the emotions generated over the past 6 months have also spilled over into legislative proposals ranging far afield from these ethical issues—proposals that would dictate the scheduling and quantity of certain types of programs, and would drastically alter the structure of broadcasting itself. I am hopeful that, upon sober analysis, responsible legislators will discard the type of bill that threatens to create far more serious problems than it seeks to solve.

Another aspect of proposed legislation demonstrates how ill-conceived regulation can breed problems that beget still more regulation. An example is the recent bill that would make broadcasters give at least 8 hours of free evening time to the presidential nominees of the two major parties during the election campaign. Here is a bill that would unfairly compel broadcasters to do what they have in the past been prevented from doing by the impractical restrictions of section 315 of the Communications Act.

Those restrictions made it impossible for a broadcaster to present the major-party candidates for President without giving equal time to every other candidate for the office. In 1956, that would have meant some 15 other candidates. Devoting hour upon hour to the often quixotic antics of little known minority and splinter-group candidates would have been an unreasonable price on the public's patience and a disservice to common sense.

As I wrote Senator LYNDON JOHNSON in 1956, NBC has always stood ready to offer suitable opportunities for network appearances to the major-party presidential and vice-presidential candidates if we could be relieved of the penalty of having to grant equal time to every minor candidate. I repeated those assurances last year when the broadcasting industry was urging Congress to ease the "equal-time" restrictions imposed by section 315 of the Communications Act.

Unfortunately, Congress failed to remove these practical obstacles to face-to-face debate or campaign appearances by the major candidates as guests of the networks. But it did lift the "equal-time" penalty from candidates' appearances in news broadcasts and on regularly scheduled news interview programs.

A WAY TO PRESENT THE CANDIDATES

On the basis of this recent amendment of section 315, we believe we have found a way to give the public an unprecedented opportunity to hear, observe, and evaluate the major presidential candidates in appearances on network television in prime evening viewing hours. Beginning 8 weeks before election day, NBC will enable the Democratic and Republican nominees for President to appear together side by side before the American television audience in regular weekly sessions to come to grips with the issues confronting the country.

The vehicle for these historic appearances will be "Meet the Press," television's oldest news interview series. We propose to expand it to a full hour—as we have done on occasion in the past—and to reschedule it on Saturday evenings, preempting "Worldwide 60."

On six of the eight weekly programs leading to election day, each major presidential candidate will get an equal chance to reply to well-informed questions by impartial, trained journalists—courteous but skillful questions designed to bring out their views clearly and effectively on the matters uppermost in the voter's mind. Each program featuring the two presidential nominees will be devoted to a major national issue or a particular group of issues, designated in advance, and the final one before election day will treat the highlights of the issues as they have developed in the homestretch of the campaign.

In addition to these six programs, there will be one devoted to a session with the two vice-presidential candidates. And another will present the minor candidates for President—not out of any legal requirement but because we believe their appearance within this framework will make an interesting and informative program. It will also give them a national hearing far in excess of any that could be justified by their voting support.

I believe that the course we are taking voluntarily is far preferable to the one that the proposed legislation would impose upon us. It represents the initiative of a broadcaster acting in freedom, not a Government edict that raises grave questions of public policy and constitutionality. Moreover, it represents a broadcaster's exercise of his own judgment as to how the candidates can be presented most effectively rather than Government dictation that they be presented in a prescribed way. There can be no doubt, in my opinion, that the format in which we plan to present the candidates can be more genuinely informative to the American people, and more interesting as well, than the speechifying contemplated by the pending bill.

HUMPHREY-KENNEDY DEBATE

Now I would like to discuss a dramatic and unusual development that arose only yesterday. As you know, Senators HUMPHREY and KENNEDY have agreed to engage in a televised debate during the West Virginia primary campaign. After thorough consideration of the circumstances and implications, we have today offered the NBC television network facilities for this debate.

You might wonder why we decided to follow this course, in view of the equal-time burdens of section 315; and why if we are able to offer time for a Humphrey-Kennedy debate in this instance, we cannot do the same for debates by the Democratic and Republican presidential candidates after they have been nominated. The differences between these two situations themselves illustrate the problems arising under section 315.

After the conventions, there will be a large number of presidential candidates from all the minor and splinter parties. If NBC were to devote as much time to debates between the Democratic and Republican candidates as we will allot to their appearances on Meet the Press under the plan we have developed, we could be under legal obligation to offer over 50 hours of evening time to the minor-party candidates. This would be an intolerable burden on the public and the network.

By contrast, televising a Humphrey-Kennedy debate at this initial stage of the campaign could give rise only to a limited number of claims for equal time. Since this is a Democratic primary contest, our only obligations under section 315 would be to bona fide qualified candidates for the Democratic nomination. Since it is still early in the preconvention period, relatively few contenders have committed themselves and would be eligible for equal time.

This course presents some problems, but we believe they are manageable. We have assessed the burden and decided to accept it, because in our news judgment, the particular issues being raised in the West Virginia primary are of unusual significance to the public and may not be representative of any of the other preconvention contests.

Station WTRF-TV, the NBC affiliate in Wheeling, W. Va., has already undertaken to originate the Humphrey-Kennedy debate and to furnish it to NBC. We expect to present this debate at a time and date to be worked out with our Wheeling affiliate and with the candidates.

In my opinion, this is probably the last time in the campaign that any network will be able to afford the luxury of presenting a debate between candidates. The way to make such televised debates possible as a regular feature of our political life is simply to free such programs from the equal-time penalty of section 315. The way not to do it is to pass another law enabling the Government to expropriate air time for campaign purposes.

THE AIR AS A PUBLIC RESOURCE

It has been argued that broadcasting is fair game for expropriation of air time by the Government on behalf of political candidates, because the airwaves belong to the people. The air does belong to the public, but what is proposed for Government expropriation is a great deal more than air. The public resource represented by the airwaves had no value until scientists and technicians invented ways to use it as a means of communication. In fact, vast unchartered areas still remain in the spectrum which cannot be used until science, technology, and enterprise develop their usefulness for the public. Thus, the

present broadcast frequencies had only theoretical value until individuals undertook the heavy investments in facilities and programing to provide a broadcasting service. Networks and stations lost millions of dollars for many years in pioneering this service; and today, many stations are operating at a loss in developing their own service.

It is not the airwaves that would be expropriated under the proposed legislation. What would be expropriated is the product of a broadcasting enterprise which, through business risk and development, like any other enterprise, has created a service where none existed before.

Is it fair to single out the broadcasting industry for expropriation of a portion of this service? It makes as much sense to suggest that newspapers and magazines be compelled to donate a prescribed number of pages to the major candidates. After all, most of them get the benefit, not of the public air, but of public money through second-class mailing privileges for which the taxpayers provide scores of millions of dollars a year.

It makes as much sense to suggest that the airlines, the railroads and the telephone company be compelled to donate their facilities to political candidates. Like broadcasting, they all make use of a public resource; and they also operate under a Federal standard of public interest, convenience, and necessity. Indeed, the telephone company uses radio frequencies to provide network interconnections and is licensed by the FCC for that purpose just as broadcasters are licensed.

THE ISSUE OF FREE EXPRESSION

There is another issue at stake here that goes to the heart of the current threat to broadcasting: the issue of free expression. Any scheme that puts the hand of Government upon broadcast program content is a curb on the freedom of expression that Americans have as much right to expect from their radio and television stations as from their newspapers and magazines. When the Government can tell a broadcaster that he must carry a certain program, or a publisher that he must print a certain story, it is as much a curb on free expression as when the Government tells them what not to print or broadcast.

The danger of governmental tampering with program content hovers like a specter over broadcasting. It is the chief hazard before us. It lurks behind every scheme to license the networks. It looms over the proposals that the Government lay down fixed percentages for program categories and that the FCC impose program rules and regulations on anyone who wishes to receive and hold a broadcasting license.

What makes this problem especially delicate and confusing is that the FCC's duties in resolving public-interest questions sometimes do require it to consider overall programing. For example, this issue can arise when two or more applicants equally qualified on other grounds are seeking a station license; or when an existing licensee is seeking a renewal.

But this delicate problem can and must be solved. The FCC should exercise its role in such cases with the utmost restraint. Instead of laying down fixed and uniform rules to govern programing throughout the country, the Commission should encourage the broadcaster to exercise his own responsibility in judging and meeting the needs of his own area. It should ask him to describe how he has sought to determine the audience interests in his community; to define those interests he seeks to satisfy, whether specialized or diversified; to outline how he proposes to serve those interests and, if he is seeking a license renewal, how he has already served them. Under this procedure, the Commission would be justified in raising questions about programing only if the application reflected a service unreasonable on its face.

Such a standard of reasonableness, properly applied, can effectively reconcile the freedom of the broadcaster to exercise his initiative and the duty of the Commission to grant licenses only to those who will serve the public interest. And by placing proper bounds upon the Commission's role in programing, it can help hold the line against attempts to set up the Government as the arbiter of taste for American viewers and listeners. That is the ultimate challenge we must meet as the outgrowth of the trying period that began 6 months ago.

THE TASKS AHEAD

To meet that challenge, we have some difficult tasks to master. One of them is to create greater knowledge and understanding of our medium—an awareness of its nature as a mass medium and its obligation to the total public. This also means creating an awareness of all that we do to meet the specialized viewing tastes of those who have been so out of temper with us. It means cultivating the concept and practice of selective viewing as the only intelligent means of enjoying a service that cannot possibly please all its viewers with all its programs all the time. And it means persuading some of our viewers that their enjoyment of television should not be conditional upon depriving others of programs they enjoy.

This is a task that has been assigned to the Television Information Office, and it has made a good start. But it is not a task that can be delegated altogether. It is one in which every one of us with a stake in this medium can and should play a part. Broadcasters have a special role they can play through the use of their own facilities in creating this understanding. They should explore means of doing so not on a hit-or-miss basis but with care and a sense of responsibility.

There are other important tasks to which these difficult months have spurred us and in which we have already made encouraging progress. We must keep at the job of maintaining the highest standards of ethical conduct in our operations. We must continue to strengthen our supervision of all broadcast material, commercials as well as program content, in the interests of taste, truth, and our special obligation to young viewers. And always we must work with all our creative might to keep expanding the horizons of the most powerful and eloquent medium in the history of communication. On the basis of what we have already accomplished in this medium—even with our mistakes and shortcomings, and in spite of the dangers that now threaten us—there is every good omen that we will prove worthy of all that must be done.

Mr. ROBERT W. SARNOFF,
Chairman of the Board, National Broadcasting Company, 30 Rockefeller Plaza, New York, N.Y.

DEAR MR. SARNOFF: I just had the pleasure of reading your April 21 speech to the Academy of Television Arts and Sciences in which you announced that NBC will give both Democratic and Republican nominees for President an opportunity to appear side by side in prime evening time (on a "Meet the Press" type program) for the eight weeks prior to election day.

I think this is a most statesmanlike step by NBC, and it is my feeling that your action wholly meets the objectives of my bill, H.R. 11260 (which was sponsored on the Senate side by 21 Senators) and will give the American people the opportunity they should have to make a close study of the candidates and the issues in this critical election year.

I should also like to advise you that as a result of this step which you have taken I have advised the House Committee on Interstate and Foreign Commerce that I consider my bill superfluous, and have asked that it be tabled.

Sincerely,

STEWART L. UDALL.

SENATE

TUESDAY, MAY 10, 1960

The Senate met at 12 o'clock meridian, and was called to order by the Vice President.

The Very Reverend F. M. Galdau, rector, St. Dumitru Romanian Orthodox Church, New York, N.Y., offered the following prayer:

O Heavenly Father, our true peace and love eternal, Thou hast endowed man with free will and with an unquenchable thirst for freedom and justice. By Thine inscrutable and rich providence, Thou hast bestowed upon all nations all things profitable to the body and soul and the spirit of truth that abhors falsehood, terror, and tyranny.

We beseech Thee, O Lord, on this day, to remember all those who invoke Thy great loving kindness; those who love us; those who hate us; and those who have enjoined us. More, especially, we beseech Thee to remember the trials and tribulations of the enslaved Rumanian people, on this 10th of May, their day of independence, and save them and all freedom-loving peoples of the world from the tyranny of the godless ones. Deliver them, O Lord, and all the oppressed peoples of the world from all injustice, calamities, wrath, and want, and grant unto them their freedom and independence, which art from Thee.

Grant, O Lord, wisdom, strength, courage, and patience to all leaders of the free world, so that they may be aware of the danger that is lurking at our very door, because, lo, the tyrant has consorted in our midst and has spread honeyed words of deception and confusion, while his mighty power is ready to impart destruction, ruin, and death.

We pray Thee, O Lord, to inspire and guide the work and activity of all our Senators and Representatives, so that, without hindrance or hesitation, they may fulfill their duties and achieve their supreme ideal of freedom and peace with justice for all nations of the world, for Thou art our hope, our strength, and our salvation, for ever and ever. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Monday, May 9, 1960, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the Committee on Finance.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, returned to the Senate, in compliance with its request, the bill (H.R. 5421) to provide a program of assistance to correct inequities in the construction of fishing vessels and to enable the fishing industry of the United States to regain a favorable economic status, and for other purposes, together with all accompanying papers.

ENROLLED BILL SIGNED

The message announced that the Speaker had affixed his signature to the enrolled bill (H.R. 10401) making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1961, and it was signed by the President pro tempore.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour; and I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

THE PLANE INCIDENT AND THE SUMMIT CONFERENCE

Mr. JOHNSON of Texas. Mr. President, this is certainly a time in which Americans—and people everywhere—must keep their heads. We cannot afford hysteria, panic, or hasty and ill-advised action.

There are many unanswered questions about the incident of the American plane that was shot down over the Soviet Union. These are serious questions which will have to be considered very carefully by Congress and by the American people.

But it is doubtful whether the answers will be forthcoming immediately. There are too many facts which are not available and which will be available only when the Soviets permit a cool and realistic appraisal of what happened in their airspace.

Furthermore, it is always difficult to come to objective conclusions in an atmosphere of sanctimonious statements and threats against other nations. It is ridiculous for Nikita Khrushchev to profess such shocked surprise over efforts to gather information.

When Mr. Khrushchev visited this country last year, I do not think he impressed any of us as being a man who is naive. By that, I mean naive about what his own country has been doing for many, many years.

The incident, of course, will be assessed with great care and all of its implications will be explored carefully. But meanwhile, we cannot lose sight of the overriding reality which confronts us immediately.

It is whether this incident will become an excuse and an alibi for sabotaging the summit conference.

Within a very few days, our country is going to enter negotiations with the Soviet Union in an effort to relax the very tensions that have brought about this kind of an incident. It is difficult to imagine those negotiations as having much success if they are to be conducted in this kind of an atmosphere.

If Nikita Khrushchev is going to spend his time taunting the United States over what he considers the blunders it has made and threatening other countries on the basis of facts which have not been clearly established, there will be little time to talk about the real problems which divide the world.

Those problems cannot be traced back to the fact that nations seek to extract information from each other. Espionage and intelligence gathering are not something that cause the cold war. They are merely byproducts of the cold war—something that follows logically when nations cannot trust each other.

Whatever may be his motivations, it is obvious that Nikita Khrushchev has handled this incident in such a way as to draw attention away from the real problems. We must get back to those problems—of people, of armaments, of respect for the integrity of smaller nations—if the summit conference has any meaning.

If blunders have been made, the American people can be certain that Congress will go into them thoroughly. But this is something that should be done objectively and not merely as a panicky reaction to Soviet charges.

And I think that one point should be crystal clear. Nikita Khrushchev cannot use this incident in such a way as to divide the American people and to weaken our national strength. The American people are united in a determination to preserve our freedoms and we are not going to be shaken from that course, or we are not going to be divided in this critical hour.

Mr. DIRKSEN. Mr. President, if the distinguished Senator from Texas will yield——

Mr. JOHNSON of Texas. I yield.

Mr. DIRKSEN. The Senator from Texas has made a forthright statement, and I concur in it.

This is not a time for us to retreat or walk backward; and I, for one, absolutely refuse to do so. To be sure, there are facts yet to be disclosed. But there is nothing that we need conceal particularly.

Certainly, ever since civilization began, there have been intelligence activities and espionage of a kind; and in proportion as civilization has become more complex, obviously the intelligence activities have become more complex.

During World War II, we set up the Office of Strategic Services. I had opportunities to examine their installations in many parts of the world.

So, Mr. President, as the majority leader has well put it, we would indeed be naive if we did not view this matter objectively and realistically; and we so stated yesterday when this matter was discussed on the floor of the Senate.

Mr. BUSH. Mr. President, will the Senator from Texas yield to me?

Mr. JOHNSON of Texas. I yield.

Mr. BUSH. I wish to congratulate the majority leader on his strong and forceful statement; and I desire to associate myself with the expressions he has made.

Mr. President, I ask unanimous consent to have printed in the RECORD at the conclusion of this colloquy an article entitled "In the New 'Wet War'—Russia Steps Up Her Spying," which appears in the current issue of the U.S. News & World Report.

Mr. JOHNSON of Texas. I thank the Senator from Connecticut for his statement.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From U.S. News & World Report, May 16, 1960]

IN THE NEW "WET WAR"—RUSSIA STEPS UP HER SPYING

Soviet espionage by fishing ships, submarines, is giving concern to U.S. officials. Innocent-looking trawlers, appearing off U.S. coasts, turn out to be loaded with radar, other electronic gear. Red fishing craft of large size have no fishing gear in sight, but can mother fleets of subs. Also showing up: missile-tracking ships, weather ships.

Now the Russians are opening up on still another front. It is a sudden, secretive invasion of all the world's oceans, including America's own home waters. Worried officials are calling this the "wet war."

With increased frequency, you hear of Soviet ships or submarines prowling close to this Nation's coastal shores.

Late in April a U.S. Navy blimp photographed the Soviet fishing trawler *Vega* 60 miles off Long Island—and just a mile from where the first Polaris submarine *George Washington* was conducting important dummy-missile tests.

It wasn't the first time these seemingly innocent oceangoing vessels have acted so boldly. After the *Vega* incident, the Navy announced that the Soviets had scouted missile firings before.

In addition, it was only little more than a year ago that the Navy was ordered by President Eisenhower to board the trawler *Novorossisk* off Newfoundland after mysterious damage had been done to five transatlantic cables.

Now there are reports of still more cable cuttings in recent weeks.

WHY THERE'S CONCERN

These are only a few of the cases in the Pentagon's growing dossier on the "wet war." Officers have been aware of similar offshore

intrusions by Russia before, so why the sudden new concern?

Mainly, it is because of what is being learned about the trawlers.

These are no ordinary fishing boats. The *Novorossisk* was a sizable ship of 1,670 tons, able to steam at 12 knots. The *Vega* is smaller, but photos under scrutiny show she carried no fishing gear in sight and was topheavy with detachable radar antennas capable of screening a vast expanse.

American intelligence marks this about the *Vega*: It was the very first of a new "loaded" type seen in these waters. All Soviet trawlers carry modern radar eyes and electronic ears, but none observed previously was as well equipped as the *Vega* for close-up espionage.

Further, there is evidence that at least some of the craft, which nest regularly in the North Atlantic, can act as mother ships to restock—but not refuel—marauding Soviet submarines. Only their fuel capacities limit Soviet sub patrols. If they could establish refueling stations on this side of the Atlantic, they would be able to lie off American coasts on an almost permanent basis.

How about reports that they are using north Cuban ports for just this purpose? So far, there is "absolutely no evidence of this," emphasize Navy specialists.

ON ALL SIDES

This "wet war" is not confined to the Atlantic. It is being carried close to the Pacific and gulf coasts of the United States as well. Several years ago, Communist submarines were detected farther away—off Venezuela and the Panama Canal, or were observed tracking the U.S. naval fleets.

Now there are more submarines—a total of 500 in the Russian Navy—and they are becoming more daring. In naval files are records of Soviet intrusions within 10 miles, and very probably much closer, of big cities such as New York, San Francisco, and New Orleans.

RUSSIA'S OBJECTIVES

What are these intruders looking for, and what—if anything at all—can be done about it?

The answer to the riddle of what they are up to comes from intelligence experts who have been investigating Soviet naval actions ever since World War II. They conclude the Russians are using their "wet war" for a variety of purposes.

The "trawlers," for example, can collect all sorts of useful information about Polaris-type tests, become familiar with the underwater characteristics of U.S. nuclear subs to make them easier to detect in the future. They can snoop on communications networks—the very heart of U.S. air defense—and some sources claim these trawlers could steer Soviet bombers through "electronic holes" in the distant early warning radar screen in Canada.

Russian submarines can chart the ocean floors surrounding the North American Continent. The purpose, as suspected by U.S. officials, is to prepare accurate maps so their nuclear submarine fleet, now being built, can navigate into exact undersea positions for missile firings against U.S. cities. With radar and infrared sensing devices, they can peer inland to mark targets on the American mainland.

A WORLDWIDE OPERATION

The "wet war," as waged by the Kremlin, is not confined to America. It is going on all around the world. In the mid-Pacific, once regarded as a private lake for the U.S. Pacific fleet, you find Soviet picket ships capable of tracking missiles. Russian subs slip out of pens in Albania to roam the Mediterranean, or move through the Taiwan Strait and south to Singapore from Siberian bases. Their weather ships linger suspiciously close to secret installations of U.S. forces in the Far East.

And, right under American noses, the Russians are conducting important research on minerals, according to Senator WARREN G. MAGNUSON, Democrat, of Washington. He wrote in a newspaper article that, 300 miles off Lower California, Soviet scientists "have taken sharp deep-sea photographs of the mysterious manganese-cobalt-nickel-copper nodules which thickly carpet the ocean floor in that and some other oceanic areas."

The tabulation of Russia's sudden interest in the oceans is almost without end. The Soviets have more ships and scientists in the polar regions than all other countries combined, and more ships and scientists assigned to deep ocean studies than any other nation.

"Soviet effort in oceanography is massive, of high caliber, and is designed to establish and demonstrate world leadership," warns Vice Adm. John T. Hayward, Deputy Chief of Naval Operations.

It all ties together. Victory in the "wet war"—ultimate mastery of the seas—would give a great edge to Russia in any efforts to blanket American coastal areas with nuclear-tipped missiles fired from offshore perches. For such an attack, complete understanding of the oceans is needed. Currents, bottom topography, magnetic, and gravitational fields are all important things to a submarine skipper. Russia is making these studies all along American coasts, in midocean, along the Continental Shelves and in all the seven seas.

NEEDED: ALARM SYSTEM

This "wet war" will be intensified, predict American officers. Ask one of these experts what can be done about it, and he answers: "As long as the Communists stay outside our 3-mile limit, all we can do is grit our teeth." By law, the high seas are free for any nation to use.

The U.S. Navy, of course, does keep as sharp an eye as it can on Communist maneuvering. "Hunter-killer" search forces constantly survey the sea lanes. But this is not enough, say U.S. Navy men. What they would like is a burglar alarm system—a very expensive underseas sonar fence—that would keep tab on all Soviet submarines in peacetime, with the implied warning that any warlike move would mean sudden death.

This is still in the dream stage. For now, American officers caution, this country should brace itself for more Soviet submarine activity and bigger and faster trawlers operating near America's home waters, and all around the world, spying out data that would be helpful in an attack on the United States itself.

Mr. KEATING. Mr. President, will the Senator from Texas yield to me?

Mr. JOHNSON of Texas. I yield.

Mr. KEATING. I wish to join the Senator from Connecticut in congratulating the distinguished majority leader on his extremely statesmanlike utterance. I know that he speaks for the people of the United States when he says they will not allow this incident to divide our country.

Of course it is regrettable that the incident occurred on the very eve of the summit conference, because it does give to Soviet Russia an opportunity to "explode a propaganda bomb," and perhaps places us at some psychological disadvantage.

However, I see no reason why this incident should endanger the hopes which all of us have for the forthcoming summit conference. As the majority leader has said, if ever we needed to act toward achieving a reduction of the tensions which exist in the world, we must act to do so now.

Also, we must appraise this incident realistically. As the distinguished minority leader has said, spying is nothing new in the world. It is a recognized and accepted fact of life in the situation in which the world finds itself. Soviet planes engage in it regularly. They have flown over parts of Alaska, northern Canada, Japan, and other Western defense areas. As a matter of fact, Soviet spying has been a more expanded and intense operation than ours, because their spies have infiltrated into every area of the free world, whereas the Iron Curtain has impeded and handicapped our securing intelligence information. Of course, many more Russian spies have been caught than have Americans or those from other countries.

Finally, the circumstances surrounding this episode would never have existed if Russia had accepted the President's "open skies" proposal of several years ago.

I am more pleased than I can say to hear our distinguished majority leader stand up here in the way he has and express himself as he has. Knowing him as I do, it is the exact manner in which I would have expected him to act.

Mr. JOHNSON of Texas. I thank the distinguished Senator.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to the Senator from Nebraska.

Mr. CURTIS. I wish to commend the majority leader and other Senators who have spoken today in defense of our country. A number of us were serving in the other body when Peral Harbor occurred. Following that episode, an investigation was moved, and a committee was established to investigate why Pearl Harbor had happened and why our armed services did not know more about it.

I think our armed services should be commended for finding out what is going on in the world.

In our cities we have fire inspectors going around, without our referring to them as spying. If the police forces give due attention to suspicious characters, nobody accuses them of spying.

Our Armed Forces are charged with a grave responsibility—the preservation of this Republic; and if we are not faced with a serious threat, then we are wasting about $40 billion a year, trying to defend ourselves.

I for one do not think we should shake and quake in our boots every time Khrushchev and his gang do not like what is going on. They never give the world an accurate story of it; and we should say, as a great patriot did, "Our country! May she always be in the right, but our country, right or wrong!"

Mr. JOHNSON of Texas. I thank the Senator from Nebraska.

Mr. WILEY. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to the Senator from Wisconsin.

Mr. WILEY. I, too, desire to join in the complimentary remarks the majority leader has made. I have never found him wanting. I believe that he is made of the mettle that makes America great.

I wish to say that while I have been interviewed several times, as a general rule I have refrained from remarks; but in this particular instance I spoke very definitely. First, I do not believe it is going to hurt the summit conference to have the facts about this incident disclosed.

Khrushchev has known all the time, the leaders who are to sit down at the table at the summit conference have known all the time, that Khrushchev has been playing a great international game of poker, and that we have certainly had our planes and our armed forces in Europe with an object. As has been suggested, that object has been that we shall not be caught again as we were at Pearl Harbor.

It was the privilege of some of us to be in a special meeting yesterday and we were briefed. What was said or done, of course, is not for me to say, but I came out of that meeting with the thought, "Thank God it has been demonstrated, to me at least, that we are alert, and not asleep."

Mr. President, there appeared in the paper this morning the text of a statement issued by Secretary Herter. I ask unanimous consent that it be printed in the RECORD following these brief words of mine.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 10, 1960]

TEXT OF STATEMENT ON PLANE

On May 7 the Department of State spokesman made a statement with respect to the alleged shooting down of an unarmed American civilian aircraft of the U-2 type over the Soviet Union. The following supplements and clarifies this statement as respects the position of the U.S. Government.

Ever since Marshal Stalin shifted the policy of the Soviet Union from wartime cooperation to postwar conflict, in 1946, and particularly since the Berlin blockade, the forceful takeover of Czechoslovakia and the Communist aggressions in Korea and Vietnam, the world has lived in a state of apprehension with respect to Soviet intentions. The Soviet leaders have almost complete access to the open societies of the free world and supplement this with vast espionage networks. However, they keep their own society tightly closed and rigorously controlled.

With the development of modern weapons carrying tremendously destructive nuclear warheads, the threat of surprise attack and aggression presents a constant danger. This menace is enhanced by the threats of mass destruction frequently voiced by the Soviet leadership.

IKE PROPOSAL CITED

For many years the United States in company with its allies has sought to lessen or even to eliminate this threat from the life of man so that he can go about his peaceful business without fear. Many proposals to this end have been put up to the Soviet Union. The President's "open skies" proposal of 1955 was followed in 1957 by the offer of an exchange of ground observers between agreed military installations in the United States, the U.S.S.R. and other nations that might wish to participate.

For several years we have been seeking the mutual abolition of the restrictions on travel imposed by the Soviet Union and those which the United States felt obliged to institute on a reciprocal basis.

More recently at the Geneva Disarmament Conference the United States has proposed far-reaching new measures of controlled disarmament. It is possible that the Soviet leaders have a different version and that, however unjustifiedly, they fear attack from the West. But this is hard to reconcile with their continual rejection of our repeated proposals for effective measures against surprise attack and for effective inspection of disarmament measures.

RESPONSIBILITY NOTED

I will say frankly that it is unacceptable that the Soviet political system should be given an opportunity to make secret preparations to face the free world with the choice of abject surrender or nuclear destruction. The Government of the United States would be derelict to its responsibility not only to the American people but the free peoples everywhere if it did not, in the absence of Soviet cooperation, take such measures as are possible unilaterally to lessen and to overcome this danger of surprise attack. In fact the United States has not and does not shirk this responsibility.

In accordance with the National Security Act of 1947, the President has put into effect since the beginning of his administration directives to gather by every possible means the information required to protect the United States and the free world against surprise attack and to enable them to make effective preparations for their defense. Under these directives programs have been developed and put into operation which have included extensive aerial surveillance by unarmed civilian aircraft, normally of a peripheral character but on occasion by penetration.

Specific missions of these unarmed civilian aircraft have not been subject to Presidential authorization. The facts that such surveillance was taking place has apparently not been a secret to the Soviet leadership and the question indeed arises as to why at this particular juncture they should seek to exploit the present incident as a propaganda battle in the cold war.

This Government had sincerely hoped and continues to hope that in the coming meeting of the heads of government in Paris Chairman Khrushchev will be prepared to cooperate in agreeing to effective measures which would remove this fear of sudden mass destruction from the minds of people everywhere.

Far from being damaging to the forthcoming meeting in Paris, this incident should serve to underline the importance to the world of an earnest attempt there to achieve agreed and effective safeguards against surprise attack and aggression.

At my request and with the authority of the President, the Director of the Central Intelligence Agency, the Honorable Allen W. Dulles, is today briefing members of the Congress fully along the foregoing lines.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to the Senator from New Hampshire.

Mr. COTTON. Mr. President, I could not refrain from expressing my appreciation to the distinguished majority leader, the Senator from Texas, for the dispassionate, considered remarks he has made in the Senate this morning. The majority leader can, at the proper time and place, be a loyal, skillful, and adroit majority partisan, and I do not reproach him for that ability. I admire him for it. But at a time like this, it is of inestimable benefit to the Senate and to the country when the majority leader takes the floor and, without appeal to partisanship, and without attempting to capitalize on any phase of the incident, counsels prudence and the path of care in seeing that the welfare of our country is guarded.

I shall take his advice and I congratulate the distinguished majority leader for the tenor and tone of his remarks this morning.

Mr. JOHNSON of Texas. I thank the Senator.

Mr. HICKENLOOPER. Mr. President, I should like to address a short remark to the majority leader.

While the majority leader and I do not always see eye to eye on partisan politics and political matters, I think he knows full well the great respect which I have for him and the extremely high regard in which I hold him. I know of no man in the Congress with greater ability. I know of no man in the Congress with greater loyalty to his country, to its security and to its progress than the majority leader.

The remarks of the majority leader this morning are the remarks of a truly great leader who is interested in his country and who, on an occasion when his country is definitely and deeply involved, not only can now but also has in the past risen completely above any partisan or political motivation. His remarks this morning are apt and to the point, and should be taken to heart by all Americans.

I am not completely and thoroughly conversant with all phases of our activities in the military and in other services in this country, but I believe, Mr. President, that I have had in the past several years my full share of exposure to what has to be done by the United States and by those responsible for its security.

I agree that all of us should be very careful at this time of tension not to express too vigorous an opinion in one way or another. Tensions in the world are very great. They can either be fanned or they can be quieted. A great deal depends upon the circumspection with which we, the people of the United States, in addition to the leaders of the political parties and of the administration, approach these problems. We, the people of the United States, I think, should exercise caution, calmness, and deliberation in these matters.

I received a letter this morning from a very worthy lady in my home State, who was very critical. She said, "What business have we 'monkeying around' even the edges of Russia? Why do we not let them alone? And then they will let us alone." I happen to know this lady. There is no finer lady in my State and none more well meaning. However, I will say she is completely devoid of any understanding of the constant and almost overpowering menace which threatens the freedom of the United States and of the free world every minute of every day, emanating from Communist aggression and Communist expansion. We must understand that if we in this country are to be able to intelligently and adequately prepare ourselves and to put ourselves in a position of security against surprise, we must know what is going on.

There are people in the country today who, I think, rather precipitously and

unwarrantedly, are criticizing in this situation. I say, Mr. President, that if a sneak attack should occur on this country today, these are the very people who would want to hang the people who had neglected to find out what was going on in the world. The security of the United States is paramount.

I wish to suggest one other thing. The continuous and uninterrupted and unprecedented espionage activities of the Communist Iron Curtain countries and of Russia in this country have gone on and have been reported to the American people for years and years. I could recite detail after detail, instance after instance, of the most flagrant espionage in this country, the most flagrant invasion of what we might call the sovereignty and the security of this country on the part of the Communist aggressors.

I merely want to say again, without drawing out the discussion at this time, that I compliment the majority leader on his very fine statement, on his statesmanlike approach, on his calmness, and on his interest in the broad best interests of the security of this country. I caution that we, as the American people, must not become too emotional about this matter, but must consider it with calmness until we know all the facts and until we know exactly what we are talking about. There are many things involved in this situation which are not at this point clear.

Mr. JOHNSON of Texas. Mr. President, I want to express my appreciation to the Senator for his undeserved comments. The Senator knows of the great admiration and respect I have for him and have had since my first association with the Senator, when he was my chairman and I was a member of the Joint Committee on Atomic Energy, and how deeply I appreciate his expression this morning.

Mr. HICKENLOOPER. I assure the Senator that everything I have said was from the heart. I mean it. I thank the Senator from Texas.

Mr. WILLIAMS of Delaware. Mr. President, I should like to join my colleagues in paying respect to our distinguished majority leader, the Senator from Texas [Mr. JOHNSON] for his well timed remarks just given and the advice contained therein. Those of us who have had the privilege of serving with the Senator from Texas recognize him as a worthy opponent on any partisan question. However, we likewise know that on questions concerning the security or the defense of our country, he speaks as an American and not as a partisan.

Mr. JOHNSON of Texas. I appreciate the remarks of the Senator from Delaware. I value his friendship more than he knows.

Mr. JAVITS. Mr. President, I had in mind making a comment this morning about the so-called spy plane incident and in that connection I was told about the remarks of the majority leader. Though I did not hear them, I have just had an opportunity to read them, and I find they are a splendid contribution to this discussion. They go to what I had in mind to say this morning rather clearly, because I, too, feel, as the majority leader did, that this incident will turn out to be perhaps not as bad as we thought, and perhaps it will help rather than hurt us in the situation.

First, to make my remarks clean cut, I compliment the majority leader on the statesmanship which goes into keeping one's head when it would be easy to seek a partisan advantage, which might be momentarily attractive but would not contribute to our country's position in the world, and I join in complimenting the majority leader, for whom I have a high regard, as he and everyone else knows.

Mr. JOHNSON of Texas. Mr. President, I wish to express to the Senator from New York [Mr. JAVITS] my gratitude, though I feel I deserve no compliment for doing what any Member of the Senate under similar circumstances would do. I merely said that America must be all for one and one for all, and we cannot allow any threats or propaganda moves to divide our people at this difficult hour. I believe all Americans subscribe to that doctrine.

Mr. JAVITS. When the majority leader says it as the leader of the opposition to the party of the administration, it means more than mere words. I think we are quite right in being pleased that he spoke as he did at this juncture.

Mr. JOHNSON of Texas. I appreciate the statement of my friend from New York. He knows of my high regard for him and my deep friendship for him.

Mr. JAVITS. Mr. President, second thoughts on the U–2 spy plane incident now show that its effect will be the reverse of what Chairman Khrushchev intended. The first flash of Mr. Khrushchev's theatricals has now worn off and reasonable men and women in the free world will have these things in mind. First, Mr. Khrushchev shows again that he wants to keep the world in the anxious seat rather than to calm its nerves. This is hardly a peace campaign or preparation for serious negotiation at the summit. Second, Mr. Khrushchev's rocket threats against Norway and Pakistan—so reminiscent of Suez in 1956—are hardly compatible with a just world secure in the opportunity for debate and the resolution of tensions through international law and negotiation. Third, the incident again recalls the unwillingness of Khrushchev to agree to President Eisenhower's open skies proposal which in turn shows American willingness to abandon secrecy and to insure the world against surprise attack. Fourth, Mr. Khrushchev highlights the danger of surprise attack and fixes attention upon the capability of one man in the Communist dictatorship by a sudden decision to plunge the world into an abyss of A- and H-bomb war.

Adult people will remember the spy networks of the U.S.S.R. which have operated for 40 years in the free world and the names of Klaus Fuchs, Pontecorvo, Igor Gouzenko, Gerhardt Eisler, and Colonel Abel. There is also evidence of U.S.S.R. aerial reconnaissance over free world areas including the United States—only we did not put on a propaganda show about it.

The U–2 incident should mobilize world opinion and bring it to bear upon the U.S.S.R. to put it in a mood to agree to pending treaties to protect against surprise attack, to end nuclear testing and for disarmament as consistently proposed by the free world nations. Second thoughts should show that the United States is not embarrassed, but that on the contrary, the free world's defensive alliances including the bases which implement them, are more necessary than ever.

As so often happens in these cases, the first impression is neither lasting nor correct. The Russian people themselves must now take careful account of what their regime means to peace. The cause and intentions of the free peoples are seen to be too deeply built to be shaken or confused by the theatricals out of Moscow.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REASSIGNMENT OF CERTAIN OFFICERS IN THE MARINE CORPS

A letter from the Secretary of Defense, transmitting a draft of proposed legislation to reassign officers designated for supply duty as officers not restricted in the performance of duty in the Marine Corps (with accompanying papers); to the Committee on Armed Services.

REPORT ON REVIEW OF SELECTED SUPPLY ACTIVITIES AT SAN BERNARDINO AIR MATERIEL AREA

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the review of selected supply activities at San Bernardino Air Materiel Area, Department of the Air Force, dated April 1960 (with an accompanying report); to the Committee on Government Operations.

REPORT ON REVIEW OF THE GOVERNMENT'S RIGHTS AND PRACTICES RELATING TO CERTAIN HOSPITAL AND MEDICAL SERVICES

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the review of the Government's rights and practices concerning recovery of the cost of hospital and medical services in negligent third-party cases, dated May 1960 (with an accompanying report); to the Committee on Government Operations.

PROVISION FOR EXCEPTIONS TO RULES OF NAVIGATION IN CERTAIN CASES

A letter from the Under Secretary of Commerce, transmitting a draft of proposed legislation to provide for exceptions to the rules of navigation in certain cases (with an accompanying paper); to the Committee on Interstate and Foreign Commerce.

AUTHORIZATION FOR SECRETARY OF COMMERCE TO UTILIZE CERTAIN FUNDS FOR SPECIAL METEOROLOGICAL SERVICES

A letter from the Under Secretary of Commerce, transmitting a draft of proposed legislation to authorize the Secretary of Commerce to utilize funds received from State and local governments and private organizations and individuals for special meteorological services (with accompanying papers); to the Committee on Interstate and Foreign Commerce.

REPORT OF FEDERAL TRADE COMMISSION

A letter from the Chairman, Federal Trade Commission, Washington, D.C., transmitting, pursuant to law, a report of that Commission, for the fiscal year 1959 (with an accompanying report); to the Committee on Interstate and Foreign Commerce.

TEMPORARY ADMISSION INTO THE UNITED STATES OF CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered, granting temporary admission into the United States of certain aliens (with accompanying papers); to the Committee on the Judiciary.

AMENDMENT OF SECTION 502 OF GENERAL BRIDGE ACT OF 1946

A letter from the Under Secretary of Commerce, transmitting a draft of proposed legislation to amend section 502 of the General Bridge Act of 1946, and for other purposes (with acompanying papers); to the Committee on Public Works.

REPORT OF THE AMERICAN ACADEMY OF ARTS AND LETTERS

A letter from the Assistant to the President, the American Academy of Arts and Letters, transmitting, pursuant to law, a report of that Academy, for the year 1959 (with an acompanying report); to the Committee on Rules and Administration.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A concurrent resolution of the General Assembly of the State of South Carolina; to the Committee on Finance:

"CONCURRENT RESOLUTION EXPRESSING THE CONCERN OF THE GENERAL ASSEMBLY OVER THE UNFAIR COMPETITIVE SITUATION IN WHICH THE TEXTILE INDUSTRY OF THE STATE FINDS ITSELF AND MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO TAKE IMMEDIATE STEPS TO PROTECT THIS INDUSTRY, WHICH EMPLOYS THOUSANDS OF PERSONS AND IS VITAL TO CONTINUED GROWTH AND PROSPERITY OF THIS STATE AND MANY PARTS OF THE NATION

"Whereas the textile industry of the State of South Carolina and many other States of the Nation finds itself in a highly competitive market with foreign goods priced from 20 to 50 percent under those made in the United States; and

"Whereas the reason for this great differential in price is the cheap labor of foreign countries of a much lower standard of living, which makes possible placing on the markets of the world products the selling price of which is far below even the cost of production in the United States, due to our higher wage scale and standard of living; and

"Whereas the general assembly recognizes that if the flood of cheap foreign goods is not regulated to the extent where our own industry is placed on a basis of fair competition the textile industry will be forced out of business; and

"Whereas the loss of an industry the size and importance of the textile mills will be a great blow to the progress of the State of South Carolina and other States similarly affected: Now, therefore, be it

"Resolved by the house of representatives (the senate concurring), That the general assembly does hereby express its deep concern over the flood of cheap foreign goods being placed on the markets of the United States and memorializes the Congress of the United States to take immediate steps to enact remedial legislation; and be it further

"Resolved, That a copy of this resolution be forwarded to the President of the Senate and the Speaker of the House of Representatives of the Congress and each U.S. Senator from South Carolina and each Representative from this State in the Congress of the United States."

A concurrent resolution of the Legislature of the State of Mississippi; to the Committee on Interior and Insular Affairs:

"HOUSE CONCURRENT RESOLUTION 35

"Concurrent resolution memorializing the Congress and the President of the United States to safeguard and preserve established State and individual rights to the use of water within the separate States:

"Whereas recent decisions of the Federal courts and recent assertions from the U.S. Department of Justice have deprived States and persons of rights which the States and persons previously enjoyed to regulate and control the use of water in the respective States; and

"Whereas the decisions and assertions are further a part of a general pattern developing gradually into Federal supremacy and usurpation over water and if continued will destroy individual and States rights over water and substitute an all-powerful centralized government control: Now, therefore, be it

"Resolved by the House of Representatives of the State of Mississippi (the senate concurring therein), That the Congress and the President of the United States and the Senators and Representatives of Mississippi in the Congress of the United States be respectfully petitioned to take all necessary action to —

"(a) preserve the water rights of the individual and the State and to prevent Federal usurpation of these rights;

"(b) to see that legislation is initiated and supported to reestablish to the individuals and to the States the rights taken from them by the Federal courts and the Justice Department; and

"(c) in every way possible reaffirm, renew, and defend the concepts that water rights are property rights and that those established rights to the use of water by a State or an individual should not be taken away without due process of law and adequate compensation; and be it further

"Resolved, That certified copies of this resolution be sent to the Honorable President and the Vice President of the United States, the Speaker of the House of Representatives of the Congress, the chairman of the U.S. Senate and House Committees on Interior and Insular Affairs, U.S. Senators and U.S. Representatives.

"Adopted by the senate April 29, 1960.

"PAUL B. JOHNSON,
"President of the Senate.

"Adopted by the house of representatives March 2, 1960.

"WALTER SILLERS,
"Speaker of the House of Representatives."

A resolution adopted by the California Grape and Tree Fruit League, of San Francisco, Calif., relating to featherbedding practices in transportation operations; to the Committee on Labor and Public Welfare.

A resolution adopted by the Common Council of the City of Oswego, N.Y., favoring the enactment of legislation to increase the minimum wage to $1.25 an hour; to the Committee on Labor and Public Welfare.

RESOLUTIONS OF ORGANIZATIONS OF STATE OF NEW YORK

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD a series of resolutions adopted by organizations of the State of New York.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY THE TRANSPORTATION SECTION OF THE NEW YORK BOARD OF TRADE, AND APPROVED BY THE DIRECTORS OF THE NEW YORK BOARD OF TRADE

Whereas the New York Board of Trade's transportation section is vitally interested in the preservation of all transportation systems servicing the Port of New York; and

Whereas the 10-percent tax on passenger transportation in the United States imposes an excessive and unnecessary burden upon all who travel in the pursuit of business vital to the national economy and welfare; and

Whereas this levy, imposed as an emergency wartime measure nearly 20 years ago to discourage nonessential use of an overtaxed transportation system, has long since ceased to serve any part or semblance of its purpose; and

Whereas the similar wartime excise tax on the transportation of goods was repealed in 1958; and

Whereas this unnecessary and inequitable excise tax, by adding to the cost of travel and thereby discouraging use of transportation, poses an immediate and serious threat to common carrier services essential to the health and well-being of the Nation: Now, therefore, be it

Resolved, That the transportation section of the New York Board of Trade does support the railroads, the airlines and the bus lines in their earnest request for the needful elimination of the 10-percent Federal transportation excise tax immediately and in its entirety, as this is in the public interest and essential to the national economy and places the board on record as favoring that repeal; and

Whereas this immediate and complete repeal is incumbent upon the Congress of the United States; be it further

Resolved, That the position of the transportation section of the New York Board of Trade favoring the repeal of this tax be made known to the Congress, and that the Congress be urgently petitioned to take immediate corrective legislative action.

RESOLUTION OF COMMON COUNCIL OF THE CITY OF OSWEGO TO MEMORIALIZE U.S. CONGRESS TO RAISE FEDERAL MINIMUM WAGE TO $1.25 AN HOUR

Whereas the original Federal minimum wage law, enacted in 1936, which then provided for a minimum wage of 25 cents an hour, has been amended on three separate occasions to bring it more realistically in line with the rising cost of living and our American concept of Federal minimum wage standards; and

Whereas the present Federal minimum wage of $1 per hour is less than one-half of the national average minimum wage of $2.21 as set, determined by the U.S. Bureau of Labor Statistics; and

Whereas wages and salaries paid at this low level make such workers a charge on the economy of the Nation, in that recipient of substandard wages are able to contribute little as consumers or purchasers of goods and services, or as taxpayers or supporters of the community welfare; more often becoming public charges on the State and private agencies; and

Whereas there are States which avail themselves of the funds and services of the Federal Treasury, and of all other Federal agencies, paid out of the Federal tax receipts collected from citizens and industries of the city of Oswego and New York State, whose employees in most cases enjoy wages in excess of the $1 minimum; and

Whereas many of the other States and their communities whose working people work for wages below $1.25 are held up as bait to industry as a reason for emigrating

from the State, thus placing Oswego and New York State in double jeopardy; and

Whereas the spirit of fair play, humanity, and minimum standards of decency, require that a legal and realistic floor be put under which workers in American industry shall not be employed: Now, therefore, be it

Resolved, That the Oswego Common Council go on record that the question of decent Federal minimum wages of $1.25 or over per hour shall be considered above the bipartisan political issues and in the interest of the Oswego and New York State economy, its wage earners, men and women, so that Oswego and New York State will receive its fair share of industrial expansion; and be it further

Resolved, That the Oswego Common Council memorialize Congress to pass an appropriate amendment to the Federal minimum wage of $1.25 or higher the law of the land, and also to give appropriate consideration to extending the law to the now exempt workers in American industry and commerce; and be it further

Resolved, That the common council call upon the Honorable Governor, Nelson A. Rockefeller, to use his good office to place this matter before the bipartisan congressional committee, set up by the New York State Members of the U.S. Congress, for the purpose of fostering such legislation, and copies of this resolution be sent to the President of the United States, and Secretary of Labor, and all Members of the U.S. Congress.

RESOLUTION OF JOINT CONFERENCE OF AFFILIATED POSTAL EMPLOYEES OF GREATER NEW YORK AND NORTHERN NEW JERSEY CALLING FOR SALARY INCREASE FOR POSTAL EMPLOYEES

Whereas the average weekly take-home pay for postal employees is only $74 per week; and

Whereas any number of impartial surveys show that an annual salary of more than $6,000 is needed today in order to be able to support an American family in a decent manner; and

Whereas the U.S. Department of Commerce, in a recent report, cited the average annual wage in the United States as above $6,000; and

Whereas the cost of living has been steadily rising to unprecedented heights; and

Whereas the annual salaries of postal employees are so low as to force over 80 percent of all postal employees to work two jobs in order to meet present-day living costs; and

Whereas wives of many postal employees have been compelled to take employment in order to make ends meet and, therefore, have had their family lives disrupted; and

Whereas this has resulted in a steady lowering in the standard of living of postal employees to a point where it is behind that of other civil servants in State and city; and

Whereas postal employees' salaries have, for a long time continued to lag behind the salaries of organized workers in private industry; and

Whereas the U.S. Government has an obligation to accord its employees the fair treatment it requires private industry to render to those it employs: Therefore, be it

Resolved, That this rally of the Joint Conference of Affiliated Postal Employees of Greater New York and Northern New Jersey, which represents 35,000 postal employees of all crafts in the metropolitan area, assembled at the High School of Fashion Industries in New York City on Sunday, May 1, 1960, goes on record seeking the enactment of legislation which will establish an average $6,000 annual salary for postal employees; and be it further

Resolved, That copies of this resolution be sent to President Dwight D. Eisenhower, Vice President Richard M. Nixon, Senator Lyndon B. Johnson, Senator Everett McKinley Dirksen; chairman of the Senate Post Office and Civil Service Committee, chairman of House Post Office and Civil Service Committee, Speaker Sam Rayburn, Representative Charles Halleck, presidents of the National Postal Unions whose locals are affiliates of the joint conference, President George Meany, AFL–CIO; all metropolitan newspapers, wire services, television and radio stations.

RESOLUTION ADOPTED BY THE BOARD OF DIRECTORS OF THE CIVIL AND BUSINESS FEDERATION, WHITE PLAINS CHAMBER OF COMMERCE

Resolved, That the Civic and Business Federation, White Plains Chamber of Commerce, after due deliberation and consideration of all the facts pertaining to the so-called Forand bill (H.R. 4700) or any substitute thereof, opposes the adoption of Federal legislation for such purposes; and be it further

Resolved, That we are not opposed to the providing of medical care to the aged as we recognize a present need for such care, but our opposition stems from the Federal Government entering into the picture of medical care particularly as part of our social security system. This, we feel, leads us further toward the door of socialized medicine which is contrary to the principles of our American democracy and, while theoretically possible, breaks down under the practical implementation of such a program.

We feel that the immediate need for medical care for the aged, if provided, should be accomplished on an individual voluntary basis with the participants contributing toward the cost of their medical coverage.

We feel further that the following disadvantages overbalance the adopting of the types of Federal legislation proposed:

1. Revenue would be insufficient to carry out the program thereby creating greater tax imposition upon our economy and increasing our national debt.

2. The Government would be competing in the business of providing medical care, thereby putting the Government in direct competition with free enterprise, medical and voluntary insurance programs, and putting a brake on the adoption of sound medical benefit programs by industry.

3. The Government would have to set fees, name doctors, hospitals, nursing homes, thereby placing an undue influence in the medical benefits field.

4. Costs of medicines and appliances would skyrocket out of proportion increasing the cost of a program and possibly forcing the Government into allied fields.

5. Fraud would be difficult to control and we question whether or not the Government would implement sufficient investigation to uncover it in view of the fact that even in our Internal Revenue Service there is a failure to provide sufficient investigators.

6. Our country's economy would be affected. It would increase the cost of doing business without increasing productivity but it would discourage personal savings, decrease the supply of investment capital, and place an even greater burden on Government to supply the capital needed for an expanding economy.

7. The individual would lose his or her right to choose his own physician and hospital.

8. It would destroy community efforts to increase and improve health care and the desire to provide such care for the local community.

9. It would impair the voluntary help of a family to encourage self-help.

It is our opinion that most doctors have always given free medical care to the aged and indigent. Hospital clinics are ever increasing in their scope of activity. Approximately 43 percent of those over age 65 are now covered by voluntary health insurance, including group plans paid for under retirement programs and it is estimated that 75 percent of those who need and want such protection will be covered by 1965, and 90 percent by 1970."

We trust this considered expression of opinion will receive your customary careful consideration.

J. HERBERT GRIMSEY,
President.

REPORT ON DISPOSITION OF EXECUTIVE PAPERS

Mr. JOHNSTON of South Carolina, from the Joint Select Committee on the Disposition of Papers in the Executive Departments, to which was referred for examination and recommendation a list of records transmitted to the Senate by the Administrator of General Services, that appeared to have no permanent value or historical interest, submitted a report thereon, pursuant to law.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. DODD:

S. 3513. A bill to enable the United States to participate in the resettlement of certain refugees; to the Committee on the Judiciary.

(See the remarks of Mr. DODD when he introduced the above bill, which appear under a separate heading.)

By Mr. GOLDWATER (for himself and Mr. HAYDEN):

S. 3514. A bill to authorize the transfer of a Bureau of Reclamation bridge across the Colorado River near Needles, Calif., to San Bernardino County, Calif., and Mohave County, Ariz.; to the Committee on Interior and Insular Affairs.

By Mr. CARROLL:

S. 3515. A bill for the relief of Fotios Gianoutsos (Frank Giannos); to the Committee on the Judiciary.

By Mr. JAVITS (for himself and Mr. KEATING):

S. 3516. A bill to admit the vessels *Fort Town, Maple City,* and *Windmill Point* to American registry and to permit their use in the coastwise trade; to the Committee on Interstate and Foreign Commerce.

By Mr. BIBLE (by request):

S. 3517. A bill to authorize the Commissioners of the District of Columbia to plan, construct, operate, and maintain a sanitary sewer to connect the Dulles International Airport with the District of Columbia system; to the Committee on the District of Columbia.

(See the remarks of Mr. BIBLE when he introduced the above bill, which appear under a separate heading.)

By Mr. CAPEHART:

S. 3518. A bill for the relief of Merrill Ernest Pyle, Jr.; to the Committee on Finance.

By Mr. SPARKMAN:

S. 3519. A bill for the relief of Henry James Taylor; to the Committee on the Judiciary.

By Mr. SPARKMAN (for himself and Mr. HILL):

S. 3520. A bill to stabilize cotton price support for the 1961 crop; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. SPARKMAN when he introduced the above bill, which appear under a separate heading.)

By Mr. KERR:

S. 3521. A bill to amend the Internal Revenue Code of 1954 to extend the time within which a minister may elect coverage as a self-employed individual for social security purposes; to the Committee on Finance.

By Mr. BIBLE (by request):

S. 3522. A bill to amend the act of June 19, 1948, relating to the workweek of the

Fire Department of the District of Columbia, and for other purposes; and

S. 3523. A bill to authorize a judicial review by the municipal court of appeals for the District of Columbia of certain actions taken by the Alcoholic Beverage Control Board; to the Committee on the District of Columbia.

PARTICIPATION IN RESETTLEMENT OF CERTAIN REFUGEES

Mr. DODD. Mr. President, I introduce, for appropriate reference, a bill to enable the United States to participate in the resettlement of certain refugees.

On the whole, I believe that House Joint Resolution 397 the chief measure now pending before the Judiciary Committee is soundly conceived. However, in view of our commitments to World Refugee Year, I hope that the bill which is finally enacted can be improved in a few minor ways.

I am in favor of the 25-percent matching formula contained in House Joint Resolution 397. But I am bothered by the fact that we had no refugee legislation on the books during most of World Refugee Year. In the bill which I am introducing, therefore, the 25-percent formula is rewritten so that we commit ourselves to parole into the United States, during the course of the act, 25 percent of the number of refugees resettled by other countries from July 1, 1959, the opening day of World Refugee Year, to the terminal date of the act. This provision would have the effect of bringing in, at most, another several thousand refugees. Because of the small numbers involved, I believe we can afford to err on the side of being generous by making our 25-percent commitments retroactive to the opening date of World Refugee Year.

One of the wonderful things about World Refugee Year was that nations which had previously not accepted handicapped refugees opened their doors to limited numbers of them and made special provision to assist in their rehabilitation. Australia, for example, committed itself to take 600 handicapped refugees, Canada agreed to take 100 refugees suffering from TB, Brazil offered to admit 100 TB refugee families, New Zealand took 50 handicapped refugees, Sweden took several hundred, the United Kingdom took 210 families of hard-core refugees, and so on. Of the refugees admitted to this country under the bill I am submitting, 500 numbers are allocated, to be used at the discretion of the Attorney General, for refugees who, because of age or physical handicap, are listed as difficult to resettle in the rosters of the United Nations High Commissioner, but who (a) are not institutional cases, (b) suffer from no contagious diseases, (c) can, in the opinion of the sponsoring voluntary agency, be made self-supporting with some assistance or are members of family units which can be considered self-supporting.

House Joint Resolution 397 limits admissions to refugees under the mandate of the United Nations High Commissioner. I agree that this is where the primary emphasis ought to be. However, I feel strongly that the High Commissioner's definition of what constitutes a refugee is in certain respects arbitrary and that we ought to make some provision in our act for refugees not accepted for protection by UNHCR. UNHCR, for example, has refused to grant refugee status to almost two-thirds of all Yugoslav refugees who have escaped into Germany, Austria, and Italy in recent years. The High Commissioner's eligibility criteria are based on the concept of political persecution. Refugees from Hungary, Poland, and the other Iron Curtain countries are automatically granted eligibility because UNHCR accepts the fact that they have escaped for political reasons. In the case of the Yugoslavs, however, UNHCR has taken the stand that most of them escaped for economic reasons and, therefore, do not qualify. Personally, I do not buy this business of kowtowing to Tito's sensitivities. The Yugoslavs are the largest group of non-UNHCR refugees in Europe. We should not bypass them because of their lack of UNHCR status.

For reasons of equity, humanitarianism, and international understanding, my bill contains a clause which makes token provision for non-UNHCR refugees—not only for the Yugoslavs, but for various national categories like the Italian refugees from Tunisia, other Europeans uprooted and forced out of their countries by the rising tide of Asian-African nationalism; family reunion cases involving Chinese refugees in Hong Kong, and so forth. The numbers involved in this category under my bill would not be very great—all told 2,000 each year for 2 years. But I attach a lot of importance to the principle of not limiting ourselves rigidly to the High Commissioner's definition of a refugee.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 3513) to enable the United States to participate in the resettlement of certain refugees, introduced by Mr. DODD, was received, read twice by its title, and referred to the Committee on the Judiciary.

CHANTILLY AIRPORT SEWER INTERCEPTOR

Mr. BIBLE. Mr. President, by request I introduce, for appropriate reference, a bill to authorize the Commissioners of the District of Columbia to plan, construct, operate, and maintain a sanitary sewer to connect Dulles International Airport with the District of Columbia system.

In brief, this proposal, advocated by the White House, with the approval of the Bureau of the Budget and the Federal Aviation Agency, represents a far-reaching step in a long and continuing fight to keep the Potomac River sufficiently free of pollution to serve as Washington's drinking water supply.

This $28-million proposal calls for construction of a huge sanitary interceptor and trunk sewerline to extend from the District of Columbia to the Dulles International Airport, at Chantilly, Va., a distance of some 25 to 28 miles, depending on the route finally selected. Its capacity will be sufficient to provide not only for the airport and its anticipated growth, but also for the expected community growth and development in the adjacent areas of both Virginia and Maryland.

The bill provides authority for the District of Columbia government to make long-term deferred-payment loans, not to exceed $25 million, to defray the cost of the interceptor, since the system outside of the District will not be immediately self-supporting. It is proposed that the Federal Government make an outright $3-million contribution toward the development of plans and acquisition of rights-of-way for the interceptor and construction of the trunkline from the airport to the interceptor.

Mr. President, this proposal envisions that the Chantilly Airport and the Virginia and Maryland communities using the sewer system will repay the $28 million construction costs by use charges over the years. It is anticipated that this system will adequately serve all the needs of the area through which it will run through the year 2000, and that by that date 700,000 people will utilize these facilities.

This system will not cost the taxpayers of the District of Columbia a single dollar. Although the District of Columbia government is designated as the agency to proceed with immediate construction and maintenance of the necessary airport sewerlines, all costs will be borne by charges levied against the users of the facility.

It is anticipated that 1 year will be required to complete the planning phases, and an additional 2 years thereafter for construction.

For those of us who serve on the Committee on the District of Columbia and the Joint Committee on Washington Metropolitan Problems, this bill is indeed welcome, and represents a tangible recognition by the executive branch of what many of us believe is a proper and necessary role for the Federal Government in orderly Washington metropolitan development.

This bill demonstrates the Federal Government's initiative and good faith in trying to help solve, on a partnership basis, the problems besetting our neighboring States of Maryland and Virginia and their metropolitan satellite jurisdictions, when such problems arise as a direct result of the growth generated from the central city represented by the District of Columbia itself.

Certainly, Mr. President, this bill represents a realistically sensible metropolitan area approach to a metropolitan area problem.

I believe it incumbent upon the Congress to act expeditiously on this bill, so it can be passed before adjournment.

The proposed assignment of this project to the District government and to the Engineer Commissioner demonstrates, to my mind, the high esteem in which Brig. Gen. A. C. Welling is held by the executive and legislative branches of the Federal Government and the confidence placed in him to handle effectively and efficiently this important job.

The VICE PRESIDENT. The bill will be received and appropriatley referred.

The bill (S. 3517) to authorize the Commissioners of the District of Columbia to plan, construct, operate, and maintain a sanitary sewer to connect the Dulles International Airport with the District of Columbia system, introduced by Mr. BIBLE, by request, was received, read twice by its title, and referred to the Committee on the District of Columbia.

STABILIZATION OF COTTON PRICE SUPPORT FOR 1961 CROP

Mr. SPARKMAN. Mr. President, as many of us here in the Senate know, existing law would allow the Secretary of Agriculture to drop cotton price supports to 70 percent of parity in 1961.

My colleague, the senior Senator from Alabama [Mr. HILL] and I have studied this matter and we find that farmers cannot take such a parity cut. In the State of Alabama cotton farmers could lose as much as $14 per bale on the 1961 crop if parity were cut to 70 percent.

This $14 drop would eliminate or cut sharply into profits per bale. Accordingly, I am today introducing, for myself and my colleague, Mr. HILL, a bill which would place a floor of 75 percent of parity on the 1961 crop and delay until 1962 a change from seven-eighth Middling grade as the standard for the cotton price support base.

Under Secretary Benson's policies price supports have fallen since 1955 from 90 percent of parity to 75 percent for 1960 Choice A cotton. Further drift toward lower prices could lead us into another catastrophe like the depression of the early 1930's.

My colleague and I decided to introduce this emergency legislation because cost of production in recent years has increased steadily while the price received by the farmer has moved downward. These conditions could lead to disastrous results if supports are lowered further.

With costs trending upward Alabama farmers would have to spend somewhat more than in recent years to make a 1961 crop and at the same time face the very strong possibility that they would make approximately $14 less per bale. Rising costs and further parity cuts would also adversely affect cotton farmers in other cotton-growing States.

I ask unanimous consent that the bill may be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3520) to stabilize cotton price support for the 1961 crop, introduced by Mr. SPARKMAN (for himself and Mr. HILL), was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 103 of the Agricultural Act of 1949, as amended, is amended by changing the figure "70" in the second sentence to "75".

SEC. 2. Section 108 of the Agricultural Act of 1958 is amended by changing the year "1961" in the second sentence to "1962".

AMENDMENT OF COMMUNICATIONS ACT OF 1934 RELATING TO COMMUNITY ANTENNA SYSTEMS—AMENDMENTS

Mr. FULBRIGHT. Mr. President, I submit a series of amendments, which I intend to propose to the bill (S. 2653) to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems, when that bill is before the Senate for consideration. I ask unanimous consent that the amendments be printed in the RECORD, for the information of the Senate.

The VICE PRESIDENT. The amendments will be received, printed, and lie on the table; and, without objection, the amendments will be printed in the RECORD.

The amendments, submitted by Mr. FULBRIGHT, are as follows:

On the first page, line 8, strike out "programs" and insert in lieu thereof "signals".

On the first page, line 9, strike out "programs" and insert in lieu thereof "signals".

On page 4, line 12, strike out "program services" and insert in lieu thereof "signals".

On page 6, line 20, strike out "programs" and insert in lieu thereof "signals".

On page 6, line 21, strike out "programs" and insert in lieu thereof "signals".

On page 6, line 25, strike out "programs" and insert in lieu thereof "signals".

On page 7, line 3, strike out "programs" and insert in lieu thereof "signals".

On page 7, line 8, strike out "programs" and insert in lieu thereof "signals".

Beginning on page 4, line 25, strike out "significantly facilitate the continued" and insert in lieu thereof "facilitate the".

On page 5, line 7, strike out "continued".

On page 6, line 11, strike out "continued".

One page 7, line 11, strike out "in order" and insert in lieu thereof "as may be required in the public interest".

On page 3, line 19, before the period, insert a colon and the following: "*Provided,* That the Commission may by rule waive the application of any section or subsection where it shall find that the public interest, convenience, and necessity will be served thereby".

AMENDMENT OF NATIONAL DEFENSE EDUCATION ACT OF 1958—ADDITIONAL COSPONSORS OF BILL

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the names of the Senators from Michigan [Mr. HART and Mr. MCNAMARA], the Senator from Louisiana [Mr. LONG] and the Senator from Alabama [Mr. SPARKMAN] be added as cosponsors of Senate bill 3481, a bill to amend the National Defense Education Act of 1958 to provide for loans to schoolteachers for summer term, where they desire to attend school for 3 months in the summer, being less than the 9-month term for which loans are now available.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I yield to the Senator from Rhode Island.

Mr. PASTORE. Is my name included on the list as a cosponsor of that bill? If not, I should like to ask unanimous consent that it be included.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the distinguished Senator from Rhode Island [Mr. PASTORE] be included as a cosponsor of the bill and that his name appear on the bill.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. YARBOROUGH. I thank the distinguished Senator from Rhode Island. His interest in education is well known in the Senate. Educators have told me they believe this amendment would be almost as beneficial as the original act itself, because teachers' earnings are so low that years and years are required to enable them to save enough money over living expenses to enable them to attend school in the summer. Thousands of our teachers are quitting the teaching profession. In my State about 20 percent each year are quitting. Statistics prove that if they can continue their learning they are less likely to quit the profession, and by making these loans available with a provision for payment in 10 years, educators believe many teachers who are quitting the profession will remain in, because by going to summer school they will increase their learning and they will increase their opportunity to earn more money. At a minimal cost I believe this measure will halt the flight of teachers from the profession, which is adding greatly to our problems.

In my own State we have 4,000 schoolteachers teaching who have only temporary certificates because school officials have been unable to get qualified teachers to teach.

Out of the 4,000, hundreds and hundreds have had no more education than a high school certificate. It is virtually impossible in the country areas to get qualified teachers because of the low pay. This is a measure which will help keep teachers in the profession and help those who are not qualified to get some training in the summer months to enable them to better fulfill their duties. I think it will be of great benefit to the educational process of this country.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I am happy to yield to the Senator from Rhode Island [Mr. PASTORE].

Mr. PASTORE. I think the Senator has put his finger on the nub of this problem. There has been a clamor over the years for better qualified schoolteachers. This bill will assist in that direction. I think our anxiety here should not be so much to avoid any exodus of schoolteachers from the profession, which of course should be stopped, but even more important than that is to facilitate the continuance of study on the part of these teachers into the summer months thus we can promote within the community of education a flow of better qualified teachers throughout the Nation.

Mr. YARBOROUGH. I thank the distinguished Senator. That is what the evidence we heard in 1958 indicated; namely, that some teachers are very able, but do not know how to teach, whereas other teachers know how to

teach but do not know their subject. At the present time teachers can get a loan, but they must stop teaching for 9 months. Under the bill the 3 months summer session would make them eligible for loans.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. MUNDT:

Remarks delivered by Senator THURMOND, of South Carolina, in making presentation of the George Washington Award to Senator GOLDWATER, of Arizona, at the annual George Washington dinner of American Good Government Society on April 30, 1960.

THIRTY-SIXTH ANNIVERSARY OF J. EDGAR HOOVER AS DIRECTOR OF FEDERAL BUREAU OF INVESTIGATION

Mr. DIRKSEN. Mr. President, this may be a good time to observe the fact that today marks the 36th anniversary of the beginning of the service rendered by J. Edgar Hoover, the very distinguished leader of the Federal Bureau of Investigation.

Mr. Hoover has had a singular record indeed, and has contributed so notably not only to law enforcement at the Federal level, but to the coordination of law enforcement between Federal, local, and State authorities.

I think the occasion can well be observed; and I was rather happy to note that the Legislature of the State of Illinois issued a proclamation to that effect, congratulating the distinguished Director of the FBI on 36 years of very distinguished service.

I ask unanimous consent that the proclamation be printed in the RECORD as a part of these remarks.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

"PROCLAMATION OF THE STATE OF ILLINOIS, EXECUTIVE DEPARTMENT

"Whereas J. Edgar Hoover on May 10, 1960, completes 36 years as Director of the Federal Bureau of Investigation, U.S. Department of Justice; and

"Whereas Mr. Hoover is the outstanding man in the field of law enforcement in the United States; and

"Whereas Mr. Hoover has devoted his law enforcement career to the improvement of conditions in law enforcement throughout the United States and in the State of Illinois and has continuously worked for the utmost cooperation between all law enforcement agencies, Federal, State, and local; and

"Whereas Mr. Hoover has represented a bulwark in this Nation against the forces of subversion; and

"Whereas Mr. Hoover's leadership in the field of law enforcement has provided an inspiring example for the youth of this country, in which youth Mr. Hoover has a deep and abiding interest; and

"Whereas Mr. Hoover, through the Federal Bureau of Investigation has contributed substantially to the improvement of law enforcement in the State of Illinois: Now, therefore,

"I, William G. Stratton, Governor of the State of Illinois, do hereby proclaim Tuesday, May 10, 1960, as 'J. Edgar Hoover Day' throughout Illinois, and request the appropriate observance of the occasion and urge all citizens to commemorate Mr. Hoover's 36th anniversary as Director of the Federal Bureau of Investigation."

In witness whereof, I have hereunto set my hand and caused the great seal of the State of Illinois to be affixed.

Done at the capitol, in the city of Springfield, this 6th day of May, in the year of our Lord 1960, and of the State of Illinois the 142d.

WILLIAM G. STRATTON,
Governor.

By the Governor:

CHARLES F. CARPENTIER,
Secretary of State.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. DIRKSEN. Yes.

Mr. JOHNSON of Texas. I wish to associate myself in the tribute paid to Mr. Hoover by the distinguished minority leader. Mr. Hoover, in my estimation, is one of the great public servants of our time. He is a good man. He is a competent man. He personifies all that is patriotic in our Nation. He is my neighbor and my friend, and I take great pride in him.

Mr. BRIDGES. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield to the Senator from New Hampshire.

Mr. BRIDGES. I too want to associate myself with the remarks made by the distinguished minority leader and with the distinguished majority leader in paying tribute to J. Edgar Hoover. I think he is one of the outstanding Americans of our time. I think he is a great public servant, and I think the United States of America and the free world are better as a result of his services.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. COTTON in the chair). Does the Senator from Illinois yield to the Senator from Iowa?

Mr. DIRKSEN. I yield to the distinguished Senator from Iowa.

Mr. HICKENLOOPER. Mr. President, I should like to join in the expressions of appreciation for Director J. Edgar Hoover, and to approve, so far as I am concerned, everything which has been said by the minority leader and by the majority leader of this body. The United States and its security owe a debt to the leadership of Mr. Hoover which probably can never be fully appreciated and can never be repaid. He has stood fast against the encroachments of Soviet espionage in this country under circumstances where strong men might have faltered because of the periodic castigation which he has received from certain elements in this country. Nevertheless, he has done his duty as an American safeguarding American interests.

Mr. CURTIS. Mr. President——

The PRESIDING OFFICER (Mr. STENNIS in the chair). The Senator from Nebraska.

Mr. CURTIS. Mr. President, I wish to add to the tribute paid to J. Edgar Hoover. His service has been outstanding. It is difficult to imagine what would be the state of the Union were it not for the service of J. Edgar Hoover. On this, the anniversary of his entering the Federal service, he is entitled to the gratitude of the American people, and I am sure he has it.

Mr. KEATING. Mr. President, today, May 10, 1960, marks the 36th anniversary of J. Edgar Hoover as Director of the Federal Bureau of Investigation. It is wholly fitting that on this memorable occasion the citizens of the United States of America pay due homage to Mr. Hoover as a public servant whose outstanding work is a monument to his competence and to his integrity.

The story of respect for law in America holds a glowing chapter in the career of J. Edgar Hoover. It is only necessary to recall the conditions of law enforcement in the early 1920's, when he began his career, to realize the tremendous forward strides which have been made since that time in developing the strength of enforcement which gives meaning to a nation's laws. A great share of credit for that advance must go to J. Edgar Hoover, a man who has stood like a rock of character and dedication in the face of the most difficult pressures and challenges of organized crime.

Under the leadership of Mr. Hoover the FBI has grown both in service and in stature over the years. It has developed enormous and invaluable files of information about individuals, associations, and organizations whose activities require the maximum of awareness and vigilance in the public interest, and in the security of our Nation.

The justly famed FBI file of fingerprints has served a vital and ever-expanding function in crime detection throughout the 50 States. Direct reference to this file has been made available to local police, and, through an elaborate and highly efficient system of a data processing and communication, essential information is readily transmitted to law enforcement agencies in every part of America.

Through the initiative of Mr. Hoover, the FBI National Academy was founded, and has contributed importantly to the unceasing war against crime in the United States. In terms of the broader international interests of our Nation, the work of Mr. Hoover and his agency in exposing subversive elements seeking the overthrow of our free system of government remains both a high tribute to this distinguishd American, and a source of security and reassurance to the American people.

As he embarks upon another year in his long and preeminent career in the service of law enforcement and national security, it is my privilege to join with all his fellow citizens in expressing the Nation's gratitude to Mr. Hoover, and in extending heartfelt good wishes for his health and happiness.

LEADERS FAVOR CONNALLY RESERVATION REPEAL

Mr. JAVITS. Mr. President, in a world of rapid change and recurring stresses, the leadership of the United

States in the strengthening of world law has become a matter of paramount importance. In this nuclear age more than at any other time in the history of the civilized world, international law is the only realistic and practical way to settle differences and disputes among nations. It is therefore vital that we should do everything in our power to promote an intelligent understanding and respect for the operation of law.

Columbia University's Bureau of Applied Social Research recently conducted a poll of a sample of persons listed in "Who's Who in America" to determine their attitude with respect to world law. Since the discussion over repeal of the Connally amendment has raised a question in the minds of people over the opinions held by many American leaders on world law, it seems to me that the results of this poll would be significant.

A summary of the results of the poll was prepared by the bureau of applied social research on April 4.

I ask unanimous consent to have the questionnaire and the summary printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WORLD LAW MAIL SURVEY REVEALS SUPPORT BY "WHO'S WHO" LISTEES FOR U.N. CHARTER REVISION

Over half of a nationwide cross section of prominent Americans who responded to a mail survey favor the enactment of enforcible world law under a revised U.N. Charter, according to the findings of a recent study conducted by Columbia University's Bureau of Applied Social Research.

The study of "Who's Who" listees also indicates that prominent Americans tend to favor a proposal for the United States to grant compulsory jurisdiction to the International Court of Justice, in disputes arising between the United States and other countries over international issues.

The study was conducted for the Pierce Butler, Jr. Foundation for Education in World Law. Dr. David L. Sills, the bureau's director of research, announced the results of the survey.

The Pierce Butler, Jr. Foundation was founded in 1957 to "encourage, through education, a widespread understanding of mankind's common interest in a peaceful world government by law." One of the foundation's purposes is to encourage research; the "world law poll" was sponsored by a special committee of prominent Americans consisting of Harrison S. Brown, professor of geochemistry, California Institute of Technology; Henry B. Cabot, president, board of trustees, Boston Symphony Orchestra; Norman Cousins, editor, the Staturday Review; Oscar Hammerstein II, librettist; Rev. Donald Szantho Harrington, minister, the Community Church of New York; Paul G. Hoffman, chairman, Hoffman Specialty Manufacturing Co.; Arthur N. Holcombe, professor emeritus, Harvard University, chairman, commission to study the organization of peace; Arthur Larson, director, world rule of law center, Duke University; the Honorable Herbert H. Lehman; A. J. G. Priest, professor of law, University of Virginia; Walter P. Reuther, vice president, AFL–CIO; Charles S. Rhyne, former president, American Bar Association; and Louis B. Sohn, professor of law, Harvard Law School; former Senator Ralph Flanders.

A questionnaire was sent to two samples of persons listed in the 1958–59 edition of "Who's Who in America": One sample, of 1,050, constituting a national cross section of Who's Who listees; the other, of 244 persons, from selected occupations.

The inquiry, conducted in March and April 1959, and which was directed by Bureau Staff Member E. David Nasatir, had two objectives. It sought, first, to show how the opinions of prominent persons toward two proposals for world law, as a means of preventing future wars, might be related to their beliefs concerning the likelihood of war, the policies of the Soviet Union toward other countries and the desirability of strengthening the United Nations. The study also sought to relate occupation, place of residence, and other social attributes to world law views.

The two world law proposals differ in their central features: Proponents of one proposal—the enforcible world law plan—assume that serious danger of war will probably continue to exist until both world law to prevent war, and the means to enforce it, are established. They have advocated that the United Nations be given a broad range of new powers for war prevention, including the authority both to decide disputes between nations in U.N. courts of law and to maintain a world police force to enforce the courts' decisions. The second proposal, the World Court plan, seeks to have particular nations—the United States, for example, in its relations with other countries—grant compulsory authority to the International Court of Justice (the World Court) over disputes which do not involve the domestic affairs of either contending party. The proponents of this plan argue that the Court's effectiveness is impaired because the United States and other nations reserve the right to decide which disputes they will submit to the Court's jurisdiction.

Dr. Sills emphasized that the survey's findings—the major highlights of which are outlined below—should not be regarded as necessarily representative of the views of all prominent persons in Who's Who; this limitation of the inquiry's results—characteristic of most opinion studies which use mail questionnaires—is attributable largely to the fact that not all Who's Who listees to whom questionnaires were sent returned them.

Some principal results of the study are:

1. Individuals who favor the EWL (enforcible world law) plan are by and large the same people who favor the World Court proposal; and individuals who oppose the first tend to oppose the second.

2. Relatively few individuals feel that "the practical chances will be at least fair" for the world's countries to reach agreement on either proposal "within 20 years."

3. Asked their beliefs about the chances that the Communist countries might be influenced toward enforcible world law "if the noncommitted Asian-African nations strongly favored" it, most respondents who favor the EWL plan replied that the Communists would "definitely" or "probably" be influenced; most of those who oppose it replied that the Communists would "probably not" be influenced.

4. Asked to indicate which of three different views about Russia's intentions most closely approximated their own, 78 percent of all respondents chose the statement:

"The Soviet Union is basically aggressive, and is likely to continue trying to bring more countries under its control throughout our lifetime."

(Other statements, abbreviated here, were "aggressive today, but will probably stop as the years go by" and "not really aggressive, only appear so at times for fear of attack from Western countries.")

5. Beliefs about the imminence of a new war are not closely linked to viewpoints about enforcible world law. Individuals who think that a major war involving large-scale use of nuclear weapons has at least a 50–50 chance of occurring within the next 10 years were compared, on their viewpoints toward the EWL plan, with respondents who think that a new war is not likely. The former favor the EWL plan slightly more often than the latter.

6. Physicians, educators, and clergymen most often favor either plan; lawyers, business executives, writers/editors, and social scientists least often favor either one. (Differences between the two groups are not extreme.) Younger respondents (48 years and younger) are far more inclined than older ones to favor either plan. Viewpoints toward the two proposals do not vary appreciably from one region of the country to another.

Findings in the preceding summary are based on cross-tabulations too extensive to be presented here (although included in a report to the Pierce Butler, Jr., Foundation). Following are breakdowns of replies to most of the separate items in the questionnaire. At the end is a breakdown of viewpoints toward enforcible world law, obtained by analyzing sveral questionnaire items simultaneously (as described in the report to the foundation).

1. What do you think the chances are that a major war, involving large-scale use of nuclear weapons, will occur in the next 10 years?

	Percent
Likely	6
A 50–50 possibility	32
Not likely	57
No opinion (or did not answer)	5
Total	100

NOTE.—Equals 575 respondents.

2. Do you think that in the next 10 years a limited war, say on the scale of the Korean conflict, is likely?

	Percent
Likely	33
A 50–50 possibility	45
Not likely	15
No opinion (or did not answer)	7
Total	100

3. The following statements reflect different viewpoints about Russia's intentions. Which one of the three statements most closely approximates your own view?

	Percent
The Soviet Union is "basically aggressive," and is likely to continue trying to bring more countries under its control throughout our lifetime	78
Russia is "aggressive today," but will probably stop trying to extend its control to other countries as the years go by	16
The Soviets are "not really aggressive," but only appear so at times because they fear attack from the Western countries	3
No opinion (and did not answer)	3
Total	100

4. Of the following four statements about the best way for the United States to treat disputes with Russia, which one comes closest to your own view?

	Percent
The United States, while avoiding risks to national security, should "seek out every opportunity" to negotiate with Russia	29
The United States, should remain willing to negotiate "insofar as Russia shows good faith"	43
"Only where U.S. strength is such" that Russia could not hope to gain by breaking its word should the United States consider negotiating	23
The United States should "avoid negotiating" with Russia	2
No opinion (and did not answer)	3
Total	100

5. Are there any steps which you feel should be taken, now or within the next 5

years, to "strengthen the United Nations" as an agency for the prevention of war?

	Percent
Yes	52
No	18
No opinion (and did not answer)	30
Total	100

6. Several long-range proposals to eliminate the threat of war have been advanced in recent years. One plan is to strengthen the International Court of Justice (the World Court) now at The Hague, and to have branches in different regions.

Its authors reason that, to rule out war, there must be machinery to settle international disputes peacefully, under law. Today, the World Court cannot fulfill this purpose, because nations now decide voluntarily to submit their disputes to the Court's jurisdiction—and few nations have done so.

Under this proposal, particular nations would agree to submit to the Court, on a compulsory rather than voluntary basis, certain types of serious disputes—over international, but not over domestic, matters—arising between them.

For each situation below: Do you think the United States should or should not grant compulsory jurisdiction to the World Court, over disputes arising between the United States and the other nation shown, if that country is prepared to do the same?

Over disputes between the United States and a NATO country:

	Percent
Should	65
Should not	21
No opinion	14
Total	100

Over disputes between the United States and a "noncommitted" Asian or African country, having no military pact with either the United States or Russia?

	Percent
Should	56
Should not	27
No opinion	17
Total	100

Over disputes between the United States and a Communist country:

	Percent
Should	44
Should not	37
No opinion	19
Total	100

7. When do you think the practical chances will be at least fair that the different non-Communist countries (including the United States) will be willing to give the World Court compulsory authority to settle disputes arising among themselves?

	Percent
Within 5 years	6
5 to 20	27
More than 20	9
Probably never	10
Impossible to estimate; too many factors involved	39

RUMANIA INDEPENDENCE DAY

Mr. JAVITS. Mr. President, on the eve of the summit conference it is well

to remember the nations held captive under Communist tyranny whose struggle for freedom goes on. One of these nations is Rumania, whose people today commemorate the independence from the Ottoman Empire proclaimed on May 10, 1877.

America's ties with the people of Rumania are based on a strong sympathy for their national aspirations. Decades of Communist rule have not succeeded in crushing their hope for liberty and freedom from Communist oppression, which we firmly support.

I ask unanimous consent to have printed in the RECORD a proclamation by Gov. Nelson A. Rockefeller, of New York, naming May 10, 1960, as Rumanian Independence Day.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

"PROCLAMATION OF THE STATE OF NEW YORK, EXECUTIVE CHAMBER, ALBANY

"On May 10, 1877, the people of Rumania proclaimed their independence of the Ottoman Empire, and confirmed their freedom on the field of battle. The accomplished fact was ratified by the Congress of Berlin in 1878, recognized by the powers of Europe and eventually also by our own Government. "Four years later, also on May 10, Charles I was crowned King of Rumania.

"Americans of Rumanian descent understandably have a warm feeling for that day, and revere it both as commemoration of the past and as a symbol for the future: Now, therefore

"I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim May 10, 1960, as 'Rumanian Independence Day' in New York State, and I urge cooperation in its observance."

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 28th day of April in the year of our Lord 1960.

NELSON A. ROCKEFELLER.

By the Governor:

WILLIAM J. RONAN,
Secretary to the Governor.

Mr. KEATING. Mr. President, today, May 10, is celebrated as Rumanian Independence Day.

More than 17 million Rumanians constitute one of the largest nationality groups in the Balkans. These splendid and courageous people have had the misfortune to suffer under oppressive alien regimes during most of modern times. In point of fact, they were obliged to struggle hard and fight continuously in defense of their freedom throughout their long history.

Late in the 15th century Rumania was overrun and conquered by the Ottoman Turks, and for centuries Rumanians lived under the rule of cruel Ottoman sultans. For several centuries they endured the almost unbearable yoke of these alien rulers, but they succeeded in maintaining their traditional national beliefs and ideals. In the middle of the last century they had their chance to attain their goal of independence, and after the conclusion of the Crimean War in 1856 they regained a considerable measure of autonomy under the guarantee of the great powers of Europe. Years later, during the Russo-Turkish War of 1877–78, they again saw their chance and seized upon the occasion by declaring their independence on May 10, 1877. This bold initiative culminated in the founding of the Rumanian kingdom in 1881.

We all are familiar with the present fate of the courageous people of Rumania. Locked behind the Iron Curtain of Communist tyranny, they stand deprived of the great gift of freedom which had been won with their blood and sacrifice. On this, the day of commemoration in the sacred history of their liberty, let us pledge never to forget the plight of the Rumanian people so long as the gates of oppression are closed upon them. Indeed, let us renew our pledge and our efforts to work for the ultimate deliverance which they yearn for and which they so richly deserve.

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the RECORD, a brief statement which I have prepared on the Rumanian Independence Day, which is being commemorated today, May 10.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BEALL

On May 10, 1881, King Carol was crowned King of United Rumania, and since that time May 10 has been observed as the day of the founding of the Rumanian kingdom, or Rumanian Independence Day.

After the conclusion of the Crimean War, the Rumanian people regained their autonomy with the guarantee of sovereignty by the great powers of Europe. But the independence of the nation was comparatively short lived; Rumania came under the Communists, and today 17 million Rumanians live in their homeland under Communist totalitarian rule. This day is observed by Rumanians throughout the world, and especially by Rumanians living in America, but it is not observed in Rumania itself. The Communist rulers of that country have forbidden any public observance of this historic date which is so important in the hearts of Rumanians. This is part of the Communist plan to extinguish freedom.

However, the Communist rule cannot extinguish the observance of this day in the hearts and minds of the Rumanian people. Despite Communist repression, the Rumanian people's resolute courage and steadfast faith in freedom continues unbroken.

Our Nation is proud of the many persons of Rumanian descent among its population. They have contributed substantially to our culture and industry, and are among our most responsible citizens.

Let us here in the Senate—and all Americans—renew the historic bonds of friendship with the liberty-loving Rumanian people, and pray that the day will soon come when the people of that nation may again live in freedom and independence.

Mr. LAUSCHE. Mr. President, the American people have never forgotten the countries which lie behind the Iron Curtain. Their tragic slavery under Communist domination stirs the moral conscience of all Americans. Today, marks the independence day of once free Rumania.

Mr. President, it gives me great pleasure to join with all Americans of Rumanian descent and the Rumanians now behind the Iron Curtain in observing the anniversary of Rumanian independence which was won on May 10, 1877.

Today, the proud people of this tragic land live under the crushing burden of Soviet rule. The Red tyranny is oppressive and cruel, but we know the spirit of freedom and national pride still glows in the hearts of its citizenry. Continued passive resistance to Communist objectives is acknowledged even by the oppressors.

On this occasion, we pay tribute to the courage and sturdiness of Rumanian patriots who stand steadfast for independence, and although they cannot openly commemorate this anniversay, we know their hearts are filled with devotion and love for their past liberties.

Let us assume the Rumanian people that they are not forgotten and that our prayer is the hope that not in the too-far-distant future, Rumanians will again be privileged to openly observe their day of independence and will be free from Communist domination.

BIRTHDAYS OF REPRESENTATIVES EMANUEL CELLER AND JOHN TABER OF NEW YORK

Mr. JAVITS. Mr. President, I wish to join with others of my colleagues in commemorating the birthdays of EMANUEL CELLER, of New York, and JOHN TABER, of New York, respectively, our senior Democrat and Republican in the New York State congressional delegation. The depth of my affection for these men has been one of the great pleasures of my congressional career.

EMANUEL CELLER, though of the other party from mine, has joined with me and I with him in many struggles in the House of Representatives, especially for civil rights and civil liberties. His devotion to the best possible relations between the United States and Israel, and the great meaning of that objective to so many of our people in New York, are very well known. I pay him the highest tribute today for the many years of honorable service, in which he has fought many fights so worthwhile for our country, no matter what might be our differences on policy which have arisen in the interim.

As to Mr. JOHN TABER, there are few who are as useful to our country. At his present ripe age of 80, his keen sense of protection of the financial situation of the country is legendary in the House of Representatives, and indeed, in the United States. Our Nation owes him a great debt of gratitude, and I hope no one will be confused by particular questions of policy when they are compared to the enormous service JOHN TABER has rendered to our country as a watchdog of the Treasury. I also pay tribute to the warmth of personality of Mr. TABER, whose friendship I have enjoyed during all the years since I first came to the House of Representatives.

Mr. JOHNSON of Texas. Mr. President, like the distinguished senior Senator from New York, I, too, served in the House of Representatives for many years, and among my most precious memories are my associations over there. I wish to applaud and associate myself with the tribute the Senator has paid to his colleague from New York, Mr. CELLER. He is an enlightened legislator and a diligent Member of Congress. He is always affable and fair and considerate of those with whom he may disagree. I am very

proud of his friendship and of the opportunity I have had to work with him on various matters since I have come to the Senate.

I would not want the record to be closed without paying tribute to my friend JOHN TABER. I do not know of any man in government who has worked more insistently and diligently and determinedly to save the taxpayers money than has JOHN TABER. I have not always shared the viewpoint he has expressed in conference committees and in subcommittees and on the floor, but I have always known that he is an honest man and that he believes in the viewpoint he expresses. He never pulls punches, and he always exercises a good influence on Congress. I am happy that he has been privileged to serve a great State in a great body. The people of America have benefited from that service. Therefore I join in wishing him a happy birthday, and express the hope that he will enjoy many more.

Mr. JAVITS. Mr. President, I am very grateful to the majority leader. New York State can be justly proud of these two men when they rate the kind of tribute which has just been paid them by the distinguished majority leader.

RUSSIAN ESPIONAGE IN THE UNITED STATES

Mr. HRUSKA. Mr. President, there is a great uproar around the world at the discovery that the Armed Forces defending the free world against the onslaught of Communist tyranny employ espionage as part of this defense.

The Red dictator, Nikita S. Khrushchev, expresses a great moral distress at this discovery. Some of our allies profess to be dismayed that we use intelligence agents to gather intelligence regarding the plans of an enemy who has brayed out that he intends to "bury us."

It is not for me at this time to dwell on what is presently occurring in this area, but I should like to explore what the headwaters of this problem really are, and to relate some of the disclosures and reports of the Internal Security Subcommittee which have been recorded through the years, and which are well documented.

Where are the headwaters of this problem, Mr. President? The answer to that question has been overflowing into the record all over the world for the past 43 years. Let me give a few summaries from that record.

I quote first from the Second Report of the Subcommittee on Internal Security of March 22, 1954, on "Activities of U.S. Citizens Employed by the United Nations":

On December 13, 1917, Lenin's handful of Bolsheviks, who had just seized the government of Russia, appropriated 2 million rubles for the needs of the revolutionary internationalist movement. Here is the language of the official ordinance as published in the Gazette of the Temporary Workers and Peasants Government, December 13, 1917, and furnished to the Senate Foreign Relations Committee by Secretary of State Charles Evans Hughes:

"The Soviet of Peoples Commissars considers it necessary to comes forth with all aid, including financial aid, to the assistance of the left, international wing of the workers movement of all countries, entirely regardless whether those countries are at war with Russia, or in an alliance, or whether they retain their neutrality."

This was the original declaration of revolution against the civilized governments of the world. It was an official statement. It was implemented also by Moscow-inspired revolutionary activity on every continent of the globe.

In 1920, Woodrow Wilson's Secretary of State, Bainbridge Colby, looked at the plain facts of Communist activity, which were visible everywhere then, as they are now, and arrived at this conclusion:

"The existing regime in Russia is based upon the negation of every principle of honor and good faith. * * * The responsible leaders of the regime have frequently and openly boasted that they are willing to sign agreements and undertakings with foreign powers while not having the slightest intention of observing such undertakings or carrying out such agreements.

"They have made it quite plain that they intend to use every means, including, of course, diplomatic agencies, to promote such revolutionary movements in other countries.

"Inevitably, therefore, the diplomatic service of the Bolshevist Government would become a channel for intrigues and the propaganda of revolt against the institutions and laws of countries, with which it was at peace."

In 1921, the British Government granted de facto recognition to the Soviet Government by means of a trade agreement. The agreement provided for the prohibition of Bolshevik propaganda in Great Britain. Only 2 short years later, Britain threatened to terminate that agreement because Soviet agents were spreading anti-British propaganda in Afghanistan, Persia, and India.

In 1924, regardless of what had already happened, Britain granted the U.S.S.R. de jure recognition. Three years later it terminated both the trade agreement and recognition because the Soviet diplomatic service in Great Britain was acting as a "channel for intrigues and the propaganda of revolt," precisely as our American Secretary of State had predicted 7 years before ("Trends in Russian Foreign Policy", pp. 5, 7, 8, 10).

In 1924, China and the U.S.S.R. established "normal" diplomatic relations. Under the treaty each country was to refrain from spreading propaganda against the institutions of the other. Three years later China broke off relations because the Soviet diplomatic service, once more was acting as a channel for intrigues and the propaganda of revolt (ibid., pp. 8, 10, 11).

In 1924, Mexico recognized the U.S.S.R. In 1930, Mexico withdrew that recognition (ibid., pp. 9, 11).

In 1926 Uruguay recognized the U.S.S.R. In 1935, Uruguay withdrew that recognition, charging Communist activity in Uruguay and elsewhere in South America (ibid., pp. 9, 15).

Despite this record of Soviet perfidy, the United States extended diplomatic recognition to the Soviet Government in 1933 after an exchange of letters between President Roosevelt and Maxim Litvinov, Soviet Foreign Minister, in which Litvinov pledged that the Soviet Union would:

(1) respect the United States and refrain from interference in the internal affairs of the United States or its territories or possessions,

(2) refrain from any propaganda, or acts to disturb the tranquillity, prosperity, order or security of the United States,

(3) prevent the formation of any group on Soviet soil, which has the aim of overthrowing the political or social order of the whole or any part of the United States.

This was the first agreement the Soviet Union ever signed with the United States. It was violating the agreement at the very moment that Litivinov was putting his signature to it, it has never ceased to violate this agreement, and it is still violating this agreement today, 27 years after it was signed.

Now I will continue with excerpts from the Internal Security Subcommittee document on "Soviet Political Agreements and Results."

In 1945 the Soviet Government was still our ally, in the war to establish the principles of the Atlantic Charter. In September of that year, Igor Gousenko, a Soviet diplomat, went to the Canadian Government with documents which caused an immediate investigation by a specially appointed Canadian Royal Commission. When that investigation was concluded, the Royal Commission found:

"There exists in Canada a fifth column organized and directed by Russian agents in Canada and in Russia" (the report of the Royal Commission, p. 685).

"Members of the staff of the Russian Embassy at Ottawa were actively engaged in inadmissible espionage activities" (ibid., p. 686).

The Royal Commission also stated:

"So far as the evidence discloses, the first head of the Military Intelligence espionage system in Canada after the arrival of the Soviet Minister was Sergei N. Koudriavtzev, whose official title was First Secretary of the Legation [later Embassy]" (ibid., p. 15).

"Major Sokolov, on his arrival in Ottawa in 1942, began to reform the previous organization, and was directed by Molier, who has been identified as one Mikhailev, an official of the Soviet Consulate in New York who came to Canada for that purpose" (ibid., p. 15).

On October 28, 1953, Ismail Ege, former chief of the Fourth Section of Soviet Military Intelligence, appeared before the subcommittee. He testified that the General Staff Intelligence Department of the Soviet Union used international bodies to conduct espionage. He proved his point by showing that Sergei Koudriavtzev, who had been head of the Red spy apparatus in Canada, later joined the Soviet delegation to the United Nations.

Let us also remember, Mr. President, that Judith Coplon's espionage partner, Valentin Gubitchev, was attached to the Soviet delegation to the United Nations. He was caught redhanded, in company with Coplon herself, and found guilty, but the U.S. Government returned him to the Soviet Union instead of sending him to prison.

On May 12, 1949, Kirill Mikhailovich Alexesv, who had been attached to the Soviet Embassy in Mexico, told the subcommittee that "all responsible workers of a Soviet Embassy are members of the secret intelligence service of the Soviet Government."

In 1951 the Special Committee on Un-Filipino Activities of the Philippine Government found that "the Communist Party is the vanguard of the Soviet Union here; its border patrol on Filipino shores."

In 1955, an Australian Royal Commission found that there had been operating out of the Soviet Embassy in Canberra,

a Soviet spy apparatus of the same kind that was discovered in Canada. Vladimir Petrov, the defector from the embassy who uncovered this apparatus, made a memorable statement about his country's espionage activities. Here is what he said—as quoted in the Internal Security Subcommittee Annual Report for 1957:

Espionage is a distinct and principal Soviet industry. This must be so; because the Soviet Union, alone of all the great powers, regards itself as being in a continuous and chronic state of covert warfare with the whole world outside the borders of the Communist empire. And conspiratorial techniques are natural to a regime that seized power and maintains power by conspiratorial methods. Soviet espionage has reaped a rich harvest by such methods, especially against friendly and unsuspecting countries.

I read now from the Internal Security Subcommittee publication, "Soviet Political Agreements and Results," a staff study published in 1959:

May 10, 1948: Costa Rica broke relations with the U.S.S.R., because the Costa Rican Communist Party with the help of international communism had taken control of the government, which provoked a civil war.

The same document tells us, Mr. President, that Brazil, Chile, Cuba, Venezuela, Israeli, Australia, Guatemala, and Iraq have all suspended diplomatic relations with the U.S.S.R. since World War II. The same document tells us that:

The Canadian Government ordered home G. F. Popov, Second Secretary of the Soviet Embassy, because he was engaged in espionage.

The United Nations ordered home Viktor Invanovich Petrov, a Russian employee of its Secretariat, because he was engaged in espionage.

Last summer, Alexander Urevitch Kaznachoev fled from his post in the Soviet Embassy in Rangoon and took refuge in the U.S. Embassy. He told the Associated Press that the main occupation of all the Soviet Embassy staff—in Rangoon—is to spy.

Kaznachoev appeared before the subcommittee on December 14, 1959, to tell of his espionage activities under the orders of the Kremlin. He told us that his espionage chief in Rangoon was Ivan Vozsiy, who masqueraded as First Secretary of the Soviet Embassy.

J. Edgar Hoover, who knows more about this subject than any man in the United States, summarized the story in a speech made before the United American Mechanics in Charleston, W. Va., on June 16, 1959, as follows:

As the No. 1 target of worldwide communism, the United States is the prime objective of Soviet espionage. Soviet defectors are unanimous in stating that between 70 and 80 percent of Russian officials in the United States are members of the Red Intelligence Services. The importance that the U.S.S.R. is currently attaching to the value of these intelligence agents is vividly borne out by the sharp increase in the number of Soviet diplomatic personnel assigned to the United States. In May, 1954, there were 212 Soviet officials in the United States. Five years later that number has increased to 313, or an increase of almost 50 percent.

Soviet espionage activities in this country expose the fallacy of so-called peaceful coexistence in recent years; pseudo appeals for peace by Communists have been more than matched by intensified Communist espionage efforts in the United States. Using blackmail, bribery, and similar techniques, Communist agents, many with diplomatic immunity, are stepping up their efforts to obtain our military, scientific, and industrial secrets for use against us.

Mr. Hoover intently analyzed the 17th National Convention of the Communist Party, U.S.A., which was held in December 1959. The Subcommittee on Internal Security published his findings. Here is a part of what he said:

The party will remain in the future—as it has been in the past—an obedient slave of Moscow. No new personalities were brought into the party's top leadership. Rather, leadership is today exercised by the same corps of hardened, disciplined, veteran Communists who feel that Moscow represents the final goal of all of mankind's hopes. So-called rightwing Communists are not represented. They have either voluntarily resigned in complete disillusionment or been coldbloodedly purged.

The Communist conspiracy in America today is led by a man who has openly boasted that he was willing to take up arms and fight to overthrow our form of Government. Hall was convicted in Minneapolis, Minn., in 1934, in connection with a riot there when he was a member of the Young Communist League. During his trial he testified as follows:

"Question. But you would prefer the Russian—you would prefer to be in Russia?

"Answer. I prefer America with a Soviet Government.

"Question. And you are willing to fight and overthrow this Government?

"Answer. Absolutely.

"Question. And you are willing to take up arms and overthrow the constituted authorities?

"Answer. When the time comes, 'Yes.'"

Only a few weeks ago, the Subcommittee on Internal Security summoned Hall to the witness stand and read him the words I have just quoted to you and gave him opportunity to disavow them. He refused it.

Mr. President, it is my suggestion that we not lose our heads at the revelation that the free world uses espionage to defend itself.

Let us look at the headwaters of the stream.

Let us remember the words of the Communist manifesto:

The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions.

AMERICAN PEACE SOCIETY FORUM TO EXPLORE THE NATURE OF PEACE IN THE COMING YEARS

Mr. KEATING. Mr. President, I call the attention of the Senate to a rather unusual seminar which is to be held here in Washington tomorrow night. It will be cosponsored by the American Peace Society and the American University, and will be held in the School of International Service Lounge on the American University campus, Massachusetts and Nebraska Avenues NW., on Wednesday, May 11, at 8 p.m.

Participating in the seminar will be a group of distinguished experts on the subject of "The Redefinition of Peace." Dr. Stefan Possony, professor of government at Georgetown University, will discuss "The Communist Requirements for Peace." Dr. William Yandell Elliot, of Harvard University, will speak on the subject "Our National Peace Policy." Dr. Bonaro Overstreet, the coauthor of a recent bestselling book on communism, who has just returned from a trip to the Soviet Union, will speak about "New Ways to an American Contribution to Peace." The moderator for the forum will be a distinguished former Member of this body, Hon. Homer Ferguson, who now serves as chief judge of the U.S. Court of Military Appeals.

Mr. President, I urge all who can do so to attend this interesting discussion of the nature of peace in the years ahead. Fresh and imaginative thinking on this topic is of supreme importance as we approach the summit conference and the crises which must inevitably lie ahead, and I am confident much food for thought will emerge from this seminar.

The American Peace Society, which has long pioneered in this vital field, is the oldest peace society in America. Its cosponsorship of this forum is in keeping with the high traditions and leadership of the society, and I hope many people will take advantage of the opportunity represented by this forum.

WRUL BROADCASTS TO CUBA

Mr. KEATING. Mr. President, several weeks ago I pointed out on the floor of the Senate that Cuba's lack of a free press had made it virtually impossible for the Cuban people to get the facts about what is happening in their homeland. I stated that in view of these conditions, it is imperative that the United States embark on a truth campaign which will bring our side of the story to Cuba.

Since making that statement on the floor, I have been advised that station WRUL, the international broadcasting station, has launched a series of truth programs for Cuba, in an effort to pierce the curtain of censorship drawn by the Castro government over all press, radio, and television in Cuba.

According to information which has been furnished to me by the station, WRUL recently began a series of nightly—Monday through Friday—broadcasts sponsored by a group of Cuban exiles who have banded together in Miami to create a program series called Por Cuba y Para Cuba—On Behalf of Cuba and For Cuba. These Spanish-language programs are broadcast from 9 to 9:30 p.m., e.s.t., on the shortwave 19 meter band at 15.38 megacycles and on the 25 meter band at 11.83 megacycles, over radio beams directed across Cuba.

The director of the program series is Andres Vargas-Gomez, the former Cuban Ambassador to the United Nations in Europe, who last month resigned in Geneva, Switzerland, after rejecting the Castro administration as Communist inspired.

The programs feature the voices of two brothers Pedro and Rene Leyva, both of whom worked on the Castro-confiscated Havana newspaper Advance.

Pedro, 32, had been a columnist for that newspaper. Rene, 46, was news editor, before both were exiled by Dr. Castro.

Each day, Mr. Vargas-Gomez and his staff cull from Cuban newspapers flown to Miami items which they know to be propaganda. The programs' producers compare these items with the verified facts and with reports from friends inside Cuba who smuggle information into the "Para Cuba" headquarters in Miami.

The programs are then recorded in a secret studio in Miami, and are relayed to the WRUL studios in New York City. They are then edited and played back at 9 p.m. over the station's powerful shortwave transmitters in Massachusetts.

Indication of the impact of these broadcasts is evidenced by Castro's recent comments against them over Havana radio. In addition, letters from Cuban listeners, testifying to a growing audience for these programs, are beginning to flow into the WRUL offices.

Beaming the truth to people who are denied access to it by government censorship is an old story to this 25-year-old station, which has become known as The Voice of Freedom.

As far back as 1940, WRUL was officially credited with being instrumental in saving 900 merchant ships from Nazi capture.

At that time the station, which has always had an extensive audience aboard ships at sea, broadcast to the Norwegian shipping fleet repeated warnings not to return to their Nazi-occupied home ports.

In 1941, this pioneer international station fed information behind the Nazi lines into the Balkans, with a view toward aiding democratic resistance units in Yugoslavia to spread truth to offset Nazi propaganda.

Following World War II, WRUL aimed programs at Italy, as part of a successful effort to keep Italy from going Communist in a critical national election.

Most recently, WRUL was effective in broadcasting to Latin America the truth about the Communist-inspired riots during the tour of Vice President NIXON.

WRUL was established in 1935 by Walter S. Lemon, president of the station, as a world radio university dedicated to the idea that a private broadcasting station could disseminate education to remote areas of the world by radio.

Approval of the sale of WRUL to the Metropolitan Broadcasting Corp., of New York, is pending before the Federal Communications Commission. The Metropolitan Broadcasting Co. now operates the following radio and television stations: WNEW and WNEW-TV, New York City; WIP, Philadelphia; WHK, Cleveland; WTTG, Washington; WTVH, Peoria; and KOVR, Sacramento-Stockton, Calif.

WRUL regularly beams, 7 days a week, to all of Latin America, including the Caribbean, Mexico, Central America, and South America, as well as to Western Europe and Africa. Programs are broadcast in English, Spanish, Portuguese, Norwegian, and Swedish.

Mr. President, I appreciate this opportunity to call the attention of the Senate to WRUL's important new program, which should be helpful in connection with projecting to the Cuban people the true story about the Cuban situation.

TWENTY-FIFTH ANNIVERSARY OF RURAL ELECTRIFICATION ADMINISTRATION

Mr. STENNIS. Mr. President, the Rural Electrification Administration will celebrate its 25th anniversary on Wednesday, May 11, 1960. This is truly a great occasion for a Government program which has become a symbol of rural progress. Almost 5 million farm families throughout our Nation enjoy the benefits and accomplishments realized under the REA. It is with great pleasure and enthusiasm that I join in paying tribute, during this silver jubilee, to one of the finest and most constructive programs enacted by Congress.

Mr. President, the local rural electric systems, authorized by the REA Act of 1935, are local organizations that build powerlines and provide electric service to farmers and rural areas. They are usually owned by the local people they serve; and, as a result, they are independent business organizations. Capital is borrowed from the Rural Electrification Administration, these interest-bearing loans are repaid to the Government on a regular schedule. Approximately $4 billion of loans to local systems have been approved by REA; and the repayment record is outstanding. As of December 1, 1959, more than $823 million in principal had been repaid, and approximately $397 million in interest had been paid.

The local system obtains its electricity for resale to farmers from private power companies, Federal agencies, and other suppliers. The purchase of electric energy by the REA has increased from 300 million kilowatt-hours in fiscal year 1940 to more than 21 billion kilowatt-hours in 1958.

Today, 96 percent of our farms have electricity, and the average farm uses more than 343 kilowatt-hours a month. Only 10 percent of our farms had electricity when the REA Act was passed in 1935; but today more than one-half of all farms which have electricity are served by the REA. Our American agriculture has actually been converted from the "dark ages" of 1935, when fewer than 11 percent of our farms had electricity, to the brighter years of today, when almost all farms are being served in this way. The REA reports that there are more than 450 ways to use electricity on farms.

In the case of our own State of Mississippi, only 2,802 farms had electricity in 1935. In 1959, 191,900 farms had this service, and 78.3 percent were served by the REA. We now have 53,512 miles of powerlines. Consumption per farm has increased from 40 kilowatt-hours in 1941, and 95 kilowatt-hours in 1950, to over 207 kilowatt-hours in 1958. This illustrates the increased use of electrical equipment on farms and in the home. The REA has given our farmers new hope and a better way of life. It has given added strength to our farm economy and our national economy.

The Rural Electrification Administration was given the new job of supervising rural telephone programs. This was authorized by Congress in 1949. The rural telephone program has the same basic features as does the REA program. Both are lending programs which require that the borrower repay principal and interest within an agreed period of time. We are proud of the record which has been established for repayment of telephone loans in Mississippi. These programs are sound, and they afford to our rural population a great service which would have been almost impossible without the assistance of the REA.

Mr. President, the relationship between private utilities and the REA in Mississippi has been good. Of course, there have been some differences of opinion; but, as a whole, these differences have been resolved. It is most encouraging that the objective and the ultimate aim of both the REA and the private utilities in my State have been to give the best possible service to their customers.

I am exceptionally proud of the REA systems operating in Mississippi. Here will be found dedicated managers and employees of outstanding ability and leadership. Their primary purpose is to serve farmers. Their foresight and their determination have been responsible for the record of progress made in rural electrification.

Mr. President, I should also like to point out that these outstanding members of the Boards of Directors of the REA serve without compensation. They have given unselfishly of their time and ability, and have made great contributions to the success of this program. They have furnished guidance, direction, and sound business judgment in the operation of the local systems.

As an example of the record of progress made by the REA, I point with pride to the East Mississippi Electric Power Association, which has served my own home county since 1939. It organized with a total of 342 members and with 30 miles of line, 5 employees, a plant investment of $40,232, and a total annual payroll of $1,412. In its first year of operation it distributed 269,783 kilowatt-hours. As of April 1960 the East Mississippi Electric Power Association has 3,257 miles of line in operation, serves 12,500 rural families, and distributed 48,147,346 kilowatt-hours in the past 12 months. It now has a plant investment of $6 million and an annual payroll of approximately $281,000. This is truly great progress, and is typical of the accomplishments being made by our REA systems in Mississippi.

Mr. President, the REA has greatly changed the living conditions of rural people, by bringing to them such necessities as running water, sanitary conditions, electric stoves, electric heating, refrigeration, motors for farm labor, milking machines, and refrigeration equipment for the sanitation of milk production and egg production. The REA has made modern farm living a reality.

There are many, many other ways in which electricity has lightened farm chores. In the years ahead we shall see new and better electric machines come to farms. Electricity will continue to make a more comfortable and more profitable way of life for our farm people. We can anticipate with confidence that the REA will rise to the challenge of meeting the growing farm demands for electricity. On this 25th anniversary I salute the Rural Electrification Administration for the truly great contribution it has made to agriculture and for the outstanding leadership which has made this progress possible.

USE OF OLD SUPREME COURT CHAMBER

Mr. STENNIS. Mr. President, may I inquire if there are other Senators who wish to have the floor for morning business? If so, I shall yield the floor to them. If not, I wish to proceed on another matter.

The PRESIDING OFFICER (Mr. DODD in the chair). Is there further morning business?

Mr. STENNIS. Mr. President, I have some morning business, I tried to make clear. I merely had the 3-minute limitation in mind.

Mr. President, for some time I have been concerned about the rather casual use of the old Supreme Court chamber. It serves as a place for parties, political meetings, banquets, committee hearings, and every other type of gathering any Senator may wish to assemble there. On inquiry, I have found that on May 28, 1934, the Senate passed Senate Resolution 193, which reads as follows:

Resolved, That the courtroom now occupied by the United States Supreme Court in the Capitol, when vacated by the Court, and the space below it formerly a part of the courtroom, shall be preserved and kept open to the public under such rules and regulations as may be prescribed by the Architect of the Capitol with the approval of the Committee on Rules of the Senate.

That resolution, although it could have been drawn a little more tightly, is positive, and states that the room shall be preserved and kept open to the public. Certainly, the minimum interpretation of the intent of the resolution is that the room was to be set aside, reserved, and preserved as a shrine.

So far as I have been able to determine, this resolution has never been repealed, so the use of this room for the purposes I have described is in violation of the resolution. The Supreme Court vacated the chamber on June 3, 1935, to occupy its new building, and I understand that for years the chamber was preserved and kept open for the public under the requirements of the Senate resolution.

I speak partly from personal knowledge, because, when I first had the privilege of becoming a Member of this body, that was the use for which this chamber was used.

Apparently, while the Senate Chamber was being reconstructed, the older room was used, as convenience required, and an unfortunate precedent was set for the use of the room by Senators and committees.

I believe that the old Supreme Court chamber should be restored immediately, refurnished, and preserved. I believe that it should be kept open to the public as provided in Senate Resolution 193.

Although the room is usually referred to as the Supreme Court chamber, it previously served as the Senate Chamber. It was in this room that Thomas Jefferson, our first President to be inaugurated at the Capitol, delivered his inaugural address and took the oath of office administered by Chief Justice John Marshall. Many other outstanding events of national importance transpired in this room. The Louisiana Purchase Treaty was ratified there in October of 1803. The Senate occupied the chamber during the War of 1812 and the Mexican War. It was here that the Monroe Doctrine was first read; and many historic debates by true statesmen of our country have taken place within the walls of this room.

It was primarily in that room that Clay, Calhoun, and Webster engaged in their famous debates, sometimes with each other, sometimes with other Senators. It was in that room that Jefferson Davis first served as a Senator from my State. He later served in this Chamber.

Mr. President, I ask unanimous consent that I may speak for 3 additional minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. STENNIS. Mr. President, it is true that the Supreme Court occupied the room for some 75 years. During this time many great judicial decisions were handed down which have affected the course and growth of our constitutional law. It was here that the electoral commission in February of 1877 pronounced the election of Rutherford Hayes as President in the greatest Presidential contest we have ever experienced. Jury trials were held in this room in cases where the Supreme Court had and recognized original jurisdiction.

The chamber was designed by Benjamin Latrobe after the model of a Greek theater. A balcony overlooked the chamber, and it was here that the press for the first time had space reserved for independent reporting of Senate deliberations on matters of national importance.

There, perhaps more than in any other one spot, grew the present proper recognition of the place of the press in reporting the daily debates and the administration of our affairs.

I have asked the Architect of the Capitol to estimate the cost of restoring and refurnishing the chamber. This estimate is in the process of preparation. It appears likely that the total cost of restoration of this chamber will be upward of $50,000, according to the plan adopted. It seems to me that we should make full restoration and that this is small cost indeed for preservation and restoration of a national shrine in which all Americans take great pride.

Mr. President, when I say "restoration," I mean restoration of the chamber as it originally was, according to the idea of the Senator from Mississippi, when it was a Senate Chamber, with the balcony restored, and with the restoration of at least some of the furniture.

I would hope that plan would include something more than an ordinary door space, so the public might partly enter, so the room would be fenced off and the floor space would be kept intact.

I have not conferred with him this morning, but I know the Senator from Arizona [Mr. HAYDEN] is very much concerned about this matter, and has raised the point on more than one occasion, and has directed the Sergeant at Arms and others to make special inquiry as to the present situation and possible plans for the future. I am certain he joins in the sentiments of my remarks although I am not expressly authorized to attach his name to what I have said.

I believe this is a matter of the gravest concern to every Senator and to every citizen. This room is a shrine of patriotism, if I may say so, and also a shrine of culture. With all due deference to everyone who may be concerned, the present use, purpose, and practice going on in that room are in degradation of our American culture, when we, particularly in a day of materialism, ought to be taking constructive steps to expand and exalt any concept or feeling that may elevate the patriotism, culture, and other deep, finer feelings of our people. This is especially so in view of the fact that hundreds of thousands of young people, most fortunately, visit the Capitol. They are the ones who will carry on this great Nation in the future.

Mr. KEATING. Mr. President, will the distinguished Senator yield?

Mr. STENNIS. I am glad to yield to the Senator, but I fear I have taken too much time already.

Mr. KEATING. Mr. President, I ask unanimous consent that we may have 1 additional minute.

The PRESIDING OFFICER. Is there objection to the request of the Senator from New York? The Chair hears none, and it is so ordered.

Mr. KEATING. Mr. President, I am very glad that the distinguished Senator from Mississippi has invited attention to this matter. I must confess I have attended functions in the room, as have most other Members of the Senate. I have, confessedly, been at some functions at which I have shared some of the misgivings of the distinguished Senator.

This is a historic room, a room which is really one of our greatest traditions of this country.

As a member of the Committee on Rules and Administration, I assure the Senator that at the next meeting I shall be glad to bring up the matter and to invite attention to the remarks which the Senator has made. I think this should be considered very seriously by our committee.

Mr. STENNIS. I thank the Senator very much for his remarks. I wish to emphasize again that my remarks are not directed at any individual or any Senator. We are all guilty. It is collective guilt. We have let this happen by degrees.

This room is a very convenient place to have committee meetings and conferences, but we now have space in the New Senate Office Building and we shall have additional space in the Capitol itself. I think we can do without the space provided by this room.

I believe the resolution, Mr. President, would represent an authorization of some special appropriation, if we have Senate support, in the legislative appropriation bill, in an amount which would at least start the restoration, should that be the will of the Senate.

Mr. President, I yield the floor.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. LAUSCHE in the chair). Without objection, it is so ordered.

NATIONAL SCIENCE FOUNDATION

Mr. JOHNSON of Texas. Mr. President, today, May 10, is an auspicious occasion. It is the 10th birthday of one of our most important Federal agencies—the National Science Foundation. This Foundation was the outgrowth of the outstandingly successful World War II Office of Scientific Research and Development and the vision and efforts of the brilliant director of that group, Dr. Vannevar Bush. Many of you will remember the legislative pangs that we went through in passing this act, but no one will remember this more vividly, I am sure, than my distinguished colleague from Washington, WARREN MAGNUSON, who played such a crucial role and worked so diligently to bring the NSF to fruition. This is only one more example of the farsightedness so consistently shown by my distinguished friend.

Those of you who have had the good fortune of listening to testimony in the last 2 years in connection with our missile and space programs, will know only too well the importance of science to our well-being and our lives. Never, since Sputnik I, have we had so forcefully brought to our attention the truly critical nature of our scientific capabilities and attainments. Rarely have we become so quickly aware of how essential it is to educate our children and our people in the ways of the 20th century.

The National Science Foundation fulfills a fundamental role in our scientific efforts. More specifically, it helps to watch over and guide our efforts in the important areas of basic research. Basic research is, for the most part, strange and incomprehensible to the layman. It may lead to no practical return whatsoever. But it is—as the name implies—basic. Basic to all increase of knowledge and therefore the foundation rock of all future progress. In this third year of the space age, this is something that we cannot ignore.

The National Science Foundation has grown rapidly in 10 years. Much of the credit for this growth must go to Dr. Alan T. Waterman who has been its Director since the beginning.

Mr. President, I should like to request unanimous consent to place in the RECORD at this point an article entitled "National Science Foundation, a Ten-Year Résumé," written by Dr. Waterman, which appeared in Science for May 6, 1960, and which carefully describes the history of the NSF's first 10 years of operation. No one knows, of course, what the future holds, but I am sure that the next 10 years of the National Science Foundation will be even more auspicious than the first 10.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONAL SCIENCE FOUNDATION: A 10-YEAR RÉSUMÉ—ITS OBLIGATIONS IN SUPPORT OF RESEARCH AND TRAINING AND IN EVALUATING NATIONAL SCIENCE POLICY HAVE MULTIPLIED

(By Alan T. Waterman, Director, National Science Foundation)

The National Science Foundation's first 6 years were analyzed with scholarly thoroughness by Dael Wolfle in Science in 1957.[1] I shall not attempt to review the factual data concerning the organization and operations of the foundation that are given in detail in his article. I shall take up the narrative essentially where he left it, at the beginning of fiscal year 1958. Whatever I have to say concerning the earlier period will be from the special point of view of one who has been intimately involved in shaping the Foundation's policies and operations during its formative years.

As visualized by Vannevar Bush in "Science, the Endless Frontier," and as defined by Congress in the National Science Foundation Act of 1950, the Foundation has two distinct sets of functions; one relates to the support of research and education through grants, fellowships, and other means, and the second involves the development of national science policy and the evaluation and correlation of the research activities of the Federal Government, as well as the correlation of its own program with those of other agencies, both public and private. There is a degree of difficulty in reconciling these two functions, because in planning and operating a research-support program the Foundation becomes to some extent an interested party with respect to the policy prescribed. Congress obviated this situation somewhat by denying the Foundation authority to perform research or to establish its own research laboratories.

In the first or operational category, planning and execution have been reasonably straightforward. Early in its history the Foundation adopted the grant as being the most flexible and effective means of support for basic scientific research. In the field of education it was decided that the graduate fellowship was the device that would produce the most immediate results in terms of trained manpower. Within the budgetary limits imposed by Congress, the Foundation immediately launched a graduate fellowship program and a research-support program which embraced all the natural sciences and, later, selected areas in the social sciences.

The policymaking functions, as well as the evaluation functions prescribed in the act were less susceptible of immediate and specific action, for reasons Wolfle pointed out.

In "Science, the Endless Frontier," Bush had visualized that a National Research Foundation would be the principal, if not indeed, the sole, point of reference for Federal support of basic or uncommitted research in the postwar period. In view of the brilliant success of the wartime Office of Scientific Research and Development, this was a logical plan for taking care of the Nation's research needs in science. So urgent were these needs, however, particularly in the mathematics, science, and engineering departments of universities, and so urgent was the Nation's need for scientific research that the provision of Federal support could not await the outcome of the 5-year congressional debate over legislation to establish the National Science Foundation.

The foresight of Secretary of the Navy Forrestal in establishing the Office of Research and Inventions—which in 1946 became the statutory Office of Naval Research made it possible for the Navy to provide critically needed support for basic research at universities. This program was followed in short order by the programs of the Federal Security Agency, notably those of the U.S. Public Health Service and the National Institutes of Health, and those of the Atomic Energy Commission. When the National Science Foundation began to operate in 1951, initial policy had been formulated and active support of science was under way; and as a result there was pressing demand for (i) impartial support of basic research and training unrelated to such practical missions as defense and health and (ii) supervision, coordination, and policy determination among the growing and splintered research-support programs of the Federal Government.

Equipped with a broad charter, a limited but growing staff, and an operating budget of $3.5 million, the new Foundation found itself under pressure almost immediately to start performing policymaking and evaluation functions. In addition, of course, it was expected to launch, as early as possible, programs in support of basic research and education in the sciences.

DEVELOPMENT OF NATIONAL SCIENCE POLICY

In this situation, the National Science Board and the Director sought to define more specifically the role of the National Science Foundation in relation to other agencies. After extensive conferences between National Science Foundation staff members and the Bureau of the Budget and other agencies, the Foundation made a series of recommendations which were incorporated in Executive Order No. 10521 of March 17, 1954.[2] The order states that the Foundation "shall * * * recommend to the President policies for the promotion and support of basic research and education in the sciences, including policies with respect to furnishing guidance toward defining the responsibilities of the Federal Government in the conduct and support of basic scientific research."

The order further directs that the Foundation shall be increasingly responsible for the support of general-purpose basic research but recognizes also the importance and desirability of having other agencies conduct their special basic research in fields closely related to their missions. The Foundation is not expected to have responsibility for the applied research and development program of other agencies; each agency is accountable for the scope and quality of its development efforts.

The Executive order of March 13, 1959 (sec. 6(b)) further clarified the Foundation's role as applying only to basic research. Within this more specialized framework, the Foundation has been steadily formulating national science policy in the course of day-to-day operations, frequently on the basis of agreement and understanding with other agencies. Those who insist that policy must

[1] D. Wolfle, Science 126, 335 (1957).

[2] This executive order was later amended by Executive Order 10807, Mar. 13, 1959.

be handed down ready made in the form of a proclamation or edict do not understand the nature of policy in the realm of science. To be workable, policy must evolve on the basis of experience; further, it must take fully into account the fundamental principles essential to the effective performance of research in science.

In carrying out its obligations regarding the development of national science policy, the Foundation started from the premise that, in the broadest sense, national policy for science is a matter primarily to be determined by the scientists themselves. The scientists of the country are unquestionably the ones most capable of deciding what is best for progress in science, in the true meaning of the word. Policy in this sense should not be masterminded by the Federal Government or any single agency.

The Foundation has advocated, and has itself adopted, the fairly general Federal policy of providing support to basic research after consultation with leading scientists in their respective fields. This would appear to be the most direct way in which progress in science in the country can be determined by the scientists themselves. It is the method that is favored by the majority of working research scientists. In carrying out this policy, a given Federal agency interjects its own interests and priorities.

In further development of science policy, the Foundation's approach has been to examine particular issues and to develop recommendations through a variety of techniques and devices, as follows:

1. The establishment of a special committee, followed by the issuance of a report. The principal example here is the Foundation's study, through two different committees, of the problems of Government-university relationships. This study availed itself of the assistance of outside individuals and groups, the Foundation staff, members of the National Science Board, and representatives of other Government agencies. Another example is the work of the Foundation's Special Commission on Rubber Research, which made recommendations on the role of the Government with respect to basic research in this field that were approved by both the President and Congress.

2. Preparation of special reports on particular subjects—for example, the Foundation report on "Basic Research—A National Resource" (1957).

3. The use of experimental programs by the Foundation as a means of acquiring information and experience to provide a basis for policy recommendations. The various experimental programs in science education, such as the Physical Sciences Study Committee, are examples of this approach.

4. Conduct of studies and issuance of reports upon request of the Executive Office of the President. The Foundation's report on the role of the Federal Government in international science, its report on Federal support of research facilities, and its recommendations regarding payment of indirect costs were prepared at the request of the Executive Office of the President.

5. Sponsorship of legislation on particular problems. An outstanding example is the successful Foundation sponsorship of legislation to extend to all agencies of the Government the authority to make grants for the support of basic research and the authority to vest title to research equipment with educational institutions. In this and other similar administrative policy matters the Interdepartmental Committee for Scientific Research and Development was helpful.

In 1959 the Foundation compiled a list of some 50 science-policy items of a governmentwide, national character that it has recommended or stressed. Drawn from a variety of public statements and published reports, these include: (i) The need for increased support of basic research; (ii) the need for increased opportunities and funds for basic research at Federal laboratories; (iii) greater stability and continuity in Federal support of basic research at universities; (iv) the need for diversity of sources of support of basic research in the Federal Government and need for basic research in support of development; (v) avoidance, to the extent possible, of large classified developmental undertakings by the Government at colleges and universities; (vi) payment of full indirect costs of federally sponsored research at universities and colleges; (vii) reasons for questioning the advisability of establishing a Department of Science and Technology; (viii) policy concerning loyalty of investigators on basic research grants.

Studies in support of policy: As background data for its own research programs and for policy formulation concerning the role of the Federal Government in the support of science, the Foundation established a continuing series of studies of the nature and extent of the national effort in research and development. Comprehensive surveys are made of the research and development effort of colleges and universities, and other nonprofit institutions and of industry. Initiated for the year 1953–54, these surveys measure research and development in terms of (i) dollars expended, (ii) professional personnel employed, and (iii) apportionment of effort between basic research, applied research, and development. With 1953–54 as the base year, future surveys will afford data to indicate trends and for other analytical purposes. These surveys are in addition to the Foundation's analyses of the support of research and development by Federal agencies, published annually in "Federal Funds for Science." The whole series carries out the Executive order "to make comprehensive studies and recommendations regarding the Nation's research effort and its resources for scientific activities."

Questions are sometimes raised concerning the value of attempting a breakdown of research and development activities in this way. The objection is made that in the pursuit of specific objectives—as, for example, by technical industries—the planning and execution involve all three categories in close coordination. Furthermore, individuals are often found who can participate effectively in all three areas. The latter are in much demand as project leaders and administrators of Government and industrial research and development.

The Foundation believes that study of these categories is warranted for a number of reasons. Leaders in science and technology feel generally that more basic research could profitably be performed by Government and by industrial laboratories. Similarly, scientists and educators have questioned the extent to which universities should engage in applied research and development, outside of certain areas such as engineering, medicine, and agriculture. Furthermore, it is desirable in any intelligent planning of science and technology to identify students with special aptitudes and to insure that such aptitudes are properly taken into account in the individuals' career plans. But by far the most important consideration is the need to emphasize the importance of basic research itself.

Under the increasing pressure to undertake and perfect critical developments in order to attain national or economic objectives, the emphasis is certain to be on the applications of science, particularly in view of budgetary and manpower limitations. **Therefore, unless a determined effort is made to support basic research, developments will inevitably be undertaken prematurely, career incentives will gravitate strongly toward applied science, and opportunities for making major scientific discoveries will be lost.** Unfortunately, pressures to emphasize new developments, without corresponding emphasis upon pure science—that is, basic research—tend to degrade the quality of the Nation's technology in the long run, rather than to improve it.

Under these circumstances the need for study and analysis of the facts is obvious.

EVALUATION OF RESEARCH PROGRAMS

A problem that matches in complexity the policy function is that of evaluation. The National Science Foundation Act makes the Foundation responsible for the evaluation of scientific research programs undertaken by agencies of the Federal Government and for a correlation of the Foundation's scientific research programs with those undertaken by individuals and by public and private research groups. The Foundation has consistently pointed out, however, that it is unrealistic to expect one Federal agency to render judgment on the overall performance of another agency or department.

The Foundation has chosen, instead, to approach the problem through close liaison and exchange of information with other science agencies. The idea is to gain a comprehensive idea of the Federal programs and overall support of fields of science such as physics, mathematics, and biology. The adequacy of Federal support in each field may thus be considered. This procedure is implemented by the general technique of basing research support upon selection among applications or proposals received. By these measures the Foundation has endeavored to identify areas that are receiving inadequate support or which require attention for other reasons.

It was discovered, for example, that systematic biology and, more recently, inorganic chemistry were being inadequately supported. Word that the Foundation would be receptive to proposals in the fields of systematic biology has resulted in the rescue of this field from comparative neglect, and in all likelihood the same results will obtain with respect to inorganic chemistry.

Another example will serve to illustrate this point. A few years after the close of World War II, both the Office of Naval Research and the Atomic Energy Commission were providing considerable support to research on low-temperature physics. When the time came that neither agency felt justified in continuing its support at the existing level, the Foundation agreed to take over the major support of research in low-temperature physics.

CRITICAL AREAS OF SCIENCE

A related matter that will call for increasing attention on the part of the Federal Government and other sources of support for research and development is the question of special emphasis on particular areas of science. The issue frequently arises in determining critical areas or, from another point of view, in identifying gaps. In all developmental work, and in the search for areas of application, the importance of priorities of time and effort is an accepted fact. In pure science, the word priorities is inappropriate and misleading. No field of science can properly be said to have priority over other fields, as science. However, at a given time, in a particular field of science, it is common to find special lines of inquiry that for the moment are making rapid progress or other lines of inquiry that are meeting difficulty. These considerations can be, and indeed are, taken into account both by individual research scientists and by research agencies concerned in research support. **Thus, at any time there may develop what might be termed "critical areas" that it is currently important to foster. If the urgency**

is great, a conference on the subject may be in order, or possibly a thorough study undertaken to ascertain what special facilities, equipment, or training may be needed to encourage progress in the field. These are well-known techniques, in common use. It seems evident that, in years to come, increasing attention will be required along these lines, since there will undoubtedly be a tendency for groups of scientists to present for support plans and programs that represent their collective thinking. Agencies that provide support will then have to evaluate the needs of different groups in the light of current available information and knowledge—and funds. However, the existence of special patterns for critical areas should not be allowed to alter the view that support of research, across all fields of science, should be carried on on a continuing basis.

NEW MECHANISMS AND AGENCIES

The tasks of policymaking, evaluation, and coordination have been further clarified by the establishment of new mechanisms and agencies that did not exist at the time Dael Wolfle's article appears in 1957.

In the fall of 1957, after the launching of the first Russian sputnik, President Eisenhower called for redoubled efforts in science and technology, and steps were taken to strengthen the Government's leadership with respect both to science and technology and to education in the sciences. The position of special assistant to the President for science and technology was created. The President's Science Advisory Committee was expanded and strengthened and undertook at once a series of studies covering significant aspects of the Government's relationships to science, technology, and education.

The science activities of the Department of State, which had been allowed to lapse, were revived. A science adviser to the Secretary of State was appointed, and science attachés were again placed in key diplomatic posts.

Finally, in response to recommendations of his Science Advisory Committee, the President signed an Executive order, in March 1959, establishing the Federal Council for Science and Technology, to promote closer cooperation among Federal agencies in planning their research and development programs and to recommend ways in which the Federal Government can assist in advancing and strengthening the Nation's scientific efforts as a whole. Represented on the Council are the Departments of Defense, Interior, Agriculture, Commerce, and Health, Education and Welfare; the National Science Foundation; the National Aeronautics and Space Administration; and the Atomic Energy Commission. Representatives of the Secretary of State and the Director of the Bureau of the Budget attend as observers.

Thus, at the present time we have the following pattern: the National Science Foundation, with its National Science Board, has the primary responsibility for dealing with policy concerning Federal support of basic research throughout the country. The Federal Council for Science and Technology deliberates on matters of policy and program coordination and future planning among Federal agencies and makes recommendations to the President. The President's Science Advisory Committee, comprising nongovernmental scientists and engineers, considers important scientific and technical matters in relation to Government policy, with special reference to national security. The special assistant to the President for science and technology is available to the President at all times for advice or counsel on a wide range of scientific and technical matters.

RATE OF OVERALL GROWTH

During the first phase of its operations the National Science Foundation was occupied with its own structure and staffing, with the definition of its functions and responsibilities, and with providing a firm foundation for its two major programs—research support and education in the sciences. From the beginning it has also been steadily involved in policy determination both for itself and in terms of Federal support of science.

During its first 5 years the Foundation's appropriation climbed slowly from an initial $3.5 million for the first year to $16 million for the fifth year, fiscal year 1956. In the second half of the decade there has been a marked upswing in appropriations, from $40 million in fiscal year 1957 to the current level of $152,773,000 (see table 1).

TABLE 1.—*Total appropriations and obligations of the National Science Foundation for fiscal years 1952–60 (to the nearest thousand dollars)*

[Thousands of dollars]

Field	1952	1953	1954	1955	1956	1957	1958	1959	1960
Appropriations	3,500	4,750	8,000	12,250	16,000	40,000	49,750	[1] 136,000	[1] 154,773
Obligations: [2]									
Development of graduate laboratories									2,000
Biological and medical sciences:

[3] Feasibility study for astrograph.

In connection with the growth of appropriations, note should be taken of the perspicacity of Congress in endeavoring to strengthen the programs in education in the sciences at least 2 years before launching of the Russian sputnik. In the summer of 1955 the Foundation published a National Research Council study, "Soviet Professional Manpower," which drew sobering comparisons between the rates at which the United States and the Soviet Union were training scientists and technical manpower. Largely as a result of these findings Congress markedly increased the Foundation's funds for education in the sciences. The total appropriation for fiscal year 1957, $40 million, was more than double that for the preceding year.

During the 10-year period since it was established, the Foundation has successively outgrown three locations in Washington: a private residence (901 16th Street NW.), a former school (2144 California Street), and the old Cosmos Club at H Street and Madison Place. Its present headquarters, 1951 Constitution Avenue, became overcrowded almost as soon as the Foundation moved in. Additional space has recently been acquired at 528 23d Street NW., and it is expected that further expansion will be necessary.

SUPPORT OF RESEARCH FACILITIES

With increased appropriations, the Foundation has been able to expand its activities in areas that have long needed attention and for which it had previously lacked funds. One of the first areas to claim its attention was the need for basic research facilities. In response to a request from the Bureau of the Budget in 1956, the Foundation undertook a study of the subject and published its findings in a report of June 1957, "Federal Support of Physical Facilities and Major Equipment for the Conduct of Scientific Research." The study pointed out that basic research today increasingly requires the use of large, complex, and expensive research tools. Although Government expenditures for research facilities since World War II have run into the hundreds of millions of dollars, for the most part these have been committed to practical research and hence have been available only to a small degree for purposes of basic research.

Traditionally, universities and other private research organizations have provided needed research tools from their own funds or from funds available from State or local sources. Now, however, the need for such

major equipment as nuclear reactors, high-energy particle accelerators, high-speed computers, and radio and optical telescopes is too great to be met from such local resources or even from the combined resources of several institutions. The report concluded that if American science were to advance at a satisfactory rate, Federal support of needed facilities would have to be provided.

In embarking upon a program in support of facilities, the Foundation has recognized that each case must be judged on its individual merits. It is difficult to establish criteria that would be applicable in all cases. Factors taken into consideration include the urgency of the need, the national significance of the development, the availability of adequate personnel, and the degree and character of local backing. Recipient institutions are encouraged to participate financially to the extent possible. The Foundation has also recognized that in some situations the Federal Government must continue to supply funds for operation and maintenance, in addition to funds for construction.

The Foundation is presently supporting two major facilities in astronomy, the National Radio Astronomy Observatory at Green Bank, W. Va., and the Kitt Peak National Observatory at Tucson, Ariz. Both of these projects were undertaken only after intensive studies by astronomers extending over a period of several years. Determination of the types of facilities and instruments needed was followed in each case by exhaustive search for suitable sites.

Other facilities being supported by the Foundation include biological field stations, construction of an oceanographic research vessel, university computing facilities, university nuclear research equipment, and facilities needed to expand research in the atmospheric sciences.

Closely related to the facilities program is the recent graduate laboratory development program, under which the Foundation provides funds on a matching basis for the modernization and equipment of research laboratories. Studies of the situation indicate that the graduate-level research laboratories of the Nation's universities are obsolescent to a degree that is detrimental to the national basic research effort. The financial straits in which most of our institutions of higher learning find themselves make it impossible for them to provide modern, well-equipped laboratories entirely out of their own funds.

This program was initiated in a modest way in fiscal year 1960 in the amount of $2 million. The budget for fiscal year 1961 provides for a substantial increase in the support level for this area.

RESEARCH SUPPORT

The increases in the Foundation's appropriation are reflected in the research support program in several ways. First, and most obvious, is the growth in the total number of grants awarded, growth in the percentage of proposals supported, and increases in the amount and duration of the average grant (see table 2). In fiscal year 1952 the Foundation was supporting 8 percent of all proposals received, for a total of $1.074 million. In the current fiscal year, support is provided for 26 percent of the proposals received, for a total value of $57.819 million. In 1953, the average grant was $10,300, for an average period of 1.9 years. In 1960, the average grant was $30,500, for an average period of 2.3 years. These figures indicate that the Foundation, with its increased funds, is able to support individual projects more fully than before and that greater stability in support is being achieved through a gradual increase in the life of the average grant. It should be noted, however, that if the funds available for the support of research have risen, so too has the demand. To date, the Foundation has not been able to support more than one-third of all the meritorious proposals received.

TABLE 2.—*Comparison of research proposals considered and supported in the biological and medical sciences: mathematical, physical, and engineering sciences; and social sciences (weather modification and antarctic research not included)*

Fiscal year	Proposals for research grants		Percentage of support	Average amount of grants awarded	Average life of grant
	Considered	Supported			
	Thousands	*Thousands*			*Years*
1952	$13,300	$1,074	8.0	$11,156	1.9
1953	17,478	1,813	10.4	10,540	1.9
1954	27,159	3,999	14.7	11,100	2.5
1955	38,046	7,855	20.6	13,350	2.7
1956	54,133	9,493	17.5	13,641	2.1
1957	78,318	14,979	19.1	14,934	2.1
1958	126,500	18,630	14.7	17,000	2.1
1959	179,671	43,644	24.3	25,900	2.3
1960	221,118	57,819	26.1	30,500	2.3

Up to the present, support for basic research has been divided approximately equally between the mathematical, physical, and engineering sciences and the biological and medical sciences, but beginning with 1960, the balance is weighted somewhat on the side of the physical sciences.

Support for basic research in the social sciences, initially divded between the two natural science divisions, began at a very modest, experimental level below $50,000. In 1958, the program was given the status of a separate program, and support was at the level of $725,000. At the end of 1958, the National Science Board approved the establishment of an Office of Social Sciences, and in the current year support has risen to $1.6 million. Only those projects are supported that are susceptible to scientific approach and that are truly fundamental in character.

Thus, the Foundation is prepared to support research of this type in such fields as archeology, economics, philosophy of science, linguistics, social anthropology, demography, history of science, and social psychology.

Methods of research support: The general pattern under which Federal agencies support research at institutions outside the Federal Government, particularly universities, originated with the Office of Scientific Research and Development during the war and provided the means whereby the Federal Government could benefit from important research carried on outside its own laboratories. The principle was developed and expanded by the Office of Naval Research and the National Institutes of Health after the war and adopted by other agencies, such as the Army, Air Force, and Atomic Energy Commission.

Briefly, the method is this: The Government encourages or invites research proposals from individuals or groups of scientists, submitted through their institutions. With the help of individual reviewers in the field involved and of advisory panels appointed by the agency for this purpose, the Federal agency selects for support those that are judged to have the greatest scientific merit. The Foundation also has statutory divisional committees for overall review of programs in the three major areas of life sciences, physical sciences, and scientific personnel and education, and a recently appointed committee to operate in similar fashion for these social sciences.

Incidentally, the Foundation's efficiency in acting upon grants has been considerably enhanced by the congressional action last year in amending the National Science Foundation Act to permit the Board to delegate authority to the director and its executive committee to approve grants and contracts in certain situations. The delegation of authority has since been implemented by Board action.

The so-called project method of research support has a number of advantages. Properly interpreted, the plan is flexible and may be applied to narrowly defined problems in science or to broad areas. It enables the Government to move in freely with the support needed for promising and significant undertakings of current interest. It provides for a national program in the sciences, utilizes the advice of the scientists in each field, and is based upon the significance and merit of the research proposed and the competence of the investigators. Since each grant and contract requires the official endorsement of the investigator's institution, the plan has evolved with the concurrence of the Nation's universities and has had a most important indirect effect in helping to strengthen such institutions. In fact, such aid has often been of critical importance, particularly for the smaller schools.

The chief drawbacks of this method of research support are its failure thus far to provide full indirect costs and the difficulties it creates in departmental administration. It has also been criticized on the grounds that the reviewing process is slow and that the resulting program is too conservative.

In reply to these criticisms it can only be said that the slowness of the process is the price one pays for operating on the basis of consultation and advice, rather than masterminding the system from Washington. Probably it is offset by the great advantage of having the Nation's scientific research and development problems widely understood by scientists as they participate in the solution of these problems. If the final results are conservative, it is because groups in general tend to become conservative; but each agency, including the Foundation, is responsible for guarding against the conservatism that is apt to result from too much committee advice.

Breadth in project support: With the increased sums available to it for support purposes, the Foundation is now able to make more grants of the broader type, often cutting across two or more departments of a university.

Some of the recent grants in this category may be of interest. A $700,000 grant awarded to the University of Pennsylvania will further research being conducted by Britton Chance, director of the Johnson Foundation for Medical Physics, which applies concepts of chemistry and physics to the biological problem of regulation of metabolism within the cell.

A study of the slavemaking behavior of ants and its populational consequences is one part of a broad program of "Thesis Research in Population Ecology" being directed by Thomas Park of the department of zoology of the University of Chicago. The Foundation will contribute support to the extent of $46,700 for the 3-year period.

Scientists at the Massachusetts Institute of Technology will undertake a concerted attack upon the problem of the production and nature of plasmas. Included are studies on gaseous electronics processes, plasma statics, magnetohydrodynamics of compressible and incompressible fluids, ionospheric physics, and some branches of astrophysics. This program, which is under the direction of William P. Allis, is being supported by the Foundation with a 3-year grant in the amount of $932,000.

In the field of solid-state physics, Massachusetts Institute of Technology has undertaken a large interdisciplinary program centered about a better understanding of the

nature of low-temperature phase transitions. Several departments will participate in this project, which is being supported by the Foundation at a level of approximately $400,000 for a 2-year period.

Two major projects in atmospheric physics will operate on similar lines. At Harvard the Foundation is supporting a program of atmospheric studies in the general area of physics, applied physics, and applied mathematics. The purpose of the program is to build a small, competent group of workers to engage in aspects of atmospheric study that can be advantageously treated by deductive scientific methods. The ultimate hope is that students trained in the disciplines of physical science will regularly enter the field. The work is under the direction of Richard M. Goody and is being supported by the Foundation for a 3-year period at the level of $172,000. At the University of Chicago advantage is being taken of the presence of a group of cloud physicists to establish a program of cloud-physics research dealing with the water resources of clouds. The research covers all the factors believed to be important in precipitation mechanisms. The Foundation grant for this program is $383,700 for a 3-year period.

TABLE 3.—*Distribution of funds for education in the sciences by major program for the period 1952–60, inclusive*

Major program	Obligations (millions)	Percentage of total obligations
Institutes	$89.8	51.2
Fellowships	43.3	24.9
Special projects in science education	21.2	12.1
Course content improvement	13.5	7.7
Scientific manpower	3.0	1.7
Other obligations	4.6	2.6
Total obligations (1952–60)	175.4	100.0

Institutional grants for research: The fact that Federal agencies have based their support of research at educational institutions on the principle of grant or contract for a particular research project judged primarily on its scientific merits has led to an increasing lack of flexibility among university science departments in the planning and administration of their own research. As an experimental approach toward a solution of this problem, the Foundation is planning to initiate institutional grants to aid institutions in fulfilling their responsibilities for developing and maintaining sound, well-balanced programs of scentific research and research-training activities without precisely specifying what activities are to be undertaken with the funds. The amount of such grants allowable to a particular institution for a given year will be 5 percent of the payments to that institution through basic research grants from the Foundation during the preceding year. Such institutional grants would be made on request and without requiring a prior statement regarding the use of the funds by the institution. A report on how the funds were used, however, would be requested. The proportion of research funds distributed by the Foundation for research purposes among all types of institutions will not be changed by this plan; the plan is designed to allow each institution to exercise a greater degree of initiative with respect to its needs in scientific activities.

PROGRAMS FOR EDUCATION IN THE SCIENCES

Between the time of passage of the National Science Foundation Act of 1950, and the end of fiscal year 1960 the Foundation's Division of Scientific Personnel and Education will have obligated an estimated $175 million for the support and administration of programs directly related to the improvement of education in the sciences.

These programs have been directed toward the solution of problems in the following four broad categories: (i) support of students of science, mathematics, and engineering, including support of students at graduate levels and above, and support of programs for students at the undergraduate level and below; (ii) aid to teachers of science, mathematics, and engineering, including teachers of science and mathematics at the secondary school level and below and teachers of science, mathematics, and engineering at the college level and above; (iii) the content of science courses; and (iv) public understanding of science.

Approximately half of the available funds has been used for the training of secondary school teachers of science and mathematics. The next largest share—about one-fifth of the total—has been used in programs for the training of students at the graduate level and above, primarily in the fellowship programs. About one-fourth of the funds has been used in programs for students at the undergraduate level and below, for course content improvement, and for the training of college teachers.

The primary objective, toward which all the program activities in science education are directed, is to insure an adequate supply of competent scientists and engineers by maintaining a high level of excellence in science education in the face of expanding enrollments, rapid changes in science itself, and the growing need for the products of scientific research and development. The demands upon the educational system have been growing faster than they can be met through the traditional processes. Extraordinary methods, therefore, have had to be developed to assist the educational system in the solution of its problems.

In developing its various programs in education in the sciences, the Foundation has been guided by certain broad principles. Its first responsibility has been to work with the ablest people concerned with improving education in the sciences in defining problems to be solved and in seeking solution to these problems. All decisions with respect both to broad programs and to specific grants are made on the basis of continuous consultation with members of the scientific and educational community. The Foundation is concerned with the substance of science, mathematics, and engineering, and its programs are designed to encourage the leading scholars in these fields to take an active part in seeking solutions to problems which bear on the improvement of subject-matter instruction. The Foundation has had constantly before it the accepted American principle of local control of education and has observed this principal in its operations. Other Federal agencies, universities, private foundations, and industrial organizations are also concerned with education in the sciences and are working toward the same goal. It is our hope and objective that the activities of these several groups may supplement each other in a constructive way.

Let us consider briefly the principal Foundation programs under the Division of Scientific Personnel and Education. These include fellowships, institutes, special projects in science education, public understanding of science, course-content improvement, and scientific manpower.

The fellowship program: The fellowship program is the oldest support program of the Foundation. It was inaugurated in 1952 by the predoctoral and regular postdoctoral programs with a budget of $1.4 million—almost half the Foundation's appropriation for that year. As new needs have become apparent, additional programs have been added: in 1956, the senior postdoctoral program; in 1957, the science faculty program; in 1959, the cooperative graduate teaching assistants, and secondary school teachers programs. By the end of fiscal year 1960, approximately $43 million will have been used for support of graduate students and advanced scholars through these seven fellowship programs. After awards have been made for 1960, an approximate total of 13,000 graduate students and advanced scholars in science, mathematics, and engineering will have received awards, from among about 50,000 applications.

It should be noted, also, that the high standards of selection for Foundation fellowships have resulted in widespread interest in the applicants, with the result that many of the unsuccessful applicants for Foundation fellowships have received awards from other sources. This is particularly true in the case of applicants included in the honorable-mention lists published by the Foundation each year.

The institutes programs: The institutes programs were inaugurated in 1953 with two experimental projects for college teachers—one in mathematics at the University of Colorado and one in physics at the University of Minnesota. In 1954 the experiment was broadened somewhat to include high school teachers. In 1956 the academic year institutes program for high school teachers started with two institutes—one at Oklahoma Agricultural and Mechanical College and one at the University of Wisconsin; and in 1959 a similarly limited and experimental program was started for college teachers. The inservice institutes were inaugurated in 1957 for high school teachers and in 1959 for elementary school teachers.

During this overall period there has been rapid growth in the funds available for the institutes and subsequently in the number of institutes that could be provided. Because of the special interest of Congress in improvement opportunities for high school teachers of science and mathematics, in recent years a substantial percentage of the funds available for education in the sciences has been devoted to the institutes programs. The high point was in 1957, when the institutes accounted for 65.6 percent of the total program. With the large general increase in appropriations and the adjustment of program support, however, the share of total funds for institutes has declined currently to 51 percent, which brings it more nearly in balance with other programs. By the close of 1960 some 72,000 teachers will have participated in these programs.

It is still much too early to be able to make a valid assessment of these programs, but it is cause for some satisfaction that through this means a significant proportion of the secondary school teachers of science and mathematics will have had some opportunity to become informed about current trends in their fields, as well as an opportunity to become acquainted with new laboratory methods.

A fundamental and long-range problem, of course, is that of providing more adequate original training for such teachers. Clearly, we cannot expect to continue indefinitely "retraining" teachers whose preparatory training has been inadequate. This, however, is a problem that lies outside the Foundation's purview and brings us back once more to the principle of local control of education; it is at the local level that the problem must be faced.

Special projects in science education: Programs included in this category are grouped generally as follows: (i) programs directed toward secondary school students; (ii) college programs and teacher-improvement programs; and (iii) public understanding of science.

Programs in the first category are designed to supplement the secondary school students'

classroom training in science by providing visiting scientists, State academies of science, and summer training for students of special ability and aptitude. The program also makes available science materials, through the media of the traveling science libraries, and traveling science demonstration lectures. It supports cooperative college-school programs and school science clubs.

Under college and teacher-improvement programs, opportunities are provided for undergraduate students in science, mathematics, and engineering to obtain experience in research laboratories, through the undergraduate science education program. Students in small colleges are brought into contact with eminent scholars from other institutions through the visiting scientists program. To assist teachers, various experimental activities have been designed, such as conferences and special academic-year programs and the program for research participation.

From a small beginning of $20,000 in 1953, support for the special projects rose slowly to something over $8.5 million in 1959 and more than $10 million in 1960. Increased support is based upon the expansion of old programs that have proved their worth and the apparent success of some of the new ones launched last year.

Public understanding of science: Progress in science depends to a considerable extent on public understanding and support of a sustained program of science education and research. At the present time, science is generally mistakenly identified in the public mind with the results of applied research and technology—spectacular developments such as space vehicles and weapons systems; with the applications of research to the cure of disease; and with the bewildering array of modern machines and gadgets that are advertised on every side.

There is inadequate understanding of the role of basic research and its fundamental relationship to progress in engineering and technology.

The Foundation has broadly construed education in the sciences to include, also, education of the public. The increasing significance of science and technology in relation to public policy, both national and international, has made it urgent that the level of scientific literacy on the part of the general public be markedly raised. In order to participate fully in the democratic process through intelligent voting, citizens must have at least a general knowledge and understanding of the nature of science and its implications for the national defense and welfare.

This is a relatively new area, and there is little experience to guide us in the choice and methods and techniques that will serve the purpose. To date, the Foundation has supported a limited number of conferences and institutes in which scientists and science writers have been brought together for the purpose of discussing the problems of communicating science to the layman. It is planned to expand these efforts and to enlist the support and advice of influential editors of the general-information media as well as the aid of the scientific community and such organizations as the AAAS and the professional scientific societies. The program was initiated in 1959 with a budget of $5,000, but as much as $200,000 may be expended for these purposes by the end of 1960.

Course content improvement: Comparable in importance to the need for aid to students and to teachers of science is the need for improvements in curriculums and course content. As a result of early studies of the subject, the dimensions of the problem began to emerge. Science must not be poorly taught at any level or in any field. Attention must therefore be given to the content of science and mathematics courses, from the elementary courses in general science through graduate courses in highly specialized fields.

The Foundation has approached this problem in a number of ways. Support has been given to relatively small projects in limited areas where useful results can be anticipated. For example, the American Meteorological Society has been awarded a grant to enable its editorial board to prepare a series of monographs on such subjects as "The Earth and the Sun," "High Atmosphere," "Climate and Man," "Oceans and Air Currents," and other subjects designed to interest high school and college students in the field of meteorology.

At the other end of the scale, a high level of support has been given outstanding investigators to enable them to attack a major problem in force. The work done by the Physical Sciences Study Committee at Massachusetts Institute of Technology is an example. This project, which was initiated in November 1956, has produced an entirely new approach to the teaching of physics, with a new syllabus, new textbooks, and a wide variety of new teaching aids and new methods and techniques of demonstration. The course was tried out experimentally in the 1957–58 school year, with eight teachers presenting the entire course.

The number of teachers using the course has increased in each succeeding year, and special summer institutes supported by the foundation have trained teachers in its use. In September of 1960 the materials developed by the committee will be made available to all interested schools through Educational Services, Inc,. of Watertown, Mass., a nonprofit organization founded in September 1958.

The success of the course revision work in physics prompted a similar large-scale effort in mathematics, guided by the school mathematics study group, operating with headquarters at Yale University. The chemistry curriculum is being worked on by two groups, the chemical bond approach committee at Earlham College and the chemical educational materials study at Harvey Mudd College. The biological sciences curriculum study has its headquarters at the University of Colorado.

Here again we have the pattern of an experimental beginning of only a few thousands of dollars up until 1957–58 (when the figures climbed above the half-million mark) and a continuing increase to the current year, in which it has seemed wise to invest $6 million in these programs.

The comprehensive review and revision of the four major science courses—physics, mathematics, chemistry, and biology—is unquestionably one of the most significant developments in the teaching of science in this country. Courses that are out of date by as much as 30 to 40 years are being brought abreast of modern developments. In the process of working together on this task, university scientists and secondary school teachers and administrators have come to see each other's problems and points of view as they could have in no other way.

SCIENTIFIC MANPOWER PROGRAM

Responsibility for the operation and maintenance of the National Register of Scientific and Technical Personnel was transferred to the National Science Foundation by the Foundation's enabling legislation. The register provides records of location and of training, scientific specializations, and other qualifications of approximately 185,000 selected scientists and engineers and is designed to insure that timely information is available, in case of need, on the numbers and characteristics of scientists and other technically trained persons in the United States. The Foundation's scientific manpower section is also engaged in continuing studies designed to provide basic data on scientific and technical personnel generally. This program is currently being supported at a level somewhat below $1 million.

Other sources of Federal support for education: In addition to the programs of the National Science Foundation, major contributions to science education are made by a number of other agencies, including the National Institutes of Health, the U.S. Office of Education, and the Atomic Energy Commission. The National Defense Education Act, for example, provides significant help under the graduate fellowship program, the student loan program, and to some extent under titles III and VII.

INTERNATIONAL PROGRAMS IN SCIENCE

The scope of the Foundation's international activities in science broadened considerably during the second half of the decade. The International Geophysical Year marked the first time that the Foundation had participated in international scientific activities on a large scale, and it also represented the Foundation's first opportunity to coordinate a major activity being undertaken by a number of Government agencies. The scientific and technical program for the United States was developed and directed by the U.S. National Committee for the IGY, under the National Academy of Sciences. At the request of the academy, the Foundation initiated consideration of IGY support by the Federal Government and, upon affirmative decision, secured and administered Federal funds totaling $43.5 million. The Foundation also served as coordinator of Government interests in the program; these involved not only direct participation by Government agencies but also, quite often, matters of broad national policy that arise in an international program.

As an aftermath of the IGY, both individuals and Government agencies have been encouraged to carry on research that extends certain aspects of the IGY work. Under the general label of International Geophysical Cooperation, the program is being coordinated at the international level by the Comité International Géophysique of ICSU. This special committee is composed of the four unions principally involved: the International Union of Geodesy and Geophysics, the International Scientific Radio Union, the International Union of Astronomers, and the International Union of Pure and Applied Physics. So far as administration is concerned, the IGC is not a package program. Instead, the Foundation accepts proposals in areas where coordinated global research is of special importance, and these are then appraised as part of the regular program of research grants.

Antarctic research: A major outgrowth of the IGY has been the continuing research programs in the Antarctic being carried on by the 12 nations who participated in the IGY antarctic program. General scientific recommendations for the area are made by the Special Committee on Antarctic Research (SCAR) of ICSU. The U.S. program is being developed, funded, and coordinated by the National Science Foundation. The latter looks primarily to the Committee on Polar Research of the National Academy of Sciences for program recommendations, and the Foundation also considers proposals from qualified scientists interested in carrying out such research. The Foundation works with the Interdepartmental Committee on the Antarctic to coordinate the research activities of other agencies, such as the National Bureau of Standards, the Weather Bureau, and the Geological Survey, and provides them with funds for their participation in antarctic research. Grants are also made to universities and various interested research organizations to complete the program of scientific activities in the Antarctic. To date, Congress has appropriated $10 million for the post-IGY program in the Antarctic.

The Navy, which has from the beginning provided all logistic support for antarctic research, continues to do so with distinction under the new program and is in command of operations in the area. The cost of this logistic support is, of course, considerably greater than the cost of the actual scientific program.

International science education: Beginning in 1959, the Foundation undertook a modest program designed to foster international cooperation and improve communications among nations with respect to problems of science education and scientific manpower. Appropriate professional groups in the various disciplines were given support for a study and evaluation of science subject matter offered in foreign educational systems, with the objective of improving science curriculums in this country. Distinguished foreign scholars were brought here to visit the various institutes sponsored by the Foundation. Advanced students and scientists have received Foundation support to permit them to participate in international educational programs. For example, a grant was made to the University of Uppsala, Sweden, for American participation in an international summer institute in quantum chemistry.

These various small programs have furnished experience that will guide us in the development and enlargement of future programs in international science education.

Other international scientific activities: Amendments to the National Science Foundation Act which were passed by Congress last year permit the Foundation to cooperate in international scientific activities, whereas previously it was limited to research activities. The amendments also permit the Foundation, with the approval of the Secretary of State, to grant fellowships or make other arrangements with foreign nationals for scientific study or scientific work in the United States. Under its existing and extended authority, and with the concurrence of the Secretary of State, the Foundation plans to expand its international activities on a modest scale.

The Foundation hopes to place, later on, appropriately qualified persons at oversea locations to carry out short-term studies in limited areas of science that are of interest and importance to both the United States and the foreign country. Eventually, it is hoped, qualified persons can be placed overseas for longer periods for the purpose of conducting and maintaining continuous contact with the scientific communities of other countries.

As funds are made available, it may be possible, also, to afford greater support to certain appropriate types of research and research facilities abroad.

SCIENCE INFORMATION

The scope and importance of the scientific information problem is something of which the Foundation has been aware since the beginning. Early attempts were made to study certain aspects of the problem, and, with the extremely limited funds available, support was given to small projects directed toward this end. This was increased as the overall appropriation grew, but a really major effort in the field of scientific information was made possible by almost simultaneous action by the executive and legislative branches of Government.

In December 1958 the White House released a special report of the President's Science Advisory Committee on "Improving the Availability of Scientific and Technical Information in the United States." After emphasizing the importance of the problem, the President's Committee recommended that the National Science Foundation expand its scientific information program to strengthen and coordinate existing governmental and private efforts in this field. This recommendation was later implemented by Executive Order No. 10807 of March 13, 1959. The National Defense Education Act of 1958, under title IX, directed the Foundation to establish a science information service. The act also provided for the establishment of a 19-member Science Information Council whose members, Government and non-Government, would represent a broad range of skills and experience in the problems of the communications needs of scientists. The Office of Science Information Service was formally established in the Foundation on December 11, 1958, and the Science Information Council first met in February 1959.

The program activities of the Office of Science Information Service fall generally in five categories: (i) storage and retrieval systems and mechanical translation; (ii) scientific publications; (iii) unpublished research information; (iv) scientific data and reference centers; and (v) foreign science information. Through these several programs the Foundation seeks to increase the dissemination of existing materials by helping to provide for prompt publication of research results, for reference aids and information centers of various kinds, and for translations of significant scientific papers in languages not widely understood by American scientists.

Research on information problems. The Foundation is supporting a slowly growing body of research on new approaches to the information problem. Most of the research is concerned with exploration of ways to use machines in information processing tasks, such as the organization, storage, and searching of scientific information and the translation of scientific publications from foreign languages into English. Before machines can process the texts of documents, however, for either mechanized information searching systems or mechanical translation systems, more precise knowledge of syntax and semantics is needed. Therefore, current research activities in these areas are extending our understanding of language in the expectation that ultimately machines will be able to handle linguistic data.

A Research Information Center and Advisory Service on Information Processing has been established jointly with the National Bureau of Standards, with some financial support from the Council on Library Resources. The purpose of the new center is to bring together research and development data on methods and equipment for the automatic processing of scientific information. The center will also endeavor to foster closer cooperation among the groups in industry, the private foundations, the universities, the professional societies, and the agencies of the Federal Government that are concerned with developing and improving methods for rapid and efficient handling of large volumes of information.

In this same area, the Foundation is issuing regularly two publications designed to disseminate information on the scientific information field and foster cooperation among research workers in that field. "Current Research and Development in Scientific Documentation" is issued semiannually as a guide to current projects both here and abroad, while "Non-Conventional Technical Information Systems in Current Use" reports on information systems that embody new principles for the organization of subject matter or employ automatic equipment for storage and search.

In the support of scientific publications, temporary or emergency aid is given to primary journals and abstracting and indexing services; also, funds are provided for the preparation or publication of significant monographs, reviews, and reference works that could not be made generally available without subsidy.

Support of this kind is granted on the basis of the needs of the scientific community and sound economic planning for the publication.

Among the scientific journals partially supported by the Foundation are two new experimental periodicals, "Physical Review Letters" and "Wildlife Disease." The first is designed to provide rapid, low-cost publication of short, up-to-the-minute articles on physics research. The latter is the first journal to be published only in microform. The purpose of this journal is to explore author, reader, and librarian reaction to microform as a means of publishing research results at greatly reduced costs.

The Foundation is also seeking to make unpublished research information more accessible. The principal sources of such information are research reports and memorandums of Government and private institutions, theses and dissertations, and papers presented at scientific conferences. An example of Foundation activities in this area is the recently initiated series of inventories of information activities of those Federal agences that operate major scientific information programs. Four surveys in this series, covering the Department of Agriculture, the Office of Naval Research, some programs of the Department of Commerce, and the Government Printing Office, have been published, and others are in various stages of preparation.

Two examples of data and reference centers supported by the Foundation are the Office of Critical Tables (OCT) of the National Academy of Sciences and the Bio-Sciences Information Exchange (BSIE) of the Smithsonian Institution. The OCT, wholly supported by the Foundation, is a coordinating and information center on projects engaged in developing critical physical data of all kinds. The BSIE, supported by the Foundation and other interested agencies, functions as a repository of knowledge on who is working on what in the biological sciences.

Plans are now being developed, with the aid of the Federal Council on Science and Technology, for broadening the information exchange at the Smithsonian Institution to include the physical sciences and possibly, at a later date, the social sciences as well.

Foreign science information: The Foundation is supporting the cover-to-cover translation of 35 key U.S.S.R. scientific journals. Support is also being given the Midwest Inter-Library Center for the acquisition of approximately 2,300 "hard-to-get" foreign biological and chemical journals.

A series of studies is being made that will provide information on the organization, characteristics, and generation of scientific information in every major geographic area of the world. Studies currently underway or planned concern the Soviet Union, Poland, Japan, Indonesia, mainland China, Czechoslovakia, Yugoslavia, and Hungary.

The Foundation is coordinating a program, involving several Federal agencies, whereby foreign currencies accruing to the U.S. Government through sales of surplus agricultural products will be used to support projects abroad for translating foreign-language publications into English.

In order to provide an effective means of exchanging information among groups working in the scientific information field, the foundation issues a bimonthly bulletin, Science Information Notes. This bulletin reports national and international developments and will, it is hoped, assist in promoting increased cooperation and coordination among scientific information services.

CONCLUSION

In any assessment of the role and accomplishments of the Foundation during its first decade, it is necessary to consider the broader question of Federal policy determination

with respect to research support, research facilities, and the development and use of scientific manpower. Policy, in turn, must be evaluated in terms of (i) the general principles to be followed, (ii) the organization of the Federal Government for science and technology, and (iii) the effectiveness of the organization and operations in accomplishing the desired objectives. Let me summarize briefly the conclusions discussed above with respect to each of these points.

General principles: The first principle in national science policy, as interpreted by the Foundation, is the critical importance of basic research for progress in science and technology. It is only through comprehensive support of basic research in all the fields of science that one can discover the potentialities for application that are so important in the competitive technology of today. Because basic research is an essential factor in the advanced training of scientists and engineers, and because the university is the natural home of basic research, it is clear that major attention must always be paid to the support of basic research in colleges and universities.

The support of basic research is relatively inexpensive. The significant costs of research and development arise out of expensive developmental programs, such as ballistic missiles, especially when these are undertaken on a crash basis. Since there is bound to be an upper limit to the amount of money available for science and technology, it is obvious that needed economies should be effected through careful selection of the developments to be undertaken. But it is false economy to curtail the basic research that uncovers leads for future developments.

In the support of basic research there are three important considerations: Progress of science, development of the individual, and strengthening and development of the institutions where research is done.

By and large, the Federal Government has paid the most attention to the first two categories. The progress of science has been advanced by the so-called research projects system, which permits an individual or a group to pursue a scientific problem of its own choosing and which permits the agencies to support proposals selected from those submitted. The Government has paid considerable attention to the development of the individual through fellowship and other educational programs and through special programs to improve science teaching and science courses.

A national problem to which the Federal Government has paid relatively little attention, however, is that of support for educational institutions to enable them to develop their own capabilities in science and engineering. Institutions have benefited greatly from Government support of research projects and from awards, such as fellowships, to individuals, but they have received little aid of a sufficiently general type to enable them to carry out their own plans for growth in science and engineering and to maintain a proper balance between these activities and others in which they engage. The needs are great: Graduate research laboratories require modernization in terms of buildings, equipment, and space; the salary scale in many institutions urgently needs adjustment upward; there is a great and continuing shortage of maintenance and operating funds; in the secondary schools the salary problem is also acute, and although progress is being made, much still remains to be accomplished.

The Federal Government's policy with respect to the problems of the institutions is to point out the needs and to emphasize the importance of satisfying those needs, to the extent possible, from State and private sources in accordance with American traditions. But it is also the responsibility of the Federal Government to exercise leadership in meeting this problem. It is becoming increasingly clear that the inadequacy of the resources available to our educational institutions is a national problem and one which the Federal Government must help to meet. Another problem to which I have referred above is the growing need for evaluation and handling of competing claims in special areas of basic research which their supporters feel are critical. Atmospheric physics, oceanography, meteorology, and seismology are examples of areas that in recent years have been found to lack adequate support, trained personnel, facilities, and equipment. Special techniques may be required for handling such problem areas, but these special problems should not obscure the need for comprehensive support of basic research in all fields of science.

Organization of the Federal Government for greatest progress: In recent years there has been extensive discussion of the adequacy of the Federal Government's organization for dealing with matters of science and technology. At the present time, each Government agency has its own organization for research and development. Overall policy recommendations concerning the Nation's effort and Federal responsibilities for science in the strict meaning of the term are vested in the foundation and centered in its Presidentially appointed National Science Board. The President's Science Advisory Committee considers critical scientific and technological matters relating to the national security and welfare; the Federal Council for Science and Technology is responsible for overall long-range planning and matters of coordination in research and development activities among the Federal agencies; science in foreign affairs is represented in the Department of State by the Science Adviser to the Secretary; and finally, the Special Assistant to the President for Science and Technology makes immediately available to the President advice in any of those areas bearing upon critical questions of policy or action.

Effectiveness of organization and operations: In principle, the organization thus outlined should be able to deal with most fundamental issues involving science and technology with which the Government is faced. On the record, many major issues have been met effectively, the cooperation of participating scientists has been outstanding, and progress along many lines has been noteworthy. However, part of this structure has not been operating long enough to evaluate its effectiveness.

In the meantime, suggestions have been made, especially in Congress, for a more radical type of organization—for example, a cabinet department for science and technology. If, by this, is meant a department that would assume complete responsibility for all research and development in the Federal Government, the suggestion can surely be dismissed as being completely impractical. Overcentralization of science in a department of this type would be strenuously opposed by all scientists and engineers as hostile to their basic philosophy, and by Federal agencies as usurping their essential prerogatives and responsibilities.

If, on the other hand, the suggested department of science and technology were intended to provide supervision and control over the research and development activities of other Federal agencies, it would encounter severe administrative difficulties as differences of opinion arose between it and the individual agencies. Under our form of government, no agency can be expected to exercise such a role, which properly belongs in the White House or in the Executive Office of the President.

A third suggestion, more limited in scope, is that there should be brought together in one department certain major research and development activities now operating as part of regular departments. Included would be such establishments as the U.S. Weather Bureau, the National Bureau of Standards, the Hydrographic Office, and the Geological Survey. Such a consolidation might well advance the research and development activities of these agencies but would leave the problem of what to do with their functions as service organizations to the departments in which they are presently located. It is to be hoped that inadequacies in the present situation that have given rise to this suggested plan can be remedied by constructive action of the departments concerned.

Admittedly there are problems of considerable magnitude to be solved in achieving maximum effectiveness in the organization and operations of the Federal Government with respect to science and technology. However, the greatest need at the moment, appears to be that of full support for the present organization, which is relatively new both in its overall aspects and in the internal organization of individual agencies. In the charter for the Federal Council on Science and Technology, for example, it is provided that each member will speak authoritatively for his department or agency in matters pertaining to science and technology. A simple way of carrying out this provision would be for each department to appoint as its representative an Assistant Secretary for Research and Development, or someone in an equivalent position.

It must be remembered that the problem of large-scale Government administration of science is recent, dating back only to World War II. We have had to feel our way into a whole new area of policy and operation. Scientists and engineers must be ready to accept full-time Government posts and to acquire the training and background in administration that are essential to this new role. The agencies and departments, on the other hand, must accept the growing importance of science and technology and adapt their administrative structures to meet its needs. The problem is one that calls for great understanding as well as cooperation and good will on all sides.

A final word: Irrespective of individual opinions as to the manner in which the National Science Foundation is carrying out its assigned role, it cannot be denied that the importance of science in national affairs is such as to justify the establishment of an agency dedicated to the progress of basic research and education in the sciences. Nor will it be denied that the Federal Government should be increasingly concerned with the progress of science and technology, both in its own agencies and in the Nation at large. The current estimated national expenditure of $12 billion on research and development would bear out this conclusion, even if more important considerations were not involved.

But it is also clear, that the whole responsibility cannot and should not rest with the Federal Government. It is essential that the citizens of the country understand and appreciate the importance of science and technology in all its phases, but especially the importance of basic research and education. Without the understanding and support of the people of the United States, the Federal Government will be unable to take proper measures for the adequate support of basic research and education in science. Individual voters, communities, and States must clearly recognize their responsibilities. The problems inherent in science and technology cannot be dismissed on the assumption that they can be met by the Federal Government without understanding, support, and local action by informed citizens.

NATIONAL RADIO MONTH

Mr. MONRONEY. Mr. President. This is National Radio Month and a good time to remember that radio provides a veritable lifeline with its prompt announcements when advance warnings are needed regarding weather catastrophes, or when emergencies develop requiring pleas for help or first aid information. Some 97 out of every 100 homes in the Nation have radios, and this valuable medium of communication plays a vital role in the lifestream of our country.

I ask unanimous consent to include a fact sheet pointing out many of the valuable services performed to all communities by this vital means of communications.

There being no objection, the fact sheet was ordered to be printed in the RECORD, as follows:

National Radio Month this year will be symbolized by the theme, "Radio—the Heart Beat of Main Street." Radio's vital role in the lifestream of the country will be brought to the attention of the public through a nationwide program reaching into every community.

The unstinting and generous assistance that radio contributes to every civic situation will be dramatized by local cooperative projects between radio stations and community organizations.

Radio is always in the forefront: As a lifetime during emergencies with advance warnings, first aid information, pleas for help; as a crusader for civic betterment; as an education and information medium for citizen and student; as a source of facts on our democratic processes and institutions.

Today, there are more than 155 million radios in use in the United States. Ninety-seven out of every one-hundred homes in the Nation have radios.

Americans are seldom more than an arms-length from a radio set; no matter where they are—at home, in a car, at the beach. About 39 million cars are equipped with radios. Portable radios are made to fit the pocket and purse.

Today, there are more than 4,000 radio stations on the air in the United States, an increase of 228 since last year. Their programs of information and entertainment reach the remotest areas of the country and the humblest of homes.

One survey of 5,000 women representing a cross section of U.S. households showed that they listened to radio 4 hours and 36 minutes a day.

FM (frequency modulation) is particularly effective for reaching a select audience. Most family income of FM listeners ranges upwards of $7,500, many over $15,000, a research study reveals.

Radio listening knows no bounds of age, sex, geographical location or season. More than half of the country's professional men tune in five or more days each week. More than nine out of every ten single working women tune in to radio each week. Among men and women between the ages of 50 and 65, about 9 out of 10 listen every week, nearly half of them tune in every day.

Mr. WILEY. Mr. President, across the Nation, observances will be held from May 1 through 31 in recognition of National Radio Month.

Historically, radio—along with other outstanding modes of communication—has made a significant contribution, not only to a better informed citizenry, but also to progress in industry, commerce, navigation, traffic control, as well as defense and other fields.

At this time, I ask unanimous consent to have a supplemental statement on the significance of the radio industry printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

Since regular broadcasting began over 40 years ago, the radio industry has grown tremendously and the rate of growth has continued right up to the present.

In 1950, for example, there were about 85 million radio sets in use in the United States, or about 56 sets for every 100 persons. Now, there are over 155 million; approximately 88 for every 100 persons.

In 1950 there were about 41 million homes in which there were one or more radio receivers; today approximately 50 million American homes have radios, about 97 out of every 100 homes. More than 99 percent of the farm homes have radios.

There are now about 39 million car radios in use. Since 1950 car radios have increased 2.3 times. Of every 100 passenger cars on the road today, 76 have radios; of every 100 passenger cars manufactured last year in the United States, 79 were equipped with radios at the factory.

In 1950, 10 million radios of all types were manufactured in the United States. Last year (1959) some 15,622,000 were produced, an increase of 56 percent in home, car, and portable radios manufactured.

Versatility of radio is shown by the variety of types in use, such as clock radios, car radios, portable radios. The development of transistors has made possible miniaturization of portables to fit purse or pocket. About 95 percent of the portable radios produced in 1959 were transistor radios.

Overall, these facts illustrate the significant role of radio in American life—now and in the future.

AUTHORIZATION OF APPROPRIATIONS FOR THE ATOMIC ENERGY COMMISSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1310, Senate bill 3387.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 3387) to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill.

PADRE ISLAND, A TEXAS TREASURE ISLAND, AWAITS ACT OF CONGRESS, TO BECOME NATIONAL PLAYGROUND

Mr. YARBOROUGH. Mr. President, in view of pending legislation to establish a National Seashore Recreation Area on Padre Island, the Senate should be particularly interested in the following report by Mr. Carl E. Cavender:

Behind the stroke of the painter's brush or the lens of the naturalist's camera, there is harbored a longing to seek out his own serenely hallowed oasis. These expanses of unmarred natural beauty are fast becoming few in number, because the waves of civilization are washing development across our lands.

Writing in the May 1960 issue of National Parks magazine, Mr. Cavender has written a most colorful and eloquent plea for preservation for public use "Texas Treasure Island."

Although time in this session of Congress is racing past, there is still time to pass the basic legislation needed for permanently preserving America's longest seashore area for use by all Americans. With each passing year the costs of the proposed project increase because the land prices climb higher. In addition, more and more of the 117-mile island is lost to public use by private development.

As Mr. Cavender writes:

Leaving Padre Island is like leaving another world—the wilderness of yesterday. This perfect playground with its sloping beaches and sometimes 40-foot-high sand dunes must be preserved in its natural state. Somewhere, some day, something good is in store for this island.

Mr. President, if the Senate will act favorably on the proposal to establish a national seashore recreation area on Padre Island, I predict that it will be creating a new park which will one day rival the scenic Yellowstone, in public popularity. With our Nation's tremendously expanding population, and in this day, when greater and greater numbers of families enjoy vacations, hundreds of thousands, many millions, more Americans will flock to the seashores and the mountains. That is one of the natural social phenomena of our times. We know, for example, that many people build a boat and put a mortgage on it even before they build and mortgage a home.

Very few places still remain in our country that are open beach land. We see more and more beaches being fenced in, as at Miami, for example. In the long stretch of 3,700 miles of coastline, from Brownsville, Tex., to the eastern cape of Maine, there are only 265 miles of public parks and beaches.

At Padre Island there is a 117 mile stretch of beach, and last year the National Park Advisory Board recommended that 88 miles of it be set apart as a national seashore area. Within the past 3 weeks the Secretary of the Interior, Mr. Seaton, recommended that 88 miles be set apart as a national seashore recreation area, and has recommended that Congress appropriate $25 million to set up the Padre Island National Seashore Recreation Area and the Cape Cod Recreation Area and the Oregon Dunes Recreation Area.

Many of us have felt very free to criticize the administration for not doing something. In this project the administration is urging Congress to do something for the American people. We in Congress ought to do something for the American people by setting up this recreational area before it is too late.

At each end of Padre Island salesmen are peddling lots, trying to sell them off as fast as they can before the recreation area can be set up. We are literally racing against time. We should

certainly do something now, while the land can still be purchased at reasonable prices. We can do that if we act promptly.

The white sands of Padre Island offer the opportunity to preserve America's longest, southernmost natural seashore for all our people. I urge congressional approval of the legislation creating a Padre Island National Seashore this session.

In order that the Congress might have more complete information concerning Padre Island, I ask unanimous consent to have printed in the body of the RECORD the article by Carl E. Cavender in the May 1960 issue of National Parks magazine, entitled: "Texas Treasure Island."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS TREASURE ISLAND

(By Carl E. Cavender)

Behind the stroke of the painter's brush or the lens of the naturalist's camera, there is harbored a longing to seek out his own serenely hallowed oasis. These expanses of unmarred natural beauty are fast becoming few in number, because the waves of civilization are washing development across our lands. Our systems to preserve these numbered tracts are spurred forward by a few elbow-swinging conservationists, who hope that tomorrow we may look proudly upon our land and recall its beginning.

Bordering the warm tidal currents of the Gulf of Mexico lies 117 miles of white rolling sands, that are—and have been for sometime—under consideration as a national seashore site. Padre Island is a desert, an oasis, and the perfect picture of desolation itself. To the misconceptions of a few, Padre Island could never become another Miami Beach—at least not without expenditure of millions of dollars. What then is the destiny of these sleeping dunes?

One morning, into the horizon's orange, spring sunrise, I steered my car via Corpus Christi's Ocean Drive route, 13 miles to the bow-shaped Padre Island. This was a common sight to me, a resident of the Coastal Bend; but with each trip my eyes searched out new adventure.

As I crossed the 4-mile span of causeway to Padre, my attention was captured by a flock of pelicans, about 75 in number. The white birds nestled in the glistening salt waters of Laguna Madre, that 600 square miles of inland waterway which is sometimes called the last leg of the Chicago to Brownsville Intracoastal Canal.

Laguna Madre is profusely spotted by tiny islands that are literally swamped with bird life. The more popular of these islands in this marshy area, are Big Bird and Little Bird Islands. Until recent years, many of these tiny islands were relatively unexplored by anyone other than fishermen and duck hunters. They have thus remained the perfect nesting place for birds.

Quite like our feathered friends, I too was seeking a retreat. On this particular morning my quest was for driftwood and old bottles. My destination was any part of the beach which was uninhabited and lacking the beer shanties and other eyesores from which I wanted to escape.

My car droned along the hardened sand at the water's edge, on the gulf side of Padre. I had picked the perfect time for my driftwood hunt, the tides were dropping and the winds were subsiding from a recent storm, leaving the debris-cluttered beach a beachcomber's paradise.

Cars with 16 inches of wheel clearance can be lost to the clutches of the softer sands, as I have learned from experience, so I continued to ride the wet sands near the water. I was ever dodging the trash that had been lashed upon the shore. It was hard to distinguish between a jellyfish and a bottle; there were thousands, no—there were millions of the blue-red bubbles that had been cast to their destruction upon the scorching sand.

I was amazed first by the large flock of pelicans; then there were the jellyfish (more than I ever imagined I would see in my lifetime); but here, I arrived at my destination.

The drift was piled higher than houses and extended the length of the beach. Trees, too big for a truck to move and logs of all shapes and sizes were jutting from the barrier. I found bamboo, coconuts, and several other varieties of drift that must have traveled thousands of miles to rest on Padre's shore, I also found a small raft and wondered from what distant isle it might have come.

Centuries of storms like the one just passed have made the history of this island. I had come to Padre to "get away from it all," and indeed, I was, for I was alone with history.

Padre Island's storybook had no beginning, as we know it; but it had to start somewhere. Cannibal Karankawa Indians were probably the first human inhabitants of this barren waste, and were later followed by other tribes and Spanish and Anglo-American settlers, who rid the lands of them. Pirates and smugglers, soldiers and sailors, fishermen, beachcombers, and cowboys later followed; and now come the tourists.

PIRATES AND SPANISH TREASURE

Padre was first called Isle de Santiago, then explorer Parilla named it San Carlos de las Malaguitos. It was finally tagged after the Padre Nicolas Balli who was granted the land by the King of Spain. At this time, the island was separated from its neighboring brother, Mustang, to the north, but due to shifting sands along Devil's Elbow, the Corpus Christi Pass was closed, thus joining the two islands.

At least one of the towering dunes may hoard a vast amount of treasure, according to historical reports. A violent hurricane developed in this region in 1553, and a Spanish fleet headed for Spain via the Bahamas was caught in its treacherous winds and waves. Three ships went under and 4 limped into the Bahama port, but 13 were forced by currents and high winds to the ghostlike arm of the sandbar, Devil's Elbow. Only 2 men of 300 men, women, and children survived the horrible slaughter by hostile savages in an island-long chase.

The King of Spain detailed salvage expert Don Angel de la Villafana, who remarkably recovered the booty from 12 of the ill-fated ships with the help of his crew. A skindiver myself, this seems an impossible task without the modern diving gear we use off Padre's waters today. So one ship remains somewhere along the once open Corpus Christi Pass; its estimated hoard is in the high thousands.

Another report of treasure upon Padre Island's sands is that of the $62,000 fortune believed buried by John Singer, who along with his family was shipwrecked in their yacht in 1847. An expedition in June of 1958 found remnants of a lost city and some old relics, but no $62,000.

Maybe there are no real treasures on Padre Island, but we like to think so; and tales about the pirate Morgan and smugglers of the early days give Padre an intriguing and alluring past.

We shake our heads to clear them of dreams, pick up our own little treasures of drift and decorative old bottles, and leave Padre alone with its history, as we head for home.

Leaving Padre is like leaving another world—the wilderness of yesterday. The coyote, the rattlesnake, and the rabbit live together here. This is the summer home of a multitude of migratory birds. Its waters have one of the largest variety of fishes along the gulf coast. The sea grass atop the dunes seemingly waves a goodby with the wind. But this is yesterday.

WHAT OF PADRE'S FUTURE?

The future of Padre Island lies with legalities. This perfect playground with its sloping beaches and sometimes 40-foot-high sand dunes must be preserved in its natural state. Somewhere, some day, somethin_ good is in store for this island. It has a future.

The concern for its future has been exemplified, as far back as 1937 with the first State Park bill proposal. I for one hope the elbow swinging of the conservationists will not go unwarranted and that tomorrow Padre Island will be the same sleeping dunes in all its wilderness and serenity.

JUDGE JESSE ANDREWS, THE "MR. DEMOCRAT" WHO SHAPED HOUSTON'S DESTINY, IS HONORED BY HOUSTONIANS AND THE HOUSTON PRESS

Mr. YARBOROUGH. Mr. President, on Thursday, May 5, 1960, the Houston chapter of the American Institute of Architects paid tribute to the Honorable Judge Jesse Andrews, one of the truly great Texans and Americans of our day.

Judge Andrews, who is known to many Texans as "Mr. Democrat," has had a leadership role in shaping the growth and destiny of Texas' largest city—Houston. As the Houston Press pointed out in a recent editorial:

> While he was chairman of the planning commission from 1940–56, our city grew from 73 square miles to 165 square miles, from 385,000 people to about 800,000.

Surely, no one will challenge that Judge Andrews took the lead in building Houston into one of the great cities of our Nation, and it is entirely fitting that architects should honor him for this work.

But I believe that Judge Andrews has won even greater respect and devotion by his vision and dedication as a real patriot. He has made an invaluable contribution to political enlightenment in Texas—working from the grassroots to the top echelons of government for the programs and goals which have made his city ranked among the most progressive and prosperous in the Nation. He has fought machines of entrenched greed in an effort for good government. He did not jump on bandwagons if they were wrong. He took the harder course when it was right. He sacrificed for honest government in our time.

Mr. President, recently Mr. John Barnhill of the Houston Press wrote an excellent article concerning Judge Andrews' life and work. I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the story from the May 4, 1960, issue of the Houston Press, by John Barnhill entitled "Man Who Saw Houston's Destiny To Be Honored—Jesse Andrews," as well as the editorial from the Thursday, May 5, 1960, issue of the Houston Press entitled "To Jesse Andrews, a Deserved Tribute."

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Houston Press, May 4, 1960]

MAN WHO SAW HOUSTON'S DESTINY TO BE HONORED—JESSE ANDREWS

(By John Barnhill)

The 86-year-old lawyer rubbed a wrinkled hand slowly across his brow as he leaned back in the swivel chair of his downtown office and reflected on 60 years of watching—and helping—his town grow.

As he reminisced, you could tell this was an unusual man. Gentle, modest, soft-spoken. He wasn't the dynamic personality that you might expect of one of Houston's most outstanding citizens and civic leaders.

GUIDED PROGRESS

But Jesse Andrews is responsible for guiding much of the city's progress as well as the success of one of the Southwest's largest law firms, Baker, Botts, Andrews & Shepherd.

When he hung his shingle here back in 1896 after 5 years at the University of Texas, young Mr. Andrews didn't have one friend among the 27,557 persons who inhabited the 9 square miles of Houston.

Today, a good part of the city's 1 million citizens know—or at least have heard—of Jesse Andrews in one capacity or another.

SIXTEEN YEARS A LEADER

Upon his retirement as chairman of the city planning commission 4 years ago, he completed 16 years of leadership in setting the groundwork for Houston's growth.

For the contributions during that period, the Houston chapter of the American Institute of Architects will honor Mr. Andrews tomorrow at 7:15 p.m. in the Engineers Club.

His accomplishments continue in more fields than city planning, however.

KEEPS HIS SCHEDULE

As senior partner in the Baker, Botts law firm, he keeps the same rigid 8 to 5 schedule that the 80-odd attorneys follow and, as one of his employees said, usually works harder and longer than anybody in the office. He has a number of personal clients.

Mr. Andrews said he's lived by the theory: "A man ought to work hard, be diligent, and be economical." (He's of Scotch descent and abhores waste.)

As one of the county's most prominent political leaders, he's earned the title of "Mr. Democrat," but says modestly, "it hardly applies."

His long life in Houston started after a career as a guard on the University of Texas' first football team—when a football was the only piece of equipment we had and the right end ran the team, as there was no coach.

SAW CITY'S DESTINY

Folding his hands in his lap, the veteran attorney recalled:

"Houston seemed destined to become a port—an arm of the sea. That's why I chose it as home."

The son of a horse-and-buggy doctor in Waterproof, La., he began a private practice in a strange city where a cousin was the only person he knew even faintly.

Within several years he went to work for Baker, Botts, and in 1906 was taken into the firm as a partner.

Today the firm sprawls over two floors of the Esperson Building and has some 30 partners compared to the three when Mr. Andrews started. He is also chairman of the executive committee of the Bank of the Southwest.

From 1940 to 1958 when he served on the city planning commission, Houston grew from 73 square miles and 385,000 persons to 165 square miles and a population of 725,000.

FAVORS ZONING

A strong proponent of zoning, Mr. Andrews said you can look around the city today and see what we've lost without it.

He claims it results in economic loss, depreciation in value of property, and said city planning is difficult without it.

"Take the Montrose area for example. At one time it was probably one of the most attractive subdivisions in the city, but it lost its character due to commercial development and will never be a choice residential district again."

"Had it been zoned," Mr. Andrews said, "it would be comparable with River Oaks today."

Turning to politics, which is one of his favorite subjects, Mr. Andrews predicted a victory for the Democrats this year.

"Remember there are more Democrats than Republicans in the Nation and I don't think NIXON will be a strong presidential candidate."

[From the Houston Press, May 5, 1960]

TO JESSE ANDREWS, A DESERVED TRIBUTE

Jesse Andrews is a venerable but vigorous 86 years of age.

What a wonderful life he has lived and enjoyed with the lovely wife he married 60 years ago.

Tonight he is to be paid high tribute by the Houston Chapter of the American Institute of Architects for his 16 years of outstanding service to Houston as chairman of the city planning commission. Those who know Mr. Andrews will agree on this: It would be hard to pay him too high a tribute.

While he was chairman of the planning commission from 1940–56, our city grew from 73 square miles to 165 square miles, from 385,000 people to about 800,000.

Under his forward-thinking direction the planning commission guided this huge growth and laid the groundwork for an even greater Houston of the future. The commission set up a parks and parkway system, a major street plan, a permanent policy of subdivision development, and the blueprint for our vital freeway system.

These were tough civic problems. They took vision. They took long hours of work. They took much patience and understanding. At the expense of his time as one of the State's top lawyers, that's what Mr. Andrews gave his city in abundance.

Jesse Andrews came to Houston in 1896 because he forsaw clearly the future of our city.

It is a little hard to realize that a man who goes to his law office daily in the Esperson Building was born less than 10 years after the Civil War ended—born in Waterproof, La., when the nearby Mississippi was Mark Twain's river of steamboat-landing cities and towns and cottonfields lining each bank.

It is even harder to realize that Mr. Andrews still looks to the future so eagerly. Talk to him today and what's he chiefly interested in: Saturday's election and its effect on the future of Houston and Texas. Ask him about the great work the planning commission did under his chairmanship and what does he say: He says he regrets the commission hasn't been able to win the biggest planning battle of all—zoning—because zoning, as Mr. Andrews thinks it should operate, would allow Houston greater but more orderly growth possibilities for the future.

Mr. Andrews is an amazing man. He is an inspiration to know.

That is, perhaps, the finest thing about Jesse Andrews. He makes himself easy to know. For 64 years a man of high rank in a high-ranked profession, he takes the time to do the little things that mean much to others. He is considerate. He likes other people. He shows it. He solicits their views. With dignity, he holds firm to his own. A liberal in Democratic Party politics, he has been honored by Presidents, but he prefers to work at the precinct level.

The men whose keen, trained minds and hands create and detail our projects-to-be—our achitects—could pick no more worthy man to honor than Jesse Andrews. He is a man of a grand past who peers steadily forward to help us make our future even grander.

DR. R. L. SKRABANEK, OF TEXAS A. & M., REPORTS AMERICA WILL NEED TWICE AS MUCH FOOD BY A.D. 2010

Mr. YARBOROUGH. Mr. President, while the Congress is seeking solutions to the highly complex national agricultural problems—including the high costs of great stocks of surplus commodities—we must keep an eye on the future as well as the present.

Recently Dr. R. L. Skrabanek, professor of sociology at Texas A. & M. College and Texas Agricultural Experiment Station, delivered an extremely enlightening paper on our projected national needs for agricultural products for the year A.D. 2010.

On the basis of population growths and other pertinent factors, he figures that this Nation in just 50 years will need about double the amount of food and livestock it is producing today.

Dr. Skrabanek's paper was originally delivered at the annual meeting of the Texas Soil Conservation District Supervisors in Galveston and was published in excerpted form on the March 1960 issue of Soil and Water magazine. I ask unanimous consent to have printed in the RECORD the article by Dr. R. L. Skrabanek in March 1960 Soil and Water entitled, "Food for the Future: Looking Ahead to A.D. 2010."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOOD FOR THE FUTURE—LOOKING AHEAD TO A.D. 2010

(By Dr. R. L. Skrabanek)

There is a great deal of thought being given to this topic by a number of very able persons in our Nation and I am glad that your program committee saw fit to include it on the program since soil conservation will play a key role in obtaining the production we will need.

I would like to discuss this topic at two different levels. The first is at the level of sociologists who are population analysts. This happens to be my field of work—sociology as it applies to the agricultural scene, and about 90 percent of my research is in the population field.

How many people we will have is one of the key factors in projecting our needs for agricultural products. I make this statement because thus far no way has been invented of increasing the amount of food consumed on a per person basis. Now some of your friends might have bigger stomachs than they did a few years ago, but on the average the total amount of food intake has remained unchanged per person in our country. In 1910, for example, the individual American citizen consumed 1,576 pounds of food per capita. A half century later, or in 1955, this figure remained around 1,758 pounds per capita. In the long run, then, those statistics tend to show that the number of people to be fed and clothed is the basic consideration in projecting agricultural requirements. While our diet habits may change, the total consumption per person is a fairly static amount. Therefore, we must depend upon

population increase for most of the expanded consumption of agricultural products in our Nation in the future.

Based on present information, there is predicted a population increase of some 50 million between the present time and 1975, and 190 million by 2010. (From 178 million in 1960 to 230 million in 1975, and 370 million in 2010). This figure represents about a 29-percent increase in the next 15 or 16 years and better than a 100-percent increase by 2010. In other words, we expect to have two people in the United States in 2010 for every one who is here now.

Using the total expected population increase and the current per capita consumption of individual agricultural products, and if we make the assumption that our food habits and types of clothing materials do not change, then we can get a pretty good picture of the additional amount of agricultural products we will be consuming in 2010. These figures can be obtained simply by multiplying the per capita consumption by the increased population, and the attached table shows these figures.

Let's adopt these as our five basic assumptions:

1. Our population will grow at a fairly rapid rate, there being 370 million people in the United States in 2010.

2. A healthy growth in our Nation's economy will prevail, with a gross national product about five times as high as in 1956 and per capita incomes about 2½ times as high in another 50 years. A per capita income of $4,900 is assumed in 2010, as compared with a per capita income of $2,000 in 1956 (based on 1957 dollars).

3. The per capita consumption of food will remain at about the same level as in 1959, but some changes in eating habits will take place toward more of the higher cost foods such as meats, milk, fruits, and vegetables, but less of the cereals, potatoes, and heavy carbohydrate foods.

4. An export level which is approximately the same as that of 1959.

5. No major wars will take place.

Now using these as our basic assumptions, these are the projected agricultural needs for 2010:

1. The utilization of farm products for 2010 is projected at a level about 2.4 times as high as today.

2. The increased output called for in meat animals, poultry, and of livestock products in general is greater than for crops as a whole. Particularly the need for feed crops is projected to rise less than livestock, production needs because of a predicted further increase of about 17 percent in the efficiency of feed conversion by livestock by 2010.

3. The overall figures for farm product utilization for the year 2010 over the 1959 base year calls for about 2½ times the total production of livestock and livestock products with the crop output needs to just about double that of today.

Among food items the biggest projected needs will be for poultry and fruits and vegetables. The need for some nonfood materials produced in agriculture, such as lumber, tobacco, grain, and oil crops, is estimated to be slightly higher than the increases needed for agricultural items which are used for food.

Projected national needs for specified agricultural products for 1975 and 2010

Product		1959 per capita consumption	Projected needs above 1959 consumption levels	
			1975	2010
Meats (carcass weight):				
Beef	pounds	81	4,412,000,000	15,552,000,000
Veal	do	6	312,000,000	1,152,000,000
Lamb and mutton	do	4.6	234,000,000	864,000,000
Pork	do	67	3,484,000,000	12,864,000,000
Poultry products:				
Eggs (ready to cook)	dozens	29.5	1,534	5,664
Chicken	pounds	29.8	1,549,000,000	5,722,000,000
Turkey	do	6	312,000,000	1,152,000,000
Milk	gallons	80	4,160	15,360
Fruits:				
Fresh	pounds	99	5,148,000,000	19,008,000,000
Processed	do	46	2,392,000,000	8,832,000,000
Vegetables:				
Fresh	do	124	6,448,000,000	23,808,000,000
Canned	do	44	2,288,000,000	8,448,000,000
Frozen	do	8	416,000,000	1,536,000,000
Potatoes	do	103	5,356,000,000	19,776,000,000
Cotton	do	26	1,352,000,000	4,992,000,000
Grains:				
Rice (milled)	pounds	5	260,000,000	960,000,000
Wheat	bushels	2	104,000,000	384,000,000

NOTE.—Based upon 1975 and 2010 population projections and 1959 per capita consumption levels; not taking into account possible changes in food habits.

COLLEGE HOUSING

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the RECORD at this point an article entitled "Housing for Exploding College Population," written by George W. Oakes, and published in last Sunday's Washington Star.

It deals with a subject which is pending before the Housing Subcommittee of the Committee on Banking and Currency, and before Congress. The author makes a very fine statement on the need for college housing, and I invite the attention of my colleagues in the Senate to the article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOUSING FOR EXPLODING COLLEGE POPULATION

(By George W. Oakes)

More than half of all college and university housing built in this country last year was financed by the Federal Government. The college housing loan program, begun in 1951, has been one of the Government's most successful lending operations and has never had a loan defaulted in principal or interest.

Since the program's inception Federal loans totalling $1,175 million have been granted to 1,200 college and university projects. Housing accommodations totalling 285,000 has been provided at colleges, universities, and hospitals as well as nearly a hundred related facilities such as student unions, student centers, dining halls, cafeterias, and health centers.

This month Senate and House hearings will be held preparatory to congressional action authorizing additional loan funds. A real fight for the continuance of the program is anticipated because the administration has refused to include it in its budget and instead has recommended as an alternative a long-term bond program with Federal funds only for servicing the debt. Under the Eisenhower proposal the bonds would be sold through commercial channels to private investors at a higher interest rate than the colleges now pay the Government.

DEMOCRATS BACK IT

However, the Democratic congressional leadership, which has strongly backed Senator SPARKMAN and Representative RAINS in their successful efforts to keep the college housing program, is trying to reject the administration's substitute. The Democrats are being supported by the entire college and university community, which regards the continuance of the present program as essential.

The extraordinary rise in college enrollments in the last decade has created an exceptional shortage of student housing. In 1959 there were 4.4 percent more college students than in 1958 when 35.6 percent of all college-age youths were attending institutions of higher education. The Office of Education estimates that 10 years from now college enrollment will be over 6 million students, almost twice as many as now.

Even today there is too much overcrowding in college dormitories. Thirty percent of college students live in housing provided by the institutions. Commissioner of Education Derthick testified last month that "frequently three and four college students are now occupying dormitory space originally designed for two students, with a consequent loss of privacy which is essential to sound learning. Many married students and their families continue to be housed in quonset huts and structures donated by the Federal Government for temporary use which have long since outlived their intended period of occupancy.

"A significant percentage of the Nation's college buildings are overdue for repair, renovation and replacement."

This situation has been caused by rapidly increasing enrollment against a background of curtailed construction during the depression of the 1930's and World War II.

The Office of Education estimated in January that if the 6 million youths expected to enroll in college by 1970 are to have as good facilities as the 3.4 million in college now (many of whom have substandard housing), an expenditure of $4 billion will be needed for new dormitories and other residential buildings. An additional $2 billion will be required to rehabilitate present housing.

WHAT IS PROPOSED NOW

Senator SPARKMAN favors an authorization of $500 million of which $250 million would be available on passage to take care of the backlog of approved applications and a supplementary $250 million to be available on July 1. In the House Representative RAINS would like $300 million a year for 2 years, effective July 1, 1960. Present indications are that Congress will adopt in the new housing bill a program somewhere between these two proposals and then see whether the President will veto it in an election year.

The leading universities of the country like Columbia, Yale, Dartmouth, Johns Hop-

kins, University of Chicago, Carnegie Tech, and the University of Southern California have all helped meet their housing needs through this Federal loan program. In fact, its beneficiaries represent a complete cross-section of American higher education—private, public, denominational, and nondenominational.

For example, here are the programs' accomplishments in the Washington area: At Georgetown University a men's dormitory for 200 students was financed by a $1,192,000 loan and occupied in 1958. Another and larger men's dormitory for 400 students, including a huge cafeteria for 1,100 students, was completed last fall under a $2.8 million loan. Also, housing has been provided for 178 student nurses and 37 faculty members through an additional loan of $1,249,000.

George Washington University made use of the college housing program to buy and convert in 1958 two apartment houses into dormitories for 138 men and 196 women with a $1,250,000 loan.

American University has obtained loans totaling $2,534,000 which have provided dormitory accommodations for 558 men and women.

Catholic University has built a 200-man dormitory and student union mostly with a Federal loan of $1,350,000. Also, the University of Maryland at College Park, Trinity College and Dunbarton College of Holy Cross have benefited from Federal college housing loans.

HOW PROGRAM OPERATES

This is the way the program operates:

A college can borrow up to $3 million in a single year for which it nows pays 3⅛ percent on loans approved during the current fiscal year. Most loans run for a period of 40 years. These terms are considerably more advantageous than a college could arrange through commercial channels. In fact, private colleges would probably have to pay from 5½ to 6 percent interest and public colleges from 4½ to 4¾ percent interest.

At present repayments by the colleges to the Government are running at the rate of $9 million a year and no loan has defaulted. The two basic tests for a loan are the college's need for the facility and the revenue that it will produce. The colleges obtain most of their funds to meet the amortization costs of the loan from student rentals for the use of dormitories.

One interesting aspect of the program is that there has been no Federal dictation over the way the money is used. In fact there is not even a required Federal architectural standard. The college buildings are constructed entirely at the discretion of the particular institution.

FORTHCOMING RETIREMENT OF SENATOR MURRAY

Mr. KEFAUVER. Mr. President, it was with a saddened heart that we learned of the decision of Senator JAMES E. MURRAY to retire at the end of his term in January. He has been so much a part of this body with which we are associated for so long it is hard to imagine the Senate without him, or Senators deprived of his counsel and assistance.

In the 12 years I have been privileged to represent Tennessee as a U.S. Senator, Montana's senior Senator has often been of incalculable help to me in many ways. This was his manner. One did not have to agree with him to respect his position and his intellect in arguing it.

Senator MURRAY is a wonderful example to foreign-born U.S. citizens, for he is himself a naturalized American citizen, having come to our country's service from Canada.

He is a battle-scarred veteran of the liberal causes in our country. He was one of Franklin D. Roosevelt's strongest New Deal supporters. Leaving a successful and interesting law practice, he came to the Senate in 1934 as a successor to another distinguished son of Montana, the late Senator Thomas J. Walsh. Since then Senator MURRAY has been decisively reelected four times, a clear expression of the confidence and affection with which he is regarded in the Treasure State.

While serving in the Senate, we all know he has tremendously benefited the causes of conservation and reclamation with his painstaking, brilliant career as a member and chairman of the Interior and Insular Affairs Committee. In addition, no other Senator's name stands higher than that of JIM MURRAY in the field of interest in the education of our young people. Even now, in the battles for Federal aid to education, it is the name of Senator MURRAY, along with that of his colleague from Montana, Representative LEE METCALF, which serves almost as a label to identify the liberal position on this subject.

Mr. President, while respecting Senator MURRAY'S decision to retire, and knowing that he is correct in doing so, all of us profoundly feel the loss we will personally suffer by his absence from this body. All of us wish him godspeed and a long and happy retirement from the day-to-day trials of public office, but we beg that he not allow his voice to go unheard. From our seniors like Senator JAMES E. MURRAY much counsel is needed.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. KEFAUVER. I am glad to yield.

Mr. SPARKMAN. I desire to subscribe to the fine sentiments expressed by the distinguished Senator from Tennessee. I was not present in the Senate on the day when the distinguished senior Senator from Montana announced his intended retirement from the Senate. I am sorry I was not able to join in the tributes paid to him on that day.

I shall certainly miss the presence of Senator MURRAY. I have been a nearby desk mate of his for several years, and have always enjoyed his cheerfulness, his statesmanship, and his leadership.

The Senator from Tennessee remarked that the Senator from Montana is chairman of the Committee on Interior and Insular Affairs. The Senator from Tennessee will recall that at another time the Senator from Montana served as the chairman of the Committee on Labor and Public Welfare. For several years, he was chairman of the Committee on Small Business, from a time just after the conclusion of World War II until that committee was discontinued in about 1948 or 1949.

Senator MURRAY has performed outstanding work in every committee position or every committee chairmanship he has ever undertaken. I remember well his work as chairman of the Committee on Small Business. It has been my privilege to call on him many times for advice and help in connection with my service as chairman of the reorganized Committee on Small Business.

Senator MURRAY has been an outstanding Senator throughout his many years of service. We shall all miss him. As he enters upon the retirement he has so well earned, I wish for him complete happiness, continued good health, and great success.

Mr. KEFAUVER. I thank the Senator from Alabama. I know of no other Member of the Senate who has worked more closely in cooperation with Senator MURRAY for fine causes and purposes than has the distinguished junior Senator from Alabama.

TRIBUTE TO MISS MIRIAM OTTENBERG, OF THE WASHINGTON STAR

Mr. KEFAUVER. Mr. President, a personal friend of many of us, Miss Miriam Ottenberg, reporter for the Washington Star, is due congratulations for having won her profession's most coveted recognition, a Pultizer Prize.

She won this award, which carries a $1,000 cash honorarium, as well as undying recognition for a series of seven articles which appeared in the Star last year exposing the unscrupulous practices of some District of Columbia used car dealers and finance companies in skinning the public.

It seems to me that this type of exposé is journalism in its highest form. It exposes an evil, arouses public indignation and leads to remedial legislation which would not have been enacted if the reporter had not exposed the condition.

As Senators know, the Pulitzer Prize was established in the will of the late Joseph Pulitzer, who was one of the giants of American newspaperdom. He published the St. Louis Post-Dispatch, which is still in existence and is still fulfilling Mr. Pulitzer's lofty purposes, and the New York World, now gone but still reverently regarded by newspapermen as having represented the finest hour of American journalism.

Miss Ottenberg has been a staff writer for the Star since 1937. Her newspaper calls her an investigative reporter, and it is in the field of investigation that her talents stand out. She has written probing series of articles on phony marriage counselors, abortion rings, high food prices, juvenile crime, sex psychopaths and drug addiction, among many others.

The series on unethical used car-lot practices has been widely reprinted. The Armed Forces has distributed it to servicemen, who are often victimized by the practices exposed by Miss Ottenberg.

I do not know of any newspaper reporter more deserving of this high honor than Miss Ottenberg. Both she and her newspaper deserve the thanks and gratitude of Congress for this fine piece of work.

Incidentally, this is the third Pulitzer Prize won by Star reporters in 3 years. In 1959 the award went to Mary Lou Werner for articles on Virginia school integration problems. In 1958, George Beveridge won a Pulitzer Prize for a series of articles on "The City of Tomorrow." Few newspapers have been so distinguished, or more deservedly so.

CONSTRUCTION OF MODERN NAVAL VESSELS

The PRESIDING OFFICER (Mr. McCARTHY in the chair). The hour of 2 o'clock has arrived; and the Chair lays before the Senate the unfinished business, which will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 10474) to authorize the construction of modern naval vessels.

AUTHORIZATION OF APPROPRIATIONS FOR THE ATOMIC ENERGY COMMISSION

The Senate resumed the consideration of the bill (S. 3387) to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes.

Mr. PASTORE. Mr. President, what is the pending business?

The PRESIDING OFFICER (Mr. McCARTHY in the chair). The pending business is S. 3387, the bill authorizing appropriations for the Atomic Energy Commission.

Mr. PASTORE. Mr. President, before making the opening statement, I ask unanimous consent that an additional staff member be permitted on the floor, inasmuch as the four authorized by the rules are already present.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. PASTORE. Mr. President, in the absence of the chairman of the Joint Committee on Atomic Energy, the distinguished Senator from New Mexico [Mr. ANDERSON], I have been delegated the responsibility by the Joint Committee to present to the Senate the authorization bill, which is the pending business.

S. 3387 which is identical to H.R. 11713 is the annual AEC authorization bill and authorizes necessary projects and funds for fiscal year 1961. The Joint Committee on Atomic Energy held extensive hearings on this bill on March 8, 9, 10, and 11, and on April 5, 6, and 7, 1960. The Joint Committee, after careful deliberation, reported the bill on April 19, and on last Friday, May 6, 1960, it passed the House of Representatives in the form recommended by the Joint Committee. The House vote was 321 to 2.

The bill follows the same general form as the AEC authorization bills for the past 4 fiscal years.

Section 101 authorizes $211,476,000 for new AEC construction projects, compared with $293,876,000 requested by the AEC. The Joint Committee reduced the bill by $82,400,000. A total of 39 line item projects are listed in section 101 of the bill, covering all aspects of the AEC program.

Sections 102 through 106 of the bill contain standard provisions on "limitations," "advanced planning and design," "restoration or replacement," "currently available funds," and "substitutions."

Section 107 amends two projects authorized by prior authorization acts. Project 57–d–1, the zero gradient synchrotron at Argonne National Laboratory, is increased from $27 million to $42 million, and project 60–e–12, alterations to Shippingport reactor facilities, is increased from $5 million to $9 million. This will permit construction of a heat sink and modification of the reactor plant for operation at a power level equivalent of 150 electrical megawatts under PWR Core 2.

Section 108 of the bill rescinds certain projects previously authorized which are no longer considered necessary by the AEC or the Joint Committee. A total of seven projects would be rescinded, amounting to $18,290,000.

Section 109 authorizes an additional $40 million of funds and a $5 million waiver of use-charge authority for use in the cooperative power demonstration program, under the conditions and limitations of previous applicable statutes. Of the $40 million in this section, $25 million is intended for construction of an intermediate-sized organic-cooled prototype reactor, if no satisfactory proposal is received from industry under the third round of the AEC Authorization Act for fiscal year 1960. The remaining $15 million under section 109 is available for research and development assistance for either unsolicited proposals or third-round proposals, whichever may develop. Two large-scale powerplants have reportedly been under consideration by two California utility groups, and Southern California Edison has recently announced a letter of intent to construct a 360,000-kilowatt atomic powerplant in California.

Section 110 authorized $5 million for use in the cooperative program with Canada for research and development in connection with heavy-water moderated nuclear powerplants. The United States will get all plans and technical data under this cooperative program.

The bill contains several changes recommended by the Joint Committee from the bill originally proposed by the Atomic Energy Commission.

First, the committee added, as project 61–d–10, $13 million for power reactor plants for the Antarctic. Testimony furnished the committee during the hearings indicated the extremely high cost of fuel in the Antarctic, as well as the fact that many lives and much equipment have been lost in transporting fuel and supplies to our scientific stations in the Antarctic. The $13 million authorization could provide for construction of three or four small atomic powerplants in the Antarctic, with discretion for the arrangements to be left to the Atomic Energy Commission, in cooperation with the Navy, which supplies our Antarctic stations, and the Department of Defense. Construction of atomic powerplants in the Antarctic would enhance our international prestige in that area, would help develop reactor technology, particularly for small plants, and would result in eventual savings to the taxpayers because of lower operating costs.

Second, the majority of the committee recommends, in project 61–f–7, $3 million for the design and the engineering of the linear electron accelerator at Stanford University, rather than the $107,200,000 construction authorization requested by the Atomic Energy Commission. The majority believes that the design and engineering authorization will allow the project to go ahead on an adequate basis and will result in better cost estimates before construction is authorized. We are concerned with the history of rising costs in the high energy physics program, and the changes that have been made in this particular accelerator. The committee has requested that an overall report on the high energy physics program, and more data on this proposed accelerator, be submitted by Atomic Energy Commission to the Joint Committee by January 1961. We believe the Congress would then be in a better position to consider the requested $107,200,000 construction authorization. There was offered in the House an amendment to authorize construction of the Stanford accelerator this year; but it was defeated by a decisive vote of 194 to 129.

Also, the committee added to the Atomic Energy Commission proposed bill two projects in the basic research field:

Projects 61–f–8, $5,600,000 for construction of a materials research laboratory at the University of Illinois.

Project 61–f–9, $2,200,000 for construction of a radiation laboratory at the University of Notre Dame.

Both of these projects were requested by the AEC Division of Research, but were eliminated during the budget process. The Joint Committee believes that intensified laboratory work and research in the two important areas of materials and radiation effects will be of great benefit to the atomic energy program.

The committee also increased the amount for project 61–h–1, facilities in the biomedical research field, from $4 million to $5 million, in order to provide needed facilities in the field of radiation research, including the effects of radioactive fallout.

In summary, the Joint Committee on Atomic Energy, through its Subcommittee on Legislation, has held detailed hearings on every project and provision in the bills. The subcommittee and the full Joint Committee gave the bill very careful consideration, made a few revisions, and reduced the total amount authorized from $293,876,000 to $211,476,000, or a net reduction of $82,400,000. The actions of the Joint Committee and the reasons for these actions are thoroughly explained in our committee report, Senate Report No. 1277.

I urge all Members of the Senate to vote for House bill 11713, in the form recommended by the Joint Committee on Atomic Energy.

Mr. JACKSON. Mr. President, I should like to supplement briefly the able remarks which have been made by the

distinguished Senator from Rhode Island [Mr. PASTORE].

The Joint Committee on Atomic Energy has added to the bill as originally proposed by the Atomic Energy Commission some items which are of great importance to our atomic energy program.

One of these items is Project 61–d–10, power reactor plants for the Antarctic, $13 million.

Last year, I visited our Antarctic bases, and witnessed the extremely hazardous operations our people are engaged in there just to provide themselves with the fuel oil they need for heat and electricity. I found out that 80 percent of all the transportation effort was devoted to the one purpose of fuel-oil supply.

I also looked into what these extremely hazardous transportation operations in the Antarctic are costing us. It was very disturbing to find that we have already lost 17 lives in these operations. We have also lost aircraft and ground vehicles which cost nearly $11 million. I also found that the delivered cost of the fuel oil at some of our bases was as high as $10 a gallon. For example, I found that it requires 4,500 gallons of aircraft fuel to deliver each 1,000 gallons of fuel oil to our Pole Station from McMurdo Station, which is 800 miles away.

The advantages of nuclear-power reactors to meet our energy requirements in the Antarctic, as compared to conventionally fueled plants, were obvious. The compactness of nuclear-reactor fuel would reduce our transportation requirements enormously, in comparison to conventional fuel. We have already developed highly reliable nuclear powerplants of small sizes. We also have in the late stages of development more advanced compact nuclear plants.

Based on studies recently completed by the Atomic Energy Commission for the Joint Committee, we also could save a great deal of money by using nuclear power in the Antarctic, as compared to the use of conventional power. The results of these studies, which are printed in the record of the Joint Committee hearings on this bill, indicate that the savings available range between $60 million and $80 million over the life of the nuclear plants.

In addition to the humanitarian and monetary advantages attendant on the use of nuclear power in the Antarctic, we also stand to gain in the field of international prestige. As Senators know, in the Antarctic we are engaged in scientific programs with 11 other nations. The adoption of nuclear energy to further our scientific efforts and to ease the physical discomforts of our people living in the Antarctic will, I am sure, greatly increase our international prestige.

We have also added provisions for two physical research projects to the authorization bill as proposed by the Atomic Energy Commission, and we have increased the authorization requested by the Commission for radiation biology.

The Joint Committee has consistently supported the basic research programs in atomic energy. I do not think any other committee is more cognizant of the importance of basic research than is the Joint Committee on Atomic Energy. The Joint Committee has added or increased the authorization of 20 atomic-energy research projects in the last three Atomic Energy Commission authorization bills. These additions covered all fields of research, including accelerators, materials research, and biomedical research.

Mr. President, I hope the Senate will pass the bill in the form in which it has been reported by the committee; and I am confident that such action will help keep our country substantially ahead in the all-important field of atomic energy.

The PRESIDING OFFICER. The bill is open to amendment.

Mr. HICKENLOOPER. Mr. President, I submit the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment submitted by the Senator from Iowa will be stated.

The LEGISLATIVE CLERK. On page 1, in line 7, it is proposed to strike out "$211,476,000" and insert "$315,676,000"; and on page 4, in lines 19 and 20, it is proposed to strike out "Project 61–f–7, design and engineering, linear electron accelerator, $3,000,000." and insert "Project 61–f–7, linear electron accelerator, $107,200,000.".

Mr. HICKENLOOPER obtained the floor.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. HICKENLOOPER. I yield.

Mr. PASTORE. I ask unanimous consent that there may be a quorum call, without the Senator from Iowa losing his right to the floor.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. PASTORE. Mr. President, I ask unanimous consent that further proceedings under the roll call be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HICKENLOOPER. Mr. President, the amendment which I have sent to the desk is an amendment proposing to restore to the authorization bill project 61–f–7, which authorizes the appropriation of $107.2 million for the construction of a new, unique, and very advanced linear electron accelerator at Stanford University, for further extensive and advanced experimentation in the atomic field.

This authorization and request for appropriation was approved by the Bureau of the Budget and requested by the Atomic Energy Commission. It was removed from the authorization bill by the Joint Committee on Atomic Energy. The committee was fairly well divided in that action. I forget the exact vote, but a substantial number of Senators voted for inclusion of this project in the bill. I am told the vote was 10 to 6 for elimination of this provision from the bill.

In the authorization bill which is before the Senate, the Joint Committee on Atomic Energy saw fit to insert $21,800,000 worth of projects which were not approved by the Budget. The committee inserted provision for those projects into the bill over my objection; nevertheless, they were inserted, and are now in the bill.

The committee saw fit to cut out of the bill provision for $107 million which was requested by and included in the budget, and which was requested by the Atomic Energy Commission.

Mr. President, I believe my amendment should be adopted. It would authorize the linear electron accelerator, which, as I have said, has been requested by the President and by the Atomic Energy Commission.

I call attention to the fact that the project has been requested and urged not only by a panel of distinguished scientists, but by a number of scientific groups.

I should like to emphasize the scientific importance of the project, the unanimous support of the scientists, and our competition with Soviet Russia in this basic research field.

I shall also briefly mention comparable costs and time schedules under the bill, as compared with the full authorization, which will be developed more fully by the Senator from Utah [Mr. BENNETT].

SCIENTIFIC IMPORTANCE OF THE PROJECT

Most of our accelerators already in operation or under construction are proton, or heavy particle, accelerators. This will be our first high energy, high intensity, linear electron, or light particle, accelerator. This machine will make it possible to probe the basic dimensions and structure of matter. It will have great flexibility in that, being a linear accelerator, it will be possible to extract the beams at various points along the line of acceleration. It will be initially planned for 10 to 20 billion electron volts, but by a fairly simple addition, can be increased to 45 billion electron volts, and therefore have a built-in protection against obsolescence.

I should like to quote from Dr. Haworth of Brookhaven, who explained some of the advantages of this machine as compared with any other:

> Our knowledge can be effectively increased only through the use of ultra-high energy accelerators of diverse capabilities. The spectacular increase in proton accelerator energies in recent times has somewhat obscured the fact that many other parameters are also quite important. We must have electrons as well as protons; we must have intensities great enough to permit rapid observation of the various direct processes and to produce copious quantities of all transient elementary particles for use in secondary interaction studies; we must have sharply focused beams and flexibility in time and space to suit the various purposes.
>
> There is an especially acute need for very high energy electrons in large intensities and in well-focused beams. Because of easier and cheaper adaptation to circular machines, protons have been produced at energies far above those available with electrons. In contrast to the proton case where 6 Bev has been available and 30 will soon be reached, electron energies have so far been limited to 1 Bev. An important step that will fill an urgent need is being taken by construction of the 6 Bev Cambridge Electron Accelerator (CEA). However important though its potential contributions, there will

be a vital need for higher energies, far higher currents, and much more sharply focused beams than it will be able to provide. The linear accelerator proposed will effectively meet these requirements. In its initial form it will have twice the energy and some 50 times the intensity of the CEA. As in all linear accelerators and in contrast to the circular machines, a full strength sharply focused beam will emerge into free laboratory space where it will be quite accessible and can be used in many different ways. As time goes on and need arises, the energy can be increased (to as much as 45 Bev) both by increases in the power of the driving klystrons and by adding klystrons at relatively modest cost. By virtue of this flexibility, it can belong to more than one generation of machines.

Dr. Panofsky is the leading expert in the world in the use of linear electron accelerators and he has built up a team of some 20 or 30 highly qualified scientists at Stanford. The only place in the world where this machine can be built at the present time is in the United States, and the only place in the United States is at Stanford University.

The reason for that is that Stanford University is the only place not only in the United States but also in the world where the nucleus of a team of this kind has been brought together. I invite attention to the fact that if we continue to delay the construction of this very much needed scientific device, this team is apt to deteriorate, and a great deal of time will be lost.

Mr. PASTORE. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER (Mr. FONG in the chair). Does the Senator from Iowa yield to the Senator from Rhode Island?

Mr. HICKENLOOPER. I yield to the Senator.

Mr. PASTORE. Will the Senator concede that since the time this linear electron accelerator was first planned and considered, there have been several variations?

Mr. HICKENLOOPER. There have been some slight variations, which have dealt almost entirely with the foundation of the machine, the question of whether it should be in a tunnel or whether it should be what they call a "cut-and-cover" on the surface. It is a matter of geology more than anything else, not related to the scientific importance.

Mr. PASTORE. Will the Senator further concede that since this machine was first planned there has been a serious question as to what the ultimate cost of the final project may be?

Mr. HICKENLOOPER. Yes. There is always a serious question about the cost of any pioneering project.

I do not agree with some of the arguments which have been made that the possible or potential increased cost of this particular device will skyrocket to the same extent and to the same percentage it has with respect to certain other accelerators, because of the history we have in respect to the operation and to the manufacture and production of this particular general type of machine. I think we have more accurate and more reliable estimates of the cost of this type of accelerator than we have had with regard to the cost of many machines proposed for construction in the past.

Mr. PASTORE. Will the Senator further concede that since the project was originally considered a serious question has arisen as to the cost of electric current which might be furnished for the operation of the accelerator, and that a study was undertaken, at the insistence of the Joint Committee, and that as a result new figures have been gathered, which now place us in a position where the cost of the power might be half of what it was originally estimated when the project was first considered?

Mr. HICKENLOOPER. I do not think the Joint Committee can take credit for all of the study. The Atomic Energy Commission itself instituted studies, also. The Joint Committee was very helpful along that line.

The studies were instituted. Studies are constantly going on with every plant as to the reduction of electrical cost. I think it was a routine examination of this particular element of the cost of construction which brought about the result.

Mr. PASTORE. I do not want to interrupt the line of thought of the distinguished Senator, with whom I am more often in agreement rather than disagreement. This is a rather unusual occasion, in respect to this particular phase of our program, that we are in disagreement.

I have read the record of the debate in the House of Representatives very sincerely and attentively. I have read the record of the hearings, as closely as I could, because I am not a member of the subcommittee which held the hearings.

Fundamentally, I do not think we ought to leave the impression that the committee, as such, is opposed to the building of the accelerator. There is merely a question in regard to whether we need more definitive information and data before a project of this size and this magnitude is undertaken, as a matter of authorization at this time.

Mr. HICKENLOOPER. I agree with the Senator that the committee members who voted against the project have freely expressed themselves as believing this is an essential project and a worthy project which has to be built some time. The only reason which was given—which to me is not a sufficient reason and not a good reason—is that we need more time for a "look see" at this matter. I think we all agree it is a perfectly worthwhile project and that it will be built.

I had not intended to get into this matter at this particular point, but I will say that there are escalated costs each year, which are a factor. There are various estimates of around 5 or 6 or 7 percent of escalated costs each year we delay this, which will be added to the total cost. It is a tremendously costly operation.

The only disagreement I find, so far as I can determine, between my particular view and that of the majority of the committee members, is over the question whether the project should be built now or whether it should be built in the future.

The Bureau of the Budget believes the project should be built now, and has requested it in the budget. The Atomic Energy Commission believes it should be built now, and has requested it. I join in their opinion. I believe the project should be built now and should not have been cut out of the program.

I should like to quote again from Dr. Haworth:

In summary, those of us who have so enthusiastically endorsed this proposal have done so because this Linac is the best and indeed the only means to fill a vital need for sharply focused electron beams of higher energies and far higher intensities than otherwise available; because with minor interruptions in its use and modest capital outlay its energy can be increased to even higher values; and finally and importantly because Professor Panofsky, Professor Hofstadter, Professor Ginzton and their colleagues constitute a group of research physicists and accelerator engineers that is unexcelled in general and is unequalled in the construction and utilization of linear accelerators.

Accelerators are needed to explore the basic secrets of the universe to tell us the makeup of atoms, protons, neutrons, electrons, and strange particles. In the past, these experiments have led to discoveries of new elements and particles, some of which have been extremely important in our atomic weapon and national defense programs. This machine, according to the testimony of all our scientists, is the necessary next step in our high-energy physics program, and I quote as follows from the testimony of Dr. John H. Williams, AEC Commissioner and former Director of the Division of Research:

The 10 to 20 Bev electron linear accelerator proposed by Stanford University should be the next major step in the high-energy physics program of the country. The construction and operation of this machine will put in the hands of the U.S. physicists a most necessary tool if we are to achieve maximum scientific progress.

UNANIMOUS SUPPORT BY THE SCIENTISTS

Mr. President, this measure has the unanimous support of the scientists. Normally the unanimous support of any particular organization or group would not necessarily be governing, but when we are dealing with a matter which is as intricate as this particular matter is, the unanimous opinion of the scientists who are knowledgeable in this particular field becomes a matter of great importance indeed.

This accelerator has been reviewed since 1957 by a series of high-level panels of distinguished scientists, each of which has unanimously recommended proceeding with this machine. The most recent review was in January 1960, by a special panel of members of the President's Science Advisory Committee and the Atomic Energy Commission General Advisory Committee and I quote from the letter dated February 5, 1960, from Dr. Piore, chairman of the panel:

In particular, this panel wishes to reaffirm its recommendation to start immediately the construction of the linear electron

accelerator proposed by Stanford University, and to express its concern about the delay which has been encountered in authorizing this machine to date. All the experimental potentialities of this machine, which the panel foresaw last year, still look as attractive as they did then. In addition, new potentialities have developed for which this high-intensity, high-energy, electron machine is well suited.

I wish to call attention to certain phrases in the quotation which I just read. Dr. Piore said:

In particular, this panel wishes * * * to express its concern about the delay which has been encountered in authorizing this machine to date.

He says also:

This panel wishes to reaffirm its recommendation to start immediately the construction of the linear electron accelerator proposed by Stanford University.

Considering the rather restrained verbiage which scientific men sometimes use in their reports and in their statements, one can understand the serious and vital nature of the recommendations which they are making here. They are not given to emotional outbursts, but the language used here is very significant; it is positive and urgent.

In addition, scientists from other advanced accelerator projects, such as a group of Midwestern universities, have also supported the Stanford project. I should like to quote from the testimony of Dr. Rollefson, director of MURA, which initials stand for Midwestern Universities Research Association:

It is a pleasure for me, as a representative of the Midwestern Universities Research Association, to have an opportunity to give our enthusiastic support to the recommended authorization of the Stanford linear electron accelerator. The reasons for supporting this program have been so well and completely portrayed in the report of the special panel appointed by the President's Scientific Advisory Committee that I feel there is little of importance that I can add.

Mr. President, in this whole field we are in competition with the Russians, or the Russians are in competition with us, whichever way one wishes to consider it.

COMPETITION WITH SOVIET RUSSIA

The United States leads the world in high energy physics, but Soviet Russia has been making increased efforts in this field. High energy physics is an area which has aroused enthusiasm and excitement among many of our best scientific minds. These machines are admittedly very expensive. But in a race of this nature we can be sure that our Soviet competitors will not slacken in their efforts to catch up with us. I quote from the separate views of our committee report. Separate views were filed by several of us who disagreed with the committee report eliminating this project. In those separate views we said:

The Stanford accelerator would permit exploration into a new field (light, charged particles at high energy) not now adequately covered by the U.S. high-energy physics program or that of any other nation. By going ahead with this research tool, our scientists will be in a position, we feel, to make discoveries that will bring our country distinction in a highly competitive field among scientists throughout the world, including Russia.

The Russians have three accelerators scheduled to start up in 1960 and 1961, including a 2 Bev electron linear accelerator at Kharkov, and they have announced a 4 Bev electron linear accelerator planned for construction at Kharkov. Even discounting the Russian claims, the Stanford 10 to 20 Bev accelerator would be the acknowledged leader in this dynamic area of science, and would offer opportunity for some positive U.S. "firsts."

The Stanford accelerator will also round out our program by giving a better balance between light particle (electron) and heavy particle (proton) accelerators.

PREVIOUS STUDIES AND COST ESTIMATES

This project has been thoroughly studied, including estimates of costs. I ask unanimous consent to insert in the RECORD at this point a chronology of developments of the Stanford linear accelerator project, as prepared by the AEC.

There being no objection, the summary discussion and chronology of development was ordered to be printed in the RECORD, as follows:

STANFORD LINEAR ACCELERATOR PROJECT—SUMMARY DISCUSSION AND CHRONOLOGY OF DEVELOPMENT

1. The Stanford linear accelerator project has been under development for a number of years, and has been given active consideration in Government circles for about 3 years. In its early stages of development, technical as well as financial support for preliminary research and development was provided by the Office of Naval Research, with AEC participation, both through the AEC-ONR research program and through direct support of components' development.

2. On May 4, 1959, after approval of the project by the President, the project was placed under AEC cognizance. Proposed legislation to authorize an appropriation of $105 million for the project was submitted to the Congress on May 27, 1959.

3. On July 14 and 15, 1959, the Joint Committee held hearings on the Stanford authorization bill. AEC testified, as did representatives of Stanford University. The Joint Committee did not report the bill out.

4. On July 19, 1959, Chairman McCone and Commissioner Williams (Dr. Williams was then Director of Division of Research) visited Stanford University, examined the site and the plans for the facilities, and engaged in extensive discussions with university officials and staff. These discussions raised the following questions:

(a) Feasibility of the site and adequacy of the design features of the machine from a standpoint of possible earthquake damage. (It was noted that the proposed tunnels were within a few miles of the San Andreas Fault which is a source of most seismic disturbances in the San Francisco Bay area);

(b) The reliability and adequacy of the construction and operating cost estimates;

(c) Possible conflicts of interest on the part of Stanford personnel who would be assigned to the project.

It was apparent from these discussions that insufficient geological investigation had been carried out by Stanford University to give assurance on the question of seismic risk at the proposed site.

5. In the fall of 1959, AEC authorized extensive core drillings and geological studies to assess the seismic risk. These studies and drillings revealed that unexpected subsurface conditions would be encountered at the proposed site which would substantially increase the cost of the accelerator tunnels, although no evidence was developed that the tunnels would be susceptible to earthquake damage.

6. After a review of cost estimates supplied by Stanford University, AEC, in September 1959, commissioned J. A. Blume and associates, architect engineers and specialists in earthquake resistant construction, to prepare detailed cost estimates of site preparation and construction of facilities to house the machine, as well as supporting facilities, to reevaluate the feasibility of the original site, and to consider alternate sites possibly offering better and, therefore, less costly geological conditions. These engineering studies were made at a cost of about $75,000 to AEC:

(a) Blume & Associates reported that whereas Stanford had estimated the construction to cost $105 million at the original site, it would more probably cost $125,700,000. Blume did not foreclose the original site because of the earthquake hazard.

(b) Blume & Associates surveyed several alternate sites and concluded that the most feasible site is another site on the Stanford property known as Sand Hills.

(c) Blume & Associates have, therefore, recommended the above alternate site, but have proposed the elimination of the tunnels as originally designed and the substitution of less expensive cut-and-fill type of construction—possible at the new site because of different subsurface conditions. Construction costs at the new site would, in the opinion of Blume & Associates, cost $107,200,000.

7. Conflict of interests: A thorough investigation was carried out by the AEC's Division of Inspection. It was determined that certain key personnel at Stanford University had interests—financial, consultative, or managerial—in a manufacturing concern known as Varian Associates, a highly qualified manufacturer of klystron tubes and other equipment vital to the Stanford accelerator. This conflict has been resolved by Varian Associates through removing themselves as a potential supplier for any equipment for the Stanford accelerator, except at no profit and on request from the Government. The conflict problem also extended to other firms who might be suppliers of electronic components. These other possible conflicts are not of such serious moment. (Varian Associates was the principal problem.)

8. Another aspect of the conflict-of-interest problem arose from the fact that Stanford University itself receives royalties from the sale of klystron tubes. (Patent rights are owned joinly by Stanford, Varian, and Sperry Rand Corp.) This has been resolved by the board of trustees of Stanford University agreeing to waive all royalties on klystron tubes supplied for this linear accelerator.

9. The Stanford accelerator project and the decision to proceed had been part of an overall study of high-energy physics originated in mid-1958. In November 1958, a committee from the membership of the President's Science Advisory Committee and the AEC's General Advisory Committee prepared a report on the Nation's high-energy physics program. The report assigned highest priority to the completion of construction and to the operation of other high-energy physics projects in being or under construction. It also recommended the construction of the Stanford accelerator as the first new undertaking.

10. This committee again reviewed the accelerator problem early this year and submitted its report on February 5. They reiterated the importance of the Stanford accelerator and recommended its construction. They also expressed concern over what they considered to be the inadequacies of the 1960 and 1961 budgets for high energy physics.

11. The problem of high energy physics has caused the Atomic Energy Commission considerable concern because of the mounting construction costs as compared with original estimates, and the sharp upward trend in annual operating costs as compared with original estimates.

12. In summary, there are six major accelerator projects now under construction which were originally estimated to cost $72 million. They will actually cost about $182 million when completed, with modifications to permit maximum utilization. The operating costs for these projects were originally estimated at $13,700,000 per year, whereas current estimates are $68,400,000 per year. If we add to this the proposed Stanford project, with its construction cost of $107,200,000 and its annual operating cost of $15 million per year, we will be committed to $289,200,000 for construction of accelerators and $83,400,000 for their operation yearly. This, plus other research in high energy physics will result in annual expenditures of $125 million for this field of science in 1965 and years following.

Mr. HICKENLOOPER. Mr. President, I ask unanimous consent to insert in the RECORD a copy of a letter dated April 28, 1960, to Congressman VAN ZANDT from AEC Chairman John A. McCone, which demonstrates that the $3 million design and engineering authorization will result in increased costs and will delay the commencement of useful experiments.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. ATOMIC ENERGY COMMISSION,

April 28, 1960.

DEAR MR. VAN ZANDT: This is in response to your letter of April 21, 1960. The answers to the questions raised therein have been prepared with the aid of the interested personnel at Stanford University and the staff of the San Francisco operations office of the AEC.

"1. If construction should be authorized by June 1, 1960, when, under projected schedules, would construction be completed? When could beam start up and useful experiments commence?"

Answer. If construction is authorized June 1, 1960, construction could be completed and the beam started up by July 1965. Useful experiments could commence July 1966.

"2. Same questions, on the assumption that $3 million 'design and engineering' is authorized this year and construction authorized by June 1, 1961."

Answer. If $3 million is authorized in fiscal 1960 for design and engineering and construction is authorized by June 1, 1961, all construction could be completed and the beam started up in the interval January–April 1966. Useful experiments could start in the interval January–April 1967.

A tabulation of the construction cost estimates and completion dates for the various alternatives is shown below:

Plan	Construction cost estimate	Completion (useful experiments)
	Millions	*Years*
Full authorization now	$107.2	6
$3 million authorized now, remainder authorized 1961	[1] 110.0	6½–6⅚
Delay any authorization until 1961	[1] 113.0	7

[1] The increased costs represent escalation occasioned by the estimated delay in the completion of the project. In addition, Stanford estimates that the uncertain status and inefficiency resulting from partial authorization will probably add an additional $1,000,000 to the total project cost.

If the project were authorized in this session of Congress for design and engineering only, and was not fully authorized until June 1961, it appears that the most serious effect will be in the lack of ability to recruit certain additional key scientists whom Stanford considers are essential for the development and design of the accelerator and experimental facilities. Testimony covering the views of scientific witnesses on this point was given before the Subcommittee on Research and Development and the Subcommittee on Legislation of the Joint Committee on Atomic Energy on July 14 and 15, 1959, by Dr. Ginzton (p. 189), Dr. Smyth (p. 208), and Dr. Rollefson (p. 230).

In response to our specific query, Stanford University now states to us:

"We are experiencing some difficulty at the present time in keeping our present staff, the nucleus of the project, together, and there is serious danger that a number of the principal scientists on the staff will leave the university's employ because of the continuing uncertainty concerning full authorization of the project.

"The number of physicists and engineers presently involved in project agreement No. 1 work is 27. We had planned to increase this to an average of 60 man-years during the first year of integrated development and construction activities, in which we would also be subcontracting all work that could be reasonably done that way. Under the existing circumstances we think we could recruit only five or six more physicists and engineers than we now have. Moreover, it is not likely that these new people will be of the excellence we had intended. Undoubtedly a partial authorization will not be attractive to scientists having tenure in other institutions or who otherwise require long-term commitments. As an example it would be impossible to recruit experienced high-energy particle physicists who would be involved in more detailed calculations of shielding or study of other problems related to the utilization of the machine. This work is necessary for its design. Given full authorization this year we believe that we could staff to the extent and excellence that was originally contemplated.

"It should be noted also that a part of the Blume first-year schedule involved partial construction of laboratories, shops, etc., needed to accommodate the increasing staff contemplated for the second year. This would not be possible under the partial authorization and hence will also complicate our staffing problem in the year beginning July 1961, if construction authorization were given then."

With respect to the question of how much progress could be made in the next year under "design and engineering" authorization with the broad authorization language contained in the committee report as compared with authorization of construction, it is clear that some progress could be made which would reduce the delay in construction when full authorization for construction was approved. Design could be well along on the master site plan, site foundation studies, the klystron test laboratory and the administration and engineering and science buildings. At least preliminary design could be done on other buildings and structures and utilities and roads. Some progress could be made on the design of the accelerator components and the accelerator test section. Design on the administration and engineering and science buildings and possibly some other facilities could be near enough complete that construction could begin very soon after funds were available for this purpose. The extent of progress on design of the accelerator proper and of testing facilities would be directly related to Stanford's ability to recruit top scientific and engineering staff for development of design criteria.

In July of 1959 Dr. Williams, then Director of the Division of Research, and I visited Stanford University, examined the site and the plans for the facilities, and engaged in extensive discussions with university officials and staff. As a result of these discussions and our direct investigations, several important questions were raised. These included adequacy of the site and of design features of the machine from the standpoint of possible earthquake damage; the reliability and adequacy of construction and operating cost estimates; possible conflicts of interest in the case of certain Stanford personnel associated with a potential supplier of major components of accelerator equipment; and questions of royalties accruing to Stanford University on the purchase by the Government of klystron tubes for the accelerator.

Following the identification of the foregoing questions and after consultation with the Joint Committee and in cooperation with Stanford University, the Commission initiated a series of actions which would resolve these questions. As a consequence, when the Commission appeared before the Joint Committee in March and requested full authorization for the project, the Commission was in a position to report to the committee that these questions had been resolved. The position of the Commission, therefore, remains unchanged.

The Stanford accelerator is the next logical step in the Nation's high energy physics program. The construction and operation of the machine will provide our scientists with an essential tool with which to further our knowledge of fundamental particles constituting the basic units of all matter. The earlier it can be completed and placed into operation the sooner will its contributions be realized and the greater will be our assurance of continued U.S. leadership in this important scientific field.

Sincerely yours,

JOHN A. MCCONE,
Chairman.

Mr. HICKENLOOPER. I understand that the Senator from Utah [Mr. BENNETT] plans to develop these points in more detail.

Last year the Joint Committee held full hearings on the Stanford accelerator, published as a 649-page document, containing a wealth of technical data and justification support. During these hearings I discussed the Stanford accelerator with Dr. Norman F. Ramsey, professor of physics at Harvard University, and I quote from page 224 of the hearings:

Senator HICKENLOOPER. Do you feel that it is a needed development?

Dr. RAMSEY. Yes.

Senator HICKENLOOPER. And in the long run over the years that this accelerator will give us answers which will be vitally needed in the development of science?

Dr. RAMSEY. I do, indeed.

Senator HICKENLOOPER. Of course, we have to balance from a practical standpoint the cost as against the anticipated results. If the reasonably anticipated results are very great, then the cost item settles itself only down to a matter of lesser significance.

Dr. RAMSEY. That is right.

Senator HICKENLOOPER. That is, whether we are throwing money away needlessly on certain gadgetry or not, the basic cost becomes insignificant as far as the overall good is concerned. From any point of view, if this is a machine that is greatly needed and will contribute proportionately to the advancement of our knowledge, then I think the cost item is comparatively a minor matter. We can spend $100 million on a battleship or a cruiser, $300 million on a nuclear carrier, which perhaps we need—I don't say we don't—but when one compares the cost of something like this with the cost of other things, we can well make the expenditure, I think, if the anticipated results seem to warrant.

Dr. RAMSEY. I think there is no question but what very important new information

which cannot be gained in any other way will be obtained from this machine.

SUMMARY AND CONCLUSIONS

The basic question here is whether the Senate will vote to proceed now with a high energy physics project unanimously recommended by our scientists, or whether we will permit only a partial authorization that will delay the project and discourage our scientists. This project is needed to round out our high energy, light particle, program, and to assure us leadership over Soviet Russia. I urge all Members of the Senate to support my amendment to authorize in full the linear electron accelerator proposed by Stanford University.

Mr. President I conclude by saying, as I have said before in my remarks, that this machine will be built. It is needed, and vitally needed. It is authorized in the budget. It is requested by the Atomic Energy Commission. It should be included in the program. I opposed many projects in the bill which were not included in the budget, but I supported putting into the program this essential scientific research tool which was included in the budget and which is demanded by the Commission.

I hope the Senate will adopt the amendment.

Mr. BENNETT. Mr. President, I join with my colleague from Iowa in expressing the hope that the Senate will vote in favor of the amendment offered by him, to authorize in full the Stanford linear electron accelerator, as proposed by the President, the Atomic Energy Commission, and the scientific community.

The Senator from Iowa [Mr. HICKENLOOPER] has already described the unique technical promise of this machine, the reasons for the scientific support, and its importance in our competition with Soviet Russia.

I should like to point out that the majority members of the committee do not oppose the project, but favor partial, rather than full, authorization at this time. I will then demonstrate that full authorization now will save money in the long run, will save time, and that it is necessary to recruit a staff of scientists and engineers.

First. The committee majority members do not oppose the Stanford accelerator, but recommend partial rather than full authorization. Let me quote from pages 8 and 9 of Senate Report No. 1277, the report of the Joint Committee on this bill:

The Joint Committee appreciates the remarkable achievements and scientific advances that have been accomplished by these "atom smashers" in the past, and is fully confident that even more remarkable discoveries will be made in the not too distant future.

The Joint Committee recognizes that an accelerator of this type could make a valuable addition to our national high-energy physics program, but believes that more design and engineering might result in better cost estimates before construction is authorized.

I shall discuss the disadvantages of a partial "design and engineering" authorization a little later.

Now let us look at the debate on the floor of the House of Representatives on this bill last Friday, May 6, 1960. Representative DURHAM, the vice chairman of the committee, said:

I am not opposed to going on with this project in an orderly fashion. I think we ought to go into all promising research work in the accelerator field, both in regard to heavy particles and light particles.

As I said, I am not opposed to any of these projects. I made the motion to put $3 million in here and let AEC come back with a thorough study to show this body exactly what it is going to cost.

Representative CHET HOLIFIELD said, in response to a question from Representative HOSMER:

Mr. HOSMER. I have consulted my figures and I have confidence in them.

May I ask this question: In view of the unanimous testimony that a linear accelerator of this size and power is a basic tool necessary for the Nation's scientific advancement, does the gentleman feel that there is any question about eventually building that machine in this country?

Mr. HOLIFIELD. The gentleman has very clearly stated that the position of the majority is not against the building of this type of accelerator at the proper time, but the question of the majority on this item is as it has been on other items, to properly and carefully look at the preparatory work that has been done and to select the timing to initiate such a gigantic undertaking. We are furnishing $3 million for them to start on their design and engineering work.

Finally Representative MELVIN PRICE, chairman of the Subcommittee on Research and Development said:

I personally favor further consideration of the project early next year and I personally will appreciate the opportunity within a short time of voting for full authorization for the Stanford accelerator.

So I think it is clear that the scientific merits of the project are recognized, and supported by all members of the Joint Committee. The only question is the method and timing of legislative authorization.

Second. Partial authorization will result in increased costs and delay in beginning experiments. Let me quote from the letter dated April 28, 1960, to Representative VAN ZANDT from John A. McCone, Chairman of the Atomic Energy Commission:

A tabulation of the construction cost estimates and completion dates for the various alternatives is shown below:

Plan	Construction cost estimate	Completion (useful experiments)
	Millions	*Years*
Full authorization now	$107.2	6
$3 million authorized now, remainder in 1961	[1] 110.0	6¼–6¾
Delay any authorization until 1961	[1] 113.0	7

[1] The increased costs represent escalation occasioned by the estimated delay in the completion of the project. In addition, Stanford estimates that the uncertain status and inefficiency resulting from partial authorization will probably add an additional $1,000,000 to the total project cost.

The Stanford accelerator is the next logical step in the Nation's high energy physics program. The construction and operation of the machine will provide our scientists with an essential tool with which to further our knowledge of fundamental particles constituting the basic units of all matter. The earlier it can be completed and placed into operation, the sooner will its contributions be realized and the greater will be our assurance of continued U.S. leadership in this important scientific field.

Let me quote also from the three-volume detailed engineering analysis by J. A. Blume & Associates:

If the project is not authorized and operations initiated so that this schedule can be followed, the cost estimates should be increased at the rate of 5 percent per year for escalation.

From the above, it seems clear to me that the method of authorization in this bill will raise eventual total costs by at least $3 or $4 million, perhaps $5 or $6 million—5 percent of $107 million—and will delay commencement of useful experiments by at least one-half to three-fourths of a year, even assuming prompt authorization next year.

For these reasons, once the technical merit of the project is recognized—as it is—and thorough engineering studies have been made—as they have—it seems clear to me that the businesslike thing to do now is to proceed expeditiously. We will save money, and time in our scientific race with the Russians, by authorizing the project in full now.

Now I come to the third and very important problem involved.

Third. Partial authorization will delay recruitment of a scientific and engineering staff for this project. Let me quote again from Mr. McCone's letter of April 28, 1960:

If the project were authorized in this session of Congress for "design and engineering" only, and was not fully authorized until June 1961, it appears that the most serious effect will be in the lack of ability to recruit certain additional key scientists whom Stanford considers are essential for the development and design of the accelerator and experimental facilities.

In response to our specific query, Stanford University now states to us:

"We are experiencing some difficulty at the present time in keeping our present staff, the nucleus of the project, together, and there is serious danger that a number of the principal scientists on the staff will leave the university's employ because of the continuing uncertainty concerning full authorization of the project.

"The number of physicists and engineers presently involved in project agreement No. 1 work is 27. We had planned to increase this to an average of 60 man-years during the first year of integrated development and construction activities, in which we would also be subcontracting all work that could be reasonably done that way. Under the existing circumstances we think we could recruit only five or six more physicists and engineers than we now have. Moreover, it is not likely that these new people will be of the excellence we had intended. Undoubtedly a partial authorization will not be attractive to scientists having tenure in other institutions or who otherwise require long-term commitments."

During the 1959 hearings on the Stanford accelerator, the possibility of partial authorization was also suggested. The discouraging effect of such an authorization was described by Dr. Smyth of Princeton University, a former AEC Commissioner.

I quote from page 208 of the 1959 hearings:

Representative PRICE. Dr. Smyth, do you feel it is desirable to authorize the full amount of the cost estimate at this time, rather than to authorize only a sufficient amount to carry on design and engineering?

Dr. SMYTH. I feel very strongly, Mr. Price, that the full amount should be authorized at this time. This is a point that I did not cover in my statement, but as I said at the beginning of my testimony, I do want to talk about it. I have had some experience in the past with situations where preliminary design was authorized or research was authorized on a project, and then there was a long delay before further authorization came through. This is extremely demoralizing. It makes it difficult to assemble a staff, and once the staff is assembled, and then there is delay in further authorization, the staff disappears and it becomes extremely difficult to reassemble the staff. In this case particularly, where the design is so fully worked out in the sense of depending on components that are already in use, and where, as I understand it, a machine could be built that would be very useful even without further development of the components, I think it would be very undesirable to give partial authorization.

SUMMARY AND CONCLUSIONS

In conclusion, Mr. President, let me restate my three points:

First. The committee majority members do not oppose the Stanford accelerator, but recommend partial rather than full authorization.

Second. Partial authorization probably will result in increased costs and delay in beginning experiments.

Third. Partial authorization will delay recruitment of a scientific and engineering staff for this project.

For these reasons I believe we should proceed with full authorization now of this important project, and I hope the Senate will support the Hickenlooper amendment.

Mr. DWORSHAK. Mr. President, will the Senator from Utah yield for a question?

Mr. BENNETT. I yield.

Mr. DWORSHAK. I am somewhat confused by the contention that by deferring action we may increase the ultimate costs of the project. As the Senator said, members of the committee were not entirely willing to proceed immediately with the project, feeling that we should move cautiously.

A year ago, the Joint Committee held a hearing on the proposed linear accelerator. For some reason, the facts were not available, and there was a delay

Is it not true that in 1959 the AEC proposed to get electric power at 9 mills per kilowatt-hour, and because of the insistence, partially, of the Joint Committee on Atomic Energy, during the recess the Atomic Energy Commission made arrangements to get power at 4½ mills from the Department of the Interior, thereby saving from $660,000 to more than $1 million a year? Is that not essentially true?

Mr. BENNETT. That is essentially correct; but it seems to me that that does not bear directly on the problem before us, because it will be 6 years, at best, before this project will be fully operative. In that period of 6 years, I should assume that the preliminary estimates which may have developed the cost of 9 mills would be restudied and reviewed so that it could be determined whether the project was ready for electricity, and all possible opportunities to reduce the cost of electricity had been explored, as they have been explored in the period between 1959 and now.

Mr. DWORSHAK. Reference was made to a letter received by the Joint Committee from the Chairman of the Atomic Energy Commission, indicating that if we proceeded immediately with the authorization and construction, the completion of the entire project might take about 6 years; whereas if we merely proceeded with more caution and additional engineering surveys, it could take 6½ years. The difference in time is only 6 months.

Does the Senator from Utah feel that the time element of 6 months is so vitally important at this time?

Mr. BENNETT. I feel that this is the type of machine or type of project on which the basic engineering has been done. Stanford is operating linear accelerators now, but they are very much shorter. Having achieved that basic material, it does not seem to me that there is any reason to delay for 6 months or a year while we talk about getting more engineering information.

This particular program is in a peculiar situation. Everybody seems to want it; yet we are now divided within the committee on the question: Shall we cut the dog's tail by $3 million this year, or shall we commit ourselves to the whole project? Having committed the $3 million, as can be seen from the comments already made by the persons who supported the majority position, almost everyone expects that next year we will move in and authorize the completion of the project.

Mr. DWORSHAK. Reference has been made to the fact that last year the Joint Committee tentatively approved this project but, for some reason, was unwilling to authorize the full amount for construction.

Is it not true that because of that delay some indication developed that the original site for the project was changed, so that the slight delay did not really retard the eventual success of the project, but actually made it likely to be more successful?

Mr. BENNETT. It is my feeling that the answer to the Senator's question is the same as the answer I gave him with respect to the power problem. If the bill had been reported with full authorization before construction actually could have been undertaken, they would be making the tests which have been made pending authorization, and I am certain that some discovery would have been made, and the answer would have been the same anyway.

It seems to me that the problem of site is not quite the same as the problem of the authorization of the construction of the machine. The fact that the original site suggested proved to be an unsound one and the fact that a better solution for the place in which to put the machine has been worked out should not influence us in our ultimate decision as to whether we want such a machine. I think we want the machine.

Mr. PASTORE. Mr. President, at this point will the Senator from Utah yield to me?

The PRESIDING OFFICER (Mr. MCCARTHY in the chair). Does the Senator from Utah yield to the Senator from Rhode Island?

Mr. BENNETT. I yield.

Mr. PASTORE. On the very question about the judiciousness of proceeding with the haste being advocated by my distinguished friend, the Senator from Utah, let me ask a question: Is it not a fact that if we had not proceeded with caution a year ago, when the first report was filed with the committee, we would have committed ourselves to a project which would have entailed the expenditure of $126 million, to build a tunnel 2 miles long?

Now it is planned, instead, to work above the ground, rather than below ground; and the anticipated expenditure will be $107 million, or a saving of $19 million. But if it had not been for the care exercised by the Joint Committee, the tunnel, at considerably greater expense, would have been authorized. That is the point we make.

Of course we are going to have an accelerator. Some say we should have it at once. Our committee is saying that this project is of tremendous magnitude and, on the basis of the present plans, it is estimated to cost the taxpayers of the Nation $107 million. However, by the time we get through, judging by the experience had with other projects in the same field, this one may cost the taxpayers $207 million.

The Joint Committee, which is the watchdog of the people's money spent in this field, favors this project, and does not question the sincerity of those who advocate construction of the project, but asks them to make a further study of the project, and prepare a better estimate, so that when the project is finally authorized, we shall be able to say to the taxpayers, "We have spent your money judiciously."

That is all this matter amounts to; it is as simple as that.

Mr. BENNETT. Mr. President, the two comments which have been made in the course of my remarks—one by the Senator from Idaho [Mr. DWORSHAK] and the other by the Senator from Rhode Island [Mr. PASTORE]—have been with respect to supplementary matters. I do not believe we have ever had more complete data on the basic machine itself that we have in regard to this machine, because, backing it up, we have the actual experience at Stanford with the operation of linear accelerators.

These projects have been developed to a size never before reached, and they involve questions of electric energy and questions of the best place for the accelerator—whether it should be placed in a tunnel, or whether it should be placed in a trench, and then covered over.

It seems to me that both of these are supplementary problems. But the fundamental problem is that we are here dealing with a machine which has been

designed by those at Stanford, where similar units have been tested with remarkable results.

So the fundamental question is whether we are going to build the machine; and, if so, when?

Mr. HICKENLOOPER. Mr. President, will the Senator from Utah yield?

Mr. BENNETT. I yield.

Mr. HICKENLOOPER. This matter has been "kicking around" ever since 1957. This is not a "Johnny-come-lately" operation.

As regards every activity in which the Atomic Energy Commission has been engaged—whether in the field of accelerators, or power reactors, or other types of facilities—every accelerator and every installation in this field could, after more experience had been gained, have been made probably a little cheaper, in some way.

This situation reminds me a great deal of the well-known question and reply:

Mother, may I go out to swim?

Yes, my darling daughter. Hang your clothes on a hickory limb, but don't go near the water.

But, of course, if she never goes near the water, she never will learn to swim.

The engineering problems which arose when the first proposals for a tunnel construction were made were routine exploratory operation problems. It was proposed that a tunnel be constructed. Some borings were made. Finally it was decided that a tunnel might involve considerable hazards, because of the geological formations in that location. So it was believed that probably it would be better and less expensive to dig a trench on the surface, at another location, where the construction might be more secure.

It is entirely possible that if we were to make this authorization next year or the year after that, or whenever we might make such an authorization, engineering changes might then be required, as a result of further and more detailed investigation.

But we must proceed with the job at some time; and we cannot learn to swim unless we go near the water.

This project needs to be constructed. We have the scientific background for it. We have a vast amount of engineering research on this matter. If we continue to postpone this work year after year, some of these days we may find a linear electron "sputnik" announced somewhere else; and then the people of the country will say to us, "Why did you let the Russians get ahead of us?"

That is the situation with which we are faced. So we wish to pioneer in this important field. Are we to "get this show on the road"?

In this situation, do we wish to continue to fool around, year after year, and, as a result, perhaps be outdistanced in some of this basic scientific research, for which this tool which the scientists have studied so carefully, is so important. I think that is the problem.

Mr. BENNETT. Mr. President, I yield the floor.

Mr. PASTORE. Mr. President, it has been said that this project "has been kicking around since 1957." Perhaps that is not a very appropriate way to state this matter.

I do not think any committee of the entire Congress acts more conscientiously than does the Joint Committee on Atomic Energy; and I believe the Senate should also know that no committee of the Congress has been more progressive, I dare say, in promoting the research aspects in the field of high-energy physics than has the Joint Committee on Atomic Energy. Its entire history exemplifies that very philosophy.

Let me say to my distinguished friends, who say this matter has been "kicking around since 1957": Of course it has been around here since 1957. Why? Because until now the answers have not been sufficiently definitive to enable us to have a proper and sound predicate for this authorization of $107 million.

Are we rejecting this proposal? Are we refuting the thinking in connection with it? Absolutely not. We merely propose that $3 million be authorized at this time. The AEC requested appropriation of $4,200,000 for fiscal year 1961, in order to undertake this project, to begin the construction. We propose, instead, an authorization of $3 million, in order to complete the planning, so more precise answers to the various questions involved will be found.

If we had been persuaded the last time they made this proposal to us, the tunnel might by now have been under construction.

Some ask, "What difference would that have made?"

In reply, I point out that if we had accepted the previous proposal, the tunnel would now perhaps be half constructed, and $5 million perhaps would have been spent; and then at that point it would have been found necessary to do the work above ground, rather than underground. Certainly we should not make large expenditures on such a basis.

Do Senators realize that this project alone will cost more than the original costs of Brookhaven and the Argonne Laboratory put together? This project is of tremendous size and cost.

So we recommend waiting a few more months—until January 1961, not until 1963 or 1970. January 1961 will not be very long to wait—before spending these large sums of money.

In the meantime, shall we be sitting on our hands? Of course not. We propose that the authorization be made for planning the details of the design and engineering of the project, so the definitive answers can be had, in order that a wise authorization for the project can be made.

Mr. President, the Commission's letter requesting the authorization of the appropriation for the fiscal year 1961 was dated February 12, 1960. That letter came to our committee. After that request came to us from the Bureau of the Budget, and the Atomic Energy Commission, the Subcommittee on Legislation, under the chairmanship of Representative HOLIFIELD, on March 8, commenced extensive hearings on the bills, as summarized in the report.

Mr. President, I say to Senators, with special emphasis: On April 1, 1960, the Commission forwarded to the Joint Committee certain proposed revisions of the bill, principally in the high-energy physics field. If all of this proposal had been decided long before now, why were not all the details set forth in the letter of February 12, 1960? But that letter did not include the details or the proposal as to the Stanford accelerator, because those involved had not yet made up their minds. In the meantime, something happened; and it became necessary to expedite the work. So, two months later they sent to us the second request, which includes this $107 million.

I say to my distinguished friends, if the entire report was decided on and formulated and if all the details of the design were agreed upon, why did they wait 2 months before they sent us the letter?

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. HICKENLOOPER. I think I can answer that question.

Mr. PASTORE. I would like to hear the answer.

Mr. HICKENLOOPER. The fact is that additional studies were requested last year. The scientific groups were in the process of studying the matter. They came up with the final study results late this winter, and immediately the Commission sent through this request for the construction of the project.

Mr. PASTORE. In other words, my distinguished friend is telling me we have not been kicking this matter around since 1957; we have been kicking it around since April 1, 1960. That is what the Senator is now saying.

Mr. HICKENLOOPER. We have been kicking it around since 1957.

Mr. PASTORE. We did not give it the best kick until April 1, 1960. That is the point I make. Let us kick it around for another 6 months. Then we will have good answers.

Mr. HICKENLOOPER. The committee took a good kick at it when it took the project out of the bill, against the recommendation of the Budget and the request of the AEC. The committee is not sacrosanct in these matters. There was a great big push 3 or 4 or 5 years ago toward the building of atomic power plants in the United States. It was said we were going to put the Government in the power business. Then we found what the costs would be of projects that certain Members of Congress were so enthusiastic about. We found that their projects were wishful thinking, and not practical. So plans for such projects have disappeared.

Mr. PASTORE. I wish to compliment the Senator from Iowa, because, had we listened to him, had we proceeded with more caution then, we would not have proposed such a large-scale program at that time. He gave us a great lesson. I would only hope now that he would become a student of his own logic. That is all I am trying to impart this afternoon. Had we listened to the Senator from Iowa several years ago, we would not have attempted to have gone into these projects headlong and ended up

with a change in philosophy and thought. That is the position I take.

Mr. HICKENLOOPER. I take no credit for and no particular satisfaction in being a prophet. I would like to go on to other things. But if the Senator will have as much faith in this matter as he has in what I predicted a few years ago, I suggest he go along with me on this proposal, because everybody says this project is going to be built. With every delay, we know there is going to be an increase in cost. The project is going to cost more next year, the year after that, or the year after that, and it will be on the basis of an escalated percentage.

There is one other point I wish to make. The Senator said a moment ago $4,200,000 was requested. That is the amount requested, and we are granting them only $3 million. However, there is a vast difference. We are not giving $3 million on an authorized project; we are giving the agency $3 million to go out and look around. The important thing on a project of this kind is to know the project is authorized and the money is being spent on a project that is under way, one that is authorized by the Congress and that is a going concern. The $3 million we are giving is not $3 million for an authorized project. It is $3 million to enable them to go out and dig around somewhere. I think we ought to authorize this project, and I think we will get the proper engineering. We will save time, we will get this magnificent tool into the hands of the scientists, and we will be taking a long leap forward in the leadership which the United States now has in atomic energy research, and which we are bound to maintain if we survive.

That is my thought.

Mr. PASTORE. I wish to thank my distinguished colleague for his observation.

Mr. President, I should like to make another observation. Some references were made to the Blume report. Let me read an excerpt from appendix M of that report:

Before final design is undertaken—

Mind you, Mr. President, before final design is undertaken; and here we are proposing to start on this project, and we do not know the final design of it—

and before the final alinement is selected, a detailed site investigation is recommended. Such investigation should include detailed geological mapping, further investigation of ground water conditions, careful study of cut and fill slope stability, and definitive analysis of excavation and foundation problems. This work would include a comprehensive program of trenching, drilling, material testing, and investigation of possible elastic strain accumulation in the subject areas. This latter recommendation is amplified and explained in the text.

During the hearings the director of the committee staff asked several questions of Dr. Ginzton, the director of the accelerator project, and I read from the hearings:

Mr. RAMEY. Are there any other changes of significance in the cost of your facility other than the matter of your tunnel aspect?

This is after they went above ground.

In other words, as we recall the original estimate was $105 million, and then taking that same estimate today it would be $126,700,000. Do some of those increases in that $126 million stay in your estimate as it is now, but you save some money by changing the site and putting it above ground?

Dr. GINZTON. Yes, this is in large measure correct. It is not the complete story. What happens is that first by abandoning the tunnels and going to cut-and-cover construction the ventilation problems in the tunnel are much different.

That is another problem.

Much of the equipment we now suggest is different from the equipment we suggested before.

That is another problem.

This includes cooling, ventilation, electrical equipment, fire protection system; many things are different. So it is not any longer possible to identify individual costs.

Mr. President, as judicious men, men who are charged with protection of the purse of the taxpayers of this country, do we begin to authorize a project under those circumstances?

I repeat, the members of the committee considered this question thoroughly. I recommend that Senators read the debate in the House. Representative CARL DURHAM, of North Carolina, has been in the vanguard of the progress on research and development in this field. He said, "Let us find out what this is going to cost."

Along that line, let me introduce into the RECORD, and I shall not take up the time of the Senate by reading it in detail, a chart which shows that, whereas the original cost of a project was estimated at only $4 million, it ended by costing about $14,700,000. Another project which it was estimated would cost $9 million will end by costing $12 million. Another project which it was estimated would cost $29 million will end by costing $40 million. Another project which it was estimated would cost $27 million will end by costing $59 million.

That experience gives us a fair idea of what kind of field we are in.

I ask unanimous consent to insert the chart in full at this point in the RECORD.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

U.S. HIGH-ENERGY ACCELERATOR COST ESTIMATES

Construction cost estimates

[In millions]

Accelerators	Energy, bevatrons	Particle	Initial estimate	Current estimate	Estimate, additions and modifications through 1965	Total estimated construction costs through 1965
Cosmotron (Brookhaven)	3.0	Proton	$4.0	$13.2	$1.5	$14.7
Bevatron (Berkeley)	6.2	do	9.0	13.9	11.6	25.5
Alternating gradient synchrotron (Brookhaven).	25.0–30.0	do	20.0	32.5	7.4	39.9
Zero gradient synchrotron (Argonne)	12.5	do	27.0	42.0	17.0	59.0
Cambridge electron accelerator (Harvard, MIT).	6.0	Electron	6.5	11.6	1.5	13.1
Princeton-Penn accelerator (Princeton).	3.0	Proton	5.8	11.2	13.3	24.5
Total			72.3	124.4	52.3	176.7

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. PASTORE. I shall yield in just a moment.

These gentlemen have said, "Let us wait 6 more months." After all, since the matter was sent to us on April 1, what is wrong with telling them to go ahead with design and engineering on this project, and then come back in January, so we can then proceed? Is that not a more businesslike way to do it?

Mr. President, the situation before us is quite a paradox, because ordinarily one would expect the junior Senator from Rhode Island to be on the other side of the question. However, we sometimes become very paradoxical, and who knows what the necessities of the times may be. However, the fact still remains that the men whom I would expect to be conservative and urge us to go slow are the very men who are urging us this afternoon to go forward with this proj-

ect, whatever the event may be, on the ground that we have the money and therefore we should build this project. Why? Because we think we should beat the Russians.

That is a rather glamorous and graphic argument, but I hope we have not reached the stage where every time we get caught in an illogical position, the argument is made that we are in competition with the Russians. We are, in truth, out to beat the Russians. We have a better program and better high energy physics than the Russians have. We have better accelerators. This is the biggest project that has come to us in a long time. We are going to have it in due time. But I say let us do it without wasting the taxpayers' money.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. HICKENLOOPER. I have one comment to make. I think the Senator, only a moment ago, disproved his own statement. The Senator said that with regard to this particular project we ought to know what the cost is going to be, that we had never before authorized something without knowing the cost of it, and then the Senator read off a list of some five projects we authorized at costs which turned out to be about twice as much as we thought they would be when the projects were authorized.

That has been the characteristic pattern of the whole new field of atomic energy. We can never find out what a pioneering project in atomic energy is going to cost, because it is a new field. As we go along with the design and engineering of these projects new problems occur which could not possibly have been foreseen because they had never occurred before.

We may expect from time to time increased costs of one kind or another. This is not the same as construction of a building, when we have built buildings by the thousands for hundreds of years and know something about design and architecture and everything involved in it. These are pioneering operations.

I merely say we should get on with the job, and get it done. It will cost us more in dollars if we wait another year or two. I think we should authorize the project, and let it go ahead with confidence. In that way we will keep the team together, and enlarge the team for its operation. We will get on with the job. I think that will be in the best interests of American leadership in atomic energy.

Mr. KUCHEL. Mr. President, I wonder if I might ask my friend from Rhode Island a couple of questions?

Mr. PASTORE. I yield to the Senator.

Mr. KUCHEL. First, I want to ask the Senator if he believes any delay in the authorization of the entire amount of money, as contained in the pending amendment offered by the Senator from Iowa, would in any respect endanger the security of the country?

Mr. PASTORE. Would a delay of 6 months endanger our security? It is my considered opinion that it would not. I think that opinion is shared by the majority of the members of the committee. I do not believe there is a Senator who would take such a position. I feel the majority are as patriotic as the minority.

Mr. KUCHEL. There is no question about that.

Mr. PASTORE. There is no question about it.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. HICKENLOOPER. I agree with the Senator from Rhode Island. This is not specifically a defense project.

Mr. PASTORE. Of course not.

Mr. HICKENLOOPER. What we are providing for is a scientific research tool. If our experience in this regard is the same as the experience we have had with other research tools, this probably will give us some new answers in regard to vast new fields of which we have no concept at the present moment.

Mr. PASTORE. In the makeup of the universe.

Mr. HICKENLOOPER. My point is that we had better get on with the job, as a matter of pure science and pure research. I agree with the Senator from Rhode Island that at the present moment, this does not directly affect the security of the United States or our armaments.

Mr. KUCHEL. I thank the Senator.

Mr. HICKENLOOPER. I should not like to have any misunderstanding about the matter.

Mr. KUCHEL. I notice on page 9746 of the CONGRESSIONAL RECORD for May 6 the Representative from the State of Pennsylvania [Mr. VAN ZANDT], a member of the committee, quoted a sentence from a communication by the Chairman of the Atomic Energy Commission, as follows:

> If the project were authorized in this session of the Congress for design engineering only and was not fully authorized until June of 1961, it appears that the most serious effect will be the lack of ability to recruit certain additional key scientists whom Stanford considers are essential for the development and design of the accelerator and experimental facilities.

On that point will the Senator comment, and indicate his view as to the validity of the statement?

Mr. PASTORE. I do not question or impugn the sincerity of Mr. McCone when he made that statement. He is a fine American, and a very worthy Chairman of the Commission. In my opinion he is a capable man.

The letter quoted was sent after this matter became a controversy. I wish to read to the Senator a letter in answer to a letter sent by the Senator from New Mexico [Mr. ANDERSON], the Chairman of the Joint Committee on Atomic Energy. The letter quoted is dated April 14th. It is the answer to the letter of the Senator from New Mexico [Mr. ANDERSON] of April 12, 1960, on this point. This is the answer we received at that time. What is the date of the letter the Senator reads from?

Mr. KUCHEL. The page of the CONGRESSIONAL RECORD for May 6 does not contain the date of the letter.

Mr. PASTORE. It is a fact that the letter was sent. I think it was read into the RECORD.

I read from the letter dated April 14:

> DEAR SENATOR ANDERSON: As we stated in our letter of April 13, 1960, to Mr. VAN ZANDT, at the present time work on the Stanford accelerator program has reached the stage where the next logical step would be to proceed with the design of the overall site plan and the design and construction of general laboratory facilities to house the design and engineering group and to conduct the research and development programs.

This is the important part of the letter:

> It is the Commission's view, however, that an authorization of $3 million—

That is the authorization in the bill—

> for design and engineering in fiscal year 1961 on the Stanford linear accelerator would allow the Commission to proceed with a program that would lead to initiation of construction with a minimum of delay following full authorization of the project.

Mr. KUCHEL. If the Senator will permit me to interrupt him, I shall read from the same sentence he has quoted. What does the wording mean when it says, "following full authorization of the project"? Is that what we are talking about in the amendment which is pending—"full authorization of the project"?

Mr. PASTORE. Three million dollars is in the bill. The reference to "full authorization" is to the time when we get the report of January 1961, I would assume. The $3 million which is talked about in the letter is the $3 million in the bill, which the amendment seeks to raise to the original amount requested. That has no bearing on the $3 million as such. This is something subsequent.

I continue to read from the letter.

> It is the Commission's view that the amount of $3 million—

That is in the bill. That is the authorization—

> for design and engineering together with operating funds for continued development work is adequate for Atomic Energy Commission and Stanford to make progress.

And so on and so forth. That is the letter which was sent. I tell the Senator very frankly, I suppose we could look at the matter in two different ways. We have to be practical about it. There is a school of thought which believes, "Well, we ought to authorize this project now, and let it go at that."

This matter was very carefully considered by the committee. As I stated, this is a bipartisan, bicameral committee. We never proceed on political considerations. I can say that with respect to the committee. There are no political motives to be injected in the debate this afternoon. If there is any difference, it is merely a question of a difference of judgment.

The majority of the committee decided that it would be better for the overall project if we authorized the planning and the designing now, and allowed those participating to come back with more definitive answers later, because this subject has been under consideration since 1957. The proposal has been changed from time to time. We have gone from one idea to another idea.

I think the project would have better "sailing" in the future if there were

unanimity of opinion. I am afraid that if the amendment is agreed to—and I do not say this as a threat—we may impede the progress of this project. Everybody seems to be for the project. It represents a new approach.

This matter was debated in the House of Representatives. The proposal was defeated by a vote of 194 to 129. The conferees will be more or less the same people who have made the report. There is a practical question involved at this moment.

I say to Senators, the history has been made. Senators have stated their positions. Let us proceed. Let us leave the matter until the plan and the design are prepared and reported to the committee. Three million dollars is provided for doing that. I know the scientists have a task in spending $3 million usefully in 6 months, but I think in this case they will do it. We will then get the more definitive design. We will get the definitive estimates. Then we will be ready to go forward. It will be done, and I do not think we will lose important time if that course is followed. That is the practical situation.

Mr. KUCHEL. What my friend is saying is that there is a difference of opinion on the need to go forward now. So that I can understand the situation, is it fair to say that the Atomic Energy Commission favors the pending amendment?

Mr. PASTORE. I assume the Atomic Energy Commission favors the pending amendment because it asked for the project originally.

Mr. KUCHEL. Does the Bureau of the Budget approve it?

Mr. PASTORE. I assume that it might, for the simple reason that it is included in its request.

Mr. KUCHEL. The Budget Bureau included the project in its request?

Mr. PASTORE. Yes, in its supplemental request.

Mr. KUCHEL. So the divergence of opinion on the necessity to go forward now lies within the membership of the Joint Congressional Committee on Atomic Energy?

Mr. PASTORE. Who are honorable, judicious, and wise men.

Mr. KUCHEL. I stipulate that.

Mr. PASTORE. But I want it in the RECORD at that point so there will not be any implications to the contrary.

Mr. KUCHEL. Let me repeat my stipulation. Let me ask my friend this question: Is it the theory of the majority of the Joint Committee that with the expenditure of the $3 million which, as I understand, the bill now provides, surveys will be completed during the next 6 months?

Mr. PASTORE. The Senator is correct.

Mr. KUCHEL. So early in the calendar year 1961, assuming a request such as is before us now were made again, on the basis of the additional information which would accrue from the expenditure of the $3 million, is it the opinion of my friend that at that juncture the committee would perhaps unanimously look with favor on proceeding?

Mr. PASTORE. I suppose so, but to make it more explicit, insofar as I am concerned, I would certainly support it with all the vigor within me.

Mr. KUCHEL. Has the Midwestern Universities Research Associates taken any position with respect to the pending amendment?

Mr. PASTORE. Representatives of that group appeared before the committee and said they would favor the project. As to details, as the Senator knows, many people appear before a committee to testify with respect to a bill. They are for the overall objective. I admit that we are getting into the niceties of that question. The committee as such is not opposed to the project. This group is in favor of the project. I think the committee is in favor of the project. Certainly I am. I am not a member of the subcommittee. As a matter of fact, I have had to do a considerable amount of night work to bring myself up to date. I did not attend the hearings. I am not a member of the subcommittee. However, I have read the transcript of the hearings and studied the report, and what I say now is based upon not what I knew previously but what I have learned since I was told I was to have management of the bill because of the absence of the distinguished Senator from New Mexico [Mr. ANDERSON], who is necessarily absent from the Senate today. That is all I can add. I would certainly support the measure. I think we must do everything within our power to progress as rapidly as we can in order to promote the levels of education and science in our country; and in view of everything which has transpired, in view of what transpired in the House and what I have read in the hearings, I say the best course to follow now is to go along, and this has been decided. When we come back in January our views will be unanimous. I think then we will go along fast and we will know where we are going because we will know more about the project.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. KUCHEL. I yield to my friend from Iowa.

Mr. HICKENLOOPER. The Senator from California [Mr. KUCHEL] asked a question as to whether the Midwestern Universities Research Association approves the project at this time. I call the Senator's attention to the report of the committee under date of April 19, 1960, page 20, on which appears the separate views of those of us who think the project should be authorized at the moment. I quote from the testimony of Dr. Rollesfson, who is the director of MURA:

> It is a pleasure for me, as a representative of the Midwestern Universities Research Association, to have an opportunity to give our enthusiastic support to the recommended authorization of the Stanford linear electron accelerator. The reasons for supporting this program have been so well and completely portrayed in the report of the special panel appointed by the President's Scientific Advisory Committee that I feel there is little of importance that I can add.

That portion of his testimony, I believe, answers the question of the Senator from California [Mr. KUCHEL] about MURA's attitude.

Mr. KUCHEL. Mr. President, I shall detain the Senate only a moment. I do not think there is anyone in the Congress for whom I have a higher respect than the Senator from Rhode Island [Mr. PASTORE], at whom I am looking. I have followed his leadership on many occasions in the Senate. I intend to do so again. This is a different subject. It is one which we who operate here as lay Senators and not members of the Joint Committee have difficulty in fully comprehending.

There is no dissent on the part of any Senator from our composite desire to lead the parade with respect to development in all the fields of atomic and nuclear energy.

After listening to the debate, I believe there are two honorable ways to look at the question.

I choose to follow the recommendation embodied in the amendment of the Senator from Iowa [Mr. HICKENLOOPER], to proceed at once with the authorization of the accelerator. I do so on the basis of my judgment that if error is to be made, I am going to err on that side. The President recommends this authorization. The Atomic Energy Commission recommends it. The Budget Bureau recommends it. Distinguished scientists and professors of some great midwestern universities recommend it. Other scientists of distinction do likewise. It seems to me that the position I take is a sound one, in the interest of the country, and so I repeat that I shall support the pending amendment.

Mr. PASTORE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. PASTORE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment offered by the Senator from Iowa [Mr. HICKENLOOPER].

The amendment was rejected.

The PRESIDING OFFICER. The question is on the third reading of the bill.

Mr. DWORSHAK. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. DWORSHAK. Will the Senator tell me whether there is any authorization of funds contained in the bill for continuing the Euratom project?

Mr. PASTORE. It is my understanding that there is nothing in the bill for Euratom.

Mr. DWORSHAK. How much has been appropriated in the past for Euratom?

Mr. PASTORE. The staff informs me that $10 million has been authorized thus far, and that all of it has been appropriated. However, there is nothing for Euratom in the pending bill.

Mr. DWORSHAK. How much has been spent of the $10 million, approximately?

Mr. PASTORE. I am informed that approximately $1.3 million has been obligated.

Mr. DWORSHAK. Mr. President, will the Senator yield further?

Mr. PASTORE. I yield.

Mr. DWORSHAK. Will the Senator concede that if the Joint Committee on Atomic Energy had been a little more deliberate and cautious in considering the entire Euratom program, and the authorization for the United States to participate therein, probably we might have avoided the embarrassment and disappointment which resulted from that action?

Mr. PASTORE. Well, I hope the Senator will not press that question, because we could discuss that from now until doomsday. At the time Euratom was suggested, insofar as the political complexion of the world was concerned, in view of the situation, particularly, which then existed in connection with the Suez Canal, in view of the scarcity of oil in Europe, and the desire to cultivate and promote production of electric energy and the use of atomic energy, in view of all these conditions the situation certainly was much more precarious at that time than it is now. Of course the picture has somewhat changed and the attitude toward Euratom has become somewhat discouraging. That is the best way I can answer the Senator's question in the time available to us now, but when more time is available I should like to discuss the matter with him.

Mr. DWORSHAK. I thank my colleague for his comment. I should like to ask him also that if the experience of the United States with Euratom does not indicate that it is not always advisable to accept the recommendations of the Atomic Energy Commission or the Bureau of the Budget insofar as the development of atomic energy is concerned.

Mr. PASTORE. I would prefer to answer that question by saying that as elected officials of the U.S. Government, representing the people, and their tax money, we should always be judicious and should always be businesslike, and always careful in appropriating the people's money.

Mr. DWORSHAK. I thank the Senator.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, and was read the third time.

Mr. PASTORE. Mr. President, I move that the Senate proceed to the consideration of H.R. 11713, a House bill identical with the Senate bill which we are now considering.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The CHIEF CLERK. A bill (H.R. 11713) to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Rhode Island.

The motion was agreed to; and the Senate proceeded to consider the bill.

The PRESIDING OFFICER. The bill is before the Senate and open to amendment. If there be no amendment to be offered, the question is on the third reading of the bill.

The bill was read the third time.

The PRESIDING OFFICER. The question is on the passage of the bill.

The bill (H.R. 11713) was passed.

Mr. KUCHEL. Mr. President, I move that the Senate reconsider the vote by which the bill was passed.

Mr. CLARK. I move to lay that motion on the table.

The motion to table was agreed to.

The PRESIDING OFFICER. Without objection, the Senate bill (S. 3387) will be indefinitely postponed.

AREA REDEVELOPMENT LEGISLATION

Mr. CLARK. Mr. President, I should like to make a strong and, I hope, dispassionate and nonpolitical plea to the President of the United States to sign the area redevelopment bill which was sent to him last Friday. The bill holds out the only hope for a quick, if partial, solution of the unemployment problem which is affecting many regions of the country, including wide areas in my own State.

Moreover, the President's principal original objections to the bill passed by the Senate last year have been substantially met in revisions made by the House of Representatives and accepted by the Senate.

I have seen, as have many of my colleagues, including the nine members, from both parties, of the Special Senate Committee on Unemployment Problems, ghost towns where almost nobody has a job except the postmaster and the public welfare representative who hands out public assistance and surplus food. In fact, in company with some of my colleagues I have visited the small town of Brier Hill, Pa., which, with a population of 1,000, perched on top of an abandoned bituminous coal mine, contained hardly one man, woman, or child who had a job. It was not because the men in that community, and in many other communities, had not constantly been seeking work.

These men told us they had traveled to Pittsburgh and Baltimore and Cleveland, and all over the Northeast, in search of work, but had not been able to find it. They told us they were turned away from the plant gates as soon as they gave their age as over 40; sometimes even over 35. They told us that because they had grown up as coal miners, they knew no other business or trade or occupation, and had had no opportunity for retraining. I have seen, and so have many of my colleagues on the Senate Special Committee on Unemployment Problems, as well as many other Senators, the most praiseworthy efforts of communities, including many in my own Commonwealth—Scranton, Hazelton, Altoona, Uniontown—to lift themselves up by their own bootstraps, by raising money by popular subscription to build shell plants and then go out and find industries to occupy those plants.

Mr. HARTKE. Mr. President, will the Senator yield?

Mr. CLARK. I am very happy to yield to the Senator from Indiana, who has served on the Special Senate Committee on Unemployment Problems, as has the present occupant of the Chair [Mr. MCCARTHY], and knows full well the truth of what I am speaking.

Mr. HARTKE. I should like to ask the distinguished Senator from Pennsylvania if it is not true that the present situation in many of these depressed cities has almost come to the point where the people feel no one is concerned about their welfare, and have tried to get help so many times that they feel discouraged at the prospect of ever getting help?

Mr. CLARK. I regret to say that the Senator from Indiana is entirely correct. As a former mayor of a city where there has been substantial unemployment from time to time, he knows of the substantial local efforts that have been made in his city as in my own Commonwealth of Pennsylvania. But I think he would agree with me that State, local, and private efforts have pretty well exhausted the resources in many of those areas.

Mr. HARTKE. I agree with the distinguished Senator from Pennsylvania. I particularly point out that the State of Pennsylvania has a program which is probably unique, nationwide. It is not true in my own home State of Indiana, where we have been able to do some good.

I also like to recall the visit to one of those places which have been the subject of help. In one of the communities of Pennsylvania it was pointed out that in one plant the sum total of employment was from 100 to 150 people, while the number of people who had been laid off numbered in the thousands.

Mr. CLARK. I well recall the incident to which the Senator refers. It was, I believe, outside Uniontown, in Fayette County, Pa. The Senator from Indiana joined me in a field trip in that area.

Mr. HARTKE. I also join with the Senator from Pennsylvania in the hope that the President will see his way clear to put aside any partisan considerations in the interest of humanity and the welfare of individuals, not alone those of the communities, but of the souls who live there—the women and children, and the men who, while they are not subject to starvation itself, nevertheless try to find work, but do not know where to turn. This, in and of itself, should be reason enough for the President to sign the bill.

More than that, the President sent a special message to Congress in which he stated, in general terms, that he was in favor of this type of legislation. If he favors the general, overall principle, then I hope he will not quarrel about where we dotted the i's and crossed the t's, and where we put the periods or paragraphs, but that he may agree, in the interest of humanity and the welfare of the United States, that this is an

economic problem which must be solved if the forward progress of the United States is to continue.

Mr. CLARK. I thank the Senator from Indiana for his intervention, and particularly for his suggestion that this is not only an economic problem, but is also a human problem. I remember well the very moving address which the Senator from Indiana made on the floor of the Senate when we submitted the report of the Special Committee on Unemployment Problems.

I revert to my comment that our cities, counties, and States—and private industry, too—have reached the end of their resources. Many of those communities never had the resources, in the first instance, to make it possible for them to rehabilitate their local economies.

I do not wish to be critical of the President of the United States. I know he is a man of good will and has a large and compassionate heart. However, he has never seen with his own eyes the situation which I have just described, and which the Senator from Indiana [Mr. HARTKE], the Senator from Minnesota [Mr. MCCARTHY], who is the present occupant of the chair, and the other members of the Special Committee on Unemployment Problems have seen. I know it must be very difficult, indeed, for the President of the United States to see at secondhand what, perhaps through the necessity of the arduous duties which he must perform, he has not had an opportunity to see at firsthand. But the President has a number of capable and intelligent advisers in his own party who have seen these things. I hope he will take their advice. I hope he will take the advice of his Secretary of Labor, Mr. James Mitchell, who is intimately familiar with the conditions I have been describing. I hope he will take the advice of two distinguished Members of this body, the distinguished Senator from Kentucky [Mr. COOPER] and my colleague from Pennsylvania [Mr. SCOTT], both of whom know these conditions at firsthand, and both of whom are urging the President to sign the bill.

I hope the President will take the advice of the present Governor of West Virginia, Governor Underwood, who has also come to see the President, and who knows these conditions at firsthand and is urging the President to sign the bill. These men understand the situation. Their advice is good, sound, hardheaded advice. I hope the President will follow it, rather than follow the advice of other men, who have never seen these conditions, such as the Director of the Bureau of the Budget and the Secretary of the Treasury, fine American citizens though they unquestionably are.

The Special Committee on Unemployment Problems took thousands of pages of testimony in stricken communities across the country. We reached the unanimous conclusion—six Democrats and three Republicans—that this problem could not be solved without a share of assistance from the Federal Government. We unanimously recommended to the Senate, and by Senate action we have sent that recommendation along to the President, that the area redevelopment bill should be passed and signed at this session of Congress. Now the bill to do the job is on the President's desk.

It is a moderate bill. It calls for substantially less help than we in the Senate thought desirable. But I hope the President will sign the bill. If he vetoes it, thousands of able-bodied persons will be condemned for a further indefinite period to the industrial scrap heap.

I point out that both of the objections which the President originally made to the bill have been met in the version which Congress passed. The President criticized the Senate bill as a spending bill, but the bill we passed does not spend 1 cent. It contains no appropriation whatever. There is no backdoor financing in it. It cannot correctly be characterized as a spending measure. It establishes a ceiling of $251 million on authorizations, but the amount to be appropriated is left to the later decisions of the Committees on Appropriations of the House and Senate, which will unquestionably be affected by the recommendations which the Department of Commerce will prepare and which the President himself will submit to implement the authorization contained in the bill.

All the bill does is to establish a program. The President has stated that he favors such a program. The Vice President has stated that he favors such a program. The platforms of both the Republican and Democratic Parties endorsed such a program in 1956. The bill merely authorizes the carrying out of the wishes of all concerned.

If the President signs the bill, the Department of Commerce must make an estimate of the money it wants, and the President must establish an agency to make the necessary loans and, to a very small extent, the necessary grants. The Bureau of the Budget must clear the request. The matter then must be reviewed by the Committees on Appropriations of both Houses.

If anyone thinks the maximum authorization of $250 million contained in the bill will get through all those stages of the process this year, he simply has not been around Washington very long.

While the President asked for a limit of $53 million to be authorized in his own area redevelopment bill, the budget estimates for fiscal 1961 contain only $10 million of expenditures for next year. Under the bill which Congress has passed, the President can still submit an estimate of only $10 million; and if Congress appropriates more than that amount, it would be a very simple matter, indeed, for the President to impound what Congress appropriated and refuse to spend any part of it. While I myself question whether that is correct procedure and is within the spirit of the Constitution, both President Truman and President Eisenhower have on many occasions refused to spend moneys which were made available to them by Congress.

Certainly the bill cannot well be vetoed on the ground that it is a spending measure. I reiterate—and I hope the President will take this fact into account—that the bill does not appropriate a single cent.

As for the President's other objection, namely, that too many labor market areas were made eligible, this defect was largely corrected on the floor of the House of Representatives after the President sent a special message to Congress commenting, among other measures, on the area redevelopment bill. The House restored the requirement which was contained in the Senate bill, but which the House committee had struck out, that no area could qualify unless its current unemployment rate exceeded 6 percent. That provision eliminated most of the big cities. Philadelphia is eliminated; so are New York City and Louisville, and a score of other cities throughout the country.

The rest of the areas where the President seemed to feel that generosity was being extended too far will be eliminated if we ever get out of what is euphemistically referred to as the 1958 recession.

If prosperity is restored and if unemployment decreases to somewhere near what we think of as normal levels, then only the hard-core areas of chronic unemployment, which this bill is designed to serve, will be over the 6-percent mark. Then in the case of centers such as Pittsburgh, where unemployment now is well over the 6 percent mark, unemployment will fall below that figure.

But if the President is still worried, for fear that too many areas will be eligible, as he is said to be worried about too much spending, he can handle that matter, too, because under the bill he will have the job of appointing the administrator who will carry the program into effect. So if the President is afraid that funds will be dissipated in areas where the economic distress is temporary, not permanent, all he will have to do will be to instruct the administrator whom he will appoint to reserve for a reasonable length of time the funds for expenditure for the hard-core areas, until suitable applications can be filed.

So, Mr. President, I hope very much indeed that the President will hear this plea, which is made to him by the citizens of the distressed areas in the Nation, who ask only for an opportunity to work for an honest living, and ask only that moderate sums of money—most of which will be repaid, with interest, to the Federal government—be put out on loan, to rehabilitate the economies of the areas in which they have been brought up, and where they have married and have raised their families and have their homes.

I hope the President will listen to the pleas of these citizens, and also will listen to those of us, on both sides of the Capitol, who have studied this problem deeply, and have seen with our own eyes the extent of the human misery involved.

I also hope the President will not be led astray by the statements of those who say this is a spending bill, or by the statements of those who say the bill covers too many areas. I hope that, instead, the President will realize that the control of those features of the proposed legislation will lie almost completely in his own hands.

Mr. President, because I have such great confidence in the wisdom and in the compassion of the President—with

whom, unfortunately, I deeply disagree at times—I am confident that if he really studies this matter and if he listens to the advice of those who know what they are talking about, this bill will yet become law.

Mr. President, I yield the floor.

INCREASED USE BY POST OFFICE DEPARTMENT OF AIR TRANSPORTATION FOR FIRST-CLASS MAIL

Mr. MONRONEY. Mr. President, during the first session of the present Congress the Subcommittee on the Post Office Department, of the Senate's Committee on Post Office and Civil Service, devoted a substantial amount of time to the matter of the increased use by the Post Office Department of air transportation for the movement of first-class mail. Five days of hearings were held on a bill—S. 2402—submitted by the Post Office Department; and during those hearings the subcommittee heard oral testimony by 17 witnesses and received written information from 25 or 30 more.

At the conclusion of these hearings and very careful study of existing statutes and court decisions construing them, the majority of the committee was convinced that the Post Office Department has the clear authority under the Federal Aviation Act to transport all classes of mail by air.

The witnesses for the Post Office Department made very clear that the increased use of air transportation was not a matter of choice, but was a matter of necessity; and he assured the committee that the use of alternative means of transportation, including aircraft, would be made only when the means formerly used proved inadequate to the needs of the postal service.

During the last few weeks, Members of Congress have been subjected to an unbelievable barrage of misinformation, largely emanating from the railroads, with the result that many Members have a completely exaggerated idea of the extent of the proposed increase in the use of air transportation and its possible impact on other carriers. For example, one Member of the House recently stated that the Postmaster General "has been going hog wild" on the use of air transportation, and that unless the practice is halted, the railroads would be forced to discontinue passenger trains on a wholesale basis, seriously hurting the railroads and jeopardizing the mail service.

Mr. President, those who have been making statements of this kind are simply misinformed as to the facts, and I should like to take this occasion to set the record straight. In 1958, the Post Office Department moved approximately 460,000 tons of first-class mail. About one-third of this was for local delivery. Another one-third was nonlocal mail moving less than 300 miles. Of the remaining one-third, represented by first-class mail moving over 300 miles, the Post Office Department moved only a small part by air. For some time the post office has been moving approximately 25,000 tons of first-class mail by air. In the immediate future, it proposes to move an additional 15,000 tons annually, making a total of about 40,000 tons. This represents less than 10 percent of the total volume of nonlocal mail.

The airlines are receiving revenues of approximately $3 million annually from the transportation of first-class mail. The railroads are receiving annually $345 million in revenues from the Post Office Department. While the increase in airlift which is planned will increase these airlines' revenues $1½ or $2 million, railroad revenues in the coming year will increase by substantially greater amounts, even after the diversion to air of this small fraction of the total mail.

What is the reason for the increased use of air transportation? Since 1953, 1620 mail-carrying passenger trains have been discontinued; and of these, 1,216 were due solely to the voluntary action of the railroads. Since January 1, 1958, alone, 794 mail-carrying passenger trains have been discontinued, of which 561 were withdrawn by the voluntary action of the railroads. Not a single train has been discontinued as the result of air transportation of mail. When air transportation of first-class mail was begun in 1953, 11 railroad mail cars were discontinued. This took place prior to the fall of 1954, and since that time not a single railroad mail car has been discontinued as a result of air transportation of first-class mail. The Post Office Department expects the increased use of air transportation now being effected to result in the discontinuance of 17 railroad post offices, but not to result in the cancellation of a single passenger schedule.

On the same day last year that the railroad witnesses were appearing before the Post Office Subcommittee to protest the increased use of air transportation, other railroad witnesses were appearing before the Interstate Commerce Committee to protest any restriction upon their right to discontinue unprofitable passenger trains. Their position seems to be that the Post Office Department is expected to move an increasing volume of mail on a constantly diminishing number of trains, regardless of the effect that this may have on the mail service of the American people.

I respectfully refer the Senate to the report of its Committee on Post Office and Civil Service of August 25, 1959, Senate Report No. 805 of the 1st session of the 86th Congress, and to the published hearings on air transportation for other than airmail before the Post Office Subcommittee. This matter has been thoroughly studied by the committee, and the evidence is overwhelming that a modest increase in the use of air transportation for first-class mail is necessary and inevitable and will have no significant effect upon the revenues either of the airlines or the railroads. The action of the Post Office Department is in the interest of providing the American people with the best possible mail service, and I am confident that the Congress will support this action, despite the screams of the railroads over the diversion of mail or the equally pained screams of the airlines that the rates set by the CAB are inadequate.

The American people are entitled to the best mail service which we can give them. Our responsibility is to them, and not to serve the selfish interest of a particular branch of the transportation industry.

Mr. MONRONEY. Mr. President, I note the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that further proceedings under the quorum call be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I am informed that we do not expect the conference report on the Mutual Security bill to be considered in the House today, because of the West Virginia primary election. We will probably not receive the conference report until tomorrow, if the House acts on it early tomorrow. I should like for all Members to be on notice that there is a possibility we shall act on the report tomorrow. We are going to act on it as soon as it is messaged to us.

In addition, we expect to consider Calendar No. 893, S. 910, to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes.

This measure will be handled by the Senator from Minnesota [Mr. HUMPHREY]. I do not know exactly when the bill will be considered, but I should like to give notice, so that I can work out a plan for consideration of the bill.

Calendar No. 950, S. 2653, to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems, I expect will be considered early next week.

I should like to give notice we expect to consider Calendar No. 921, S. 2168, to amend the Navy ration statute so as to provide for the serving of oleomargarine or margarine some time this week or early next week.

The Stella School District bill, Calendar No. 924, H.R. 8315, which is a very famous bill most people have heard about, we should like to have considered. I shall attempt to arrange a convenient time with the Senator from Oregon.

Calendar No. 173, H.R. 4601, to amend the act of September 1, 1954, in order to limit to cases involving the national security the prohibition on payment of annuities and retired pay to officers and employees of the United States, to clarify the application and operation of such act, and for other purposes, is a measure as to which I understand there is considerable opposition. I think the bill will probably be considered. I should like for Senators to be on notice it may be considered.

The wheat bill, S. 2759, has not been cleared by the policy committee, but has

been reported. We expect to have a meeting of the policy group at an early date, and will consider the bill.

The military construction authorization bill we expect will be reported some time this week. I should like for all Members to be on notice that the bill may be considered. I expect it will be considered Friday. The bill comes from the Armed Services Subcommittee headed by the Senator from Mississippi [Mr. STENNIS].

We do not expect to consider any bills to be reported from the Committee on Agriculture and Forestry this week, but S. 3044, a forest use bill, may be considered next week.

We do not expect anything to be reported from the Committee on Appropriations this week. The next bill to be reported will probably be the Agriculture Department appropriation bill. Hearings have been concluded on that bill. The hearings on the Labor Department-HEW appropriation bill and general Government matters appropriation bill have not been concluded. As soon as the bills are reported we will consider them in the Senate. I should like for the staff to contact the chairmen of the subcommittees, to see if those bills can be reported soon, so that we can keep making progress. There is a 3-day rule in regard to these bills.

The Subcommittee on the Defense Department appropriations has received the Defense Department appropriation bill from the House. It will be some time before that bill is acted upon.

We may receive the Treasury-Post Office conference report this week. Any Members who are interested in that should be on notice.

The military construction authorization bill may be reported from the Committee on Armed Services Wednesday. Hearings will be held next week on a major bill to amend the Reserve Officers Personnel Act.

We expect it will be at least another 2 weeks before the housing bill is reported from the Committee on Banking and Currency.

H.R. 9662, an omnibus bill to amend the trust, estate, and partnership tax laws, will probably be reported by the Committee on Finance next week. Hearings are being held on H.R. 10 this week, but there will be no report on the bill until next week at the earliest.

The Hawaii omnibus bill may be reported this week by the Committee on Interior and Insular Affairs. Major amendments to the Mineral Leasing Act also may be reported.

S. 2584, to remove the 50-percent subsidy ceiling on ship construction, may be reported by the Committee on Interstate and Foreign Commerce Wednesday.

Nothing is expected from the Committee on the Judiciary this week.

Nothing is expected this week from the Committee on Labor and Public Welfare. Executive meetings on the minimum wage bill will begin May 23.

Nothing is expected this week from the Committee on Post Office and Civil Service. The committee will wait for House action on the pay bill.

Nothing is expected this week from the Committee on Public Works. The omnibus rivers and harbors bill is at least 2 weeks, and probably 3 weeks, from action.

CONSTRUCTION OF MODERN NAVAL VESSELS

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1329, House bill 10474.

The motion was agreed to; and the Senate resumed the consideration of the bill (H.R. 10474) to authorize the construction of modern naval vessels.

ORDER FOR ADJOURNMENT TO 12 O'CLOCK NOON TOMORROW

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when the Senate concludes its business today it stand in adjournment until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

RETIREMENT OF SENATOR O'MAHONEY

Mr. JOHNSON of Texas. Mr. President, I know of no other business to be transacted by the Senate today.

I wish to make a brief observation concerning the announcement of the very able senior Senator from Wyoming [Mr. O'MAHONEY] that he will not be a candidate for reelection.

Senator O'MAHONEY has served with great distinction in the Congress for many years. First he was employed in the legislative branch of the Government as secretary to the late Senator Kendrick. He also rendered outstanding service in the executive branch of the Government when he served as Assistant Postmaster General during the early days of the Roosevelt administration. Perhaps one of his most notable contributions to public service was made when he headed the TNEC study in the early thirties. This inventory of our economic system served as the basis for some of our most prudent and forward-looking legislation.

I know of no man who has been a wiser counselor or a more cooperative legislator than JOE O'MAHONEY. And at all times, he has been a true public servant—dedicated to the interests of the people. It is with the deepest regret that I learn of his decision. Of course, we shall accept his decision, but we shall accept it with great regret, and with the knowledge that few, if any, men who have ever served in this body have rendered more dedicated or more patriotic or higher quality service than has the Senator from Wyoming, JOE O'MAHONEY.

Mr. LONG of Louisiana. Mr. President, I agree with the Senator from Texas that the distinguished Senator from Wyoming has been one of the great and devoted public servants of his time. Even long before I had the opportunity to serve in this body, I was one of those who, from boyhood, admired his great fight to preserve and strengthen the antitrust laws, to preserve free enterprise, and to treat fairly and equitably all citizens of this country, no matter where they were placed in life, with particular emphasis on economic and social justice for the least of them all.

It is of great regret to me to hear that the Senator from Wyoming is to retire from this body at the conclusion of this term. We shall sorely miss him.

Mr. JOHNSON of Texas. Mr. President, I appreciate very much what the Senator from Louisiana has said. He has stated my sentiments better than I could express them, as he usually does.

Mr. KEFAUVER. Mr. President, I am very sorry to hear that the Senator from Wyoming is to retire from the Senate at the end of this term.

Through many years he has been one of our outstanding and most valuable public servants. I have the privilege of serving on the Judiciary Committee with Senator O'MAHONEY, and specifically on the Antitrust and Monopoly Subcommittee, of which he was chairman, and of which he is now cochairman.

Senator O'MAHONEY has always stood for and fought effectively for economic freedom, for the rights of small business and middle-sized business to have a chance against concentrations of economic power. He has effectively espoused the cause of competition. As has been pointed out both in the Senate and in the House, where he has appeared before House committees, when people lose their economic freedom they sooner or later lose their political freedom.

There is no deeper student of the problems of economics and of concentrations, monopolies, and mergers than the distinguished Senator from Wyoming. In this field he has been the most eminent scholar and specialist we have ever had, in my opinion, in the Congress.

He has always been interested in younger Members of Congress. When I first came to the House of Representatives I came to know Senator O'MAHONEY. He was never too busy to take time to explain his philosophy, and to explain the meaning of legislation.

I consider also that he is one of our most eminent students of constitutional law. When he spoke it was always on the basis of sound principle; he was listened to, and was very persuasive. His work, what he stood for, and his influence will live on for many, many years. We shall all certainly miss him. I regret that he has decided to retire.

Mr. JOHNSON of Texas. The Senator from Tennessee [Mr. KEFAUVER] has made a very beautiful statement. I know that the Senator from Wyoming [Mr. O'MAHONEY] appreciates the tribute he has paid to him. I share the views expressed by the able Senator from Tennessee, who has made such remarkable contributions to the antitrust and monopoly field himself, and I wish to congratulate him on the fine work he has done and the great progress he has made and the great example of public service he has set. It should be an inspiration to every person in Congress and in public life.

Mr. KEFAUVER. I thank my majority leader.

Mr. KEATING. Mr. President, long before I came to the Senate I came to

know Senator O'MAHONEY in his appearances before the House Judiciary Committee and in several conferences between the Senate and the House, and I came to have a very great respect for his unusual abilities as a lawyer. I also became proud to be able to call him my friend. He was a friend and counselor on many occasions before I became a Member of the Senate, and has been such ever since.

I have a very deep personal affection for Senator O'MAHONEY. As a Republican I should not join in the regret that he has decided not to be a candidate again. He has, of course, a very high place in the affections of the people of his State. I certainly do regret the reasons which have given rise to his decision, and can only express the hope that his retirement from his arduous duties in the Senate will result in his complete restoration to health.

Our hearts and our prayers will be with him as long as he lives. He holds a unique spot in our affections.

Mr. JOHNSON of Texas. Mr. President, I appreciate the generous statements made by the acting minority leader concerning our beloved friend from Wyoming.

ADJOURNMENT

Mr. JOHNSON of Texas. Mr. President, if there is no further business to come before the Senate at this time, I move, pursuant to the order previously entered, that the Senate adjourn until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 4 o'clock and 38 minutes p.m.) the Senate adjourned, under the order previously entered, until tomorrow, Wednesday, May 11, 1960, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate May 10, 1960:

U.S. TAX COURT

The following-named persons to be judges of the Tax Court of the United States for terms of 12 years from June 2, 1960. (Reappointments.)

Arnold Raum, of Massachusetts.
Allin H. Pierce, of Illinois.
Graydon G. Withey, of Michigan.

Irene F. Scott, of Alabama, to be a judge of the Tax Court of the United States for a term of 12 years from June 2, 1960, vice Marion J. Harron, term expiring.

HOUSE OF REPRESENTATIVES

TUESDAY, MAY 10, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Joel 2: 13: *Turn unto the Lord, your God, for He is gracious and merciful, slow to anger and of great kindness.*

Eternal God, our Father, we rejoice that Thou art always willing to bestow upon us the priceless blessings of Thy wisdom to live by, Thy light to walk by, and Thy strength to sustain us.

Thou knowst that daily we are greatly disturbed and disquieted for we are being besieged by perplexing national problems and perilous international circumstances.

We penitently acknowledge that we art tempted to allow our minds to be centered merely upon tidings and things that are dark and gloomy, causing our hearts to be overcome by cowardice and cynicism.

In the vast concerns of our beloved country, for which we find ourselves unequal, wilt Thou give us a new perspective and a clearer vision of that blessed day when righteousness and justice shall be triumphant, and freedom and peace shall be the glorious possession of all mankind.

Through Christ Jesus, we offer our prayer. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

RURAL ELECTRIFICATION ADMINISTRATION

Mr. BASS of Tennessee. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. BASS of Tennessee. Mr. Speaker, tomorrow is the 25th anniversary of the Rural Electrification Administration. This great institution is not only one of good and of progress for all of the country, but it is also a monument to the life and work of our beloved Speaker, Hon. SAM RAYBURN.

I have a special order for tomorrow and I hope, if time permits, to be able to discuss some of the phases in the history of this great program, and at the same time pay tribute to the work of our Speaker in this field. If there are others who care to join me tomorrow I have 1 hour reserved for that purpose.

COMMITTEE MEETING DURING SESSION OF HOUSE

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Subcommittee on Legislative Oversight of the Committee on Interstate and Foreign Commerce may sit today during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

PROVIDING PROGRAM OF ASSISTANCE IN THE CONSTRUCTION OF FISHING VESSELS

The SPEAKER laid before the House the following request from the Senate, which was read:

IN THE SENATE OF THE UNITED STATES,
May 5, 1960.

Ordered, That the House of Representatives be requested to return to the Senate the bill (H.R. 5421) entitled "An act to provide a program of assistance to correct inequities in the construction of fishing vessels and to enable the fishing industry of the United States to regain a favorable economic status, and for other purposes."

Attest:

FELTON M. JOHNSTON,
Secretary.

The SPEAKER. Without objection, the request of the Senate will be agreed to.

There was no objection.

DEPARTMENT OF AGRICULTURE AND FARM CREDIT ADMINISTRATION APPROPRIATION BILL, 1961

Mr. WHITTEN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate be limited to not to exceed 4 hours, the time to be equally divided and controlled by the gentleman from Minnesota [Mr. ANDERSEN] and myself.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

CALL OF THE HOUSE

Mr. BUDGE. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 85]

Alexander	Farbstein	Montoya
Anderson, Mont.	Flynn	Moore
	Forand	Morris, N. Mex.
Bailey	Garmatz	Pillion
Baker	Gavin	Pirnie
Barden	Gilbert	Porter
Barrett	Goodell	Powell
Blatnik	Green, Oreg.	Reece, Tenn.
Blitch	Hechler	Riehlman
Boggs	Henderson	Rivers, Alaska
Bolton	Hess	Roberts
Bonner	Hoffman, Ill.	Rooney
Boykin	Holt	Scott
Brewster	Hosmer	Shelley
Brown, Mo.	Inouye	Sheppard
Buckley	Jackson	Simpson
Burleson	Jones, Ala.	Spence
Cahill	Judd	Staggers
Canfield	Kasem	Taylor
Celler	Kearns	Teller
Chamberlain	Kee	Thompson, N.J.
Chelf	Kilburn	Vinson
Coad	Kluczynski	Wallhauser
Collier	Kyl	Walter
Davis, Tenn.	McGinley	Weaver
Dawson	McMillan	Widnall
Devine	Macdonald	Willis
Dorn, N.Y.	May	Winstead
Dowdy	Metcalf	Wolf
Durham	Miller, N.Y.	Zelenko
Elliott, Ala.	Mitchell	
Fallon	Moeller	

The SPEAKER. On this rollcall 337 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

SUBCOMMITTEE ON LABOR STANDARDS

Mr. ROOSEVELT. Mr. Speaker, I ask unanimous censent that the Subcommittee on Labor Standards of the Committee on Education and Labor be allowed to sit this afternoon during general debate.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

SUBCOMMITTEE ON THE LIBRARY

Mr. JONES of Missouri. Mr. Speaker, I ask unanimous consent that the Subcommittee on the Library of the Committee on House Administration may sit today during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

DEPARTMENT OF AGRICULTURE AND FARM CREDIT ADMINISTRATION APPROPRIATION BILL, 1961

The SPEAKER. The question is on the motion of the gentleman from Mississippi [Mr. WHITTEN].

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes, with Mr. KILDAY in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the unanimous-consent agreement, the gentleman from Mississippi [Mr. WHITTEN] will be recognized for 2 hours and the gentleman from Minnesota [Mr. ANDERSEN] will be recognized for 2 hours.

The Chair recognizes the gentleman from Mississippi [Mr. WHITTEN].

Mr. WHITTEN. Mr. Chairman, I yield 15 minutes to the gentleman from Missouri [Mr. CANNON].

Mr. CANNON. Mr. Chairman, on May 1 the Soviet Government captured, 1,300 miles inside the boundaries of the Russian Empire, an American plane, operated by an American pilot, under the direction and control of the U.S. Central Intelligence Agency, and is now holding both the plane and the pilot.

The plane was on an espionage mission authorized and supported by money provided under an appropriation recommended by the House Committee on Appropriations and passed by the Congress.

Although the Members of the House have not generally been informed on the subject, the mission was one of a series and part of an established program with which the subcommittee in charge of the appropriation was familiar, and of which it had been fully apprised during this and previous sessions.

The appropriation and the activity had been approved and recommended by the Bureau of the Budget and, like all military expenditures and operations, was under the aegis of the Commander in Chief of the Armed Forces of the United States, for whom all members of the subcommittee have the highest regard and in whose military capacity they have the utmost confidence.

The question immediately arises as to the authority of the subcommittee to recommend an appropriation for such purposes, and especially the failure of the subcommittee to divulge to the House and the country the justifications warranting the expenditure and all details connected with the item at the time it was under consideration on the floor.

The answer of the subcommittee is—absolute and unavoidable military necessity, fundamental national defense.

During the Second World War the United States succeeded in breaking the Japanese naval code. Through this incredible good fortune the U.S. commanders were able to read every order transmitted from Tokyo and all interfleet communications. This advance and intimate information had much to do in preparing the way and increasing the effectiveness of our great victory in the battle of Midway which broke the power of Japan in the Pacific. But some incautious member of a congressional committee or its staff leaked the information to a reporter, and 30 minutes after the next edition of his newspaper hit the street Japan changed her naval code and all further advantage was lost.

This appropriation, and its purpose, is justified by honored and established precedent. This subcommittee, including the same personnel with the exception of two members who have since died, was the same committee which for something like 3 years provided in the annual appropriation bills a sum which finally totaled more than $2 billion for the original atomic bomb. Session after session the money was provided, and the subcommittee visited Oak Ridge where the work was in progress without any Member of the House with the exception of the Speaker of the House being aware of this tremendous project or the expenditure of the money. According to the testimony of all military authorities that bomb ended the war and saved the lives of not less than half a million men who would have had to be sacrificed in the conquest of Japan. No one has ever said that the subcommittee was not justified in expending an amount that eventually aggregated more than the assessed valuation of some of the States of the Union for that purpose.

Espionage has been throughout recorded history an integral part of warfare. Before occupying the Promised Land Moses "by the commandment of the Lord" sent out from the wilderness of Paran 10 men under the direction of Joshua to spy out the land.

And no nation in the history of the world has practiced espionage more assiduously than Russia. The United States and every other allied nation today literally swarms with her secret agents. Within the last few weeks we sent to the Federal penitentiary at Atlanta a Russian spy convicted in Federal court who was regularly transmitting information directly to Moscow every night. Their spies stole from us the secret of the atomic bomb. When we were at Oak Ridge we were told there were so many Russian spies there that only by a policy of strictest departmentalism were they able to maintain the integrity of their work.

The need for espionage in this instance was exceptional and compelling. At the close of the World War in which we had saved Russia from complete subjugation we were surprised to learn that while all other nations were disarming and returning to a peacetime status as rapidly as possible, Russia was feverishly driving her factories and continuing to increase her armament at top speed. Simultaneously they announced that communism and free enterprise could not live in the same world.

Every effort has been made by American administrations to reestablish conditions under which we could discontinue excessive expenditures for armament and divert these vast sums to business and humanitarian purposes. But each year Russia has become more arrogant and threatening and more demanding.

Under our American ideals and system of government, a declaration of war against any nation, however provocative, is unthinkable. Our military authorities have no choice but to give any enemy the advantage of first attack and then depend on massive retaliation for defense. The Communists have taken every advantage of this situation.

In modern warfare surprise is a tremendous advantage. Less than a week before the Communist attack on Korea a congressional committee from this House returning from Seoul reported that permanent peace had been established and the land was returning to prosperity. There was no shadow of war; not the slightest cloud appeared on the horizon. The sudden rush of a vast army of well armed, well trained, and well munitioned Communists across the border made it necessary for us to throw precipitately into battle raw and untrained troops who were wholly unable to protect themselves or hold their positions. And there followed one of the most disastrous periods in the history of American arms.

During the hearings on this appropriation for the last 2 or 3 years, I have each year asked the CIA representative before the committee, "How could the enemy mobilize an army of such size and accumulate millions of tons of supplies and munitions and the transportation facilities necessary for its movement without our learning that such an attack was in prospect?"

And each year we have admonished the Authority, the CIA, that it must meet future situations of this character with effective measures. We told them, "This must not happen again, and it is up to you to see that it does not happen again"; that the American forces must be apprised of any future preparation for attack in time to meet it. And

the plan they were following when this plant was taken is their answer to that demand.

And I want to take advantage of the opportunity to compliment and thank Director Allen W. Dulles and his remarkable corps for the admirable way in which they have met the situation through these later years.

They are entitled to the highest commendation by the Department, the Congress, and the American people.

We cannot permit another Korea. We cannot take the risk of carnage and national devastation which might involve every American city. We cannot take the risk of the consequences which would follow a similar attack from across the Russian borders. And since the Russians refuse to cooperate in our efforts to establish permanent peace—refuse even to agree to ethical standards of warfare—we have no choice but to protect our Nation and our people through the age-old methods of defense so long in use by the Communists themselves, lest we wake tomorrow, or do not wake tomorrow, as a result of our failure to know in time what they are planning against us.

The world has been appalled by the vicious vindictiveness of Khrushchev's denunciation. He yesterday characterized the policy of the United States as stupid and blundering. His fury is incited by the fact that it is neither stupid nor blundering. On the contrary it has been infinitely successful and effective.

When we have answered his threats—and he has been very free with them on all occasions, even when he was here as our guest in our own country—when we have answered his threats by basing our Strategic Air Command in a position to defend ourselves and our allies, he has boasted that he could stop them at the border. That is why we are now so earnestly developing our submarines so that if he ever is able to neutralize our Strategic Air Command then we will have to take its place a fleet of nuclear-driven missile-firing submarines that will be just as effective a halter upon him as SAC is today.

His discovery that since 1956, for 4 years, CIA has been sending planes across his border—and as far as 1,300 miles into the interior without his knowing it—is the occasion of this outburst.

It completely disproves his vaunted ability to stop SAC at the border.

The only reason he was able to apprehend even this plane or its pilot was that it developed some unforeseen and unavoidable mechanical or physiological defect, the first in 4 years. He was unable to hit it or to overtake it at its cruising height of 70,000 feet. So in order to leave the impression that he captured this plane he distributed a picture of a pile of rubbish which those who know the plane recognized as absolutely spurious. The plane and the pilot were evidently taken comparatively uninjured. That completely destroys his claims of invulnerability against American attack. So he as usual resorts to subterfuge.

And now the most gratifying feature of the entire incident.

The world has always recognized the remarkable success of our form of government. It has been the wonder and admiration of mankind. But always they have said that it was at a great disadvantage in a war with an authoritarian dictatorship.

We have here demonstrated conclusively that free men confronted by the most ruthless and criminal despotism, can under the Constitution of the United States protect this Nation and preserve world civilization.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I yield such time as he may require to the gentleman from New York [Mr. TABER].

Mr. TABER. Mr. Chairman, that was the most magnificent and courageous speech I have heard on this floor in many a day. It is true that we have approached these summit conferences with the idea that each side must be given the right to inspect and examine what the situation might be on the other side. That is the only way we can have peace as the result of these summit conferences. We must have that right. When the leader of Russia refused us that right, the only method we had and the only chance we had was to get out and do just what was being done by this pilot. It was nothing compared to the spy work that was carried on by the Russians—nothing at all. Today, the leader of Russia knows that he could not overcome the United States with the airplanes and missiles that we have available. But we could not know what the proper targets were or know where they were or where they would be unless we had some means of checking up on them—and he left us no course to pursue except the course that we did pursue. That sort of approach was the only approach that we could make. I have served, as has the gentleman from Missouri, on the subcommittee that went into the question of the development of the atomic bomb and went into the questions of supplying the CIA and the other branches of our Government with funds necessary to take care of and protect the United States and its people. For my own part, just so long as I am here, I intend to support that position. We brought in from the Committee on Appropriations, under the leadership of the gentleman from Texas and the gentleman from Michigan [Mr. FORD] a military appropriation bill designed to maintain the advantage that we have today over the Soviet. Let us go on and maintain it.

Mr. WHITTEN. Mr. Chairman, I yield myself 20 minutes.

Mr. Chairman, I realize that in presenting the agriculture appropriation bill it is somewhat of an anticlimax in view of the wonderful speeches that have been made today. It probably is appropriate that this presentation be preceded by those statements, because many of our problems in the field of agriculture are tied directly into the defense effort of this country.

Back in World War II, and subsequent thereto, the American farmers were asked to produce world without end. They did that magnificently. When the war was over they were not given any refunds or tax reductions. Some $15 or $18 billion were given to business after World War II. No such thing was given to the American farmers.

We bring you a bill today where we are embarrassed by its size. We are embarrassed because under the present situation it is our subcommittee that has to pick up the check "after the fact," where we have little if anything to do with the amounts that are involved. In this bill that was submitted to us we were requested to appropriate the sum of $4,135,263,190. Our subcommittee was able to reduce that by $170 million. However, may I say, Mr. Chairman, that in the budget request regular activities were something like one-third of the total. Another one-third was for restoration of the capital impairment of the Commodity Credit Corporation; another more than one-third was reimbursement for special activities, the job of handling which has been assigned to the Commodity Credit Corporation.

I have before me the U.S. News & World Report for last week, which points out that the United States has entered into an agreement with India whereby we will, within the next 4 years, give to India something like $1,200 million worth of rice and grain. We have seen in the papers the fine statements made as to how wonderful this is on the part of the United States. I am not taking issue with that. But whatever that is, I do not know of anybody who feels it would lead to any agricultural markets in India. However fine it is from a good Samaritan point of view, however good it is from the standpoint of our international policy, our subcommittee will have to sign checks for it in excess of $300 million, charged up to the American farmers for each of the next 4 years. That is an illustration of what we have before us.

Yes, Mr. Chairman, our subcommittee has a tough job in trying to bring about reductions in the cost, because so many of them are beyond our reach. We on our subcommittees have tried to bring in a bill on which we could all agree. I doubt there is an item in this bill that suited all of us on this subcommittee. But the bill as produced represents the composite views of the whole subcommittee, I believe. I have gone over it very closely, trying to make it as sound as I was capable of doing.

I want to pay tribute to the members of my subcommittee who have worked so hard on this bill. My friends and colleagues on the majority side, Congressmen FRED MARSHALL, BILL NATCHER and FRED SANTANGELO have cooperated fully and have helped in every way. The minority members, Congressmen H. CARL ANDERSEN, WALT HORAN and BOB MICHEL have done their part to bring this bill to the floor in the best possible shape.

Now I would like to discuss some of the major factors with which we had to deal.

FARM INCOME AT LOW LEVEL

The records of the Department show that the Federal Government is now spending far more in the name of agriculture than ever before in history, and

yet income from farming in 1959, including soil bank payments, was at the lowest level since before World War II. This is true, despite the fact that national income has increased consistently each year and per capita income for all segments of the population, other than agricultural producers, is at the highest level in the history of the country.

The farm price support program was created in 1933 to preserve and maintain our soil resources, to give the farmers suitable purchasing power and to provide the consumers with an adequate supply of food and fiber. By 1952 some weaknesses began to become apparent in the laws which were enacted at that time. The Government had an investment of some $2½ billion in commodities in 1952 and was incurring some one-half billion dollars of cost per year. This came about because of overproduction.

Several factors contributed to this overproduction: First, the increased knowledge and technical know-how of farmers who were able to materially increase their production by cultivating each acre; second, lack of effective means of controlling production due to an antiquated system of acreage controls which was becoming ineffective.

Net farm income was $14.4 billion per year in 1952.

Beginning in 1953, the Department of Agriculture, reflecting the views of some people, insisted that changes should be made in the program then in effect. Since that time, the following cures have been offered, tried, and from the record found wanting, so far as solving the problem is concerned:

First. Price support reductions averaging 20 percent were made under the "flexible price support plan."

Second. A soil bank program was created to curtail production by paying farmers not to farm.

Third. Public Law 480 was enacted to dispose of surpluses by virtually giving them away overseas.

Fourth. Research and extension appropriations have been increased some 120 percent.

Fifth. Department of Agriculture personnel has increased about 28 percent and appropriations have increased around 300 percent.

Sixth. Production controls have been relaxed as price support levels have been lowered. For example, the removal of controls on corn production, beginning with the 1959 crop, has resulted in enormous increases in acreage harvested and volume of production.

THE RESULTS

Most of these so-called cures have been a heavy drain on the Treasury and have provided little to improve the deteriorating farm situation, which will grow worse if the present course is followed.

One serious result has been the impairment of purchasing power of rural America. Farm income has dropped from $14.4 billion in 1952 to $11 billion in 1959, a 24 percent reduction. The effect of reduced prices and increased costs on net farm income during this period is indicated by the following figures from the records of the Department shown on page 68, part I, 1961 hearings:

	Prices received	Prices paid	Parity ratio (percent)	Net income from farming (billions of dollars)
	(Index based on 1910–14)			
1952	288	287	100	14.4
1958	250	293	85	13.1
1959	240	298	80	11.0
4th quarter, 1959	231	297	78	10.9

The loss of this purchasing power has already affected not only those who depend on farming for a livelihood, but also those engaged in banking, merchandising, industrial production, and other business activities, particularly in the smaller communities. Since those dependent on agricultural income, either directly or indirectly, represent an important market for goods produced in the urban areas of the Nation, this loss of farm income has not only affected the economic welfare of farm sections of the Nation, but if allowed to continue is bound to have serious effects on the whole Nation.

The importance of American agriculture as a market for the Nation's goods can be appreciated when it is realized that agriculture uses more finished steel in a year than is used for a year's output of passenger cars. It uses more petroleum products than any other industry. It uses more rubber each year than is required to produce tires for 6 million automobiles. It is one of the Nation's largest users of electrical power. Its inventory of machinery alone exceeds the assets of the American steel industry and is five times that of the automobile industry.

It has been reliably estimated that each dollar of farm income produces $7 of income throughout the rest of the economy. Thus, it is reasonable to assume that the loss of $3.4 billion of farm income in 1959, as compared to 1952, resulted in a loss of domestic markets worth some $24 billion to the industrial producers of the Nation in that 1 year.

Another unfortunate result of these so-called cures has been the production of huge surpluses of many agricultural commodities, which have served to depress markets generally for agricultural products, and have been a great economic loss to the United States. Figures furnished by the Department, as set forth on page 68, part 1, 1961 hearings, indicate that total farm output has increased from the 1952 level of 108 percent of the base period 1947–49 to 125 percent in 1959. This increase in production of 17 percent, which has created the surplus problem, has to a considerable degree been due to efforts of farmers to offset reduced prices by increased output. This has placed an additional strain on the fertility of the Nation's soil. It is estimated by officials of the Department that this unneeded production has cost the grain farmers over $1 billion in extra annual production of grain alone.

COSTS TO FEDERAL TREASURY

Seven years of experimentation with reduced price supports, outmoded acreage controls, ineffective soil bank programs, and costly oversea disposals under Public Law 480 has placed a heavy financial drain on all segments of the American economy. And benefits to the farmer have been less than those received by other groups through these programs.

A summary of these tremendous expenditures resulting from excessive production while trying these so-called cures since 1952, follows:

	Billion
Reduced price supports	$8.0
Soil bank program	4.3
Public Law 480	13.5
Total	25.8

Nearly $3 billion is provided in the bill for 1961 to meet the continuing cost of these programs, as follows:

	Billion
Restoration of capital impairment of Commodity Credit Corporation (price support)	$1.226
Conservation Reserve (Soil Bank)	.310
Reimbursements to CCC for cost of Public Law 480 and other special activities	1.444
Total in 1961 bill	2.980

In addition to these heavy expenditures, the appropriations for the other programs of the Department have increased from $827.5 million in fiscal year 1952 to $1,089.2 million in fiscal year 1960, an increase of nearly 32 percent.

PRICE SUPPORT REDUCTIONS

In the past 7 years price supports have been reducted an average of 20 percent. These drastic reductions, in the face of constantly rising production costs, have had several important effects on the farm economy of the Nation. First, they have reduced net farm income nearly one-fourth between 1952 and 1959. Second, they have created tremendous surpluses which are about to wreck the entire farm program.

As has been pointed out each year by many members of this committee, farmers tend to increase their production as farm prices are reduced, in an effort to maintain income essential to meet operating cost and living expenses. Experience during the past few years has disproven the theory advocated by some that reduced prices will reduce production. The records of the Department for the past 7 years show that production has increased at about the same rate that price supports have been reduced.

One of the most definite indications of this is Commodity Credit Corporation holdings which have increased from $2.5 billion in 1952 to over $9.2 billion as of January 1960. A study of figures appearing on pages 373–387, part 3, 1961 hearings, further supports this point.

The total cost of the price support program from its inception in 1932 through 1952 was about $2.6 billion. With lowered price supports and increased production, the Department has lost another $8 billion under this program since 1952. An estimate furnished

by the Department shows that price support on surplus feed grains alone cost the Government some $3.5 billion in price support investment and $1.5 billion in carrying charges in 1959. Figuring farm costs of extra production at 50 percent of normal, this surplus cost the farmer in excess of $1 billion to produce—page 754, part 3, 1961 hearings.

SOIL BANK PROGRAM

In 1955, the soil bank was offered as a solution. Acreage was rented from farmers and taken out of production, though the record shows 23 percent had not been in production. The cost of the soil bank to date, including funds in this bill, has been approximately $2.7 billion. It is estimated that an additional $1.6 billion will be required in future years to meet long-term conservation reserve commitments entered into under existing legislation. This estimated total cost of $4.3 billion would be further increased if this program were to be extended beyond the present year.

The production records of the Department show that the program has been relatively ineffective in bringing production in line with need—pages 373–375, part 3, 1961 hearings. There seems to be little benefit from this program, unless considered as a means of offsetting loss of farm income at the marketplace. The past record proves conclusively that this program offers no future solution to the problem of overproduction, even if billions of dollars are spent each year.

As shown by the Department's testimony, 2.6 million farms are classified as small farms. These represent 56 percent of the total farms in the United States, which include about 275 million acres, but produce only 9 percent of the commercial production. Therefore, if all such farms were removed from production at an average of $10 per acre, it would cost $2,750 million a year and would reduce production only 9 percent—assuming large farms did not offset such reduction. These figures cannot be misunderstood.

PUBLIC LAW 480

The Agricultural Trade and Development Act, Public Law 480, was proposed as a means of disposing of the surpluses which reduced price supports and acreage controls had failed to control. Title I of this law provides for sales for foreign currencies, title II authorizes donations to friendly countries to meet famines and other disasters, and title III provides for barter and other means of disposal. It is to be noted that the Government pays the full costs of this program in American dollars.

It was adopted by Congress with serious misgivings on the part of many people. In view of the fact that it has done nothing toward stopping overproduction—in fact it has tended to postpone the time when Congress will deal with that problem—such misgivings appear to have been fully justified.

This program, which was first started in 1954 as an outlet for surpluses, has developed into an outlet for production overflow at practically 100 percent cost to the United States. Instead of correcting the situation, it has been followed by more and more surpluses.

The authorization for sales to foreign governments for local currencies under title I has expanded tremendously since its inception as follows:

	Total authorization—billion
July 1954	$0.7
August 1955	1.5
August 1956	3.0
August 1957	4.0
September 1958	6.25
September 1959	9.25

In addition, up to $1.4 billion is authorized for donations under title II. Title III costs will further increase this amount, although exact figures are not available. Through December 1959 over $2.9 billion of commodities have been donated and bartered under title III. Thus a total of over 13.5 billion American dollars has been authorized for expenditure since 1954 under present law. Further extensions of the act would of course increase this total cost.

This program was originally justified as a means of using agricultural surpluses to develop and promote oversea markets for U.S. agricultural products. There is evidence to indicate, however, that foreign currencies generated under this program in some instances are being used to expand agricultural production abroad, in competition with U.S. products in world markets. Further, it appears that such programs are often undertaken in countries which have no prospects of ever providing markets for U.S. products.

An example of this is a project called "Operation Beef" in Argentina. Under this program, $14.3 million is being used to increase beef production in that country to compete with U.S. meat producers in world markets. Since Argentina produces many of the same crops as the United States, the two countries are natural competitors and market prospects there are very limited. Therefore, it is hard to understand how U.S. interests are benefited by projects of this kind.

Whatever the benefits of the Public Law 480 program, in the opinion of many members of the committee, it too has failed to help the overproduction problem. As mentioned earlier, it probably has contributed to a constantly deteriorating situation for American agriculture by getting these huge surpluses "out of sight" abroad and thereby postponing action to prevent the increase in the surplus problem.

If a sufficient amount were diverted from the tremendous supplies on hand and available for use under Public Law 480, such commodities could well be the means of enabling the farmers to bring production in line with domestic and foreign consumption. If used to protect farm income while the farmer cut production 20 percent, they would reduce storage costs up to $100 million per year and would reduce price support costs—possibly $700 million to $1 billion per year. Further, they would protect farm income during the period of adjustment needed to bring production in line with demand, and would enable such a plan to be carried out at little or no cost to the Government. The commodities have already been bought and paid for by CCC and will otherwise be given away to foreign countries under Public Law 480. A full discussion of such a proposal for feed grains, the area of our greatest problem, is contained on pages 172–173, part 3, 1961 hearings.

In the opinion of a majority of the members of the committee if the Public Law 480 program is to be continued, it should be considered a foreign aid program and should be paid for in the mutual security bill.

EXPANDED RESEARCH AND EXTENSION

As pointed out previously, funds for the research and extension programs of the Department have expanded about 120 percent since 1952. A summary of this increase is as follows:

	1952	1960
Department of Agriculture research	*Million* $44.2	*Million* $104.4
State experiment stations	12.7	31.8
Extension Service	33.5	64.1
Total	90.4	200.3

The large increases for these programs have been justified by the Department and offered as an answer to the farm problem and as a substitute for protection of farm income through adequate price support levels. They have been supported by the Department on the theory that improvement of farming methods and development of new uses for agricultural commodities through research can offset reduced income and thereby enable the farmer to stay in business.

The members of the committee fully recognize the value of these essential programs. They are aware of the important benefits of research and extension work to the farmers of the Nation. They realize the fact that farmers would be much worse off financially than they now are, were it not for the improved production techniques which have resulted from the research and extension programs of the Department.

They realize, however, that the real benefits of this work are not sufficiently direct and fast enough to meet a sudden economic crisis, such as has been experienced in the past few years. They wish to point out, therefore, that these programs, as fine and essential as they are, cannot and should not be expected to offset sudden losses of farm income and related economic problems.

PERSONNEL AND APPROPRIATIONS INCREASES

It is apparent that continued increases in personnel and funds for the Department of Agriculture is not the answer to the farm income problem, where higher cost and lower prices are leading to overproduction. If such increases could improve the situation, the 28-percent increase in personnel and 300-percent increase in appropriations since

1952 would have done so. A summary of the expansion of the Department is as follows:

Personnel	
Dec. 31, 1952	67,406
Dec. 31, 1959	86,508
Increase (28 percent)	19,102
Appropriations	*Billion*
Fiscal year 1953	$1.045
Fiscal year 1960	4.045
Increase (300 percent)	3.083

REMOVAL OF CONTROLS

Along with actions taken to reduce price supports, efforts have been made by the Department to remove or curtail production controls. This also has contributed to the increased production in recent years and the ever-mounting surpluses.

While efforts to control production through acreage controls have not been effective, it appears unwise to eliminate them until some satisfactory substitute has been adopted. Mandatory price supports on basic commodities cannot work without some type of control over production.

At the recommendation of the Department, a program was adopted last year which removed all controls on corn, beginning with the 1959 crop, along with a further reduction in price-support levels. This was done over the strenuous objection of many Members of Congress who realized that the inevitable result would be to increase production substantially, fill up Government storage facilities, increase Government costs, and further depress the market.

The result of this new corn program has been to increase harvested acreage from 73.3 million acres for the 1958 crop to 84.6 million acres for the 1959 crop. Intentions to plant for the 1960 corn crop are estimated by the Department to further increase to 85.8 million acres. They could possibly increase to 90 million acres.

While it is too early to see the ultimate effect of this program, it is significant to note that production of corn increased from 3.8 billion bushels in 1958 to 4.4 billion bushels in 1959. Further increases for 1960 are probable.

A summary of Department figures placed in the 1961 hearing record relative to corn is as follows:

Corn (bushels)	Support levels (percent)	Acreage harvested (million acres)	Yield per acre	Production (million)	CCC inventory (million)	Storage and handling costs (million)
1952	90	80.9	40.7	3,292.0	$500.0	$28.3
1956	84	75.6	45.7	3,445.3	1,245.6	71.5
1958	77	73.3	51.8	3,800.9	1,857.8	140.0
1959	66	84.6	51.5	4,361.2	1,861.3	133.5

In the face of this record, it is even more disturbing to learn that the Department is now recommending the same kind of program for the handling of wheat. This would certainly compound the problem, if adopted.

CORRECTIVE ACTION URGENTLY NEEDED

Members of this committee tried to tell the Department in 1953 and subsequent years that farm income is based on "volume" times "price" less "cost." They tried to convince the Department that, if prices were reduced, the farmer—faced with increasing costs—of necessity would increase volume, and could do so since control by acreage is no longer effective. Prices were reduced, and production went up—not down.

While differences of opinion exist as to what should be done in the future, the record clearly shows what has been done during the past 7 years has been no solution. The situation becomes progressively worse for the farmer and the taxpayer, while the major benefits go to those between the farmer and the consumer. The above facts and experiences convince a majority of the committee that the problem will never be solved until Congress attacks the problem at its base, which is overproduction.

It is the belief of a majority of this committee that, for the protection of our overall economy, farm prices must reflect cost plus a reasonable return. Such prices, however, must be made contingent upon farmers holding farm production, in terms of bushels, bales and pounds, to domestic and normal foreign markets. If that is done an adequate price can be obtained at the marketplace.

This makes it imperative that present approaches to this problem be reversed if the agricultural industry of this country is to survive, and if we are to prevent a bankrupt agriculture from pulling down the rest of our economy. Further, the taxpayers are not likely to continue to finance such needless and heavy expenditures which can be avoided if proper supports based upon farm costs are restored and made contingent upon actual production being held in line. Unless present programs are reversed, they will eventully wreck farm purchasing power, and eventually the entire national economy.

Farmers themselves are suffering most from these costly and ineffective programs. They are forced to operate in a manner that causes them to deny their families an adequate standard of living and in many instances they are taking fertility from the soil that they wish to preserve for future generations. On numerous occasions they have expressed a desire to cooperate with the Federal Government to bring about a correction of the farm problem. To a large extent their pleading has been ignored because of the influence of those between the farmer and the consumer who have prospered in the farmer's name and at the cost of the taxpayer.

After the experience of the past 7 years, it appears absolutely necessary that production be brought in line with the needs of domestic and foreign dollar markets. Past approaches to overproduction must be reversed, using surplus commodities now on hand to ease the financial shock on the farmer and the general economy during the period necessary for adjustment.

And whatever we do, our investigations and hearings show we must operate the Commodity Credit Corporation on a strictly business basis, with due regard to safeguarding the assets of the Corporation in order to protect the U.S. Treasury.

THE COMMODITY CREDIT CORPORATION

The Commodity Credit Corporation was organized October 17, 1933, under the laws of the State of Delaware, as an agency of the United States. From 1933 to 1939 the Corporation was managed and operated in close affiliation with the Reconstruction Finance Corporation. On July 1, 1939, it was transferred to the Department of Agriculture by the President's Reorganization Plan I. Under the Commodity Credit Corporation Charter Act of June 29, 1948, it was established as an agency and instrumentality of the United States under a permanent Federal charter.

The original capital in 1933 was $3 million. The act of March 8, 1938, gave CCC its first borrowing authority of $500 million. This was increased periodically until it had reached $6.75 billion in 1950. This amount has been increased four times since 1952 and now stands at $14.5 billion.

The Corporation is managed by a board of directors, subject to the general supervision and direction of the Secretary of Agriculture, who is, ex officio, a director and chairman of the board. The board consists of the Secretary of Agriculture and six other members appointed by the President and confirmed by the Senate.

Under the provisions of the Corporation's charter, its officers and employees are obligated to operate on a sound business basis and protect the assets of the Corporation. In the past, the officers and directors have been full-time employees of the Department, and thereby able to give only a portion of their time and attention to this $14.5 billion Corporation, the largest in the world, handling the greatest volume of buying and selling of any business organization known.

The policies adopted and actions taken by Department and CCC officials in recent years have been disappointing to the committee. In the opinion of many members, they have lacked complete objectivity.

As a result, the record indicates that much unnecessary cost has been incurred and much money has been wasted, all of which has to be restored by appropriations from the Treasury.

STORAGE COSTS EXCESSIVE

Many fail to realize that about half of the price support expenditures each year are for such items as storage and handling, transportation, interest and administration. Despite frequent comments concerning subsidies and price support benefits to the farmer, the amount which eventually goes to the farmer is only a portion of the cost. In

fact every group seems to be cut in on profits far beyond those received by the farmer. In fiscal year 1959, for example, storage, transportation, administrative and interest costs were 49 percent of the total losses under the price support program. And, while the rates for these nonfarm costs assure a handsome profit, amounts paid to farmers as price supports hardly cover production costs.

In 1959, storage and handling charges totaled $481.7 million. Storage charges for 1960 are estimated at $612 million. Further, unless something is done to curb this increasing cost, storage costs are expected to exceed $700 million in 1961. It should be noted that this latter amount is nearly equal to the cost of running all of the Department's regular activities in 1953, including research, marketing extension, soil conservation, crop insurance, regulatory activities, and forestry.

During this period, while support prices to farmers were being reduced by an average of 20 percent, rates paid to warehousemen for storage were being increased substantially. Further, since the farmer pays for the first year of storage, this increase in storage costs further reduced the net amount of his loan by the same amount. The total cost of storage was increased from $73.3 million in fiscal year 1952 to $481.7 million in fiscal year 1959—pages 483–486, part 3, 1961 hearings. During this same period, net income to the farmer dropped about 24 percent.

Committee investigations made in 1955 and 1956, which have been made a matter of record, disclosed various actions of the Department to increase storage costs through increased rates and benefits to private warehousemen and the use of commission merchants and forwarding agents in lieu of available Department personnel. These investigations also provided information to show that commodities were often moved from one area of the country to another, regardless of expense, in order to fill empty commercial warehouses, even though Government storage bins were left vacant. In 1955, over 16 million bushels of corn were moved from the Midwest to the west coast at a cost to the Government of over $8 million, even though vacant space remained at locations from which shipped.

A comprehensive committee investigation conducted last fall provided further information which helps to explain why storage charges have increased so much in recent years. For example, this investigation included figures showing that storage charges paid certain warehouses during the period 1957–59 were sufficiently high to allow the owners to recover their investment in buildings and equipment in a period of 2 years. In one instance, the investment was liquidated in 16 months. While uniform storage rates for uniform warehousing and storage appear sound, the same rate for inferior or low-cost warehousing cannot be justified and is far too expensive to the Corporation.

Further, during this period of price reductions for the farmer and profitable increases for all others, the Commodity Credit Corporation disposed of usable Government-owned storage bins at a substantial loss. During this same period, many CCC-owned bins were leased to private persons, some of which were rerented for storage of Government-owned grain. The figures on pages 758–759, part 3, 1961 hearings, show that as of December 31, 1957, some 31.7 million bushels of CCC storage bins were leased for three-fourths cent per bushel per month—an annual rate of 9 cents per bushel. Some of this type of space has been rerented by CCC for the standard annual rate of 16.5 cents per bushel, plus loading in and out charges.

Evidence has also come to the committee's attention that Government-owned storage space such as bins and liberty ships was and is being held vacant in order to keep private warehouse space filled at excessive storage rates.

Officials of the Commodity Credit Corporation state that these actions were taken under their interpretation of authority in section 3 of the charter of the Corporation, which reads as follows:

> That nothing contained in this subsection (b) shall limit the duty of the Corporation, to the maximum extent practical consistent with the fulfillment of the Corporation's purposes and the effective and efficient conduct of its business, to utilize the usual and customary channel facilities and arrangements of the trade and commerce in warehousing commodities.

It is the opinion of the majority of this committee, in view of the obligation of the officers of the Corporation to protect its assets and thereby the taxpayer, that these actions do not constitute "effective and efficient" conduct of the Corporation's business.

RECLASSING OF COTTON

Since 1956, the Corporation has paid out over $166 million in rebates on cotton reclassed after sale, a large part to international cotton traders who held such cotton for the Government in their own warehouses where they could easily have advance knowledge of reclassing rebates, thus preventing true competition at time of sale. A breakdown of this amount is set forth on page 314, part 3, 1961 hearings. Much of this cottton was sold by such buyers from CCC in world trade at higher than the original class, as shown by previous committee investigations.

The committee developed these facts in 1958 and the CCC stopped the practice for the past year—selling approximately 6 million bales without reclass after sale. Thus no rebate was paid. Notwithstanding this fact, yielding to pressure from those who received such rebates, the Department has again refused to reclass before sale so as to have maximum competition and treat all bidders alike. It has announced that for the ensuing year it will reclass cotton after sale on a discount basis.

In the opinion of the committee such action shows an utter disregard of the obligation to protect the assets of the Corporation and thereby the taxpayer.

FAILURE TO SELL COMPETITIVELY

For a number of years the CCC, following orders of the Department, refused to sell U.S. agricultural commodities competitively in world markets, notwithstanding unlimited authority to sell competitively for dollars. Page 148, part 3, 1961 hearings, shows the years in which commodities were not offered competitively. During that period, CCC stocks on hand increased from $1 billion as of June 30, 1952, to $3.7 billion on June 30, 1954, and $5 billion on June 30, 1955.

Finally in late 1954, at the insistence of this committee, the Department began selling some commodities competitively in world trade for dollars. Finally all commodities except cotton were offered. During this period, while cotton was held off world markets, CCC holdings of cotton increased from $418,000 in 1952 to $1,249,813,000 in 1956.

In 1955, at the insistence of this committee, the first cotton was offered for sale abroad for dollars on a competitive basis and 1 million bales were sold in a very short time. Then at the request of American international cotton merchants, the Government again held U.S. surplus cotton off world markets. Congress then passed the Agricultural Act of 1956 requiring sales for dollars. Notwithstanding this legislation, the Department in 1958 refused to offer cotton at competitive prices "in violation of law" according to the Comptroller General. Exports dropped from 7.6 million bales in 1956–57 to 2.8 million bales in 1958–59. This course has cost the CCC and the people hundreds of millions of dollars and has done great damage to the U.S. cotton producers.

In 1959, competitive oversea sales were started again and exports for 1959–60 will again increase to a total of 6.5 million bales, from a low of 2.8 million bales in 1958–59 when the CCC, under instructions from the Department, was holding U.S. commodities off world markets, increasing storage costs and holding an umbrella over increased foreign production.

Despite the success of the competitive sales program, the CCC now is using the payment-in-kind approach, the cost of which is hard to determine. Future investigations will likely show exorbitant profits to many nonfarmers.

LACK OF SALES PROGRAM

It will also be recalled that this $14.5 billion Corporation, which was purchasing increasing quantities of commodities each year, did not even have a sales organization or a sales manager until congressional action was taken to require such a program. In 1956, this committee created a special position of sales manager and directed the Corporation to set up a sales organization and undertake an aggressive sales program. The work of this sales manager has been fairly effective. However, domination by other officials of the Department and lack of authority to sell have reduced his effectiveness.

RECOMMENDED IMPROVEMENTS IN CCC OPERATIONS

These factors have caused a majority of the members of the committee to agree that the operations of this huge Corporation must be improved. Considerable monetary savings could be made through improved operations.

The committee believes that CCC would be more effectively and efficiently run and its assets better protected, if its officers were full-time employees of the Corporation rather than officials of the Department, with full time jobs with other activities of the Department. The committee has therefore included language in the bill to require that the officers and directors of the Commodity Credit Corporation be paid from corporate funds, after February 1, 1961. This should have the effect of giving the Corporation more independence and should lead to greater efficiency in its operation and less impairment of capital, which will thereby reduce the amount of future appropriations required.

Further, since the officers and directors of the Corporation have the obligation to operate efficiently and to protect the assets of the Corporation, and thereby the Government and the taxpayers, a majority of the members of the committee believe from the record before them that certain corrective actions are necessary with regard to storage practices.

The committee urges the Corporation to decrease amounts paid for other than farmer-owned storage by at least the reduced value of the commodity stored, as determined by the reduction in price support levels and per-unit investment of the Government since 1952 in such commodities. It also urges the Corporation to discontinue the sale or lease of Government storage space to commercial concerns where such space can be used more economically to store commodities by CCC.

Further, should the Corporation's holdings be reduced to the point that competition exists between warehousemen at terminal markets or ports, a majority of the members believe that the CCC should set up guide rules or perhaps advertise for bids, in order to hold down costs and reduce the opportunity for favoritism in determining which warehouses will receive Government business at such points.

The committee does not approve the moving of CCC stocks from Government storage bins and liberty ships into commercial space in order to pay commercial warehousemen storage costs. The Government-owned facilities should be used to capacity at all times. Furthermore, the CCC should not encourage expansion of commercial storage facilities beyond community needs by offering unrealistic rates that encourage highly speculative investments on the part of inexperienced grain storers. Prior to any request to the warehouse industry to provide additional storage, the CCC should make a survey to determine the adequacy of space to handle stocks over an extended period of time.

The committee is firmly opposed to the proposal to reinstate reclassing of cotton after sale. They oppose it for two reasons: First, it adds to the capital impairment of the Corporation and increases the annual appropriations by lessening competition and funds received by CCC from sales; and second, such a practice gives a definite advantage to the large cotton buyers who also have large quantities of CCC-owned cotton stored in their warehouses and thereby are in a position to anticipate rebates from reclassing in offering bids for cotton purchases from CCC on a competitive basis.

The committee has included language in the bill, therefore, which prohibits the use of CCC funds to carry on cotton reclassing after time of sale. It is of the opinion that any reclass of cotton should be contingent upon determination by CCC that there is a need for such reclass. Further, it believes that cotton should be sold by sample or cataloged so as to give all purchasers an equal opportunity to bid. The committee notes that the Department, following such a course, sold 6 million bales of cotton this year without such reclass after sale.

NEW APPROACH TO PRODUCTION CONTROL NEEDED

The most serious problem facing Agriculture today is the continued overproduction of crops already in surplus supply. Yields per acre for nearly all crops have increased steadily in recent years. Total production has also increased, despite acreage controls and the Soil Bank.

When the present system of acreage controls was placed into effect over 20 years ago, it was fairly effective, since acreage yields were limited by the type of agriculture used at that time. In recent years, however, this means of control has become completely ineffective due to improved methods of cultivation and increased use of machinery, fertilizer, insecticides, and improved seed.

It is apparent to this committee that something has to be done. Correction must be made, both for the welfare of the farmer and the Federal Treasury.

In seeking a solution, several facts are evident:

First. What we have been doing has not worked. After spending or committing ourselves to spend nearly $26 billion, the record shows the situation to be three to four times worse in terms of surplus inventories of CCC.

Second. Farm income is now so low, even with the sale of the overproduction to the Government, that farm purchasing power must be protected from a further drop.

Third. Any future farm program must provide that farm income shall come from the production of that quantity of product necessary for domestic and foreign markets. In the interest of the overall national economy, such production must reflect farm costs plus a reasonable profit. Such income should come from the marketplace.

Fourth. To bring about correction, we have one factor which should enable us to scale back overproduction without injury to farm income or further cost to the taxpayer during the period of adjustment. This is the $9.2 billion of CCC commodities on hand which are already paid for. Commodities from these stocks should be offered to farmers in consideration for cutting back farm production.

If such a plan were put into effect, there would be a number of important benefits to the national economy—(a) the Government would save storage costs, (b) price support costs would be reduced in line with production actually eliminated, (c) farmers would save the cost of producing extra units of production for which there is no market. Further, no additional outlays of funds would be required to accomplish this objective, since commodities to be used are in Government stocks and will otherwise be given away under Public Law 480.

Once production and demand are in reasonable adjustment under this program, it would appear that fair and reasonable price supports should be provided for the farmer's share of the domestic market. Any overproduction should be eligible for foreign markets at world prices. If this course were followed, the cost to the Government would be negligible.

The other course which might be followed would be to continue price supports on total production, limited to domestic, and foreign markets. If this approach were used, the Government would continue to pay the cost of the difference between the support price to offset high American costs and the world market.

Whichever course is followed, or if some other answer is to be found, it is the belief of a majority of this committee that the Department and the Congress should get together without delay on a plan to use surplus commodities on hand to get farmers to cut total production of wheat and feed grains—the area of greatest difficulty at the present time which commodities must be considered together. Merely cutting acreage will not work, as shown by the record.

The Department should be authorized to immediately institute a program which will encourage each producer of wheat, corn, and feed grains to curtail his production up to 25 percent in any one year in return for the transfer to him from CCC stocks of an equal quantity of the commodity for which reduction was made.

Under such a plan, the Secretary of Agriculture would transfer from Government stocks of wheat, corn, grain sorghum, or other feed grains, which are otherwise available for shipment to foreign countries under Public Law 480 and similar programs, to any U.S. producer of said grains upon the following terms and conditions:

First. The producer must reduce his total production of wheat, corn, grain sorghum, or other feed grain below his average production of all of said grains for the 3 preceding years.

Second. The Secretary shall first enter into an agreement for a period of from 1 to 3 years with any such producer of wheat, corn, grain sorghum, or other feed grain, or any combination thereof, which will require upon the part of such producer that he reduce his total production of all of said grains below his average production of the 3 preceding years before such producer can qualify to receive Government stocks.

Third. The Secretary shall determine the amount of such transfer of said feed grains to be offered for transfer in any year to any one producer, but in no case shall the amount exceed 25 percent of the

average production of said producer for the 3 years next preceding the date of such agreement. Such transfer may be made by transferring warehouse receipts.

Fourth. To obtain such Government stocks, each farmer must (a) file notice with the county committee that he expects to avail himself of such offer, (b) agree in writing to reduce his total production of all or any combination of such grains for the years included in such agreement, (c) submit a statement of his production of all of said crops for the 3 preceding years, together with such additional proof as may be required by the Secretary, (d) certify that he will not increase his production of other commercial crops, and (e) supply such proof of reduced production as the Secretary may require.

Fifth. Insofar as practical, grain so transferred shall be of the same type and kind as that for which reduction in production was made by such producer. When not practical, such transfer shall be in quantities of grains of equivalent monetary value.

Sixth. The Secretary of Agriculture would be authorized to issue such rules and regulations as may be essential to carry out this provision.

As a part of such a plan, a commission could well be appointed to study and prepare a farm plan for submission to the Congress after adjustment of production has been made. Such plan should be based on protecting farm income at the market place and keeping production in line with domestic and foreign markets. This approach is deemed necessary because of wide differences which now exist between farm organizations and between farm leaders, including those in the Congress.

It is believed by a majority of the members of the committee that this proposal is a start in the right direction, that is, toward a program of balancing production with market demand and the long time need to maintain soil and water resources. It would provide an effective means of controlling production through production quotas on the quantity of a commodity which may be produced and marketed. In addition, it would save farmers their present cost of production on that part of their production eliminated, and would save the Government the price support and storage and handling costs on the surplus which otherwise would be produced. It is to be noted that, under this plan, the Government would save storage costs of from 11.68 cents per annum for oats to around 16.5 cents for corn and 17.885 cents for wheat and flax, for each bushel removed from storage. Also, it should be remembered that it would cost the Government little, if anything, for commodities transferred to farmers in payment for reduced production, since such commodities are now on hand and will otherwise be given away under the "foreign aid" Public Law 480 program.

BENEFITS TO GENERAL PUBLIC

As pointed out in previous years, most of the programs of the Department are of direct benefit to every citizen of the United States and should not be considered to be exclusively for the benefit of the farmer. American consumers in general receive as large a share of the benefits from Federal funds spent for agriculture each year as do the farmers themselves. Programs benefiting the general public as much or more than the farmer include the following:

First. Improvement and protection of public health, including home economics and human nutrition research, plant and animal disease and pest control, meat and poultry inspection, school lunch and special milk programs, and donations to schools, institutions and needy people.

Second. International relations and national defense, including Foreign Agricultural Service, donations to Veterans' Administration and Defense Department, donations to needy people abroad, International Wheat Agreement, emergency famine relief, sales for foreign currencies (Public Law 480), and bartered materials for stockpile.

Third. Regulation and improvement of marketing, including marketing research and regulatory activities, market inspection, grading, classing and standards, agricultural estimates, market news services, freight rate services, the Commodity Exchange Authority, and the Farmers Cooperative Service.

Fourth. Conservation of natural resources, including the Soil Conservation Service, watershed protection, flood prevention, Great Plains program, and the agricultural conservation program.

Of the funds expended for agriculture for fiscal year 1960, it is estimated by the Department that over 54 percent will be spent for programs which benefit the general public as well as the farmer. Estimated expenditures for fiscal year 1961 indicate the same situation—page 26, part 1, 1961 hearings.

AMERICAN CONSUMER EATING BETTER

Further, it should be pointed out that the American consumer is eating more and better food at less cost than ever before in history. While per capita income in the United States has increased steadily each year, consumers are spending a smaller share of this income for food. Department of Agriculture statistics—page 85, part 1, 1961 hearings—indicate that the average American consumer is spending about 21 percent of his income for food, as compared to 23 percent in 1951 and 27 percent at the end of World War II. Figures on page 87, part 1, 1961 hearings, show that 1 hour of factory labor will buy twice as much food as it would 30 years ago. In 1929, 1 hour of labor would buy 6.4 loaves of bread, while in 1959, 1 hour of labor bought 11.3 loaves. One hour of labor will now buy 17.6 pints of milk as compared to 7.8 pints in 1929. The same relationship applies for meat, butter, eggs, potatoes, oranges, and most other agricultural items.

DONATIONS AT HOME AND ABROAD

When considering the cost of agricultural programs, it is important to realize that a significant part of the cost of the Department of Agriculture is due to the furnishing of foods to needy people, both in the United States and overseas. Since 1953, $1.3 billion of surplus foods have been distributed to the needy people of this country. This has been of direct help to States and local communities in handling their own welfare programs. In 1959, over 21 million Americans benefited from these surplus foods. Since 1953, approximately the same amount of surplus foods have been given to needy persons in foreign countries. These donations have been made through U.S. voluntary agencies in which church-affiliated organizations have played an important part.

While the cost of the Public Law 480 program, which is paid for in American dollars, is carried in the agricultural appropriation bill and, therefore, charged against the farmer by those who are unfriendly to agriculture, most of the real benefits seem to go to everyone but the American farmer. Some 85 to 90 percent of all foreign currencies received in payment for foods shipped abroad is either given or loaned back to the government of the recipient countries. These funds, which are frequently used to create or expand foreign agricultural production in competition with U.S. producers, are handled by the International Cooperation Administration as a supplement to the regular foreign aid program.

The balance of these foreign currencies are set aside for the use of the United States to meet oversea expenditures which otherwise would have to be met by appropriations from the U.S. Treasury. Under the provisions of section 104 of Public Law 480, these foreign currencies may be used for a variety of U.S. purposes abroad, including market development, trade fairs, supplemental stockpiling, educational activities, translation and acquisition of foreign publications, scientific activities, construction of U.S. buildings and operation of U.S. agencies.

The bulk of these currencies are being used overseas for such things as foreign aid operations, military housing, stockpiling, and educational and research activities. Yet the cost of the foreign currencies used for these programs has been included in the agricultural appropriation bill, rather than in the bills of the appropriate Federal agencies. On May 5, 1958, an official of the Commodity Credit Corporation pointed out that present legislation prevents CCC from even recovering interest which it must pay from those agencies which derive benefits under the barter program of Public Law 480. In connection with oversea military housing financed through this means, he stated:

Under our arrangements with the Department of Defense, CCC will receive reimbursement for its investment from savings in quarters and station allowances which would otherwise be paid to the military personnel occupying the completed housing. Based upon Department of Defense estimates, CCC will not recover its investment in the housing for a period of some 17 years.

During this time, CCC must pay interest to the U.S. Treasury on the $50 million which it has tied up in the housing. This interest cost, running to about $14 million, cannot be recovered from the Department of Defense under existing legislation and will be reflected as a charge against the farm program administered by the Department of Agriculture.

In my opinion, I would be derelict in my responsibilties if I recommended the approval of other housing projects of this kind.

THE CRANBERRY INCIDENT

The situation which developed last fall with respect to the misuse of chemicals on cranberries and caponettes on a relatively small percentage of total production points up a serious problem facing Agriculture with respect to the use of pesticides and sprays. From the standpoint of public health it should be recognized that many such chemicals are necessary to protect food. Failure to use insecticides could result in the production of foodstuffs even more harmful to human health than those heretofore condemned. Also, pesticides and sprays must be used by farmers to produce the high quality and low cost foods which the consumers of the United States are demanding. Further, the use of sprays is necessary to prevent sizable economic losses to the Nation from pest and disease damage to crops.

The development of more effective insecticides is one of the reasons why only 12 percent of the people in this country are able to feed the other 88 percent—a situation which has never before existed in the history of the world.

Farmers are continually harassed by plant and animal pests and diseases. They cost farmers billions of dollars annually. For example, the European corn borer has become one of the most injurious enemies of corn in this country. It causes substantial losses every year and in recent years these losses have sometimes ranged over $150 million annually. Cotton insects, principally the boll weevil, cause tremendous annual losses, to which must be added the cost of chemical controls. Cotton farmers must spend $75 million or more annually for insecticides. Since pioneer days, grasshoppers have caused extensive damage to both crops and rangeland. Annual losses from this pest are over $100 million. Cattle grubs are distributed over the entire country, causing losses of about $100 million annually from losses in weight and production, damage to hides, and loss of meat in dressed carcasses.

The wide variety of chemicals used for control of pests and diseases today serves only to allow a farmer to hold his own or stay even in his production. Without the proper use of chemical controls, flies would contaminate milk with filth and create a hazard to the public health. The coddling moth, phony peach disease, peach mosaic, pear blight, and the apple maggot plague the farmer by reducing the quality and quantity of his fruit crops. It would not be possible to market apples, peaches, and pears free of worms, rot, scab, and so forth, without proper use of chemicals. These are but a few of the problems which the farmer must meet in order to provide consumers with an adequate supply of safe foods of good quality.

Subsequent to the regular hearings on the 1961 budget, the White House announced that the Department of Agriculture would make indemnity payments of around $10 million to cranberry growers who sustained losses on good and wholesome berries harvested in 1959 because the market for good berries had been destroyed as the result of the unfortunate method of handling contaminated berries, which totaled less than 1 percent of the total crop. As a result of this precipitous action, cranberry sales of good berries were cut by two-thirds during the last holiday season. It is estimated that there will be a carryover of cranberries of nearly 1 million barrels of such wholesome berries into the next season, nearly a full year's crop.

The payment of such indemnities are proposed to be made under clause (3) of section 32, which reads as follows:

Such sums shall be maintained in a separate fund and shall be used by the Secretary of Agriculture on to * * * (3) reestablish farmers' purchasing power by making payments in connection with the normal production of any agricultural commodity for domestic consumption.

It is understood that payments will be limited to wholesome and edible cranberries. Improperly treated berries have been or will be destroyed. The Department justified its action in making these payments on the basis that damage to the market for good berries resulted from governmental action.

In the opinion of the majority of the members of the committee, this entire situation was uncalled for and most unfortunate. It is believed that this damage to an important industry of the Nation would not have developed had it been handled properly at the outset. Such damage can be and should be avoided in the future. If such action becomes necessary in the future, it is to be hoped that the industry affected can be protected and only those who may have violated regulations will be penalized.

Further, it is expected that responsible officials of the two Departments—Agriculture and Health, Education, and Welfare—will work together with private interests so that they can all share in the responsibility of establishing and announcing standards to be followed in the use of chemicals for agricultural purposes.

The committee also feels that the $10 million indemnity payment announced by the President is not a proper charge against Agriculture and the Department of Agriculture should not be expected to pick up the check for such damages in the future.

AGRICULTURAL RESEARCH SERVICE

Now I wish briefly to discuss the details of the bill before us. We have tried to restrict some of the requests with regard to research.

The committee recommends $67,934,000 for the research programs of this agency during the fiscal year 1961, which is $1,047,700 less than the budget estimate. The increase of $212,410 over funds appropriated for 1960 covers several essential research needs for the coming year.

One of these is research on protection from flood and erosion, which is one of the major needs of our Nation. Through various programs, the Department spends over $600 million per year for soil conservation and related work. This is exclusive of funds provided to the Corps of Engineers, and the Reclamation Service. Land owners contribute additional amounts.

For several years, this committee has realized the necessity for research to properly support the action programs of the Department. The committee therefore has provided $950,000 for establishment of four soil and water conservation research facilities; $600,000 for staffing and operation of the new Ames Laboratory which will be ready for operation in 1961; $250,000 for expanded research on tobacco; $250,000 for research on chemicals and biological measures to reduce or avoid hazards from pesticide residues; $750,000 for additional utilization research; $125,000 to enable the Department to increase research where most essential at existing soil and water conservation research facilities; and $496,400 to cover the Government's share of employee health benefits pursuant to Public Law 86–382.

The $950,000 included for additional soil and water conservation projects includes $250,000 for research on improved practices for conservation farming and ranching in the Southwest; $350,000 to establish a national center for basic research on soil-water-plant relationship in the Northeast; $200,000 to expand research on hydrology problems in the Southern Great Plains area; and $150,000 to strengthen existing research at a land-grant college in the Northwest area where an acute erosion problem is causing the loss of soil at an alarming rate. The Department is expected to put these facilities at the appropriate places. The one for the Northeast is to be located at Cornell University, I understand.

Production of tobacco is one of the major agricultural industries of the country. Tobacco is grown on a total of approximately 1.2 million acres in 22 States and is a major source of income in 8 of these States. Total production of tobacco in 1959 was about 1.8 billion pounds which brought over $1 billion cash income to producers. Tobacco produces about $2.5 billion per year in taxes, $1.7 billion of which goes into the Federal Treasury.

At the present time, the tobacco industry faces a number of problems, including fixed price ceilings, fixed acreage, and increased labor costs, which now total 65 percent of production costs. Work methods used in tobacco production are still almost entirely manual and between 400 and 500 hours of human labor is required to produce and harvest an acre of tobacco. These factors make it imperative that means be found to improve and mechanize production and harvesting methods and techniques. Therefore, the committee has added an additional $250,000 for such research. These funds should be used for planning, construction, and equipping greenhouses and special laboratories for tobacco research work at a new research center to be established in Kentucky from State appropriations of $1 million.

One of the most promising solutions to the problem of spray residues may come from the development of chemicals and biological control measures which will not leave spray residues on the food mar-

keted. In view of the need to develop better and safer pesticides and sprays, the committee has included an additional $250,000 in the bill for 1961 which should be used to evaluate, reorganize, and strengthen the programs of the Department in this general area. Such work should be done jointly with the Department of Health, Education, and Welfare and the various private chemical producers throughout the country. Over $6 million is now being spent annually by the Department for research on insects and chemicals used in sprays and pesticides. Information furnished to the committee indicates that U.S. chemical companies are currently spending another $25 to $30 million annually for similar research.

The 1961 budget estimate includes an increase of $2,212,800 for utilization research, $1,512,800 by direct appropriation and $700,000 by curtailing various existing research activities so as to redirect funds from farm research to utilization research. The committee recommends the sum of $900,000 for this purpose, $700,000 to come from increased appropriations and $200,000 to be obtained by redirection from farm research. The committee believes, however, that existing stations should not be closed in working out this redirection of funds; also, there should be no elimination of small projects for pecan research and cotton insect research.

The amount included in the bill for utilization research would provide approximately $200,000 for research on cotton. It is recommended that, from this amount, the Department should make advance preparations for the operation of the Boll Weevil Laboratory authorized last year, by obtaining personnel to be used on existing research projects until such laboratory is ready for occupancy early in fiscal year 1962. It is further recommended that the balance of these funds be used to carry out essential research at branch laboratories located at Baton Rouge, La.; College Station, Tex., and Florence, S.C., and to strengthen mechanical stripper and gin stand research.

The special fund of $1 million of unused prior year funds established last year to provide part time subprofessional help on a contract basis has been continued for the coming fiscal year.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Texas.

Mr. POAGE. The gentleman has just referred to utilization research. There is a good deal of misunderstanding about what has been done in regard to utilization of research.

Do I understand that the committee has not stopped the work that is now being carried on by the cotton insect laboratories?

Mr. WHITTEN. We certainly have no intention, and our action does not provide for that.

Mr. POAGE. That is the way I interpreted it.

Mr. WHITTEN. In fact, we want it to be carried on. The department in its submission to us had curtailed the production research program some $700,000. That was by direction of the department. The committee in going over the matter found in some areas it might be possible to consolidate things of that sort, so we went along with a $200,000 cut, but we had no intention of cutting out the work the gentleman refers to, nor did we have any intention of cutting out the two items involving pecan research.

Mr. POAGE. I refer to the entomology laboratory at Waco, Tex. The work of the committee does not close that laboratory?

Mr. WHITTEN. No; it does not.

Mr. BUDGE. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Idaho.

Mr. BUDGE. In connection with research, as the gentleman from Mississippi is aware, there has been quite a considerable interest in the establishment of soil and water conservation research laboratories throughout the United States. For the fiscal year 1960, the Appropriations Committee of the other body asked the Department of Agriculture to set up a working force to tentatively locate those research facilities. Under the priority list which was submitted to the committee and in its request to the Department there was an item priority numbered 13, a laboratory at Twin Falls, Idaho, which is in the B category and that follows a laboratory of that category having a priority numbered 10 at Bushland, Tex. It is my understanding that the Bushland laboratory is included in the funds in this bill. Now, am I correct in assuming the committee will give careful consideration in following the priority and considering the establishment of priority 13 item at Twin Falls, Idaho, in its next consideration of this bill next year?

Mr. WHITTEN. May I say to the gentleman from Idaho, I know of his deep and sincere desire to get a laboratory in his area. But I am sure the gentleman appreciates the problem of the subcommittee. We had earlier asked that these laboratories be set up on a regional basis. We were unable to get the Department to say what regions should be included. Later in the other body they submitted a list of priorities, and our subcommittee and the Congress last year went along with trying to set up these priorities.

We are spending over $600 million a year in soil conservation work. The American farmers and others are putting up additional amounts. Our committee has tried to agree on a regional basis to give the necessary research facilities to back up and implement the problem. We have approached it on a regional basis. I am sorry we did not reach the one the gentleman is interested in. The one in the Northwest has to do with a soil erosion program in another area. However, the Twin Falls, Idaho, facility will have the continuing interest of this subcommittee and will have our consideration in the coming year. It is the next category B laboratory in order of priority.

Mr. BUDGE. I thank the gentleman.

Mr. AVERY. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Kansas.

Mr. AVERY. I had not planned to interrupt the gentleman until he had concluded his remarks, but since some mention has been made of research facilities I thought this might be the appropriate time to ask a question. I am concerned particularly about an item that has been budgeted for research in pesticides. In another committee, the Committee on Interstate and Foreign Commerce, there is being considered legislation the necessity for which has been brought about by the action taken by the Department of Health, Education, and Welfare.

But it refers directly back to the pesticide problem. In view of the cranberry incident we had last fall and several related problems, I wonder if the gentleman feels that now is the time to terminate the research that is intended to relieve the very problem in the first place.

Mr. WHITTEN. May I say to the gentleman, I do not think our action has terminated research at all. In fact, the records show that some $6 million is now being spent by the Department in various pesticide investigations. In the present bill we have increased that by about $250,000 to coordinate their work. In the cranberry incident, it was not a case of the insecticide not having been properly tested. It was a case of less than 1 percent of the total producers using greater quantities, against instructions, of pesticides that were properly cleared.

Now, again, I want to say that this subcommittee is as deeeply concerned as is the gentleman and that the cranberry incident was so handled as to practically ruin the market. It should not happen again. But, we do feel that merely providing larger sums of money without coordination is not necessarily the way to answer the problem. In fact, the chemical companies came to me as chairman of the subcommittee and pointed out that they are spending between $25 million and $30 million a year themselves in this area. And they said "if the Government is going to take it over, we will quit." Again I say, there is $6 million in here to carry on that work now. We give them $250,000 more and ask them to coordinate their efforts with the Department of Health, Education, and Welfare as well as private enterprise, in an effort to handle this problem. But, it is not lack of money that creates the problem.

Mr. AVERY. I probably should not have brought up this cranberry incident, because it brings on a lot of related matters that are not really in question. As I recall the cranberry incident, it is not related to insecticides in the first place. It was a chemical used for a different purpose. But, the point I wanted to make in the area we are moving, there is an increasing use of chemicals, both to stimulate production and also to make for better preservation and to improve attractiveness, sales promotion. Since we are in an area of increasing use of chemicals, the question comes up in my mind whether this is the right time to curtail the research program by the Department of Agriculture, in making and developing better methods to use these chemicals.

Mr. WHITTEN. We have not curtailed it. We have increased it.

Mr. AVERY. But you do not go along with the budgetary recommendation to further extend.

Mr. WHITTEN. That is right. And the support for the budgetary item failed to take into consideration the money that they now have and the need to coordinate their activities. The justification was that the private chemical companies were moving out and therefore the Government had to move in. I took it up with the chemical companies and they said, "No, if the Government is going to move in, we are going to move out. We cannot afford to spend $25 million or $30 million a year and then when we produce something, have it taken away from us."

So, their argument would not hold water when we took it up with the folks that said it was necessary. But, the problem still comes in the cranberry incident. It was a misuse of a proven chemical, and that is what we find in just about all of these cases. All the research in the world would not control the fellow that takes advantage and violates the rule.

Mr. MARSHALL. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Minnesota.

Mr. MARSHALL. I just merely wanted to say that we had testimony before our committee that showed that the commercial manufacturers of these pesticides and insecticides were spending in the neighborhood of $25 million of their own money. So that, also, is an adjunct to the work that the Department of Agriculture is doing. I think that it is very well that industry is spending money in their research on items of this kind.

Mr. HORAN. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to my colleague on the committee.

Mr. HORAN. Mr. Chairman, I wanted to point out that any number of witnesses before our committee in seeking funds used the need for research in pesticides as an excuse for their appropriation request. We felt that there was not a proper amount of coordination between ARS, the land-grant colleges, and HEW and other places where this sort of research is being carried on. If our action does no more than get a proper amount of coordination between the requests for funds and the work that is to be done—and this is very important work—I think we will have served a very useful purpose.

Mr. WHITTEN. I thank the gentleman.

Mr. BROOKS of Louisiana. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman.

Mr. BROOKS of Louisiana. I have received some protests about the closing of some pecan experimental stations, one down in Louisiana, and especially about the insecticide work that is being done at those stations. Will the gentleman enlighten us on that?

Mr. WHITTEN. I stated earlier that the committee did not intend that that work should be eliminated or curtailed. It is a small item, but very important to a small industry in certain areas. May I say that the research people were under instructions from officials at the departmental level to cut down and they applied cuts in these places. But the committee differed with them. We do not intend for that work to be eliminated.

Mr. BROOKS of Louisiana. In other words, the money is in the bill for that purpose?

Mr. WHITTEN. That is right.

Mr. BROOKS of Louisiana. I thank the gentleman.

Mr. WHITTEN. Mr. Chairman, may I briefly run over some of these items?

For plant and animal disease and pest control, the sum of $52,011,000 is recommended for the coming fiscal year, an increase of $2,210,400 over fiscal year 1959 and an increase of $3,235,400 over the budget estimate, largely for the brucellosis eradication program. The amount proposed includes increases of $75,000 to put on a full year's basis the regulatory activities under the Federal Insecticide, Fungicide and Rodenticide Act: $400,000 to expand the plant quarantine inspection staff at ports of entry, particularly those of the St. Lawrence Seaway; $150,000 for staffing the new Ames Laboratory to be opened in 1961; $2,167,700 for the brucellosis eradication program; and $306,000 for employee health benefit costs. These increases are offset by decreases of $888,300 for nonrecurring costs of screw-worm eradication and transfer of leasing costs to the General Services Administration.

During the hearings this year, departmental and other witnesses testified to the need for increased quarantine protection to prevent the introduction into this country of plant and animal pests and diseases. The committee recognizes that continually increasing travel and foreign commerce, a part of which is now coming directly into the Great Lakes area, have added to the danger of such introductions. It is expected that these trends will continue.

While the committee realizes the necessity of preventing agricultural pests from gaining entry into this country, it also believes that the problem can be met without steadily rising Federal costs for handling this problem. The Department is directed to work out with the carriers, representatives of industry, and other agencies and organizations a program, first, to place additional responsibility on the carriers to provide absolute notice to all travelers, to the end that any person who may bring prohibited articles into this country will have willfully violated such restrictions; and second, to provide a system of fines which will offset this increasing cost as well as reduce the danger.

In view of the fine relationship between this country and Canada, and the joint interest in this problem, the committee also believes that it would be far better if arrangements were worked out to check all incoming ships at the original port of entry of the St. Lawrence Seaway. This should prove more effective and more economical than the procedures presently contemplated.

The 1961 budget included $15,582,300 for brucellosis eradication, a reduction of $1,250,000 below the 1960 appropriation. A great deal of testimony was received from Members of Congress and others as to the urgent need for further expansion, rather than reduction, of efforts by the Federal Government in this area. In addition, information was presented to show that the reduced level of expenditure proposed for 1961 would not only postpone eventual eradication by many years, but would double or triple the cost of eventual eradication. In view of this very convincing evidence and strong support for the expansion of this work, the committee has included a total of $19 million in the bill for 1961.

The bill includes $21,562,000 for meat inspection for 1961. This amount provides an increase of $237,100 for employee health benefit costs. It permits the continuation of meat inspection activities of the Department at the 1960 level of operation.

The 1961 budget for the first time proposes appropriations for the use of foreign currencies generated from sales under title I of Public Law 480. Previously these funds have been spent without the usual appropriation controls. The estimates under this head include funds for market development research under section 104(a) and agricultural and forestry research under section 104(k).

The committee recommends $15,131,000 for 1961, an increase of $3,074,500 over funds expected to be used for these purposes in fiscal year 1960. Since Public Law 480 was created originally to develop and expand foreign markets for U.S. agricultural products, the committee feels that the full amount is justified. Further, it feels that the use of foreign currencies for market development and related research should have priority over other purposes for which such currencies may be used under the law.

Language was included in the Appropriations Act last year authorizing the transfer of the land used by the Entomology Research Laboratory at Orlando, Fla., from the Defense Department to the Department of Agriculture. In the report, the committee called on the Department to select possible alternative sites so as to eventually sell this valuable land for commercial use. The 1961 budget proposes an appropriation of $900,000 to provide new facilities to replace those located on the property at Orlando proposed for sale.

The committee has disallowed the proposed appropriation and has included in lieu thereof language which will permit the sale of these facilities and the use of the proceeds for the establishment of a new laboratory at whatever site the Secretary of Agriculture may determine.

An appropriation of $31,803,000 is proposed for grants to State experiment stations for the coming fiscal year. This amount includes $31,553,000 for payments to States and $250,000 for the penalty mail costs of the program.

The appropriation recommended continues available in 1961 the program provided for 1960, the appropriations for which represent an increase of 150 percent over funds provided for this purpose in 1952.

EXTENSION SERVICE

The sum of $55,715,000 has been included in the bill for 1961 for payments to States and Puerto Rico, an increase of $2 million over funds provided for fiscal year 1960.

The budget request proposed an increase of $2,865,000 for additional personnel to strengthen and expand the rural development program. The increase was requested for additional personnel, to provide rural development help in new areas similar to the work now being carried on in about 200 counties. The committee agrees that some attention should be given to this need in the other counties of the Nation not now covered. It feels, however, that the work should be performed by the regular extension agents and work force in such counties. It does not feel that the building up of a separate organization or additional staff to carry on this activity is advisable. The committee has therefore provided $2 million for such regular extension workers as may be needed in counties which desire to set up this program.

A number of States have used the substantial increases made in this item in recent years for additional personnel at the State and county levels. Many of these States have failed to maintain the salaries of county agents at a level comparable with agents in other States. In such States, the funds in this bill should be used for the present number of employees at the county level to place salaries at a level comparable with other States. Testimony before the committee indicates that salary increases are needed in 22 States to maintain comparable levels. Further, the disproportionately large amount which has been used for specialists at the State level in recent years would indicate that further increases for that purpose are not warranted at this time.

In discussing economic conditions in agriculture with the Director of the Extension Service during the hearings this year, the lack of interest by young people in farming as a means of livelihood was considered. It is significant to note the gradual decline in agricultural students. Department figures found on page 527, part 1, 1961 hearings, show that only 31,722 out of 411,437 undergraduate students in the Nation were enrolled in agricultural courses in 1959.

For retirement costs for extension agents, the bill includes $5,875,000 for fiscal year 1961, an increase of $200,625 over 1960 funds and a decrease of $86,000 in the budget estimate. The additional funds allowed will be required to cover the Federal share of retirement costs for the increased funds allowed for county extension workers.

The committee recommends $2,490,000 for penalty mail costs of State extension directors and county extension agents during 1961, as authorized by law. This is approximately the same amount as was provided for fiscal year 1960.

The Federal Extension Service provides for leadership, counsel and assistance to the 50 States and Puerto Rico. As of November 30, 1959, there were 238 employees in this organization, 231 of whom were stationed in Washington.

An appropriation of $2,255,000 is proposed for fiscal year 1961. This amount provides an increase of $12,460 over 1960 for employee health benefit costs. It is a reduction of $137,660 in the budget estimates.

FARMER COOPERATIVE SERVICE

The Service carries on its work through three program divisions—Marketing, Purchasing, and Management Services. On November 30, 1959, the Service had 110 employees, all stationed in Washington.

The sum of $620,000 is recommended for the coming fiscal year. This includes an increase of $4,200 for employee health benefit costs. It is a reduction of $24,650 in the budget estimate.

SOIL CONSERVATION SERVICE

During the current fiscal year, soil conservation assistance has been provided for 30 new districts which have come into existence. It is expected that an additional 20 districts will be organized in 1961, which will bring the total to 2,911 districts by June 30, 1961.

The committee recommends an appropriation of $83,132,000 for the coming year, an increase of $810,000 over the 1960 appropriation and an increase of $250,000 over the budget estimate. Of the increase over 1960, $600,000 is required to cover employee health benefit costs. This is offset by a transfer of leasing costs of $40,000 to the General Services Administration. The balance of the increase, $250,000, is provided to meet the increasing needs for technical assistance, particularly for the 20 new districts expected to be organized next year.

For watershed protection, the bill carries an appropriation for 1961 of $32 million. During the 1960 fiscal year, a total of $32,276,964 is available for this program, including an appropriation of $22,750,000 and a carryover of unused funds from fiscal year 1959 of $9,526,964. The amount of $32 million included in this bill, therefore, will make available approximately the same amount for fiscal year 1961. The amount is sufficient to restore the planning funds available in 1960 and to finance a total of 42 planning parties during the next year.

Testimony before the committee indicates that more than 1,200 communities throughout the Nation have requested help in developing watershed plans. It further shows that assistance has been authorized for about 500 of these, that some 200 plans have been approved, and that construction has started on about half of these. In view of the large number of applications still awaiting plans, and in view of the large number of approved projects awaiting construction funds, the committee has increased the watershed protection funds above the amounts requested. In the opinion of the members of the committee, the amount of interest in this program in all areas of the country, and the urgent need for increased attention to the conservation of the soil and water resources of this country, warrant even larger amounts than those recommended in the bill.

For the flood prevention work in the 11 major watersheds authorized by the Flood Control Act of 1944, the committee has included an appropriation of $18 million, the same as provided for fiscal year 1960.

Legislation just enacted authorizes additional works of improvement in accordance with the provisions of section 4 of the Watershed Protection and Flood Prevention Act in connection with the 11 watershed improvement programs provided for by the Flood Control Act of 1944. It also authorizes the making of loans to cover the local share of both the flood prevention and non-flood prevention features of these 11 watersheds. Therefore, language has been included to make the flood prevention appropriation available for these purposes.

As pointed out in last year's report, the work under this program has lagged far behind that envisioned when the program was initiated in 1944. It now appears that this flood prevention work, which was originally estimated to take 15 years to complete, will take 40 years or more to complete at the present rate of progress. If slowed down even more, as proposed in the 1961 budget, this time could be extended another 10 years.

Floods in the United States cause damages of more than $1 billion per year. The Department of Agriculture estimates that about 56 percent of all these damages occur in upstream watersheds, primarily to agricultural interests. It is estimated that the 212 approved Public Law 566 projects covering 12.5 million acres will reduce average annual flood damages of $16 million by 78 percent. In the 11 authorized flood prevention watersheds covering 30 million acres, the programs, now 30 percent installed, will reduce the $40 million annual flood bill by more than three-fourths when completed.

The severe April-June 1957 floods in Texas, Oklahoma, and Arkansas caused $159 million damages in upstream watersheds alone. Small watershed programs completed on less than 2 percent of the area prevented losses of more than $2 million. If all upstream watersheds had been treated, 70 percent of the losses equal to $109 million could have been prevented. Even though 56 percent of total flood losses occur in upstream watersheds, Federal appropriations have provided about $63 for flood control on main streams to every $1 for upstream watershed flood prevention.

For the Great Plains conservation program, the bill includes the full budget estimate of $10 million for fiscal year 1961. This will permit the continuation of the program at the 1960 level of operation.

Mr. BASS of Tennessee. Mr. Chairman, will the gentleman yield on that point?

Mr. WHITTEN. I yield to the gentleman from Tennessee.

Mr. BASS of Tennessee. In regard to the money for watershed protection projects, does the gentleman from Mississippi now feel that the amount appropriated in this bill is adequate to carry on the program for the projects that have been approved already or are in the final planning stages?

Mr. WHITTEN. I think so; all things considered. In this area, frankly, we could probably use, if we had the personnel, several times the amount of money in this bill. But we have tried to be practical. We restored $7,250,000 to bring the amount of money up to this year's level. We restored the money that we felt was necessary to carry on these projects, those that are completed and ready to go. We restored money for the planning parties so that they could proceed with planning. Within limitations that we thought were sound and sensible we restored as fully as we could the moneys we thought were necessary. And it took a good deal of money to bring them up, because they had been cut.

AGRICULTURAL CONSERVATION PROGRAM

An appropriation of $242 million is included in the 1961 bill for payments earned under the program authorized in the 1960 Appropriation Act. This amount, which is a reduction of $600,000 below the budget estimates, is believed to be adequate to meet all commitments under the 1960 program. The amount recommended is the minimum which must be provided, however, since commitments under the 1960 program authorization are binding upon the Government and the Congress.

The committee also has restored the authorization for the 1961 program to the $250 million level. This is the fifth time since 1952 that the budget has proposed to reduce the size of this program. In every year but one, Congress has restored the full $250 million level of operations. Declining farm income makes it imperative that the Nation continue this program to prevent further depletion of the Nation's soil.

As has been pointed out in prior years, this program provides the primary financial support for the entire conservation effort of the Department. The program has about 1¼ million participants each year, which represents 25 percent of all farming units in the United States. Further, it gets conservation work done at much less cost to the Government than other programs such as the conservation reserve and the Great Plains program. The average ACP payment per participant is less than $250 and the cost per acre averages about 60 cents, as compared with payments under the Great Plains program of $4,000 per farmer and $2 per acre.

The budget proposes the elimination of the proviso inserted last year placing restrictions on the distribution of ACP funds among counties. It will be recalled that this language is designed to prevent changes in fund allocations as a means of forcing the elimination of practices which might otherwise be included by a county in its list of approved practices. The committee has retained the language for 1961. It is of the opinion that State committees can make changes from 1958 allocations on a reasonable basis by exercising their authority to reallocate funds among counties as fund requirements change.

AGRICULTURAL MARKETING SERVICE

An appropriation of $43,153,000 is recommended for 1961, including $16,315,000 for marketing research and agricultural estimates and $26,838,000 for marketing services. The amounts proposed are $11,100 over the budget estimate and $1,685,900 over the 1960 appropriation.

The increase provided for the marketing research and agricultural estimates appropriation includes $750,000 to initiate a long-range program to improve crop and livestock estimating services; $50,000 to provide for agricultural estimating services in Hawaii and Alaska; and $102,500 for employee health benefit costs.

The increase for marketing services provides $50,000 for more effective supervision of grain inspection; $40,000 to strengthen enforcement of the Federal Seed Act; $31,000 for initiation of market news services in California and Louisiana; $500,000 for additional poultry inspection; and $207,600 for employee health benefits. These are offset by a reduction of $45,200 due to transfer of leasing costs to the General Services Administration.

A total of $10,796,000 has been included for poultry inspection during the coming fiscal year. This is an increase of $500,000 over funds provided for 1960 to be used to provide inspection at poultry products processing plants as deemed by the Department to be necessary to the protection of public health. This action has been taken by the committee in order to provide additional protection to the consumers of the Nation.

Considerable testimony has been received by the committee indicating the need for additional research funds for this agency to expand cotton quality evaluation research at Clemson, S.C., and Lubbock, Tex., and to undertake additional types of research to improve cotton fiber, to develop improved instruments for measuring cotton quality, and to learn more about how cotton fiber performs during the weaving and finishing processes.

The committee is unable to provide additional funds at this time for this purpose. It recognizes the importance of this problem, however, and feels that work along these lines should be undertaken during the next year. It recommends, therefore, that the additional work proposed at Clemson and Lubbock be undertaken by the redirection of funds from present research on costs and margins of marketing cotton, and cottonseed economic studies and evaluations. It further recommends later in this report that basic fiber research, instrument development, and studies of weaving and finishing facilities be undertaken on a contract basis through the use of Commodity Credit Corporation funds available for research purposes.

For payments to States and possessions, the full budget estimate of $1,195,000 is recommended for the coming fiscal year. This is the same amount as appropriated for fiscal year 1960. Payments under this appropriation are made on a matched fund basis to State and territorial marketing agencies for programs designed to get into practical use improved methods and practices in the marketing of farm products.

For the school lunch program, the committee recommends an appropriation of $110 million for fiscal year 1961. This is the full budget estimate and is the same amount as appropriated for 1960. In addition, the committee recommends the transfer of $45 million from section 32 funds to be used to purchase meats and other foods needed to provide balanced school lunches. This will provide a minimum of $155 million for this program for 1961, which should also be supplemented by other transfers of surplus foods from sections 32 and 416.

This program provided noonday meals to over 30 percent of the Nation's 39,480,000 school children in 1959. The program served an average of over 10.7 million children during the 1959 school year, with a peak participation of over 12 million in 1 month.

Total funds spent for school lunches and the special milk program during the current fiscal year, including Federal, State, and local contributions, and commodities furnished from Federal sources, are estimated at $1.077 billion. This represents a sizable market for agricultural products and is an important contribution to the health and welfare of the Nation's school children.

FOREIGN AGRICULTURAL SERVICE

The budget estimate provides a total of $7,176,300 for this activity during the coming fiscal year. Of this amount, $4,637,300 is requested as a direct appropriation and $2,539,000 is requested as a transfer from section 32 funds.

The committee recommends funds for fiscal year 1961 of $6,940,000, an increase of $928,700 over 1960 funds and a decrease of $190,300 in the budget estimate. Of this amount, $4,447,000 is provided by direct appropriation and $2,493,000 is provided by transfer from section 32. The increase includes an additional $800,000 to cover by direct appropriation for the first time certain attaché expenses paid in prior years from foreign currency allocations; $110,000 for new attaché posts in several Eastern European and north African countries; and $18,700 for employee health benefits.

The foreign currency appropriation, which appears in the 1961 bill for the first time, provides funds for the purchase of foreign currencies for purposes for market development under section 104(a) of Public Law 480 and participation in agricultural and horticultural exhibitions under section 104(m) of that act. Heretofore funds have been used for these purposes from Budget Bureau allocations rather than annual congressional appropriations.

An appropriation of $14,621,000 is recommended for fiscal year 1961, an increase of $8,777,622 over funds available for 1960. As explained in connection with a similar item under the Agri-

cultural Research Service, the committee feels that the use of these foreign currencies for the expansion of foreign markets for U.S. agricultural commodities, as intended by Congress when Public Law 480 was adopted, is of primary importance.

These appropriations are intended to give effect to the legislative policy established by the Congress in section 104(a) of the Agricultural Trade Development and Assistance Act, which directs (1) that there be set aside for market development purposes from sales proceeds and loan repayments an amount not less than the equivalent of 5 percent of the total sales made under title I after September 29, 1959; and (2) that special effort be made in entering into sale and loan agreements to provide for sufficient convertibility to obtain the currencies needed for use in countries which offer a reasonable potential of becoming dollar markets for U.S. agricultural commodities.

The countries which offer the best market possibilities are frequently those where sales are made for dollars rather than for foreign currencies under Public Law 480. Therefore, foreign currencies are not always available in those countries where most needed. The funds appropriated by this paragraph are not restricted to the purchase of currencies in those countries which have excess currencies or which may be classified by the Bureau of the Budget as excess to other uses. Such funds may be used to purchase the currencies of the countries where market potentials exist or to purchase currencies which are convertible into the currencies of such countries.

In order to make certain that foreign currencies are available in those countries which market potentials and where market development work is most likely to be effective, the committee has included language in the bill to set aside currencies for this purpose as provided by the amendment to section 104(a) of Public Law 480 adopted last year.

COMMODITY EXCHANGE AUTHORITY

The bill carries an appropriation of $930,000 for fiscal year 1961. This is a reduction of $11,325 in the budget estimate. The increase of $20,500 includes $14,000 to expand investigations of abuses and unlawful market practices, and $6,500 for employee health benefit costs.

Recent investigations of trading on three different commodity exchanges have revealed rather widespread trade practice violations on each of them. The increase proposed will permit more frequent investigations of these markets and more effective enforcement of the Commodity Exchange Act.

COMMODITY STABILIZATION SERVICE

For acreage allotments and marketing quotas, the full budget estimate of $40,135,000 is provided for 1961. This is a decrease of $400,000 below funds provided for fiscal year 1960, including $1,400,000 appropriated in the Second Supplemental Appropriation Act, 1960.

In addition to other activities of this program, the funds allowed will enable the Department to check up to 75 percent of the upland cotton crop during fiscal year 1961 as a basis for issuance of marketing certificates, as required by law.

For the sugar act program, the committee recommends the full budget estimates of $74,500,000 for 1961, an increase of $3 million over the 1960 appropriation. This increase for mandatory payments to sugar producers is based on a projected increase of 287,500 tons of sugar in 1960 over 1959 production.

An appropriation of $310 million is provided to pay off obligations incurred under 1960 and prior year conservation reserve programs. This is a reduction of $51,783,000 below the budget estimate and is $25 million below funds provided for fiscal year 1960.

Justifications presented to the committee indicate that a balance of $30 million of prior year appropriations will be available in 1961 for payments to producers. The 1961 appropriation has, therefore, been reduced by this amount. Further, funds included for Commodity Stabilization Service operating expenses at the national, State, and county levels appear to be overstated in the budget and have been reduced accordingly.

In a report released last December, the Comptroller General of the United States stated that 5.4 million acres, or 23 percent of the land retired under the conservation reserve had no history of crop production in prior years. He further stated that, based on a national average rental rate of $10 per acre, the payments on such land have amounted to $54 million annually, or about $270 million over the 5-year average life of the contracts. The committee is gratified to learn that, beginning with the 1960 contracts, greater restrictions have been placed on eligibility requirements for land placed in the conservation reserve. It is disappointed and shocked by the fact, however, that such large sums of money have been expended without real reduction in production.

In view of the findings of the Comptroller General, the committee contemplates that the Department will review all contracts now in force and will use every means available to recover in such cases. Where there have been misrepresentations as to prior production records, or other substantial misrepresentations, contracts should be canceled and money erroneously paid should be recovered. Where contracts represent a bad financial arrangement for the Government, even though valid, efforts should be made to work out a cancellation arrangement and settlement in order to avoid further expense to the Government. In expectation of some savings from such an effort, the committee has reduced the 1961 appropriation an additional $20 million.

The legislative authorization for this program expires at the end of the current year. Therefore, no authorization is included in the bill for a 1961 conservation reserve program.

FEDERAL CROP INSURANCE CORPORATION

The 1961 bill carries an appropriation for this program of $6,376,000, which is the same amount as was provided for the current fiscal year.

In addition, authority is provided for the Corporation to spend $2,630,000 from its premium income for administrative costs in fiscal year 1961. This provides an increase over 1960 of $300,000. Employee health benefit costs will require $31,400 of this amount. The balance is required to expand this program to 35,000 new crops and 15 new counties in the coming year.

The program is operating in 865 counties in fiscal year 1960 and is expected to be extended to 880 counties in 1961. The program for 1961 contemplates 425,000 crops insured as compared to 390,000 in 1960. During the 11 years that the program has been operating on a limited experimental basis, premiums have exceeded indemnities by about $2 million.

RURAL ELECTRIFICATION ADMINISTRATION

The 1961 budget proposed authorizations of $110 million for electrification loans and $80 million for telephone loans. No contingency fund was included. The committee recommends the full budget estimate for both programs. It further recommends a contingency fund of $50 million for each program.

It is estimated that the Department will begin fiscal year 1961 with $235 million of electrification applications on hand and will receive further applications during 1961 of $217 million, making a total of $452 million for consideration in 1961. It is further estimated that $110 million of prior year loan funds will be carried over into fiscal year 1961. This carryover, plus the $160 million recommended in this bill—including the contingency fund—will provide a total of $270 million to meet this need in 1961. A total of $245 million of electrification loans are expected to be made in the current fiscal year.

For the telephone program, it is estimated that applications totaling more than $135 million will be on hand at the beginning of fiscal year 1961 and that additional applications of $120 million will be received during the year, making total applications of $255 million for consideration in 1961. The amount provided in the bill, $130 million—including the contingency authorization—will meet about half of this need. Telephone loans will total $105 million in fiscal year 1960. There will be no carryover of 1960 telephone loan funds into 1961 fiscal year.

Collections on electrification loans in 1960 are expected to be $157 million. This amount should be even larger in fiscal year 1961, and should equal or exceed the $160 million authorized for loans in the bill for 1961. The repayment record of this program is still amazingly good, despite low farm income. Delinquencies of more than 30 days are only $400,000—about thirteen-thousandths of 1 percent of loans outstanding.

The full budget estimate of $9,632,000 is proposed for administrative expenses for the coming fiscal year. This is the same amount as appropriated for fiscal year 1960.

FARMERS HOME ADMINISTRATION

For the lending programs of this agency for fiscal year 1961, the bill includes total loan authorizations of $227 million. This authorization includes

$26,900,000 for farm ownership loans, $197,100,000 for farm operating loans, and $3 million for soil and water conservation loans. The amounts recommended for ownership and operating loans are the same as the amounts to be loaned in fiscal year 1960. In addition, the bill includes a $40 million contingency authorization. Not to exceed $5 million of this may be used for farm ownership loans and the balance is available for the farm operating loan program.

Evidence before the committee indicates that credit for agricultural purposes is very tight and that interest rates are increasing rapidly. In many areas of the country, commercial credit is no longer available to farmers. It is reported that some production credit associations of the Farm Credit Administration are charging up to 8 and 9 percent for agricultural credit, and the general average appears to be between 6 and 7 percent.

These factors have forced many farmers to turn to the Farmers Home Administration which was established to provide credit to farmers who had no other source of credit. It is to meet this increasing need that the committee has restored the 1960 level for loans and has provided the contingency authorization mentioned above. The committee feels it essential that this organization be in a position to assist in the adjustment many farmers are having to make due to depressed conditions in agriculture. The committee notes that the full $20 million contingency provided for 1960 has been used and more is needed.

Of the original authorization of $450 million provided in Public Law 1020 approved August 7, 1956, for farm housing loans, an unused balance of $297 million is expected to be available in fiscal year 1961. The Department estimates that it will use only $25 million of this amount in the coming year. The balance of the authorization will be available, however, if needed to meet unanticipated demands for farm housing loans.

It has come to the attention of the committee that this organization has established two sets of standards for housing loans—one set for counties which are participating in the rural development program, and another set for the other rural counties of the Nation. Many of the members of the committee feel that citizens of other than rural development counties should have the same opportunities and directs the Department to change its practices and procedures to that end.

The committee has approved $30,500,000 for the administrative costs of this program for fiscal year 1961. This is $244,750 less than appropriated for the current year and $967,650 less than the budget estimate. In addition to this appropriation, this organization will also have $1 million available in 1961 from the farm tenant mortgage insurance funds for administrative expenses. Also funds for administrative expenses are available from the disaster loan revolving fund as needed. In 1960, transfers for administration of disaster loans will exceed $3 million.

While the total loan volume of this agency continues to increase due to reduced farm income, there are still a number of areas where there are few applications and little or no need for FHA field offices. The administrative funds have been reduced, therefore, with the request that the Administrator reexamine his field operations so as to reduce or eliminate offices wherever possible.

OFFICE OF THE GENERAL COUNSEL

The sum of $3,358,000 is recommended for fiscal year 1961 for this office. The increase of $195,975 above the 1960 appropriation is provided to meet the employee health benefit costs of this organization and to handle the increased workload related to the legal work of the various marketing and regulatory activities of the Department.

OFFICE OF THE SECRETARY

The committee recommends the full budget estimate of $2,899,500 for the coming year. This is an increase of $18,500 over 1960, all of which is required to meet employee health benefit costs in fiscal year 1961.

OFFICE OF INFORMATION

The bill for fiscal year 1961 includes a recommended appropriation of $1,478,000 for the work of this office. This is an increase of $46,335 above 1960 funds, which includes $6,335 for employee health benefit costs and $40,000 to meet the increased demands on this office for information services, including, first, policy clearance and review of processed publications; second, regionalized radio tape service; and third, cataloging and distributing agricultural photographs.

Considerable interest has been expressed by Members of Congress and others in the 1959 yearbook called "Food," in view of its appeal to city consumers as well as agricultural people. The demand has become so large that a reprint appears necessary. It is estimated that it will cost $180,000 for a full reprint or $90,000 for half an edition.

The sum of $213,000 is included in the bill for printing of an agricultural yearbook. The committee recommends that half an edition of "Food" be reprinted and that the number of copies of the 1961 yearbook on seeds be reduced to permit publishing and release within the remaining funds available for yearbook purposes.

LIBRARY

The sum of $895,000 is proposed for 1961 by the committee. This is an increase of $63,100 over 1960, which includes $6,880 for employee health benefit costs and $56,220 for (a) processing gift and exchange material and making it available for use, (b) improving bibliographic service, and (c) providing for additional purchases of publications.

In order to meet the research needs of the various divisions and agencies of the Department adequately, some additional staff is required to make books and publications in the library more readily accessible and to assist scientists and researchers in locating material needed. Therefore, the committee has approved the increases proposed in the budget for 1961.

COMMODITY CREDIT CORPORATION

The sum of $1,226,500,000 is recommended for restoration of capital impairment of the Corporation. This includes $632 million for realized losses through June 30, 1959, and $594,500,000 for losses incurred through December 31, 1959. This is a reduction of $98,500,000 in the 1961 budget estimate.

A breakdown of the realized losses for the fiscal year 1959, for which $575 million was provided in the Second Supplemental Appropriation Act, 1960, and $632 million, as included in this bill, is as follows:

[In millions]

Price support program:	
Basic commodities	$567
Mandatory nonbasic commodities	198
Other nonbasic commodities	46
Strategic materials	−6
Total, price supports	805
Commodity export program	132
Interest, administrative and other (net)	195
Special milk program	75
Total, realized losses	1,207

Data furnished by the Department shows that $620 million—about half—of this realized loss is for price support transactions. The balance represents payments to nonfarm people for storage, transportation, administration, and interest.

On March 16, 1960, the Department proposed a lower rate schedule for storing price-support grain. Estimates placed in the record, page 666, part 3, 1961 hearings, indicate that an estimated $98,500,000 can be saved if this reduction is put into effect. With the expectation that the Corporation will reduce storage charges as proposed and otherwise improve storage practices during the coming year, the committee has reduced this item by the estimated saving of $98,500,000.

The basic charter of the Commodity Credit Corporation contains authority for research on commodities with which it deals. One of the purposes of such research is to minimize or eliminate the losses on commodities in CCC inventories. Information furnished the committee shows that CCC funds are now being used for research on grain. In 1959, $146,575 was used for this purpose and it is estimated that $142,100 will be spent in fiscal year 1960.

The committee believes that the Corporation should continue this type of research, particularly with reference to the major commodities. It also feels that contracts to meet specific problems are much more sound than an overall increase of permanent employees for this type of work. It believes, however, that such research activities should be handled so as not to incur unusually excessive costs or endanger the market for existing business concerns for any industrial products involved.

Appropriations totaling $1,443,634,000 are recommended to reimburse CCC for the cost of these various special programs through June 30, 1960. The amount recommended is an increase of $175,536,500 over the appropriation for this purpose for fiscal year 1960. A further breakdown of costs for fiscal years 1959 and 1960 and funds recommended for 1961 is as follows:

Project	1959 (1958 costs)	1960 (1959 costs)	1961 (1960 estimated costs)
International Wheat Agreement	$80,800,000	$47,404,779	$32,572,000
Emergency famine relief to friendly peoples	119,270,000	96,601,678	107,094,000
Sales of surplus agricultural commodities for foreign currencies	1,033,515,000	968,016,000	881,000,000
Grain for migratory waterfowl feed	18,506	17,363	18,000
Transfer of bartered materials to supplemental stockpile	82,250,335	129,000,000	422,950,000
Advances to Agricultural Research Service for animal disease eradication activities	19,390,100	1,036,192	
Advances to Agricultural Marketing Service for classing cotton and grading tobacco	1,510,870	608,926	
Unobligated balance		25,412,562	
Total appropriation or estimate	1,336,754,811	1,268,097,500	1,443,634,000

As has been pointed out previously, these activities are carried on outside of the regular functions of the Corporation. Its funds and facilities are used merely as a convenient means of financing these programs. They are not related in any way to the price support program of the Corporation.

The bill for 1961 includes an authorization of $44,726,000 for administrative expenses of the Corporation during the coming fiscal year. This is an increase of $2,326,000 over the 1960 limitation and is $3,702,000 less than the budget estimates.

The sum proposed includes an additional $326,000 for employee health benefit costs and $2 million to provide a contingency reserve to enable the Corporation to meet unforeseeable increases in workload during the next year.

The heavy workload volume of the new cotton program which was begun in 1960 is expected to continue in 1961. Acquisitions of grain in 1961 are estimated to be heavier than in 1960 due to a 384 million bushel increase in takeovers from the 1959 corn crop; wheat loans, acquisitions and disposals in 1961 are also expected to exceed those in 1960.

Since price support is mandatory for many commodities, and the volume of loans and purchases cannot be controlled, the provision of a contingency reserve as mentioned above appears necessary.

FARM CREDIT ADMINISTRATION

The bill includes an administrative expense limitation of $2,480,000 for the Farm Credit Administration for fiscal year 1961, which is the amount included in the budget estimates. The increase of $170,000 over the 1960 limitation is required to cover the full year cost of the transfer of 37 employees from the Federal Land Bank payroll to the Farm Credit Administration payroll authorized by the Farm Credit Act of 1959. These are employees of the Farm Credit Administration who have been paid by the Federal land banks as a matter of convenience. No increase in cost or number of employees is involved.

The bill also includes language which authorizes expenditures necessary in the liquidation of the Federal Farm Mortgage Corporation and the sale of its mineral reservations. All Government capital has been repaid.

Mr. YATES. Mr. Chairman, will the gentleman yield for a question?

Mr. WHITTEN. I yield to the gentleman.

Mr. YATES. The committee's report on page 11 touching on storage costs raises a question in my mind, and that is this. Can the gentleman give any reason why a limitation should not be placed in this appropriation bill which would require funds that are expended to be used first for Government storage of surplus commodities rather than permitting it to go to private warehouses?

Mr. WHITTEN. It would be pretty hard to reach what you are talking about mechanically. This is a corporation that under the basic law has full authority to operate as a corporation, to sell and to buy. A limitation on the use of administrative funds probably could be worked out, but the Department, after our hearings and after we discussed our investigators' report, on March 16 announced it was cutting the rates back.

We approached it that way because there is such a wide variety of different situations and different kinds of things. We felt we were not in a position to write out the details of a specific contract in a specific area.

Then we implemented that by failing to restore $98.5 million which they had justified for carrying storage at the present rate. I do think under the present circumstances that is sufficient.

In our report we further told them that under the law, which states that they shall carry on an effective and efficient operation, we feel they should keep Government warehouses filled first in order to carry that out. I would say that we have gone far enough for the moment. If they do not carry this out, I would certainly be glad to cooperate with the gentleman next year to see that it is done.

Mr. YATES. I am glad the gentleman made that last point, about using Government warehouses first. I did not see that in the report. The language of the report on page 12 states:

It is the opinion of the majority of this committee, in view of the obligation of the officers of the Corporation to protect its assets and thereby the taxpayer, that these actions do not constitute "effective and efficient" conduct of the Corporation's business.

Does the gentleman indicate that the inference to be drawn from this language is that Government warehouses should be used first before private warehouses are used?

Mr. WHITTEN. Let me put it this way: If the Corporation owns a warehouse and can keep its grain in its own warehouse, certainly we do not think it should keep its own space empty and pay somebody to store the grain. At the moment I do not see that in the report, but it is in the report.

Mr. YATES. Stated specifically?

Mr. WHITTEN. Yes.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield.

Mr. BROWN of Ohio. I read with a great deal of interest the report on pages 11 and 12 with respect to storage costs. Was this report made before the Commodity Credit Corporation, or whoever it was, made the cut in storage cost to eliminate the big profiteers and help the little elevator operators in some States?

Mr. WHITTEN. This report was written subsequent to the Department's original pronouncement. The course of events was that our committee had an investigation made. We took it up with the Department on February 3, and on March 16 they made their announcement.

They called me and asked if we would support them in bringing the cost down. I said that I would for myself but I could not speak for the committee. Before in the report we call on them to cut costs. We give them considerable latitude. We also mentioned farmer-owned storage. The farmer has to take his storage the first year. He has to take that loss. So we wrote our language in the report as support for the announcement.

Mr. BROWN of Ohio. We have in Ohio small elevators. We produce a grade and type of wheat that is not in oversupply, but it is used for the making of flour and the grain goes in and out of these elevators rather rapidly. I am advised that the average profit of the elevator operators in Ohio is only between 4 and 5 percent. There has been no profiteering. I am also advised, as late as this morning, that the cost support cut of 19 percent on all elevator storage rates will just simply close a lot of the small warehouses—and we have no large terminal warehouses in Ohio—the small elevators, and the farmers will have no place to take their grain.

Mr. WHITTEN. May I say to the gentleman, we do not take credit for nor do we underwrite the Department's method of handling this. For instance, we see some sense in a uniform grain storage rate for uniform warehouses. Personally, I cannot see that you ought to pay the same rate to a fellow who can liquidate the total cost of his warehouse in 16 months as one or two of them have

done as to an established warehouse that gives you full protection.

What we are trying to do is to point out the things we think have been poor business. We point out the law which says this must be carried on in an efficient manner. That means pulling the costs down but giving them latitude as to how to do it. This straight across-the-board cut, to my mind, is not the way they should have handled it. But the fact I differ with them is not surprising, because I have differed with them many times as the gentleman knows.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I yield myself such time as I may require.

GREEN ACRES PROGRAM

Mr. Chairman, I would like first to say it is a pleasure for me personally to work under the chairmanship of a gentleman such as Mr. WHITTEN, of Mississippi, and to be associated with a man like WALT HORAN, of Washington. By the way, JAMIE and I have been on this particular subcommittee for 17 years. We are almost making a career out of it. We have had the company of Mr. HORAN there for about 15 years and Mr. MARSHALL, another very fine gentleman from my own State, has been around for some 12 years. Our able colleague from Kentucky, Mr. NATCHER, has been with us on the committee for about 6 years and we have two comparatively new members, our colleagues the gentleman from New York [Mr. SANTANGELO] and the gentleman from Illinois [Mr. MICHEL]. It is a pleasure to work with these gentlemen. I have always found them eminently fair, and I want to preface the remarks I am about to make by expressing my sentiments toward my fine colleagues on the subcommittee.

DEPLORABLE CONDITIONS OF OUR FARM ECONOMY

Mr. Chairman, the deplorable conditions of our farm economy discussed so eloquently by the gentleman from Mississippi [Mr. WHITTEN], who is chairman of our Subcommittee on Agricultural Appropriations, and the contents of our committee report, together with the accompanying bill, should be sufficient cause for the most serious concern on the part of every Member of Congress.

Words alone, written or spoken, cannot fully and properly describe the plight of several millions of farm people who during the last 10 years have seen prices go steadily up on the things they buy and as equally steadily down on the things they sell. Sleight-of-hand juggling of farm income figures cannot conceal the fact that our farm economy is in difficult straits and that the time for constructive and remedial action is long overdue.

In the last 10 years our gross national product has risen from $382 billion to $480 billion; national income has gone up from $217 billion to about $400 billion; labor income alone has climbed from $175 billion to about $280 billion; hourly earnings in all manufacturing jobs have gone up from $1.46 in 1950 to $2.28 today; and in virtually every segment of our economy, with the exception of agriculture, we have seen similar rises and aside from a few chronically depressed areas the whole Nation has prospered.

But look at agriculture. Net farm income stood at $13.8 billion in 1949 and the latest report shows net farm income has dropped below $11 billion. If there was ever a famine in a land of economic plenty, such a famine exists today among the farm people of our Nation.

We expend a considerable amount of money for various farm programs, many of which are actually for the primary benefit of consumers, but the one big item which relates itself directly to farm income is the appropriation to restore the capital impairment of the Commodity Credit Corporation.

The Commodity Credit Corporation is the banker for our price support operations. For ready understanding of the purposes of agricultural price supports I might describe them as the equivalent for farm people of minimum wage laws, unemployment insurance, labor management agreements, and so forth, for the protection of labor income. Unorganized and without the potent weapon of the right to strike, farm people must of necessity look to the Federal Government for a measure of assistance in their efforts to obtain a fair and equitable return for their labor, investment, and management ability. This we call parity.

In the bill before us there is an item in the amount of $1,325 million to restore the capital impairment of the Commodity Credit Corporation and this represents the losses sustained in our price support operations during the last fiscal year. Last year we appropriated $1,435,400,000 for this purpose; the year before $1,760,400,000; and the year before that $1,239,800,000.

In the last 5 years we have sustained a total loss of $6,689,900,000 in our price support operations, and in those same 5 years net farm income has dropped a full half billion dollars. Although it should be obvious to everyone that our programs of price supports are not doing the job, I shudder to think where our farm economy would be today if we had not provided at least this measure of protection.

As ranking member of the Subcommittee on Agricultural Appropriations, as a Member of Congress representing a great agricultural district, and as a man conscious of the fiscal implications of the bill we bring before you, I must report that the rise in costs to the public in recent years has been accompanied by a corresponding decline in farm income. We cannot forever expect farm people or taxpayers generally to support such an inadequate and costly program.

Our subcommittee has been fully cognizant of these negative developments. Each year we have conducted extensive hearings—this is my own 17th year on the subcommittee—and this year you will note that our hearings total more than 2,500 pages in length. In all modesty I believe I can honestly say that the seven members of our subcommittee know more about the detailed operations of the U.S. Department of Agriculture and of our farm programs than any other group in Congress.

I believe our subcommittee has taken every conceivable action available to us in our efforts to cut the costs of these programs and make them more worthwhile to the farm people in whose interests they were first authorized. At the same time, I believe we have exhausted our capabilities and the frustrating experience of spending good money after bad compels me today to bring this whole problem before the Congress in the hope that something constructive might come of the effort.

COMPREHENSIVE NEW FARM BILL

On May 2 of this year I introduced a comprehensive new farm bill—H.R. 12000—together with my able and distinguished colleague the gentleman from Iowa [Mr. JENSEN]. His identical bill is H.R. 12001. This bill was not casually conceived nor was it lightly offered. Speaking for myself, its provisions were based upon many years of service in the Congress, especially as a member of the Subcommittee on Agricultural Appropriations, together with virtually a lifetime of experience as a farmer, and as a farm manager.

As a preliminary to the discussion of our proposal, let us first take a good look at the problem we seek to solve.

From the viewpoint of the American taxpayer, the development of a solution to the farm problem should have the highest priority. Reluctantly but of necessity I must report to the Congress that we now have in Commodity Credit Corporation accounts about $9 billion worth of surplus agricultural commodities. In the next fiscal year it will cost about $600 million to store and handle that vast storehouse of agricultural products. Added to this will be the losses through deterioration, market losses, shrinkage, and other factors leading inevitably to a loss to the Public Treasury of probably another $1 billion.

As a practical matter, we have found from experience that we cannot even give away this multi-billion-dollar hoard of agricultural commodities. In the bill before us you will find another item of $1,468,742,000 to reimburse the Commodity Credit Corporation for various special activities such as Public Law 480, the International Wheat Agreement, and famine relief to friendly countries. Tremendous quantities of American food have moved through church and other charitable organizations from Government warehouses into empty stomachs around the world; additional amounts of staggering tonnage have been sold for local currencies which are near worthless to us; and we have thrown wide the door of our food storehouse to needy people both at home and abroad. But it costs money to even give these stocks away and from the viewpoint of the taxpayer this $9 billion stockpile is and will continue to be a most costly burden.

From the viewpoint of the farmer we purport to help, this stockpile of agricultural surpluses is a two-edged sword striking at the heart of his pocketbook. In the first place, the level of farm commodity prices at a present average of only 80 percent of parity together with the farmer's proportionate share of the total tax burden leaves the average

farmer at the bottom of the economic ladder. In the second place, the tremendous accumulation of farm commodities in the inventory of the Commodity Credit Corporation hangs like a dark cloud over the agricultural economy and eliminates completely any hope for a rise in market prices for farm products.

The proposal the gentleman from Iowa [Mr. JENSEN] and I have laid before the Congress is designed to meet effectively and promptly both of these basic problems of accumulated surpluses and depressed farm commodity prices. Moreover, we seek to accomplish these prime objectives at little or no additional cost to American taxpayers.

The green acres program we propose contains numerous provisions previously advanced by other able and distinguished Members of Congress. The payment-in-kind features, for example, may be found in many bills now pending before the legislative committees. My cosponsor, the gentleman from Iowa [Mr. JENSEN], along with his colleague, the gentleman from Iowa [Mr. HOEVEN], some time ago introduced payment-in-kind bills for corn. The distinguished chairman of my Subcommittee on Agricultural Appropriations, the gentleman from Mississippi [Mr. WHITTEN], and my very able farm colleague the gentleman from Minnesota [Mr. MARSHALL] recently introduced bills to authorize a payment-in-kind program covering all feed grains and wheat.

After studying many of these constructive proposals and gaining from them a number of worthwhile ideas, Mr. JENSEN and I felt that something additional was needed to accomplish a balance between production and market demands and the green acres feature was conceived for this purpose.

Having crystallized our own thinking on the general outlines of a farm measure, we took the idea directly to the farmers who would be affected for their counsel before introducing a bill and the farmers themselves gave us the answers to several questions for which we had been unable to find the answers.

I personally discussed the green acres proposal with more than 400 farmers, ASC committeemen, county agents, conservationists, livestock men, and others representing a cross section of Midwest agriculture. As a result of these discussions, the initial idea was considerably modified and several very valuable improvements were made. For example, we were concerned about the collateral effects our proposal might have upon the livestock industry and I found the answer in a suggestion made by an ASC county committeeman at the last meeting held on the subject.

The Andersen-Jensen green acres program is in a major sense the result of the combined thinking of a cross section of farm people and the leaders of responsible farm organizations, and I want at this time to acknowledge their help and express my personal appreciation for their contributions.

Now, Mr. Chairman, I would like to take a few minutes to describe briefly the various sections of our bill.

Section 2 of the bill provides for a nationwide referendum to permit farmers to determine for themselves whether or not they want this program to go into operation. Since every farmer in the United States who produced wheat, corn, oats, rye, barley, grain sorghums, soybeans, and flaxseed would be immediately affected, all of those producers who produced one or more of these commodities in at least 3 of the last 5 years would be eligible to vote in the referendum. If two-thirds or more of the producers voting in the referendum favored the program presented to them, it would be in effect the following crop year and thereafter unless the Congress authorized and the Secretary of Agriculture conducted another referendum on this or a modified program.

I will discuss the other sections of the bill upon the assumption that the entire program would be approved in the referendum. If farmers voted to the contrary, the entire measure would be inoperative.

GREEN ACRES PROVISION

Section 3 covers the "green acres" provision and is the cornerstone of the entire proposal. Beginning with the 1961 crop, all producers of the commodities enumerated earlier would be required to put at least 20 percent of their total cropland under green cover. Farmers would receive no direct compensation for so doing, and they would be free to do anything they wanted to with these green acres other than the production of nonconserving crops. They could graze it, cut hay off of it, put it into wildlife cover, and so forth. The principal stipulation would be that it must be under green cover and not in the production of nonconserving crops.

The 20 percent figure in our bill is not a precise figure which we have determined to be the exact minimum cropland needed in green acres on each farm to do the job. It is, however, the best possible estimate we can make as to a percentage reasonably expected to accomplish the objective we seek of balancing the production of these commodities against consumer needs and market opportunities.

Because this is such an important feature of the bill, you may be interested in the basis for the 20 percent provision and some of the reasons for its importance.

It should be obvious to all that American farmers are producing too much. They were called upon to increase production during the war years, and farm programs in effect in recent years have provided no alternative. We now have in Government ownership $9 billion worth of agricultural commodities and it is costing us about $600 million a year for storage and handling. We are simply producing too much and all previous efforts to achieve the desired balance have failed.

The best advice we can obtain together with our own study of official statistics leads us to the conclusion that we have nationwide about 32.6 million too many acres currently producing wheat, rye, corn, oats, barley, grain sorghums, soybeans, and flaxseed. This is a composite figure which takes into account an estimated deficit, for example, of about 3.6 million acres of oats and 0.9 million acres of flax last year.

Assuming the accuracy of this figure, and we believe it is reasonably accurate, the next step was to devise a sure means of taking this much land out of production at no cost to the taxpaying public.

Nationwide we have about 430 million acres of cropland now in production. About 136 million acres of this cropland is in hay and pasture, or 29.6 percent of the total. However, this percentage of total cropland in hay and pasture ranges from a statewide average of 13.1 percent in Kansas, to 85.8 percent in Vermont. North Dakota averages 15.6 percent of its total cropland in hay and pasture: Washington, 18.9 percent; Georgia, 20.2 percent; Montana, 20.8 percent; Illinois, 21 percent; Colorado, 21 percent; North Carolina, 22 percent; South Carolina, 23 percent; Delaware, 23.1 percent; Texas, 24.3 percent; and Minnesota, 24.3 percent.

Within the States the percentage of cropland in hay and pasture also varies widely. I have listed the States in ascending order up to and including Minnesota because I have more details about my own State. In my district, for example, I have two big-producing counties which have an average of 7 and 9 percent of their cropland now in hay and pasture. Obviously, the range within these counties is from zero to a few dairies with substantial acreage of hay and pasture.

The point I want to make is that we calculated this as best we could and came to the conclusion that 20 percent was about as reliable a figure as could be determined without intensive study of the latest census data when it becomes available. Experts in the field gave us estimates that ranged from a low of about 15 percent to a high of about 25 percent and from this we conclude that our 20-percent figure is fairly accurate. In addition, we anticipate that hearings on the bill would develop information which would either confirm this figure or lead to a more precise percentage for the green acres program.

It is our considered judgment that the establishment of this minimum figure of 20 percent of the cropland on every farm would probably raise the national average about 8 percent which would take out of crop production about 34 million additional acres. If so, and allowing for the fact that a good farmer would often select his poorer land for the purpose, we believe we would be within striking distance of balanced production.

MUST BE ABSOLUTELY ENFORCIBLE

One further point on this section. Everyone we discussed this with advised us that it must be absolutely enforcible. To make it effective we have put some real teeth into it by providing a penalty of 50 percent of the total production on any farm not in compliance with the green acres provision. This penalty would be in the amount of one-half the value of the violator's total production the year of his noncompliance

and we believe there will be little or no noncompliance.

Section 4 provides a vital incentive insofar as farmers and our rural economy are concerned. Under this section price supports on all the commodities listed would be set at 80 percent of parity the first 2 years, at 85 percent the next 2 years, and at 90 percent of parity thereafter. If our calculations are accurate, and we believe they are, the market will rise steadily in the next few years and the level of price supports will follow it up. In this section we propose in 5 years to restore the general level of farm commodity prices to the level from which they have fallen steadily in the last 10 years. The step-by-step increase will avoid sharp disruptions in our whole agricultural economy and we believe it is entirely practical to move back up in this manner.

PAYMENT-IN-KIND

Section 5 contains the provisions for the liquidation of present surpluses; the maintenance of an adequate supply for the protection of consumers, world markets, and food-for-peace programs; and the balancing of farm production in the future. The payment-in-kind program is to be entirely optional with the producer, but we have purposely set the rate at 80 percent of average, normal yields to make it attractive to producers. In addition, we have set a maximum of 50 percent of any farm which may be temporarily retired from production in the interests of farm families and the local economies. I have never wanted to see whole farms retired from production for any reason and we propose to prevent that in this program.

As one of the original coauthors of the conservation reserve program, I have consistently opposed the retirement of whole farms via this program.

As is provided in most of the other payment-in-kind proposals, our bill calls for a complete retirement of the acreage for which 80 percent of normal yield certificates are issued. These certificates will be valued as of the time of issue and will be completely negotiable. They can be used as collateral for credit. They can be surrendered in exchange for CCC stocks. They may also be sold to a neighbor or a local elevator for cash. When finally surrendered, these certificates would be exchanged for surplus stocks owned by the Government. However, these stocks would not be eligible for price supports. The retired land may either be put under protective cover with ACP assistance, left black if that is the proper thing to do from a conservation standpoint, or put under wildlife cover. However, no harvest of crops or hay would be permitted except in emergencies authorized by the Secretary of Agriculture.

There is also another payment-in-kind feature in this section relative to the "green acres" retired from grain production under section 3.

To protect the livestock economy against a flood of cheap hay, we authorize an optional 25 percent of normal yield payment-in-kind for the complete retirement of this land. This has been set at this particular rate so the farmer who has livestock and needs the hay can utilize his "green acres" and the farmer who does not need the hay or pasture can completely retire that land in return for the 25 percent of normal yield payment-in-kind. We also have reason to believe that once the present surpluses have been liquidated this feature alone might well serve to maintain the balance in production we seek under the terms of our bill. If so, the total cost would be very low because of the relatively low payment rate of 25 percent.

In this section we also afford a measure of protection to the grain trade and storage industry by directing that commodities redeemed with payment-in-kind certificates shall to the maximum extent practicable be from CCC stocks in bin sites or other Government facilities before withdrawing from commercial warehouse facilities. In addition, I would like to report that our Agriculture Appropriations Subcommittee held several meetings in the Midwest on the storage question and we were told by responsible country elevator operators that they very much preferred the movement of free grain to the storage of CCC stocks as the trade in free grain is more profitable to them.

From our inquiries we came to the conclusion that the elevators will find the increased supply of grain in trade channels more to their liking than long-term storage of Government stocks.

This section includes the usual penalty for violations equal to forfeiture of all payments and an additional penalty equal to 50 percent of the amount otherwise due.

Section 6 provides that the acreage diverted either into green acres or by payment in kind shall be in addition to any acreage already in the conservation reserve. In other words, if part of a farm is now in the conservation reserve the balance of the farm would be considered as an entity for the purposes of this legislation and the green acres would have to come out of the remaining cropland in production.

Section 7 assures producers eligibility for ACP cost-share payments on their entire farms, including the green acres and land diverted under payment in kind.

Section 8 provides that the proposed program shall be administered by the farmer-elected committees which are already in existence.

Section 9 directs the Secretary of Agriculture to transmit annual reports to the Congress in order that the operations of the green acres program may be constantly reviewed. In addition, it provides that any increase in the percentage of cropland required under the green acres provision shall first be approved by Congress and then submitted to producers in another nationwide referendum. However, if we have been reasonably accurate in the determination of this percentage, it is unlikely that such action would be necessary at any time in the near future.

Section 10 guarantees to cotton, peanut, rice, tobacco, and wheat producers that no terms of this measure shall in any way affect their present programs of acreage allotments, marketing quotas, or price supports except for the 80 percent of parity price support floor under wheat.

In the first place, I would not undertake to offer legislation affecting these commodities as I know there are better authorities in the Congress representing these particular producers. However, I do want to call attention to the fact that the green acres program would be of considerable economic value to the producers of cotton, peanuts, rice, and tobacco, from the standpoint of higher price supports for the grains they produce on their farms.

ILLUSTRATIVE CHARTS

That, Mr. Chairman, is a section-by-section summary of the bill. I would now like to call our colleagues' attention to the four charts we have prepared which illustrate the prospective impact of this proposal upon the production and income of a representative 320-acre midwestern grain farm. These charts may be readily adjusted to various crops as well as larger or smaller farms. The 320-acre farm is simply illustrative of the program.

The first chart shows that farm in virtually all-out production in 1960 under the present program. You will note that we have estimated 25 acres for buildings, lots, roads, wastelands, and so forth, and, to be conservative, have shown 35 acres already in alfalfa. On the balance we show 160 acres of corn, producing 9,600 bushels, worth about $1 per bushel this year; 59 acres of soybeans, producing 1,500 bushels, worth about $1.73 per bushel; and 50 acres of barley, producing 1,500 bushels, worth about 70 cents a bushel. In the lower left-hand corner of the chart we show an approximation of the surplus produced on that farm, and these figures are based on the actual percentage of each commodity now in surplus production. On the right-hand side of the chart we show the total gross income in the amount of $13,800 for this all-out production.

The second chart shows that same farm in 1961 under the "green acres" program with 80 percent of parity price supports. Since this is primarily a grain-producing farm, we assume, as an illustration, that the farmer will take full advantage of the program. First, he will have to put a total of 59 acres into the green acres program. For this he may elect to receive the 25 percent of normal yield payment in kind for wildlife cover, or 885 bushels of CCC corn. Then he will be eligible to retire an additional 88.5 acres completely, for which he will receive a payment-in-kind certificate worth 4,228 bushels of corn. On his remaining acres we assume he will plant 100 acres of corn, yielding 6,000 bushels, with a price support of about $1.30; 27.5 acres of soybeans, yielding 825 bushels, with price supports at about $2.25 per bushel; and 20 acres of barley, yielding 600 bushels, with price supports at about 96 cents a bushel. At present rates of consumption, this farm would not be producing enough to meet current mar-

ket demands, and we would begin to eat into the surplus stocks held by the Government at public cost. From the income standpoint, you will note that the total gross income on that farm would rise to about $15,856—an increase of $2,000 above the previous year with reduced costs of production.

In addition, may I point out in all of these charts that the payments in kind made available to producers would in every instance assure that much minimum cash income regardless of weather or crop conditions. Since these certificates will be issued in the early spring, this cash income will contribute greatly to the whole rural economy and will help insure against local economic disasters as a result of crop failures.

Now, if you will refer to the third chart, you will find that farm producing the same crops as shown on the second chart, but this will be in 1963, when price supports go up to 85 percent of parity and the total gross income goes up to $17,139—another $1,300 with no increase in costs of production.

Then, if you will refer to the final chart illustrating the situation in 1965 you will find that we have liquidated the surpluses and that farm is back into full production with 90 percent of parity price supports and a total gross income of about $20,766. Since the costs of production are comparable with those shown in the first chart for 1960 under the present program, you can readily see that the gross income on this farm will have risen a total of about $7,000 or more than 50 percent with no additional costs to the producer or the taxpayers. With the surpluses liquidated and supply in balance the operator of this farm will contribute to the total output approximately his proportionate share of the market need and the 90 percent of parity price supports will function as an orderly marketing device at little or no cost to the taxpayers.

Although farmers are at all times to farm as they please under the "green acres" program, it should be noted that after the surpluses have been liquidated there will not even be a payment-in-kind program for those commodities which are not currently in surplus. The green acres provision will remain permanently in effect, except for national emergencies, to help maintain the overall balance of production with the payments in kind operating to adjust temporary imbalances between commodities.

COST LITTLE OR NOTHING

May I also emphasize the fact that the entire program proposed in our bill will cost the taxpayers little or nothing more than the costs of administration and the release of surplus CCC stocks which are worthless for all practical purposes and are actually costing us about $600 million a year to store. I have not had time to calculate the savings that would be accomplished under the terms of our bill but I can assure our colleagues from my years of experience on the Agriculture Appropriations Subcommittee that the savings in total costs would be enormous, not to mention the nationwide benefits that would accrue from a prosperous and healthy farm economy.

Since the green acres bill was introduced last week, we have had a most gratifying response from other Members of Congress, spokesmen for farm organizations, and the public as a whole. However, some questions have been raised relative to our contention that the program will cost the taxpayers little or nothing other than the costs of administration and I would like to discuss that briefly.

In the first place, I do not believe the costs of administration would be substantially increased over the level of recent years because we will, by the operation of the proposed program, actually reduce and eventually eliminate some past administrative costs.

For example, the costs of care and custody of commodities in the bin sites throughout rural America will be rapidly eliminated by the distribution of these stocks as payment-in-kind.

As indicated on page 754, part 3, of our hearings, the current annual costs to the taxpayers for handling of surplus wheat, corn, grain sorghum, barley, and rye were as follows: $717 million for transportation, $105 million for receiving and loading out, $415 million for 12 months' storage, and $192 million for interest at a rate of 4 percent on our total investment in these commodities. In other words, in addition to the initial investment of $3½ billion in these five commodities, we are faced with an annual cost of another $1.4 billion bringing our total investment in those commodities to better than $5 billion. With the green acres program in full operation there should be virtually no surplus production and, if this were the case, we could save the $5 billion otherwise invested in the acquisition, storage, and handling of these five commodities.

Now, a word about the liberal payment-in-kind proposal in our bill. We have purposely made it liberal and would be willing to set it at a full 100 percent of average normal yield except for the fact that we want to reduce the quantity of grain on the market by that additional 20 percent. We believe the 80-percent figure will be a strong incentive for participation, and that is what we want.

SURPLUS DISPOSAL PROGRAMS

We must not lose sight of the fact, Mr. Chairman, that the $9 billion worth of surplus agricultural commodities owned by the Government are, for all practical purposes, worthless. Before anyone criticizes our proposal to release these stocks to farmers via the 80 percent of normal yield payment-in-kind route, let me remind them that agricultural commodities are not the only surpluses owned by our Government.

In fiscal year 1959, the Federal Government disposed of more than $6 billion worth of surplus stocks other than agricultural commodities. We sold $2.1 billion worth of surplus for a cash price of $99.6 million. In addition, we sold as scrap for $66 million another quantity of surplus property which had an original cost of about $4 billion. On top of that, we gave away by donations to health, educational, and civil defense organizations some $229.5 million worth of surplus property. In other words, in the disposal of other surplus property owned by the Federal Government we have realized less than 3 cents for each dollar initially invested and that is little short of actually giving it away.

In the case of American agriculture, we propose the exchange of surplus farm commodities—already bought and paid for—in return for a reduction in production in the interests of our total economy.

If the Congress is genuinely concerned about the plight of farm people, we offer a practical and workable program in our green acres proposal.

If the Congress is constructively interested in restoring the rural market for commodities manufactured and processed throughout the Nation, we suggest this means of raising the level of farm income.

If the Congress shares our concern regarding the rising costs of acquiring, storing, and disposing of surplus agricultural commodities, we offer a means of virtually eliminating that costly operation.

If the Congress recognizes the desirability of maintaining necessary reserves for the protection of consumers, for distribution to needy and deserving people at home and abroad, and for the stability of our whole agricultural economy, we present this proposal for balanced production.

If the Congress shares our desire to solve this costly problem of surplus production which depletes our soil and demoralizes our economy, then we ask that consideration be given at this session to the Andersen-Jensen green acres program.

The President in his message to Congress on May 3, 1960, said:

> I still believe that America's farmers prefer, as certainly I do, the development of legislation which will promote progress for them toward economic equality and permit them the maximum freedom.

We respectfully refer the attention of the administration to our proposal which we believe will restore our farm economy to its proper level and will do so within the confines of the President's language I have just quoted.

Mr. NATCHER. Mr. Chairman, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to my good friend from Kentucky.

Mr. NATCHER. The American farmer has no better friend than H. CARL ANDERSEN of Minnesota. It has been my privilege and honor to serve with this subcommittee for 6 years; and during that time I have witnessed the interest of my friend CARL ANDERSEN in all matters concerning agriculture.

I want to commend the gentleman on the fine statement he has made and to inquire as to whether or not in the opinion of the gentleman this is a sound bill from the standpoint of conservation?

Mr. ANDERSEN of Minnesota. I thank my colleague for his very kind remarks; and I may say to him that conservationists have already approached

the gentleman from Iowa [Mr. JENSEN] and myself, and they have told us they were delighted with this approach to the farm problem. It is very definitely a conservation program. That is my answer to the gentleman.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to my chairman.

Mr. WHITTEN. I wish to say to the membership that in all the years I have had the privilege of serving with our friend, H. CARL ANDERSEN, no one has worked more unceasingly for the interest of American agriculture and the American farmer.

CARL ANDERSEN knows farm problems first-hand. He has had many years of experience here, and in the dealings with agriculture his interests have been sincere and never political. I wish to say to him that his bill which he has so ably discussed, in my opinion, would be a very great improvement over the laws we now have.

I do not want to make this comment without including, also, our friend on the Appropriations Committee, the gentleman from Iowa [Mr. JENSEN], the joint author of this bill. I have had the privilege of serving with both these gentlemen. I have served under the chairmanship of CARL ANDERSEN, and it has been said it did not make much difference which of us happened to be presiding officer of the subcommittee. We have worked through and through, and by paying attention here to these two gentlemen because they have sponsored this bill, I do not mean to overlook other members of the Appropriations Subcommittee on my side: FRED MARSHALL, BILL NATCHER, and FRED SANTANGELO for they are sincere members who are interested in the work of agriculture and who give some thought to the economy of the taxpayers as well; nor do I want to overlook my Republican colleagues on the other side, the gentleman from Washington, WALT HORAN, and the gentleman from Illinois, BOB MICHEL. They, too, have this Nation's interest at heart. I want to say that this appropriation bill we have before us today reflects the composite views of this group trying its best to meet the problems as we see them.

I congratulate the gentleman from Minnesota and the gentleman from Iowa for having made this very straightforward statement, in calling the attention of the American public to the need in this area and the fine work in the preparation of their bill.

Mr. ANDERSEN of Minnesota. I sincerely appreciate the remarks of my chairman. May I call the attention of the committee to the fact that it was due to the efforts of Mr. WHITTEN, representing the minority, who joined me when I became chairman of the subcommittee and, we, together with Mr. Hope, of Kansas, put into effect the pilot watershed program without departmental or budget approval. This has now become the small watershed protection program. We commenced in this very subcommittee the small watershed protection pilot program. My chairman had the original nub of the idea and that is the way the gentleman from Iowa [Mr. JENSEN] and I have developed this particular bill.

We are seizing on all the good ideas. We have stayed back on purpose, we have waited to see what other gentlemen produced, and we are trying to bring together in one package the suggestions made by the gentleman from Minnesota [Mr. MARSHALL], the gentleman from Iowa [Mr. HOEVEN], and others. We have taken a number of good ideas from other authors and built them around the mandatory 20 percent that each and every farmer in the Nation must contribute as his share toward a profitable agricultural economy.

Mr. HORAN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the gentleman from Washington.

Mr. HORAN. I want to point out to the committee that there is a crying need for some approach to a solution of our farm problem that we have before us today. As our chairman of the subcommittee pointed out in his remarks we are picking up the tab for $481 million for storage alone in this particular bill. It is estimated we will pay out $612 million next year for storage alone, none of which helps the farmer very much, and it is estimated next year's expenses in the storage field will be in excess of $700 million.

I want to commend the gentleman from Minnesota for at least coming out with what I think is an idea that ought to be studied fully. I may say to my other colleagues who are interested in wheat and a domestic parity that I am attracted to the outline of a farm program that is outlined in the report.

Mr. ANDERSEN of Minnesota. Will not the gentleman agree with me that we must approach this entire problem of small grains as one? We cannot do it piecemeal. We have found that out.

Mr. HORAN. I realize that there is a conflict in commodities and that does get in the way.

Mr. ANDERSEN of Minnesota. That is correct. I might say for the benefit of the wheat producers and the wheat men in this Congress that every attempt is made to help them. For example, in this bill we do not say that a man once he has a negotiable certificate in the Corn Belt cannot pull out wheat stocks if he wants it for feed, but it will be on a relative price basis, not bushel per bushel. I might also say that the 15-acre wheat producers are not going to bother about producing 15 acres under this bill. Instead they are going to retire it for payment in kind by taking out 30 percent of their land, and they will pull back other commodity stocks. It is going to help every normal wheat farmer in America to eliminate the 600,000 15-acre farmers on a purely voluntary basis. It is going to benefit everyone concerned.

The gentleman from Washington has pointed out that this is one of the big problems facing us today, and the gentleman is absolutely right. Here it is the middle of May and not a worthwhile thing has been done for agriculture. We are trying by pushing this to at least light a fire and get some action so that back my way we will not have the disconsolate sort of economy we have today and despondent farmers.

Why, that miserable bill passed here 2 years ago happened to deal with corn. A lot of you gentlemen here voted for it. Mr. CANNON, Mr. BROWN of Missouri, and I and the late Mr. Christopher got up and fought it. We said: "Why reduce the price of corn down to a disastrous level and force the farmer to go out and produce corn from fence row to fence row to make a living?" Now, the only friend I know of in Government or elsewhere for that particular bill is Ezra Benson. He is the only man who still says it is good legislation. I fought then against it and I will fight against any principle utilizing our soil to produce 800 million bushels of corn or any other commodity that we do not need only to put it in tin cans and bring about enormous storage charges and consequent deterioration. It is not a good program for the wheat and corn producers in the Midwest. God help us if that is the best we can do here. That is why I have taken this hour today. And, this is the first time I have taken an hour under this bill, even though I have been the ranking member on the committee for a good many years. The time is getting late. The hour is getting late. Let us remember that.

Mr. MARSHALL. Mr. Chairman, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the gentleman from Minnesota.

Mr. MARSHALL. I would like to commend my colleague and friend from Minnesota for the fine statement that he has made today. I would like to also reiterate that while we drew up the soil bank bill and presented it to the Congress, as my good friend has stated, it was never our intention that entire farms be taken out of production. It was our intention that the production come out of the productive areas of the country to bring about a balanced agriculture. Furthermore, if I might say further, at the time we were working on this bill, we asked the Department of Agriculture for comment on our bill. They sent in a report, and it is interesting to note at this time that they said that in order for that program to be effective it would cost in the neighborhood of $500 million annually. Since that time we have spent over $2 billion on a program that is in effect now on conservation reserve, which I personally do not agree with, because it has taken out lots of marginal land. It is not reaching the productive land of this country. We had occasion to visit some of the Midwest areas, and we know that last year we produced a 4-billion-bushel corn crop, the first time in history, in this country. And, they have told us that they were doing everything that they could to add more corn acres in this next year to the production. So I say to my good friend and colleague and Members of the House that next year we will have increasingly more difficulty in corn production, and 2 years from now you can expect the Government to blow its top off if we have anywhere near a normal crop year. My good friend and

colleague has recognized that, and he has put in a lot of work on this proposal, as has my good friend, the gentleman from Iowa [Mr. JENSEN], because both of these gentlemen come from areas that see what is happening to this corn and feed production, and both have been stalwart promoters of soil conservation. They both know by experience that you are placing a burden on the soil, robbing the soil of the fertility to produce commodities that we do not have need for, and unless something unforeseen changes that trend, it will wreck the livestock and poultry industry in this country.

Mr. ANDERSEN of Minnesota. I thank my colleague from Minnesota. And, I say this, that he is absolutely right in his reference to our first idea of what the soil bank should be. The gentleman will remember that he and I were the first ones in the Congress to use that term "soil bank" away back in 1954. It has not operated along the line that the gentleman from Minnesota [Mr. MARSHALL] and I intended that it should be operated, but if it had, we today would not be in the agricultural fix we are in. We never intended that we should take whole farms out of production and destroy the economy of the small communities by too many of these farms going out. We never intended that for a couple of years, at least, the soil bank program should be a field day for speculators.

We thought we had a good idea, but I do not care how good an idea is, Mr. Chairman, if you do not have the proper administration of any program you might as well throw it out of the window. We did not for the first 2 years, at least, have the proper administration of the conservation reserve.

Mr. Chairman, I want to say this further. I do have hopes for the green acres program because I know that the present Secretary of Agriculture will have nothing to do with its operation if it becomes law. He has only a few months left in office.

Mr. MARSHALL. Mr. Chairman, will the gentleman yield further?

Mr. ANDERSEN of Minnesota. I yield.

Mr. MARSHALL. I was going to say that had the proposal that my colleague and I made been put into effect, we would not be facing the problem of a 9 billion bushel surplus in stocks of Commodity Credit, nor would we be paying around $600 million in storage costs this year. And that $600 million is more than that program was estimated to cost to do the job when the gentleman and I proposed it.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the gentleman.

Mr. SMITH of Iowa. First I want to commend the gentleman for coming forward with a bill. There have been so many people who criticize everything that comes up but they never come forward with a bill of their own or with anything constructive. Also I want to concur in what was said by the gentleman from Minnesota [Mr. MARSHALL] and in the gentleman's own comments concerning corn. We are going to have this year alone from the 1959 carryover 600 million bushels of corn. That is one-third as much as was accumulated in all the previous years put together. That is the first year under this program that the gentleman has been talking about.

Mr. ANDERSEN of Minnesota. Will the gentleman further agree that in this crop year 1960 the farmers of America are going to put 85 million acres into corn, and 20 million acres of that we have no need for whatsoever?

Mr. SMITH of Iowa. Seed corn salesmen just this weekend told me that they have sold more than 5 percent more seed corn this year than last year.

Mr. ANDERSEN of Minnesota. The gentleman mentions seed corn salesmen. I had only three objectors among the 400 business people and farmers with whom I discussed this proposal just 3 weeks ago back in Minnesota and Illinois. Two of those gentlemen were big cattle feeders who do not produce enough corn for their own needs. They honestly said that they were afraid that corn was going to go up and they would not make quite so much profit. The other gentleman was a seed corn dealer who was afraid that he would not be able to sell the amount of seed corn he had for several years. But all three of these men did not stop to look ahead into the future.

Mr. Chairman, I want to close on this. Unless we do something about this, the beef cattle men are going to go down with the feed grain people; there is no question about it. Seven years ago I said to Mr. Benson, "Don't you realize that cheap feed will eventually mean cheap livestock?" He said that I was wrong. But I think in the last year or two he has come at least part way toward my line of thinking.

The beef cattle men had better get back of some proposal like this and not insist on 75- and 80-cent corn unless they want to see their whole operation hit the economic skids.

Mr. Chairman, I want to say in conclusion why I am proud to have the gentleman from Iowa [Mr. JENSEN] join me in the introduction of this bill. There has been no man in the Congress more interested in soil conservation than has the gentleman from Iowa [Mr. JENSEN]. All through this green acres bill you see "conservation." I am happy that I have a man of his caliber standing along with me urging the Congress to adopt this proposed legislation.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield further?

Mr. ANDERSEN of Minnesota. I yield further to the gentleman from Iowa.

Mr. SMITH of Iowa. I do want to say, however, that I wish I could share the gentleman's optimism in the idea that there is no one but Mr. Benson for this corn program. I have found quite a few among our colleagues.

Mr. ANDERSEN of Minnesota. If the gentleman will permit, let me say there are perhaps a few other misguided souls.

Mr. SMITH of Iowa. Mr. Chairman, I have a few questions if the gentleman will yield further.

Mr. ANDERSEN of Minnesota. I am glad to yield.

Mr. SMITH of Iowa. As I understand it, the gentleman does recognize that lower price supports do not actually reduce production because he says you should go to 80 and then 85 and then 90 percent of parity?

Mr. ANDERSEN of Minnesota. Absolutely.

Mr. SMITH of Iowa. Also, as I understand it, you do not have any requirement on the referendum that one must have been a producer of any certain amount of a commodity.

Mr. ANDERSEN of Minnesota. Yes; 3 years out of 5, then that man has the right to vote.

Mr. SMITH of Iowa. In what quantity?

Mr. ANDERSEN of Minnesota. If any man produces wheat, corn, all these other grains, and has a crop history of 3 years out of the last 5, then he is entitled to vote in that referendum.

Mr. SMITH of Iowa. What if I produce only 1 acre?

Mr. ANDERSEN of Minnesota. That is all right.

Mr. SMITH of Iowa. Just any small amount?

Mr. ANDERSEN of Minnesota. That is all right.

Mr. SMITH of Iowa. You can get down to a few stalks.

Mr. ANDERSEN of Minnesota. Not if you get down so far that you are not a farmer. Our bill refers to producers.

Mr. SMITH of Iowa. My point is that there must be some kind of referendum.

Mr. ANDERSEN of Minnesota. That is provided in our bill. I recognize and the gentleman from Iowa [Mr. JENSEN] recognizes that certainly the legislative Committee on Agriculture on a proposition like this will have to work it over. There are many refinements to be made. We do not hold any pride of authorship, but we are holding up this green acres provision as perhaps the answer to the most vexing farm question that has been before this Congress for years. Certainly I would not anticipate that this bill would be voted out without a number of worthwhile amendments. I just hope if it does come in it will maintain in it that green acres mandatory provision, because that in the first place balances production that year with demand. It is the heart of our proposal.

Mr. SMITH of Iowa. I understand according to the gentleman's charts here he is proposing to reduce corn acreage by 40 percent in the first year.

Mr. ANDERSEN of Minnesota. No; there is no such proposal.

Mr. SMITH of Iowa. The charts are not in accordance with that proposal?

Mr. ANDERSEN of Minnesota. That chart is merely representative of a half-section grain farm much like my own farm in Minnesota.

Mr. SMITH of Iowa. The point is, you do have to get rid of the corn in the bin?

Mr. ANDERSEN of Minnesota. After you get rid of the corn in the bin, then the demand in the market is going to take care of all the farmer can produce. Remember, the green acres is still in effect.

Mr. SMITH of Iowa. The gentleman does not think any other program is necessary, then?

Mr. ANDERSEN of Minnesota. No. The green acres will do the job outside of a small Commodity Credit Corporation stock that would take care of the temporary imbalances. Sometimes you might produce 100 or 200 million bushels too much of corn. The price of soybeans would go up. Next year people would go into soybeans or barley where they could make more money. The market would do much to balance production, and a small payment-in-kind program would help make the necessary adjustments.

One of the most attractive features of the green-acres proposal is the fact that it would afford our farmers virtually complete freedom in the operation of their farms.

Mr. Chairman, I yield 11 minutes to the gentleman from Iowa [Mr. JENSEN].

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. JENSEN. I yield.

Mr. HALLECK. As one who raised some question about that poultry inspection bill when it was before the House, and concerned as I was that it would cost a lot of money and it really was not necessary for the protection of the health of the people of the country, I would like to have the chairman of the subcommittee restate the proposition. Do I understand correctly that inspections that have been conducted—that no part of those inspections has shown anything that would be injurious to the public health?

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. JENSEN. I yield.

Mr. WHITTEN. We have full inspection of the poultry that is handled at time of slaughter. But the law as it stands, beginning July 1, provides that we would have to have an inspector at every further processing plant where there is a piece of meat in the package. And 2 out of 300 have asked for that inspection, because by getting that they get a label. They would like the Government to pick up the cost of it.

Mr. HALLECK. What is that cost per year?

Mr. WHITTEN. About a million dollars. We have learned from the processors that they want it so that they can get a label. But the law is compulsory. It says we have to provide the money. We provide it on this basis and we think that in view of the record this is ample to meet the needs.

Mr. HORAN. Mr. Chairman, will the gentleman yield?

Mr. JENSEN. I yield.

Mr. HORAN. We felt that what we were facing was almost double inspection of products already inspected.

Mr. WHITTEN. Well, it certainly is, as I see it.

Mr. HORAN. I think the House ought to know that our total bill for meat and poultry inspection is in excess of $33 million a year, and it is an item that we thought we ought to take a look at.

Mr. JENSEN. Mr. Chairman, at the outset of my remarks I wish to compliment the members of this committee for the good job they have done in bringing this most difficult bill to the floor of the House in the condition in which we find it today. It is a big job to initiate appropriations for the Department of Agriculture, especially under present circumstances.

I have served on the Committee on Appropriations with all the members of this committee, and I hold them all in the highest regard.

I came to Congress with my very able colleague from Minnesota [Mr. ANDERSEN]. We have worked very closely together on all matters pertaining to farm problems, and every other problem that affects the welfare of our country. CARL ANDERSEN is a statesman of the highest order. Also the very able gentleman from Mississippi [Mr. WHITTEN]. I know his heartbeat. I know he is sincere in all of his duties as are the other members of the committee. I hold them all in high esteem.

I am very pleased especially about the appropriations for Soil Conservation Service and Watersheds, for the amount of funds which the committee recommends. America receives more present and long-time benefits from this service than from any other Federal agency. It seems there are some folks in the Department of Agriculture who are not properly sold on the great value of the Soil Conservation Service, because Soil Conservation Service request for funds is regularly trimmed down before it gets to the Budget Bureau. Now I am certain I speak for a great majority of my colleagues on both sides of the aisle when I commend the committee for the amount provided in this bill for Soil Conservation Service. I have never been accused by my colleagues of wasting the taxpayers' dollars, but I try not to be pennywise and pound foolish.

Now, Mr. Chairman, I would like to use the balance of my time to explain our green acres farm program, which is a new approach to the solution of the vexing farm problem, which has, as you know, been proposed by Congressman H. CARL ANDERSEN, of Minnesota, and myself. Mr. ANDERSEN has just most ably and correctly explained our bill to the House in full detail.

Our plan is known as the green acres farm program, and is the result of many months of study, investigation and discussion with scores of farmers, farm organizations, farm editors, county extension agents, ASC and SCS officials, and livestock feeders.

Our bills, which are identical, were introduced on May 1, last. Congressman ANDERSEN'S bill number is H.R. 12000, and is H.R. 12001. We are pleased to report that our bill has already met with much nationwide approval.

In the time allotted me I will point out the most important provisions of our bill.

The cornerstone of our green acres farm program is the requirement, after approval in a single nationwide referendum, that every farmer producing corn, oats, barley, soybeans, flax, and all other feed grains, and also wheat, in order to qualify for the benefits under our bill, must have 20 percent of his cropland in grass, hay, or pasture, green acres, so to speak.

To protect the livestock industry, every farmer will be offered 25 percent of his normal yield in payment-in-kind out of Government surpluses if he completely retires his green acres which constitute 20 percent of his total cropland, or he can use his retired acres for pasture hay, and so forth, and receive no pay on such acres.

Farmers who already have 20 percent or more or cropland under green cover would be immediately eligible for the green acres program.

Congressman ANDERSEN is the top minority member on the subcommittee which appropriates for the Department of Agriculture and all of its programs, and I am next to the top minority member on the full 50-member Appropriations Committee. Both of us have constantly advocated measures to conserve our soil, and to increase the farm income.

Early this year Congressman ANDERSEN, Congressman HOEVEN and I introduced a payment-in-kind bill for corn alone. It won much nationwide approval, and that acceptance led me into this present collaboration with my neighboring colleague, Mr. ANDERSEN, himself a farm operator at Tyler, Minn. I was raised on the farm, and for 24 years dealt almost exclusively with farmers in the retail lumber business in Exira, Iowa, my home, and since coming to Congress I have worked closely with farmers and can understand their problems.

Congressman ANDERSEN recently spent 2 weeks in the Middle West meeting with hundreds of farmers in all lines of production, and with many other interested people, and he is pleased to report that with hardly a single exception they approved our green acres program, said it was economically realistic and predicted its success if made law, which we sincerely hope it will be during this session of Congress.

The best agriculture experts we know have assured us the green acres program would in the first year bring about a balance between production and consumption of these grains. The farmer would make his green acres contribution in return for the other liberal benefits provided in our bill, and which would stabilize all farm prices on a much higher level.

To liquidate the huge price-depressing surpluses now stored at huge cost, we provide an additional payment-in-kind equal to 80 percent of each farmer's average yield for other cropland taken completely out of production, not to exceed one-half of the whole farm. We

can afford to pay the farmers liberally for reducing production when such payment is made in kind. The participant can either use such grain, or cash in his Government certificate at his elevator or bank.

Outside the green acres, our bill provides that each farmer could produce any and all of these grains, and receive a price support of 80 percent of parity the first 2 years, 85 percent the next 2, and 90 percent thereafter. Both ANDERSEN and I have been stanch supporters of 90 percent of parity for basic farm crops. With no surplus production, this price support schedule will cost the taxpayer very little, as you can see, when commodities on hand are used in lieu of cash outlay. The county ASC office has a history record for every farm in their respective county, hence administration costs will be about the same as at present.

In a few years, after present surpluses have been liquidated, American farmers, except for their green acres, could go back into full production with a parity market demand for everything they produce. We must always maintain an ever normal granary as a necessary reserve to protect the public against an emergency.

Figures furnished in support of any proposed farm program are convincingly in favor of the green acre program.

Using a 160-acre Iowa farm, for example, our best estimate of the average gross income for 1960 under the present farm program will be about $7,000. Under the green acres program in 1961, at 80 percent of parity, we estimate the gross farm income would be not less than $8,000, with a reduced cost of production due to the decreased crop acreage. In 1963, when price supports go up to 85 percent of parity, the same 160-acre farm will again produce no surpluses and we estimate a gross income of approximately $9,500. Finally in 1965, that same farm should gross not less than $11,000 due to increased prices for grain and livestock, and will be back in full production, less the green acres. Supports will be at 90 percent of parity. Production will constantly be in balance with consumption.

Farmers should have first priority to purchase Government storage bins, as such bins become empty.

This increased income is bound to come, not only because of higher grain prices, but also because of the higher hog, cattle, sheep and poultry and egg prices, which higher grain prices will generate. We believe hog prices, for example, will hit a top of at least $24 per hundredweight within a year after our bill is made law.

It will not be difficult for every farmer to calculate his increased income under the green acres program by applying the above figures proportionately to his own operations; and remember our bill is truly a family sized farm program.

We feel certain that within 5 years after our bill is made law, the green acres program will raise the average gross income on Iowa farms 50 percent, and in other States proportionately, because it will bring about a balance in production, will liquidate the present surpluses, and secure for the farmer and the rural businessman their fair share of our national income.

Congressman ANDERSEN and I, and other proponents of our bill, have urged the Agriculture Committees of Congress to approve our bill and to bring it to the floor of the House and Senate for early consideration, and we hope for its adoption during this session to assure its full operation in 1961. Everyone who is interested in the farm problem should waste no time in letting their Congressman know the kind of a farm program they believe will best solve this vexing problem for them and for all America. We feel certain that after a study of our green acres farm program, it will be the choice of the great majority.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. JENSEN. I yield.

Mr. ANDERSEN of Minnesota. While we were formulating this bill I recall that often the gentleman was concerned about any possible deleterious effect it might have upon beef cattle and beef products.

Mr. JENSEN. Right.

Mr. ANDERSEN of Minnesota. The price of beef cattle and so forth. The gentleman, of course, knows he and I have agreed in our consultations on this with other men that we put the support price on corn up to $1.30 a bushel instead of 98 cents, which is prevalent now in western Iowa and Minnesota. This price would make any farmer stop and think whether or not he wanted to increase his hog production because certainly no farmer wants to produce hogs just for the fun of it; it is a lot of work. I have produced a lot on my own farm. Consequently it would mean farmers are not going to produce so many hogs as they would with dollar corn in sight. Then the goal will be about 5 million fewer hogs a year instead of the much higher number that will be produced in 1960.

The fact that 5 million hogs are not produced in turn will help the entire beef market. That is the conclusion we have come to, is it not?

Mr. JENSEN. That is right. Naturally, I am greatly interested in the welfare of the hog and cattleman because the district I have the honor to represent is one of the largest hog producing and cattle feeding areas in the Nation.

Mr. ANDERSEN of Minnesota. And the gentleman's district is also a family-sized farm district?

Mr. JENSEN. Yes; and our bill is purely a family-sized farm program.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. JENSEN. I yield to the gentleman from Iowa.

Mr. GROSS. What does the gentleman's bill do with respect to foreign imports of meat products?

Mr. JENSEN. I wish we could stop that in this bill, but we cannot. That is legislation not appropriations as the gentleman knows we are not a legislative committee. I may say I share the gentleman's concern about the great amount of imports shipped into this country which is helping to depress farm prices no end. I am ready to raise tariffs, and plenty, to protect not only our farmers, but businesses and labor too.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. WHITTEN. Mr. Chairman, I yield 15 minutes to the gentleman from New York [Mr. SANTANGELO].

Mr. SANTANGELO. Mr. Chairman, at the outset I wish to pay tribute to the chairman of the subcommittee, the gentleman from Mississippi [Mr. WHITTEN], for his tremendous work on this subcommittee and for the solicitude he has shown to the members of the committee, and especially to me, not only in the asking of questions in order to educate a city member of the committee, but also to develop a program which will be beneficial both to the farmers and to the consumer.

I also want to commend the ranking minority member, the gentleman from Minnesota [Mr. ANDERSEN], and Mr. MARSHALL, who have taken a city boy in tow in the rural electrification program, in the rice paddies of Asia, and in the pens among the hogs and the pigs and the cattle in Nebraska and Illinois. Likewise, I extend my thanks and appreciation to the gentleman from Kentucky [Mr. NATCHER] for his continual assistance, and help and for the information which is basic to farm problems and which a city representative would not normally understand.

I come to you to talk about a farm appropriation bill and ask you to support it. I support this bill because I believe that it is in the interest of the farmer as well as in the interest of the consumer throughout the United States.

As a representative from the city of New York, I would like to speak to city representatives who I know feel erroneously that there has been a giveaway to the farmers and that the farmers are getting rich in the collection of storage charges of surplus grains. Insofar as payments for storage are concerned, let me state to you gentlemen from my observation and study of conditions in Illinois and in Iowa and in reading the various committee reports, that it is not the farmer who is collecting the high storage payments. Those who are profiting from the high and excessive storage rates which are a disgrace to this administration and to the United States belong to an industry whose profits have been so abnormally high that a new gang of "quick-buck" artists have entered into the industry. Because of our Government's guarantee of storage business and administrative policies which direct that grains be stored in commercial bins instead of in Government bins regardless of the availability of Government bins, storage costs have zoomed to $600 million a year. This Government policy must be ended.

Perhaps in the past there have been some farm programs which have been wasteful and did not accomplish the desired result. When we eliminated the acreage reserve program, we eliminated, in my opinion, a very expensive and wasteful program. There are still some wasteful farm programs, but as I see

it, they are at a minimum. The committee made some recommendations along these lines.

This appropriation bill reduces the request of the President's budget totaling $4,135,263,190 by $170,481,690 and recommends the sum of $3,964,781,500. The committee has decided not to restore the capital impairment of the Commodity Credit Corporation to the extent of $98,500,000. The committee has demanded an investigation of the storage rates, obtained such an investigation, and after the report was submitted to the committee and discussion had with the Department of Agriculture, the Secretary of Agriculture announced that despite the opposition of the warehouse industry, that it is reducing storage rates by 19 percent, which will thereby reduce the total cost of storage rates by $98,500,000.

I would like to point out to the city representatives that this bill is approximately $4 billion. The farmer receives direct price support, which is measured by the amount we restore the capital of the Commodity Credit Corporation. The total amount of capital impairment ment which we have restored in this appropriation bill amounts to $1,226,500,000, which is the direct support which the farmers receive in one form or another. The remaining sum contained in this appropriation bill is spent for benefits which are mixed. Benefits which not only the farmer, but also the city worker and friendly foreigners receive.

The mixed benefits can be classified in four categories. One is the improvement and protection of the public health, such as the inspection of meat and poultry, where we have appropriated $21,562,000 for meat inspection and $500,000 more than last year for poultry inspection. We have, furthermore, the school lunch program with its direct appropriation of $110 million in cash and $45 milllion by transfer of funds from section 32, in addition to transfer of surplus foods. We also have, as you know, the special milk program, costing $75 milllion, which goes to many people on public assistance, and we have donations of food supply to needy folk.

A second category is the improvement of international relations and in defense, such as donations to needy people abroad, emergency famine relief, sales for foreign currency and bartered materials for stockpiles, such as wheat to Brazil in exchange for thorium and rare earths. While we must restore the capital impairment of the Commodity Credit Corporation for these items, and these items are listed in the report as reimbursement for special activities totaling $1,443,634,000, we recognize that these expenditures serve the farmer indirectly and serve our international policy whatever that might be.

A third category of mixed benefits to our farmer and other economic segments of our population is the improvement of marketing systems, such as marketing inspections and freight rate service, which in this bill amounts to $43,143,000.

A fourth is the improvement in conservation of our Nation's natural resources, our land, in the prevention of floods, in agricultural conservation, and in technical assistance in conserving land under the soil conservation program. These programs, you will note in the committee report, cost $143,132,000.

Members of the House, these are mixed benefits. They benefit not only the farmer, whose total gross income last year has once again fallen, but also benefits our city people, our schoolchildren, our welfare recipients, and, yes, even some of our senior citizens. They also benefit the friendly foreigners whose support we seek, by our mutual security program, and by these programs. We, from the cities, must not therefore conclude that this farm appropriation bill is a one-way street. Our interests, economic and national, are intertwined, and inasmuch as I deplore the attitude of the city Representatives that price supports are giveaways to the farmer, I deplore the attitude of the farm Representatives and rural Representatives that funds for housing and depressed areas are socialistic and giveaways. We, in the cities and in the farm belt, have a common concern in preserving our national resources whether it be in the form of preservation of farms or in the protection of our water supplies. We have a common interest in aiding our people in the depressed areas of the country and our people who reside in the big cities.

We know from experience that if the farmer suffers and cannot sell his crops or commodities, he loses the purchasing power which is so necessary for him to buy the equipment to work his farm and to buy the machinery which the manufacturers of New Jersey, Connecticut, and Pennsylvania produce. We know that if the farmers go broke, they cannot buy the refrigerators, the televisions, the electrical appliances and the clothing which are produced in the factories of New York and the mills of New England, and now in some of the garment factories in the Southern States along the Atlantic seaboard. If they do not have the funds to purchase these articles, we, in the cities, cannot sell our garments, we cannot sell our appliances, we cannot sell our machinery, so we must suffer, too.

I have made during the hearings an inquiry as to the extent of the connection between the city residents and the farmers. I have been astounded to see how many appliances the 4,200,000 household membership of the REA has purchased. I direct your attention to volume 4 of the hearings of this year, pages 95–110. These will disclose the extent of the connection. This program of electrification by the REA of our farms has generated $14 billion worth of private business, with the manufacturing companies in the industrial areas of our country's selling and the farmer's buying. Without such program, I wonder how many more depressed areas we would have like the district of Congressman BAILEY, of West Virginia, or Congressman FLOOD, of Pennsylvania, or Congressman KILBURN, of New York. I am certain that there would be many.

I have looked about to find out the reason for the high prices to the consumer to determine whether the direct subsidies to the farmer is causing the housewife and the consumer to pay a higher price for the food commodities. From my inquiry I say that the fault lies not in the amount of price supports or money that the farmers are getting, but in the distribution of our surpluses, in the costs which are saddled on the price which the farmer gets. Reliable information indicates that the farmer receives only 38 cents of the consumer $1. Where does the rest of the money go? It goes in the cost of distribution, it goes in the cost of transportation, it goes in the cost of storage. I take issue with the statement of the spokesman of this administration that we, in the cities, are buying more with our dollar and that we have no reason to complain. Our dollar does not purchase more, when you compare what 1 hour of factory labor can purchase today with what 1 hour of factory labor could buy years ago. I want you to recall that the comparison does not take into consideration the taxes that we have to pay and does not take into consideration the fact that many people are nonfactory workers. We have our service trades, our nonfactory workers, and our senior citizens living on pensions who are suffering with the high level of consumer prices.

Despite price supports on wheat, corn, and other basic commodities, the small farmer must rely in a large measure on a nonfarm income to obtain the necessities of life. Farm income is low, on a real basis or on a comparable basis. Net farm income in the last 7 years has dropped from $14.4 billion to $11 billion. The consequences of low farm income manifest themselves in the flight from the farms, in the decline of small family farms, and in the drop of farm employment to the extent of 1,374,000. The unemployed farmers swell not only the unemployment rolls in the rural areas, but the relief rolls in the cities. We must, therefore, continue our aid to the farmers of the country.

I would like to discuss a program which the parents of the city have contact with and can see tangible results. I refer to the school lunch program, which is of vital importance to the school children in the cities and also to the schoolchildren in the rural areas. This bill provides for an appropriation of $110 million cash payments and $45 million obtained from a transfer of section 32 funds, which as many of you know are the funds which are derived from receipts from taxes on imports. This composite figure of $155 million represents an increase of $1,342,752 over last year's appropriation and is designed to take care of the 500,000 additional children who have enjoyed and are participating in the program since last year. I believe that this program has accomplished its objectives of extending the market for agricultural food commodities and to improve the health and well-being of the Nation's schoolchildren by providing a well balanced school lunch.

In the past 25 years there has been a tremendous expansion in school food services. In the immediate years ahead, there is likely to be further substantial expansion. By 1965 it is expected that 7½ million more children will be attending elementary and secondary schools, pushing total enrollment to the almost unbelievable total of almost 47 million. As new schools are built and as old ones are modernized, more and more school facilities will be available to meet the growing demand for lunches at school. I am pleased to note that the District of Columbia has expanded the program substantially over last year.

I am no farmer, I have no farmers in my district nor do I have any farms in my district except rock gardens and small backyard plots. I do not even represent those crabgrass weekend farmers of suburbia, but I do know and I am firmly convinced that in America there is an economic unity between the man who toils on the farm and the worker who labors in industry.

While I have been asking you to support this bill, I want you to know that in the administration of the farm program and in its allied fields, everything is not going well. The storage problem in the United States is a national disgrace and this administration must assume the blame. I have been in the corn fields of Illinois, I have studied the storage problem in the great State of Iowa where more than one-third of the corn is stored, I have inquired into the storage of wheat, and I state unequivocally that this administration has been wasteful and shamefully prodigal. We have Government bins which are 65 percent utilized. We can build bins which would not be costly. The cost to the Government for the storage of a bushel of grain per year averages about 6½ cents per bushel. Corn has been stored since 1952. This administration has adopted a policy of storing grains in commercial warehouses at a cost of 16½ cents per bushel per year when the cost to the warehousemen is 10 cents per bushel per year and less. As a result of the high profits and practices of the Department of Agriculture of this administration, men have built warehouses with guaranteed storage and have recouped their investments within a period of 1½ years and thereafter everything is profit. These are men who have never been in the warehouse business who render no service except dead storage. The administration has announced after prodding by the committee and after an investigation that it will reduce, commencing July 1, 1961, storage rates by 19 percent or 3 cents per bushel. In 1959 the cost is $481 million in storage rates. In fiscal year 1960 it is estimated that it is going to cost us $612 million. In 1961, if the rates are not reduced, it will cost our Government, through the CCC, $700 million.

Another major criticism is the disinclination or the reluctance of the administration to use the moth ball fleet which we have in the Astoria River in the State of Washington, in the Hudson River in the State of New York, and in the James River in the State of Virginia. We have over 106 ships which can store 34 million tons of wheat at practically no cost, and yet the administration continues its ill-advised policy of maintaining storage in commercial warehouses. Such a policy must and should be discontinued.

I am very pleased that the committee agreed with me on the need for appropriating funds for a soil research center to be located in Cornell University at Ithaca, N.Y. A Senate report had previously recommended that a soil research center should be set up either in Pennsylvania or New York. The Department of Agriculture notwithstanding the Senate recommendation and the admitted need was disinclined to set up such facilities. The committee after listening to testimony from both Republican and Democratic representatives from the State of New York allocated $325,000 for this research center. We know that great benefits to the State of New York, the eastern area of the United States and to soil conservation will result from this appropriation. I am delighted to have played a role in seeing that a needed and beneficial program was provided for in this appropriation bill.

I trust that this appropriation bill will be approved.

Mr. YATES. Mr. Chairman, if the gentleman will yield for a question; where did the gentleman get the figures on the difference in prices between the amount paid for Government storage and the amount paid for private storage?

Mr. SANTANGELO. There are figures in the record which indicate the cost to the Government. In addition to that, I have had conversations with the directors of the Commodity Credit Corporation as to the storage charges in Government-owned bins. They said it cost 6½ cents per bushel per year. They also said that the warehouse industry indicated in certain circumstances the price goes up to about 10 cents per bushel per year and then goes down to about 6½ cents. Normally the greater the storage the lower the unit cost. However, in the case of some of these big grain warehouses, on 750,000 bushels or better, the price goes back to 10 cents per bushel per year. It does not make sense, but these other figures which the Department of Agriculture has obtained are the figures which the warehouse industry has submitted in their negotiations and are substantially the figures which show that after the reduction they still have a spread of 3½ cents over the maximum cost which they say they are spending in the storing of this grain.

Mr. AVERY. Mr. Chairman, will the gentleman yield?

Mr. SANTANGELO. I yield to the gentleman from Kansas.

Mr. AVERY. This is a very important matter as far as my State of Kansas is concerned. I know the gentleman wants to be absolutely fair about this when he points out that the differential in warehousing cost is the difference between 16 cents and 6 cents, but he should also state that even though that 6 cents cost could be proven, or even 11 cents, which is the figure the Department of Agriculture furnished to me—he should recognize the Government warehouse is not charged up with the guarantee of the condition of the grain, as a private warehouseman has been. Government storage is not charged up with the quantity measurement that takes into account shrinkage, which the private warehouseman has to guarantee to the Commodity Credit Corporation, nor taxes paid. There may have been unjustified earnings. I am not taking the position that 16 cents is right, but to be absolutely fair the gentleman should admit these other costs of private industry do not occur to the Commodity Credit Corporation.

Mr. SANTANGELO. Under the uniform storage agreement under section 10, there is a provision where if there is spoilage or a danger of deterioration they can ask permission to sell it and dispose of it so as not to incur a loss.

Mr. MARSHALL. Mr. Chairman, will the gentleman yield?

Mr. SANTANGELO. I yield to the gentleman from Minnesota.

Mr. MARSHALL. They told us that the spoilage of grain and corn in these bins is less than a fraction of 1 percent. So the amount of spoilage that has taken place in these bins is an infinitesimal amount.

Mr. SANTANGELO. I agree with the gentleman.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. SANTANGELO. I yield.

Mr. SMITH of Iowa. So that the RECORD may be straight, does the gentleman agree with the figure given by the Department of Agriculture, that it costs 5.1 cents per bushel for storage and you get less than two-thirds of a cent for shrinkage, so that the cost is over 6 cents, with this item included. That does not include taxes, of course, because the Federal Government does not pay taxes. But is that correct?

Mr. SANTANGELO. I agree with the gentleman.

At this point I would like to commend the gentleman from Iowa for the fine work that he did and the information he elicited during the hearings in Iowa, where he showed the trade practice that the Government was directing them to put into private warehouse. They could just as well have put it in the Government bid and paid the private warehouse the money for storage and thereby saved the matter of moving the grain.

We have the school lunch appropriation, $110 million in cash and $45 million by transfer of funds to the Department of Agriculture.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. SANTANGELO. I yield to my chairman.

Mr. WHITTEN. I want to say to the membership of this House that it is in the American tradition for us to have on our Subcommittee on Agricultural Appropriations a member such as the gentleman from New York, and I mean

downtown New York. He is a splendid lawyer and a tireless worker, who is interested in the subject. He works untiringly not only in the committee but out in the field. He has more energy than most of our members. He has contributed greatly to the considerations of this subcommittee and he has performed great services not only on the subcommittee but also by his understanding of the problems of the industrial and city areas. He has brought essential balance to this subcommittee, which I think is a tribute to the arrangement which put him on this subcommittee. The gentleman from New York [Mr. SANTANGELO] has done a great service on this committee, a great service; and I am glad to say so.

Mr. SANTANGELO. I thank the gentleman.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. SANTANGELO. I yield to the gentleman from Illinois.

Mr. YATES. Will the gentleman comment on the question whether or not grain stored in any of the ships in the mothball fleet would deteriorate, being in ships that are in the water?

Mr. SANTANGELO. The information which I have is that they will not deteriorate. Corn cannot be stored in the mothball fleet, but we can without any difficulty store the wheat. The proof of the pudding is in the storage. They have about 30 ships which are full, but they have 86 which are empty, and they will not use them. I say we should use those ships. They will not spoil if the grain is put in the mothball fleet.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. HORAN. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. FORD].

Mr. FORD. Mr. Chairman, I would like to raise at this point some of the questions that I raised in the full committee in reference to the report and, more specifically, the various charts at the conclusion of the report that are a summary of the appropriations and authorizations made for the current fiscal year, the budget estimate for fiscal 1961, the amount recommended in the bill for 1961, and then a comparison of the bill before us with the 1960 amounts and the 1961 estimates.

As the chairman of the subcommittee knows, in the full committee I raised a question or two about how the committee report handled the contingency funds in the compilations at the conclusion of the written part of the report. As the gentleman from Mississippi knows, perhaps better than anybody in the House, it has been a practice for some time, I believe, that we have contingencies in this bill that are handled a little differently than contingencies in other appropriation acts. It is my understanding in this report on the bill that we have $100 million in contingencies for the REA loan authorization, $50 million for the electrification part and $50 million for the telephone part. In addition there is a $40 million contingency in the loan authorization portion of the Farmers Home Administration.

Now, as I look at the charts in the committee report I do not see those contingency funds, which total $140 million, as being included in the tabulation. They are footnoted at the bottom of the various pages in the report.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Mississippi.

Mr. WHITTEN. The gentleman is correct. That is the way the report is written. I would like to indicate, with the gentleman's permission, the reasoning of the committee. We have carried this for a number of years. For instance, for fiscal year 1960 we had $180 million loan authorization for the Farmers Home Administration and $20 million in the contingency fund. Last year they sent us a budget recommendation for $140 million. We had to increase it because of the demand for loans.

Here again the gentleman refers to our conversation in the whole committee. Now, here is our reasoning, and if the gentleman reads the report, he will understand it, and I think anybody else who reads the report will understand it, so I do not think there is a problem for anybody to find out what the situation is. In our report we spell it out and in our tabulations we spell it out. Here is the reason we do it. If we put the amount plus the contingency in one bill, it would leave us where we were exceeding the budget. If we put it as we have, the budget has to increase itself, in which case we and the budget are still together.

Now, it is a matter of opinion. I appreciate the gentleman's statement, but I say flatly and unequivocally that we do make it possible for them to increase the loan authority in line with what the gentleman said, but they can do it only if the Budget Bureau approves it. And, again, if the Budget Bureau approves it, they have increased the budget. So, that is our reason.

Mr. FORD. May I just point out what appears to me to be certain inconsistencies in the report:

First. In the 1960 column, under REA, the $136 million figure does not include the $25 million contingency amount for electrification, apparently, because it was not released by the Bureau of the Budget.

The CHAIRMAN. The time of the gentleman from Michigan [Mr. FORD] has expired.

Mr. HORAN. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. FORD. Mr. Chairman, I thank the gentleman from Washington.

Second. On the other hand, the 1960 REA figure of $104 million for telephone does include the $25 million contingency provided as indicated by footnote 10, apparently because it was used.

Third. In the 1960 column under Farmers Home Administration the contingency amount of $20 million is included in the table and totals as indicated by footnote 7, apparently because it was used.

Fourth. But in the 1961 committee bill column which should represent the amounts recommended, none of the figures included the contingencies totaling $140 million as disclosed by footnotes 8 and 9.

In consequence both the totals for the 2 years and the comparisons tend to be inconsistent in that they do not factually disclose the full amounts provided or recommended either in the tabulation or the footnotes.

Five. As a matter of fact, the argument that 1960 funds were not used cannot be wholly accurate as a statement until after June 30, because we are still in fiscal year 1960.

Another point that I think ought to be discussed is this. I understand that in eight instances throughout the bill items are reappropriated out of fiscal 1960 for utilization in fiscal 1961. For example, on page 6 the language is as follows:

> And any unexpended balances of funds transferred under this head in the next preceding fiscal year shall be merged with such transferred amounts.

Is there any idea from the hearings how much is involved in that instance or in any of the other eight instances?

Mr. WHITTEN. May I say to the gentleman that that is an emergency fund which is carried to meet emergency outbreaks of animal diseases and it has saved us many times. We cannot tell in advance how much demand there may be on it. We tried to restore the fund so that they can have it.

The gentleman will remember the emergency outbreak among hogs several years ago. We have had a number of such instances. Also we had the foot-and-mouth disease emergency. There is no way actually to know, so we cannot give exact figures. Agriculture, goodness knows, is charged with so much. If we charged them with something last year that they did not use, I think it is sound to bring it forward instead of counting it against both years. Be that as it may, as bad as this bill is to handle, if we have handled it satisfactory except for the points the gentleman has raised, I think we have done a wonderful job.

Mr. FORD. I know it is a tough job and the gentleman works hard at his responsibility as chairman of the subcommittee. But I think that in these instances where you are reappropriating 1-year funds for the next fiscal year we ought to have some information as to what the amount may be. All of the departments, to my knowledge, do make a forecast of what their unexpended, unobligated balances will be at the end of the fiscal year. Is there anything in the hearings which would give us at least their estimates of what these totals might be?

Mr. WHITTEN. The hearings will disclose that. Except for this emergency matter, we could supply the figures as to what the carry-over would be. In the soil bank, for instance, we brought forward $30 million. Last year when this bill was up everybody was upset because of how much money was in there for the soil bank. Agriculture took all of that wave of publicity about it. Then it developed that they did not spend it. If that money had lapsed, if it had not

been brought forward again we would have been charged with that this year. So, putting the two together, it would have left Agriculture in just that much worse shape in the public eye. So we thought it well to bring it forward, showing that last year we did not go all the way with it and we will use it next year. We have explained it in every instance.

Mr. FORD. I think it is true that when you reappropriate like this and you do not know exactly the amounts, it tends to some fiscal irresponsibility in the Department, particularly when they are 1-year funds.

The following chart or table is included to explain in detail several of the points which I have discussed:

Department of Agriculture appropriation bill, 1961—Revised comparative statement of appropriations for 1960 and estimates and amounts recommended in bill for 1961

	Appropriations, 1960	Budget estimate, 1961	Recommended in bill for 1961	Bill compared with—	
				1960 appropriations	1961 estimates
Appropriations (p. 51 committee report)	$4,665,643,551	$4,135,263,190	$3,964,781,500	−$700,862,051	[1]−$170,481,690
Loan authorizations (p. 52, committee report)	466,000,000	367,000,000	417,000,000	−49,000,000	+50,000,000
Subtotal, appropriations and authorizations, per report table	5,131,643,551	4,502,263,190	4,381,781,500	−749,862,051	[1]−120,481,690
Add:					
REA loan authorization "contingencies"	[2] 25,000,000		100,000,000	[2]+75,000,000	+100,000,000
FHA loan authorization "contingency"	[2](20,000,000)		40,000,000	[3]+40,000,000	+40,000,000
Total, appropriations and authorizations	5,156,643,551	4,502,263,190	4,521,781,500	−634,862,051	+19,518,310

[1] Some of this committee reduction in new appropriations requested for 1961 is offset by reappropriation for 1961 of prior year balances that otherwise would revert to the Treasury.

[2] Contingency amounts of $50,000,000 authorized for 1960 (Public Law 86-80); $25,000,000 for 1 program only reflected on p. 52 of committee report; contingency amounts of $100,000,000 recommended for 1961 not reflected on p. 52; true comparison of 1961 bill with 1960 act, +$50,000,000.

[3] Contingency amount of $20,000,000 authorized for 1960 reflected on p. 52 of committee report; contingency amount of $40,000,000 recommended for 1961 not reflected on p. 52; true comparison of 1961 bill with 1960 act, +$20,000,000.

Mr. WHITTEN. Mr. Chairman, I yield such time as he may desire to the gentleman from Missouri [Mr. CARNAHAN].

Mr. CARNAHAN. Mr. Chairman, there are several items in this agricultural appropriations bill for 1961 about which I should like to speak very briefly.

The first of these is the agricultural conservation program—a program which I believe to be the very backbone of this Nation's soil and water conservation effort.

I strongly oppose any efforts to effect a reduction in the ACP for 1961.

I oppose any such effort because I firmly believe that it would be a step backwards—a backward step this Nation cannot afford.

Soil is this Nation's greatest natural resource. It is from the soil that we derive our essential food, fiber, and raw products. This soil is a part of our legacy. We inherited it from our forebears and we have a sacred obligation to pass it along to those who come after us. It must be preserved.

Unlike most natural resources, our agricultural resources can be used and then at the same time restored and improved. It takes more skillful management to conserve our soil than for example it does oil, coal, or iron. Fortunately, though the process of conserving soil is a highly complex one, we do know how to do it, and have been doing a tremendous job in this field.

Congress has since 1936 recognized its responsibility in this area for it has wisely provided funds each year for the ACP. The original legislation for this program provided $500 million; however, the funds authorized have varied from time to time and in recent years have been stabilized at $250 million a year.

In my opinion, this voluntary cost-sharing type of conservation program is the very incentive needed to encourage farmers to carry out the necessary conservation practices on their lands. Because of the present price squeeze the farmer is not able to perform these measures if it were not for the ACP.

Not only is it in the interest of our farm families now living on the farms but for the conservation of the soil for future generations, that I feel no cuts must be made in appropriations for this program. The ACP has and should continue to play an important and essential role in preserving this natural heritage for us.

While records for the 1959 program are not yet available, it appears that ACP will total about the same nationally as in 1958. The following are some accomplishments under the 1958 ACP which I feel point out significantly that the ACP is obtaining the maximum amount of conservation on the Nation's farms per tax dollar invested:

ACP assisted in applying soil and water conservation practices on 1,083,706 farms and ranches. The average amount of assistance per farm was $200.

ACP assisted in establishing nearly 2½ million acres of conservation cover. In addition to protecting the land, this conservation cover keeps land out of intensive crop production for at least 5 to 7 years and, in some cases, permanently.

Assisted in seeding almost 1½ million acres of additional rotation grass or legume seedings for soil protection. This keeps the land from producing surplus crops for at least 2 or 3 years.

Assisted in planting a third of a million acres of trees for forestry purposes which permanently retired these acres from field crops and pasture.

And ACP assisted in improving 1,800,000 acres of grass and legume cover on farmland to extend its lifespan for conservation purposes. Much of this land, otherwise, would likely have been shifted sooner to more intensive use.

The effect of these shifts in land use is cumulative. The practices established will stay on and protect the land for periods ranging from the length of a rotation to permanently.

Of course, grass and tree cover are only part of the conservation investments farmers made with the ACP in 1958. Some of the other measures established with ACP cost-sharing included over 63,000 water storage reservoirs and nearly 5,000 miles of water diversions and spreaders; 54,000 acres of permanent sod waterways and nearly 856,000 acres terraced; almost a half million acres of stripcropping and nearly 1⅔ million acres of drainage for conservation farming and 1½ million acres of cropland tilled for temporary protection against wind and water erosion.

The need for the ACP in Missouri has been demonstrated repeatedly in past years by the response from farmers desiring to participate in the program. Under the 1958 ACP in my State, more than 43,000 farmers received cost-sharing assistance through the 114 Missouri County ASC offices amounting to a total of more than $10 million which means they contributed at least that much more out of their own pockets to carry out these conservation measures.

Improved grass and legume cover was established on 120,458 acres.

ACP assisted in installing terraces to control erosion and runoff on more than 30,000 acres and over 500 miles of diversion ditches and dikes to divert runoff were constructed. In conjunction with this, 709 mechanical outlets were installed as protection against erosion on these structures.

Drainage practices, such as open and closed tile drains and shaping and grading, were performed on more than 157,000 acres to dispose of excess water.

To improve grassland management, 3,528 livestock reservoirs were built.

ACP assisted farmers in establishing 137,146 acres of vegetative cover for winter protection from erosion and encouraged them to seed over 21,000 acres of cover to protect cropland throughout the crop year.

During that year, farmers were assisted with the application of liming material on 408,305 acres to insure an adequate vegetative cover for conservation purposes.

We in Missouri are proud of the steps farmers are taking to help conserve the natural resources of our Nation. However, much credit must be given to the

ACP which encourages them to perform the needed conservation measures on their farms.

Another aspect of this appropriations bill which is of particular interest to me, Mr. Chairman, is the grants-in-aid to the State experimental stations. This is badly needed for forestry research, soil and water conservation research, and research in other fields of agricultural industry.

Most of the appropriation for this activity does, however, go to the field of forestry and related fields.

The State Legislature in Missouri last May made an appropriation of $80,000 for the biennium for the forest survey. This work, of course, is being carried on in cooperation with the U.S. Forest Service. Recently the Director of the Agricultural Experiment Station approved a new full-time research position on the staff of the school of forestry, even though the increase in funds of agricultural research was relatively modest for this biennium. This position will be filled by a man who will devote full-time research in wood technology and products which is felt will be a tremendous help to the wood-using industries of Missouri. The annual cost of this position will be around $15,000 and it is mentioned to indicate the support which the State has been giving to the research program in the school of forestry. There is a need for strengthening of forest research in the forestry schools in order that these schools may be in a strong position to turn out better trained scientists for the future and in order that the State experiment stations may carry their proper share of the research activities in forestry.

I urge support of this program by the Federal Government.

Another aspect of this agriculture appropriations bill which is of concern to me also, Mr. Chairman, relates to the program of plant quarantine. It has come to my attention that our present quarantine forces are so thinly spread out that we do not have adequate protection from foreign plant and animal pests. I feel that this program is of vital importance in safeguarding agriculture in this Nation. If this program is to be effective, it must form a tight line of defense at all ports of entry. Because of the increase in the number of ports, in part brought about by the opening of the St. Lawrence Seaway, and the increase in traffic at these ports, adequate funds are needed to expand this much needed protective facility of the Department of Agriculture.

In addition to appropriation for REA and RTA other aspects of this legislation of interest to the people of my district are the request for funds to eradicate brucellosis, and funds for the school lunch program. Having been a public school administrator for several years I know firsthand the values of the school lunch program.

Mr. WHITTEN. Mr. Chairman, I yield such time as he may desire to the gentleman from Kentucky [Mr. NATCHER].

Mr. NATCHER. Mr. Chairman, the Subcommittee on Agriculture of the Appropriations Committee once again brings to the floor of the House, for your approval, the annual appropriation bill for the Department of Agriculture.

It has been a pleasure serving with our chairman, the distinguished gentleman from Mississippi [Mr. WHITTEN], and the other members of this subcommittee. We were ably assisted by our executive secretary, Mr. Ross P. Pope.

For fiscal year 1961 we recommend $1,294,647,500 for regular activities, $1,226,500,000 for restoration of capital impairment, $1,443,634,000 for reimbursement for special activities, $417 million for loan authorizations under the control and direction of the Rural Electrification Administration and the Farmers Home Administration, and $369,670,000 for permanent authorizations.

For the Agriculture Research Service, we recommend appropriations totaling $141,507,000; $67,934,000 of this amount is for research; $52,011,000 is for plant and animal disease and pest control; $21,562,000 is for meat inspection.

TOBACCO RESEARCH

The need for additional research in tobacco was clearly established during the hearings. Less research has been done on the mechanization of tobacco production than for other major crops and work methods used in tobacco production are still almost entirely manual. At the present time between 400 and 500 hours of human labor are required to produce and harvest an acre of tobacco. Total farm labor requirements for the 1,154,000-acre crop represents equivalent full employment for some 1,920,000 people for 300 8-hour days per year. Tobacco is grown on a total of approximately 1,154,000 acres in 22 States and is a major source of income in 8 of these States. Total production of tobacco in 1959 was about 1,800 million pounds which brought over $1 billion cash income to producers. About 750,000 farm families are engaged in the production of tobacco. The number of hours required to produce an acre of tobacco has changed very little over the past 50 years. Labor requirements for other major crops, on the other hand, have been strikingly reduced. Tobacco taxes total a little over $2½ billion annually to the support of Federal, State, and local governments; $1.7 billion goes into the Federal Treasury and this does not include indirect taxes. Prior to the establishment of the income tax in 1913, for many years the second largest return to the Internal Revenue Bureau came from the impost of manufactured tobacco and related taxes.

From time to time, we have been informed that we are pricing ourselves out of the foreign markets. Accepting this view during the present session of the 86th Congress, we passed H.R. 9664. Under this legislation the parity price for tobacco was tied to the 1959 level. The purpose of this bill is to prevent the operation of the present parity formula from pushing the support price on tobacco beyond limits which the tobacco industry believes to be reasonable at present general price levels. Under the terms of this bill, the tobacco support level for 1960 will be the same as in 1959 and in subsequent years the support price will be adjusted from the 1959 level in direct proportion to the change in the parity index, using the previous 3 years moving average as a base.

Tobacco is one of the most important cash crops in America. In terms of cash receipts from the sale of crops in the United States, tobacco in 1958 was exceeded in value by only four crops:

1.	Wheat	$2,253,000,000
2.	Cotton	1,928,000,000
3.	Corn	1,412,000,000
4.	Soy beans	1,117,000,000
5.	Tobacco	1,007,000,000
6.	Sorghum grain	569,000,000
7.	Potatoes	373,000,000

Only recently the Common Market countries entered into an agreement which places a 30 percent ad valorem tax on our tobacco. This tax does not apply to the tobacco produced in the six Common Market countries, and certainly is not only restrictive but is an unreasonable tax which has for its purpose, complete exclusion of our tobacco for the next 10 years. In addition, we know that 60 countries in the world have, during the past few years, increased their import duties on tobacco. Our own subcommittee, in its travels in the Pacific and Far East from October 23 to December 10, 1959, discovered some of the problems confronting tobacco today. In the report of the Agriculture Subcommittee's trip we have the following statement:

> We also visited the La Suerta Tobacco Co. in Manila to observe manufacturing processes and discuss use of American tobacco. While American tobacco is generally preferred, tobacco manufacturers are unable to get all they want because of a government program now in effect favoring local production of tobacco.

The tobacco industry is undergoing scientific and technological changes that have so significantly affected agriculture as a whole that it is now necessary to step up our research program for this commodity.

Certain increases for research were approved from 1953 through 1959. For livestock and products, we approved increases totaling $7,894,000. For cereal and forage, increases totaling $3,733,000 were approved and for cotton and other fabrics, we approved increases totaling $2,150,000. Increases for research during this period of time for wool and mohair totaled $715,000 and for major crops, $295,000. Increases for tobacco research from 1953 through 1960 totaled only $293,000. Increases totaling $1,015,000 were approved for oil seeds and $100,000 was approved for naval stores. Nine hundred and thirty-eight thousand dollars in increases for new crops was approved and $900,000 was approved for crop and livestock protection. From 1953 to 1960 we approved increases for fruits, nuts, and vegetables totaling $2,045,000. Research increases for all other crops during this period of time

totaled $478,000 and $6,102,000 was approved for forestry.

While the hearings were under way, the State of Kentucky, through its legislature, appropriated $1 million for use in construction of an agricultural tobacco research center and in addition, appropriated $50,000 to be used in tobacco research. Ordinarily, in setting up a research program or expanding programs, it becomes necessary to have a research laboratory building. With few exceptions, the Federal Government must bear the cost of the building as well as the equipment and other facilities necessarily required for research and for a research center. Since I have been a member of the subcommittee, some 9 or 10 laboratories have been constructed out of Federal funds, and, at no time has any State constructed a research center for use by the Federal Government. The laboratories constructed have cost the Federal Government from $500,000 to several million dollars each.

Tobacco pays its own way and certainly adequate funds should be appropriated for research at this time. Our committee recommends an increase of $250,000 for tobacco research. This amount will be used in conjunction with the $1 million for the research center and the additional sum of $50,000 for tobacco research mentioned above and will be used for planning, locating, constructing, and equipping of appropriate greenhouses with humidity and temperature control, and for appropriately equipping the special laboratories for tobacco research in the new center. Power, light, steam, and water lines and compressed air facilities must be installed for the greenhouses and for outlying field facilities. Machinery and shop equipment will also be supplied for the mechanization studies. A headhouse will be constructed in connection with the greenhouses for use in storing soil and materials in greenhouse work.

RURAL DEVELOPMENT

In 1955, we decided to appropriate a small amount for rural development. This program attempts to find the means whereby rural families of low-income status can be assisted to raise their income and to enable them to enjoy a level of living commensurate with our American standards. We know that our farmer has the right to demand a standard of living in keeping with the contributions he makes to the national economy. The amount expended in the rural development program has produced great benefits to our people. This is not a handout program. It is conceived as an educational and technical assistance program where agencies and organizations band together in a group to serve people of a community, county, or area. The three pilot counties in Kentucky are Butler, Metcalfe, and Elliott.

BRUCELLOSIS

During the past few months, I have received a great many letters from farmers throughout this country requesting that our brucellosis eradication program be stepped up instead of slowed down. The Department recommended $15 million for the brucellosis program, and we have increased this amount to $19 million.

TRADE BARRIERS

Along with our many problems concerning agriculture in this country, we are faced with the problem of removing foreign trade restrictions against our agricultural commodities. It makes no difference how much time we spend on merchandising; we are simply helpless if the trade policies of our friends abroad permit our products only limited access to their markets. It is imperative that we continue our negotiations with other countries seeking to obtain lower tariffs on our commodities. Today we face stronger competition abroad than at any time during the history of this country.

RURAL ELECTRIFICATION ADMINISTRATION

In our REA program, we now have about 4,590,000 consumers on REA financed lines. We have some 1,426,000 miles of lines throughout 47 of the States at the present time. About 95½ percent of the farms, ranches, and rural establishments of this country have the advantage of central station electric power and about one-half of these installations are served by borrowers from REA. In considering our REA program in the future, we must keep in mind that this system serves a national territory. The average number of consumers per mile is only about three and one-tenth and a large number of cooperatives average less than two consumers to a mile. Due to the fact that the cooperatives are operating in such thin territories, the amount of equity REA borrowers have accumulated is exceedingly low. According to recent reports, 50 percent of the rural electric systems have less than 20 percent equity in their facilities. The budget authorizations for our REA Administration total $110 million for electrification, and $80 million for rural telephone service. To each amount, we have added a contingency of $50 million.

RESEARCH

Our agricultural research program is one of the most important programs that we have today. This program must be geared to the problems now confronting American agriculture and be able to meet the problems in the future. A constructive research program should reduce waste and losses and improve efficiency of production. An adequate research program must also improve processing, marketing, and consumption. It should be able to develop new and improved crops and products and expand our markets for sale of our commodities. An adequate research program provides improved nutrition and better living for rural and urban people. We must expand our agricultural research program in order to meet the objectives which I have just enumerated. It is a recognized fact that the research facilities of the Department of Agriculture and of the State agricultural experiment stations are overcrowded and the majority need modernization at the present time. We must have modern, up-to-date facilities in order to meet the agricultural research needs confronting us today. In addition to buildings required for research laboratories, we must also have the necessary personnel, properly trained and skilled in the sciences to carry on our research program. Today, we must compete with private industry to obtain the necessary scientists to carry out our research program. Certainly second-rate scientists should not be a part of our research program and, therefore, we must be prepared to compete with private industry for skilled personnel in this program. It is true that our agricultural research funds have increased over the years, but the results justify the amounts expended.

SOIL CONSERVATION SERVICE AND CORPS OF ENGINEERS' CIVIL WORKS PROGRAM

Twenty-five years ago we started our national soil and water conservation program. This program has had a tremendous impact upon American agriculture, and in my opinion it will be just as important in the year 1970 as it is at the present time. We have enough good land left in this country to keep us prosperous and well fed if we conserve and improve it. Today, we have more than 2,900 organized soil conservation districts. Soil conservation districts, which began 25 years ago as merely an experiment in local self-government, have demonstrated their value and now include 95 percent of the Nation's farms and ranches. Our people generally support our soil and water conservation program. This program has accomplished a great deal and millions of acres which were decreasing in value as a result of erosion have been restored to productive capacity. Many sections of our country which were heretofore subject to flood damage now are free from that danger. The provision for local conservation districts with local control and direction is the best way to achieve maximum results in conservation. We have every reason to be proud of our soil and water conservation program. This service is one of the great achievements of our present-day Government. Soil conservation means as much to my home State as to any State in the Union, and our soil conservation program, together with our Corps of Engineers, flood control, and navigation projects are producing results in Kentucky. Our farmers are remaining on the farms and, for the first time in a number of years, Kentucky will show an increase in population. We have 122 soil conservation districts in 120 counties in Kentucky with over 86,000 farms participating in this program. Conservation problems become more complex as population growth and technology brings about intensive uses and competition for our land and water. The estimates submitted by the Department of Agriculture for conservation operations totaled $82,882,000 and we recommend an increase of $250,000, making a total of $83,132,000. We recommend $32 million for watershed protection instead of the budget request of $27,750,000. For flood prevention, we recommend $18 million instead of the amount requested by the Department of

Agriculture of $15 million. For our Soil Conservation Service, we make recommendations totaling $143,132,000 which is an increase of $7,500,000 over the amount requested by the Department of Agriculture.

This year will be the 137th year that Congress has appropriated funds for the Corps of Engineers' civil works program. Flood control, as we know it today, started in 1924 when Congress appropriated $75,000 for the removal of snags in the Ohio River. In 1928 Congress authorized a flood control project in the Mississippi River Valley. The flood control program began on a nationwide basis in 1936 when Congress passed the first major Flood Control Act.

In 1824 Congress gave the Corps of Engineers responsibility for developing a system of roads, canals, and waterways. At this time the big problem was transportation, and the Corps of Engineers concentrated on making our inland waterways and inland and coastal harbors usable. Floods became of great concern as each year the towns and cities suffered loss of lives and heavy property damage. If, at this time, we had had a good constructive soil conservation program underway we would not have experienced this difficulty.

Today we have completed 525 flood control projects and we have 2,800 active Corps of Engineers projects. In addition, we have 1,565 miles of embankments along the main stem of the Mississippi. We have 23,000 miles of improved waterways and 500 harbors in this country today. The Great Lakes navigation system, the St. Lawrence Seaway, the Mississippi River and the Ohio River are only a few of the main inland waterways.

SCHOOL LUNCH PROGRAM

Our greatest asset is our schoolchildren. We recommend $110 million for fiscal year 1961 and, in addition, we recommend the transfer of $45 million from section 32 funds to be used to purchase meats and other foods necessary for our schoolchildren's lunches. This will provide a minimum of $155 million for fiscal year 1961. According to testimony received by our committee, this program served an average of over 10.7 million schoolchildren during the 1959 school year, and with 30 percent of the Nation's 39,480,000 schoolchildren provided with noonday meals.

EXTENSION SERVICE

Our extension service has been of great benefit to the American farmer and especially so in the State of Kentucky. Funds appropriated for this program are used to supplement funds appropriated by State, county, and local governments for the employment of county agents, home demonstration agents, 4–H agents, and State specialists who, in turn, bring into force additional programs of the Department of Agriculture. The extension agents and the entire service in Kentucky is composed of dedicated people who are rendering a great service. We have succeeded in securing salary increases for our extension agents in Kentucky during the past 3 years and every effort will be made to see that our extension agents are provided with adequate salaries. We recommend a total of $66,335,000 for our extension service.

CONCLUSION

Mr. Chairman, each year 4½ million farm operators decide what to produce on the Nation's 400 million acres of crop land and 700 million acres of pasture. We know that our rural people must make many adjustments in order to keep their operations on a sound foundation. Today, more than at any time in the past, the business of farming demands the application of the most recent developments in science. We must keep in mind that agriculture is an industry that changes rapidly. Such changes create new problems for our farmers.

Our committee recommends this bill to the Members of the House.

Mr. PELLY. Mr. Chairman, I feel constrained to make certain comments in connection with H.R. 12117, the agriculture appropriation bill.

As my colleagues well know I have been strongly opposed to the present farm subsidy bill and indeed have been forthright in speaking against Government acreage and price controls which constitute in my opinion the costliest failure in our domestic history.

I expect later on to vote against this appropriation bill as I have voted against agricultural bills in the past as a personal protest against the present program. How anyone can justify spending approximately $4 billion per annum on the farm fiasco is beyond my comprehension.

Certainly President Eisenhower was never more right than when he stated recently that in no domestic area do we have a more obvious need for corrective action than in agriculture.

Let me hasten to say that it is the farmers who have the chief source of complaint. They are the ones who suffer under the existing Federal program. I think they have a right to look to the Congress for corrective action.

Briefly I want to discuss various proposals to effect relief. I point up frequently the distressing fact that Government surpluses, even after the huge recent transactions for wheat disposal under Public Law 480, will represent a cost to the taxpayer of more than $9 billion with an annual storage charge in excess of $1 million a day. But in all honesty I must say the Farm Bureau has been practical in recommending a plan to move away from controls—rather than to abruptly terminate the program. I will go along with that general policy.

James Patton, the president of the National Farmers' Union, however, a month or so ago offered his solution. I absolutely abhor his suggestion, which was to license farmers. He suggested each licensed farmer should pay 2 percent yearly of the proceeds of his marketing to the farm organization of his choice—the Grange, Farmers' Union, or Farm Bureau—with the money going to promote sales and educate nonfarmers at home and abroad about the role of the farmer.

I wonder how the nonfarmer under such brainwashing would end up. But as for the sponsor of this plan, Mr. Patton was consistent because he said he favored a major shift of support for schools from local to the Federal level. He is for a Federal system.

We have many suggested solutions that go in the same direction as Mr. Patton would have us go, but not so far.

One is the program which I understand is favored by two of the Democratic candidates for the Presidential nomination. Under it a cartel or sort of central cooperative would be set up to control prices. The poor consumer I fear would assume an awful burden under such a monopolistic plan.

Personally, I think Congress should concentrate right now on a solution of the wheat situation because it is the most pressing.

Legislation of that nature has been introduced. It has been described as a new wheat marketing act. My colleagues from the wheat-producing areas of Washington State, WALT HORAN and CATHERINE MAY, are among those who sponsor this plan and they tell me it is both realistic and constructive. Under this wheat bill a national estimate of primary use would be established by the Secretary of Agriculture—then each State would be given an acreage allotment. Only wheat for human consumption would be regulated. Seventy-five-percent parity would be set as the price support level for the annual requirement.

Mr. Chairman, I am for restoring our farmers to a free enterprise basis and a returning to the law of supply and demand. Granted such action must be by degrees to stabilize the economy.

In the interim the provisions of the Horan-May and other bipartisan sponsored wheat marketing bills, it seems to me, would be helpful and a step in the direction which ultimately I hope will come.

Meanwhile, this legislation would reduce the cost of the program to the taxpayers; start an orderly reduction of the Government-held surplus and assure against disastrously low income levels to the wheat producers.

I hope the House Committee on Agriculture will not report out legislation just to invite a political veto.

Instead, let the House consider a bill which has a chance of being enacted into law. I will support corrective transitional farm legislation similar to the Horan-May plan because my able colleagues have convinced me of the merit of their idea until such time as consumption and supply are in closer balance.

Mr. WHITTEN. Mr. Chairman, I yield 5 minutes to the gentlewoman from Missouri [Mrs. SULLIVAN].

QUESTIONS ON POULTRY INSPECTION

Mrs. SULLIVAN. Mr. Chairman, I asked the chairman of the subcommittee for this time in order to obtain answers to several questions which occur to me about this appropriation bill and

its accompanying report, which I think will be of great interest to every housewife.

First of all, on poultry inspection, may I ask if the additional $500,000 provided in the bill for poultry inspection will permit the continuous inspection beginning July 1, as required under the Poultry Inspection Act, of food items processed from poultry? It is my understanding from the officials of the Department that an additional $1 million over the current year's appropriation would be required for this necessary function, and I have seen other figures showing it would cost anywhere from $500,000 to $1 million more. Therefore, the question which I have very strongly in mind is whether the extra $500,000 provided in this bill will be enough to allow the Poultry Division to place inspectors on a continuing basis in all 300 plants now temporarily exempt from inspection because of a shortage of trained inspectors but which, under the law, must have their products continually inspected beginning with the coming July 1, and at Government expense.

Mr. WHITTEN. May I say to the gentlewoman, it is my personal judgment that what is involved is what we might interpret continuous inspection to be. The committee tried to investigate fully this whole matter. It is to some degree between the Department and the processors as to protecting public health. In no instance have the inspectors in the 200 plants found anything injurious to the public health, but the processors in turn could use the stamp of the Department as part of their advertising. In fact, 200 out of the 300 do that. They definitely would like to shift the burden of that cost to the Government. The other third would like the Government to give them the inspection free so that they would be on equal terms with the others.

The Department feels, as I understand it from their testimony, that having the little plants continuously inspected is not necessary to protect the public health, but they in turn refuse to give the stamp unless they do that inspection. What we do is say to the Department, "We are giving you that much money. Inspect them to the fullest degree to protect public health, but when you do it, go ahead and issue the stamp."

We thought that was a fair solution of the problem instead of meeting it head on. Whether you have to repeal the law by providing that no funds shall be used, or whether you have a lot of inspections to get the stamp, so far as the testimony is concerned, we thought that this was the best solution we could think of, and we hope we are right.

Mrs. SULLIVAN. Mr. Chairman, if the gentleman will be patient with me the law says all processing plants in interstate commerce must have inspection. About 300 have been temporarily exempted, but beginning July 1 that exemption expires. Now will he please explain the somewhat confusing, technical language on page 17, beginning on line 2, dealing with the poultry inspection program. Does that language change existing law so far as the requirements of the Poultry Products Inspection Act are concerned? If it does not change the law, why put this language in the bill?

Mr. WHITTEN. Frankly, I would take it that it changes the law by giving the Department some say-so about what inspection is necessary to protect the public health.

Mrs. SULLIVAN. If it does change the law, as I also believe it does, is it proper for the Committee on Appropriations to change the requirements laid down for poultry inspection under legislation drafted by the legislative committee on agriculture, and enacted by Congress several years ago?

Mr. WHITTEN. If we ask for a rule and they grant it, we would have the privilege of changing it if we saw fit to do so. But, this is, frankly, subject to a point of order. We think it is better than nothing and this is the best we can do. So we have not tried to override anybody, but we do think it is the best solution that we could think of.

Mrs. SULLIVAN. The law says that all poultry moving in interstate commerce should be inspected, including products made from poultry. This language in the bill on page 17, "*Provided*, That the Department is hereby authorized and directed to make such inspection of poultry products processing plants as it deems essential to the protection of public health and to permit the use of appropriate inspection labels where it determines from such inspection that such plants operate in a manner which protects the public health, and not less than $500,000 shall be available for this purpose," seems to say it would now be up to the Secretary in his discretion to decide which processed products are to be inspected, and under what circumstances the Department should assign inspectors to such processors, and also permits, apparently, some substitute seal to be used to attest to the wholesomeness of poultry which has not actually been inspected.

Mr. WHITTEN. If the gentlewoman will yield to me, I must say I have never been a stickler about jurisdiction. We have so many problems here that if somebody were to handle some of them, I certainly would not object. The Department cannot determine which products are to be inspected, but they can determine what inspection is necessary to protect the public health. But when a legislative committee says that the Committee on Appropriations must appropriate, it looks to me as if some other group has probably stepped a little far. I think they should inspect, but I think it should be for the protection of public health and not for the stamp. But if they say that they have inspected this plant fully and adequately to protect the public health, I do not think they should be permitted to withhold the stamp.

Mrs. SULLIVAN. The point I wanted to call attention to is this: If it is to be only a spot inspection program in plants making poultry pies, poultry soups and other products containing poultry, and yet anything that goes through that processing plant would carry a seal of wholesomeness, then I think we are misleading the housewife in allowing that seal to be on the product indicating that it has been inspected when it probably has not been inspected.

Mr. WHITTEN. I do not know where we should end this. But they have been inspecting 200 plants and they have not found anything that would injure the public health and according to the letters that have been sent to me, they say that they pay for it because they want to use the stamp because it is a matter of advertising. I do think if the gentlewoman would go along with this, we can work with this and see if we can resolve the situation. Again I say, only one objection and out it would go.

Mrs. SULLIVAN. But under the law, all these 300 exempted plants will have to be inspected beginning July 1, will they not?

Mr. WHITTEN. Unless the other body should put in a statement that, notwithstanding the legislation, no part of these funds can be used for such inspection. Then the law would be repealed. We do not want to do that. We try to resolve it by saying that they must inspect, but the inspection must be for the purpose of protecting the public health, and when you do inspect, to say so.

Mrs. SULLIVAN. I thank my colleague very much for his frank answers. It is clear to me that the language in the proviso in question on page 17 relaxes the strict requirements of the Poultry Products Inspection Act insofar as that act now requires the inspection of all poultry and poultry products in interstate commerce. The act permitted temporary exemption of some plants from the inspection requirements for the convenience of the Government, because it was not considered feasible to provide inspectors at the start of 1959 for every plant in the country subject to the act. There was a shortage of trained personnel in this field.

So the act as originally passed allowed this temporary exemption for 18 months of plants for which inspectors were not available. The Secretary choose to use this administrative authority to exempt from compulsory inspection all plants doing further processing of poultry into poultry products like soups, pies, and so forth, on the assumption that he would need all the trained inspectors available in January 1959 just to cover all of the slaughtering plants.

The exemptions for the further processing plants expire on July 1. The Secretary has asked Congress to amend the law so that he can continue to exempt such plants. Congress has not done so. In the meantime, many of these further processors—200 out of about 300 exempted plants—have felt it was so important to have their products inspected for wholesomeness by the Federal Government that they have paid out of their own funds to have their products continuously inspected under a voluntary inspection program operated by the Department. Under the law, however,

they are entitled to the same kind of free inspection the slaughtering plants receive.

This bill provides an additional $500,000 to the poultry division to provide inspection at plants processing poultry products but the language of the proviso on page 17 gives the Secretary discretionary powers he would not otherwise possess after July 1 to exempt particular plants from inspection. As I understand it, the proviso would permit a spot check inspection program, with a seal attesting to the wholesomeness of poultry products not produced under continuous inspection.

The CHAIRMAN. The time of the gentlewoman from Missouri [Mrs. SULLIVAN] has expired.

Mr. WHITTEN. Mr. Chairman, I yield such time as he may desire to the gentleman from Minnesota [Mr. MARSHALL].

Mr. MARSHALL. Mr. Chairman, few committees of the Congress spend so many long hours together as do our appropriations subcommittees. This is a natural consequence of the responsibility imposed upon us to examine not only every budget request but also the manner in which these funds have been and are being administered.

The work is long and arduous but it is rewarding because of the great opportunities it presents for lasting service and because of the associations developed in our day-to-day efforts. It is a privilege to work with such distinguished Members of Congress as JAMIE L. WHITTEN, of Mississippi; WILLIAM H. NATCHER, of Kentucky; ALFRED E. SANTANGELO, of New York; H. CARL ANDERSEN, of Minnesota; WALT HORAN, of Washington; and ROBERT H. MICHEL, of Illinois.

TRIBUTE TO CHAIRMAN

Every year I serve on the subcomittee, I become more and more impressed with the ability of our chairman; JAMIE WHITTEN is an able and conscientious representative of his district and the State of Mississippi but he is genuinely interested in the problems of all farmers everywhere in our country. The friendly and courteous atmosphere in which we work is built upon the mutual respect members of the subcommittee have for each other's problems and viewpoints. We do not always agree on what is best in every situation but we do agree that our common goal is a healthy and prosperous agriculture sharing in our Nation's growth and progress.

FARM TROUBLES REMEMBERED

That agriculture is in trouble today is too painfully apparent to need documentation. It should not be necessary to review in detail that part of our agricultural history which is remembered so clearly by every farmer who lived through it. I am speaking of the twenties and early thirties when failing farm prices, forced sales, farm foreclosures, bank failures, and dark depression forced a mighty Nation to its knees.

We fought our way back to the greatest productive effort the world has ever known. It should not be necessary to review the basic agricultural laws which made this recovery and growth possible—parity payments and loans, soil conservation and good farm management, diversion of surplus production into foreign and domestic channels, crop insurance, and credit.

NINETEEN HUNDRED AND FIFTIES PROMISED HOPE

We entered the decade of the fifties with high hope and reasonable expectation that we would continue to go forward. Instead, we face the sixties with confusion and frustration. What has happened to us?

If past is prolog, it is worth our while to briefly consider the events and policies that went before. In so doing, we can penetrate some of the fantastic theories and new myths under which the realities of recent history have been buried.

NEED REALISTIC APPROACH

It is true that the farm problem has many facets and it is as complex as modern agriculture itself. Other segments of the economy are complex and face immense problems. Seldom, however, do we witness the pessimism that has gained thought among some agricultural "experts" in the mistaken notion that no solution is possible. What we need to do is look at our problems as realistically and with the same hardheaded candor practiced by other segments of our economy.

My own recollections go back to the beginnings of what has become the modern technological revolution in agriculture. As a small boy, I accompanied my father, then the first county agent in Minnesota, on some of his field trips. I heard him discuss crop rotation with the farmers in an area where the principal cash crop was wheat. I heard him discuss the need for growing a cultivated crop like corn and the advantage of putting land into legumes to restore humus to the soil. This impressed upon me the importance of technical know-how in farming operations.

GAS ENGINE AND TRACTOR

Better farm management, better disease control, and the beginning of mechanization expanded total farm output and released still other acres for the production of marketable crops. The development of the gasoline engine and the tractor together with the improvement of management practices created a new capacity.

The demand for production during World War I hastened the expansion to meet the needs of the world market cut off from other producing countries. We were prepared for the challenge and met it. When the war ended, the level of prices received by farmers plunged 43 percent between 1919 and 1921.

FARM CONFERENCE OF 1922

The general scare and heated protests finally led President Harding to call a national conference on the farm problem in 1922. This was the first such meeting in history and one of its recommendations directed the Congress and the President to "take steps immediately to reestablish a fair exchange value for all farm products with that of other commodities." It also suggested to farm organizations that they survey world supply-and-demand factors and "propose measures for proper limitation of acreage in particular crops."

The price drop eventually led to general income consequences, but for the farmer the effect was immediate and disastrous. No matter where he turned, no matter what alternative he chose, he was always the victim of lower prices and lower income. This meant a lower standard of living for himself and his family. It meant neglect of health and education and neglect of the farm itself.

PRICE OF UNWILLINGNESS

Those who still today say that government has no place in the economic affairs of the farmer might well study the economics of the twenties. As then, we can now try to solve the farm problem by an unwillingness to face facts but we must expect to reap the same consequences.

Who benefited from the unwillingness to act and the unconcern of the twenties? Consumers? A man walking the streets out of work does not benefit from low prices. Merchants? There were so many merchants with so much money on the books that any profit in operations was wiped out by bad paper. Did it help the banks? Look at the foreclosures of that period. I repeat, who benefited from the farm depression of the twenties?

M'NARY-HAUGEN BILLS VETOED

When the pressures building up for action finally led to efforts by Congress to intervene with the McNary-Haugen bills of 1927 and 1928, Calvin Coolidge twice vetoed them. Despite the shortcomings evident to us today and their shortsighted view of workable trade relationships, the bills did represent an attempt to act.

FARM BOARD FAILURE

The precedent of nonintervention was finally broken in the Agricultural Marketing Act of 1929 which created a Federal Farm Board to stabilize the prices of farm products by buying when supplies were excessive and selling when shortages existed. In 3 years, despite the sincerity of effort, three-fourths of its $500 million appropriation was lost. In the face of the most devastating depression of all time, that action was too little and too late. Prophetically, the Board ended operations with a warning that withholding supplies from the market alone could not stabilize prices unless accompanied by production control.

To make matters worse, the enactment of the Smoot-Hawley Tariff Act totally ignored the importance of a sound trade relationship and ruined what foreign markets we had left. Its proponents chose to ignore the fact that we came out of World War I a creditor nation and we needed the two-way street of trade to maintain vital markets for the abundance of our production.

DISTRESS SPREADS ACROSS NATION

Agriculture was left to flounder while the depression deepened and the rest of the economy tasted the distress already

so familiar to farmers. No one who lived through that period needs to be reminded of the suffering and fear that terrorized the nation.

Sickened by callous inaction in the face of such overwhelming poverty, the American people swept the Republican Administration out of office with a demand for bold, new action.

SUPREME COURT KILLS HOPE

Congress passed the Agricultural Adjustment Act in the spring of 1933 in an effort to establish and maintain a "balance between the production and consumption of agricultural commodities." Using benefit payments as an inducement to control surplus production, the program was later augmented by marketing quotas for specified crops. When the Supreme Court nullified the regulation of production and the processing tax which helped to support the program in its decision of January 6, 1936, many farmers feared that the only remaining hope had been knocked out from under them.

NINETEEN HUNDRED AND THIRTY-SIX ACT OUTLINES PURPOSE

But within a year Congress responded with the Soil Conservation and Domestic Allotment Act of 1936 which provided means of controlling production and provided incentives for conservation of our soil by proper plowing, contouring, and crop rotation. Its preamble best states the new spirit of hope:

SEC. 7. (a) It is hereby declared to be the policy of this Act also to secure, and the purposes of this Act shall also include, (1) preservation and improvement of soil fertility; (2) promotion of the economic use and conservation of land; (3) diminution of exploitation and wasteful and unscientific use of national soil resources; (4) the protection of rivers and harbors against the results of soil erosion in aid of maintaining the navigability of waters and water courses and in aid of flood control; and (5) reestablishment, at as rapid a rate as the Secretary of Agriculture determines to be practicable and in the general public interest, of the ratio between the purchasing power of the net income per person on farms and that of the income per person not on farms that prevailed during the five-year period August 1909 to July 1914, inclusive, as determined from statistics available in the United States Department of Agriculture, and the maintenance of such ratio. The powers conferred under sections 7 to 14 inclusive, of this Act shall be used to assist voluntary action calculated to effectuate the purposes specified in this section. Such powers shall not be used to discourage the production of supplies of foods and fibers sufficient to maintain normal domestic human consumption as determined by the Secretary from the records of domestic human consumption in the years 1920 to 1929, inclusive, taking into consideration increased population, quantities of any commodity that were forced into domestic consumption by decline in exports during such period, current trends in domestic consumption and exports of particular commodities, and the quantities of substitutes available for domestic consumption within any general class of food commodities. In carrying out the purposes of this section due regard shall be given to the maintenance of a continuous and stable supply of agricultural commodities adequate to meet consumer demand at prices fair to both producers and consumers.

NINETEEN HUNDRED AND THIRTY-EIGHT ACT BROADENS PROGRAMS

To strengthen and broaden the existing programs, the Agricultural Adjustment Act of 1938 was enacted; the basic legislation responsible for the great strides in American agriculture.

It carried forward the principles of the Soil Conservation Act of 1935 in encouraging good management of the Nation's soil resources—not only, or even primarily, for the benefit of farmers but for the direct benefit of all future generations dependent upon soil for food and raw materials.

TOOLS TO BALANCE PRODUCTION

Loans, marketing quotas, and parity payments were provided as the necessary tools to enable the farmer to bring his production into closer balance with demand without complete and total collapse of income. For the first time, farmers themselves were called upon to administer their own programs on the basis of their own experience and to meet their own realistic needs.

Surplus production was diverted into domestic and foreign channels and programs to develop new uses for agricultural products were pushed forward.

As a further stabilizing effort, the Federal Crop Insurance Corporation was created to provide insurance against loss of crops. By 1942, one-fourth of all wheat farmers were taking advantage of this program.

REA SPEEDS MECHANIZATION

Another major contribution to the recovery and expansion of agriculture was in the making. Tomorrow we will observe the 25th anniversary of the creation of the Rural Electrification Administration by Executive order of President Roosevelt on May 11, 1935. Its modest beginnings did not foretell the great role it was to play in the continuing agricultural revolution.

It brought light to the rural home and with it the means of further mechanization in farm operations. By the end of 1936, almost 100 loans were approved and we had laid the basis for the labor-saving devices which enabled farmworkers to increase their output during the help shortage of the war years ahead.

The Nation has never seen a finer example of cooperation. Farmers worked with and through their Government to help each other help themselves.

MET CHALLENGE OF WORLD WAR II

Our agricultural plant was prepared for the great emergencies of World War II. Our stockpiles were a godsend to the entire free world and our farms were geared for the maximum output. The labor shortage was met with increased mechanization and production efficiency made its most spectacular gains. Once again American farmers were ready for the challenge and met it. Now some are saying they met it too well. This grisly bit of erroneous hindsight is unworthy of comment.

The world was grateful for our preparedness as the great breadbasket of democracy.

Technological advance with its increase in production efficiency was a sign to be welcomed rather than feared. We emerged from World War II and the Korean conflict with a greatly expanded potential to be turned to good or evil. We still had within our means the tools for a return to orderly production and wise use of our resources to meet immediate world needs while protecting our future capacity. Never was the opportunity so great.

END OF DISCREDITED POLICIES?

We thought we were done once and for all with the discarded and discredited policies of unhappier days. We thought these were forever forgotten in the dismal files of failure. It seemed unbelievable that anyone could consciously slip into the errors that could only result in a repetition of the sad history I have briefly recounted here.

I say to you frankly, Mr. Chairman, we failed to anticipate the unaccountable stupidity, at worst, or the incredible naivete, at best, of the men to whom we entrusted the opportunity that was ours.

DREAMING WITH EISENHOWER

In this, the twilight of the Eisenhower administration, the American farmer cannot help but ponder over the 7½ years which promised a bright dream that now seems to be only another nightmare.

If he is a corn farmer, he can recall how confidently he approached a new day at a time when all seemed well. At the plowing matches at Kasson, Minn., he had heard a great general who was a candidate for President promise:

And here, and now, without any "ifs" or "buts," I say to you that I stand behind—and the Republican Party stands behind—the price-support laws now on the books. This includes the amendment to the Basic Farm Act, passed by votes of both parties in Congress, to continue through 1954 the price supports on basic commodities at 90 percent of parity.

PLEDGES REPUBLICAN PARTY

Whatever misgivings this farmer may have had when he recalled the disastrous farm policies of the Hoover administration were quickly dismissed by this new candidate. In Brookings, S. Dak., he spoke not only for himself but for his party when he said:

The Republican Party is pledged to the sustaining of the 90-percent parity price support and it is pledged even more than that to helping the farmer obtain his full parity, 100 percent of parity, with the guarantee in price supports of 90.

SECRETARY OFFERS ASSURANCES

It seemed a great day on the farm, a bright and cloudless day without threat of impending storm. The farmer could relax with his family in the satisfaction of a hard day's labor done. The sunset promised a peaceful night and a glorious tomorrow.

Any doubts about the new Secretary of Agriculture seemed to be dispelled when he said firmly in St. Paul:

Our agricultural policy should aim to obtain in the marketplace full parity prices of farm products and parity incomes for farm

people that farmers will have freedom to operate efficiently and to adjust their production to changing consumer demands in an expanding economy.

GOLDEN PROMISES DISTURBED

Surely these golden promises would mean a bright, new day for agriculture. The farm programs that had helped him to pull himself up from the mires of depression would not only be continued but they would be improved. With his son home from Korea, the farmer could look forward to a peaceful world of growing markets that could only mean prosperity for his family and well-being for the Nation.

This was a time to sleep well and enjoy the dream of better things yet to come. A new voice interrupted this fantasy with a warning that the postwar level of prosperity in agriculture was "a dream world, and no one expected it to last." It came from Don Paarlberg, one of the chief architects of the new farm policy, in a speech at West Millbury, Mass.

FARMER RELUCTANT TO DOUBT

Our corn farmer drove the troubled thought from his mind. The gains made on his farm were real gains and certainly no one would seriously suggest a return to the dog-eat-dog economics that fed the farm depression. He remembered burning corn in his stoves because it was cheaper than coal. He remembered the neighbor who hauled 100 bushels of oats 10 miles to town to get $8 to buy Christmas presents for his children. He saw fat cattle sold on the market at South St. Paul for 3½ cents a pound. He recalled the human suffering and reassured himself that the mistakes of which it was born would never again be repeated. Not when the future promised so much.

In the cool light of morning, the uneasiness returns with the echoed warning of the Secretary of Agriculture that "every young man requires the spur of insecurity to force him to do his best."

MORE CORN SEEMS ANSWER

He has lived with insecurity before and knows the sick fear it engenders. He is restless as the hopes and dreams of the night seem to dim in the cold light of the day. He has been told to "raise his sights beyond the dollar sign, beyond material things," but he knows that he must go on with the work of the day to feed his family and pay his bills.

He is told that he is now free to make his own decisions without socialistic controls and regimentation. Listening to a morning radio program, he learns that he may be able to receive a corn loan even if he does not stay within his allotment. Of course, he will receive less for his corn but he can make up the income by planting more corn since production no longer seems to be a problem. So he goes out to his fields to plant more corn and notices that his neighbors are doing the same.

With the prospect of more corn, he decides to keep a few more brood sows. Hog prices go down but he is told that he no longer needs to bother with the corn allotment. With acreage unlimited, he decides to plow up the clover and legumes. He abandons crop rotation in order to expand his production.

UNIT TIMES PRICE EQUALS INCOME

After all, unit times price equals income. With prices down, he needs to grow more to meet the steady increase in operating costs and taxes. A bushel of corn buys less so the only hope is more bushels of corn. His neighbors, too, find themselves on the same treadmill.

Clouds are appearing on the horizon as our farmer's day draws to a close. The hope of better education and health care for his children is a vanishing dream. As the surplus piles up around him, his debts increase and his standard of living declines. What began as a day of promise is now darkened by the menacing storm clouds of an uncertain night.

WHAT DID PRESIDENT SAY?

And what does he hear from those who held out the golden promise? The answers had seemed too simple to them but now there is only confusion and uncertainty. At a Washington press conference, the President says:

Now, if there were any kind of reasonable plan that connected with other features of the thing they could bring something about that seemed reasonable and fair to the farmers, well, I would be glad to look at it and, because as I say, if it looks reasonable to me, I will approve it because I am just to this point—I know that we are in a bad fix, the farmers are, and I have had correspondence recently with some of my farmer friends because, individuals, to get statistics.

What does it mean?

With 83,000 employees in the Department of Agriculture, why is the President writing to his "farmer friends" to get statistics about the "bad fix" we are in?

THE DREAM IS ENDED

This is the troubled state of mind the corn farmer finds himself in after his day with Eisenhower.

All of this, of course, did not happen in a day. But the analogy of the bright day of promise ending with storm clouds all around is a valid one.

Our job now is to help the President understand how it happened. The experience has been too painful to be forgotten. To prevent the impending storm, we need to control the causes. We can do this only if we know the causes and recognize them.

HOW DID IT HAPPEN?

Using corn as our example, let us see what happened first to prices, then production, and finally to the whole farm economy.

When this administration assumed office, corn was supported at 90 percent of parity. During the previous year, the price of corn averaged 95 percent of parity. Prices were still holding good during the early winter of 1953.

There was no reason to expect change except for the good. The corn producer had every reason to believe that he could safety fall into a dreamlike state with nothing but prosperity to trouble him in the years ahead.

CORN PRICES HELD IN 1953

In 1953, the level of price support at 90 percent of parity for corn was $1.60 a bushel. There were no acreage allotments that year and the average price received by farmers for the 1953 crop was $1.51 a bushel.

In his farm message of January 1954 the President urged flexible supports for corn at modernized—or lowered—parity levels. He recommended a decrease of 1 percent in support price for each 1 percent increase in supply and asked for acreage allotments. For other grains, he simply asked flexible supports to be fixed by the Secretary of Agriculture.

COMPLIANCE DECREASES

Corn marketing quotas were repealed in the act of 1954 without having been used. Price support at 90 percent of parity was continued through 1954 with a drop to 85 percent provided for 1955.

Acreage allotments for 1954 were fixed at 46 million acres but farmers grew 54 million acres. The decrease in compliance was already being attributed to the threat of flexible supports in 1955. The Secretary of Agriculture merely said:

There were certain factors that tended to reduce compliance, I believe.

He did not elaborate further in his testimony before our subcommittee in 1955.

PRODUCTION UP; PRICES DOWN

While allotments were cut back for 1955, corn production again increased as the rate of compliance decreased under pressure of the drop in support prices and in the market price.

The coming trouble was evidencing itself in 1956. This was the first year of transitional parity, the first year of a price support to noncooperating farmers in the commercial corn area, and a substantially higher price support to producers in the noncommercial corn areas.

SUPPORT UP; PARITY DOWN

In February 1956, the Secretary of Agriculture announced a price support based on transitional parity of $1.40 per bushel to growers keeping within allotments. By mid-April it was increased to $1.50, which amounted to 86.2 percent of transitional parity.

An average price support of $1.25 was offered to noncooperating farmers in the commercial area. This amounted to 71.8 percent of transitional parity.

The final rate to cooperators remained $1.50 but by fall it represented 84.3 percent of parity.

NONCOMMERCIAL SUPPORTS

The final 1956 rate to growers in the noncommercial corn areas was also jacked up—to $1.24. The 1956 act provided that noncommercial areas must get at least 82½ percent of the rate to cooperators as calculated on a national basis. Previously, the noncommercial area rate was 75 percent of the commercial area rate. The new language lasted for only two crops, 1956 and 1957.

A referendum of corn producers in the commercial area was provided by the 1956 act to determine whether they favored the old acreage allotment and price support program or a soil-bank corn base of 51 million acres. Under the

latter plan, a grower could get support with 15 percent of his acres in the soil bank. Supports were to be at the level the Secretary determined would assist growers in marketing corn in normal channels of trade without encouraging uneconomic production of corn.

SECRETARY'S PLAN VOTED DOWN

Secretary Benson announced in November that the support price under his plan would be $1.31 a bushel, if it carried. If it did not carry, the minimum support to growers in the commercial area would be $1.36 a bushel. No assurance was given that price supports would be available to noncooperators.

The Secretary's plan failed to receive the necessary majority.

In 1957, the Secretary announced that support to cooperators in the commercial area would be $1.40 a bushel—parity had increased enough to raise it 4 cents—and support to noncooperators in the commercial area was to be $1.10. Corn in the noncommercial area would be supported at $1.27. These rates remained for that season.

SUPPORT NONCOMMERCIAL, NONCOMPLIANCE

In the spring of 1958, Secretary Benson announced the minimum 1958 support at $1.36 a bushel to compliers in the commercial area. That fall he announced that the support would be made available for the third successive year on noncompliance corn in the commercial area at an average rate of $1.06 a bushel. Support in the noncommercial area went back to the old level based on 75 percent of the commercial area rate.

The act of 1958 set the pattern for 1959 and 1960. A referendum was scheduled for December to give commercial farmers a choice between the old program or elimination of the commercial area and allotments and price support at 90 percent of the average price received during the previous 3 years. Congress insisted on a minimum support of 65 percent.

SUPPORT HITS MINIMUM

This time the referendum carried. Support was $1.12 a bushel to all producers. This was 90 percent of the previous 3-year average price.

In Januray 1960 the Secretary announced corn support for this year at $1.06 a bushel. This is the minimum—65 percent of parity.

What is the result? Corn production climbed to 3.8 billion bushels in 1958 and then to 4.3 billion bushels in 1959, and another 5- to 10-percent increase for this year.

SUPPORT DOWN; PRODUCTION UP

With reasonable supports and allotments removed the 21-percent increase in corn production could have been anticipated by the Secretary if he had reviewed past experience. Following is a table showing the level of price support and the level of production in recent years:

TABLE 1.—*Support price on corn, corn production, 1953–59*

Crop year	Compliance		Corn production
	Support price	Percent support price is of parity	
			Thousand bushels
1953	$1.60	90	3,209,896
1954	1.62	90	3,057,891
1955	1.58	87	3,229,743
1956	1.50	84	3,455,283
1957	1.40	77	3,422,331
1958	1.36	77	3,800,863
1959	1.12	(1)	4,361,170

[1] 90 percent of $1.25, average price received by farmers in calendar year, 1956–58.

Source: Hearings, Department of Agriculture appropriations bill, 1961, pt. 3, pp. 193, 313.

The end result of the administration's determined effort to lower supports on corn and corn prices is a growing accumulation of corn supplies. This causes yet other serious problems which I propose to discuss. The carryover stocks are expensive to store and hang as a constant threat over the livestock market. In addition, the farmer scrambling to save himself from total collapse is diverting lands from conservation uses in order to obtain the production he needs for subsistence.

At the end of the 1951–52 marketing year, the corn carryover was 486 million bushels. The carryover at the end of the 1959–60 marketing year is expected to be 2 billion bushels.

CARRYOVER PILES UP

Except for oats, the other grains show a similar trend but nowhere is the increase in carryover more dramatic than it is in the case of corn.

The following table compares the carryover of specified grains for the marketing years 1951–52, 1952–53, and 1959–60:

TABLE 2.—*Carryover of specified agricultural commodities at the end of the 1951–52 and 1952–53 marketing years and estimated carryover at the end of the 1959–60 marketing year*

[In millions]

Commodity	Date of carryover	Carryover at end of 1951–52	Estimated carryover at end of 1952–53	Estimated carryover at end of 1959–60 [1]
Wheat...bushels	July 1	256	560	1,350
Corn.....do	Oct. 1	486	700	2,000
Rye.....do	July 1	3.9	4	10
Oats.....do	...do	283	225	200
Barley.....do	...do	73	50	160

[1] Estimated carryover at the end of 1959–60 marketing year is based partly on expected disappearance and exports for the remainder of the marketing season. The carryover actually realized at the end of the current season may vary moderately from these estimates depending on trends in consumption and exports during the rest of the season.

Source: Hearings, Department of Agriculture appropriation bill, 1961, pt. 3, p. 280.

Corn and feed grains today make up the No. 1 agricultural problem of this country and we have not yet felt its full force. The brunt of the storage problem will be delayed 2 years and more because much of the corn will be held on farms under ever-normal-granary loans. These are loans made on the current year's crop and include extensions of loans made on the previous year's crop.

Reseal programs for price-support loans on 1959-crop farm-stored grains have been announced on corn, barley, wheat, and grain sorghums. In addition, price-support reseal loans already in effect on the 1958 grain sorghums, wheat, corn, barley and oats, 1957 wheat and corn, and 1956 corn can be extended by producers for another year.

CARRYOVER BECOMES SURPLUS

From past experience, we know that reasonable stockpiles are necessary both from the standpoint of stabilization and emergency situations. We are reaching the point, however, that some of the carryover is actual surplus production. It is this production which hangs as a constant threat over the market. The following table describes the current situation both in terms of desirable carryover and surplus carryover:

TABLE 3.—*Indicated surplus in carryover stocks for 1960*

[In millions of bushels]

Commodity	Estimated supply—disposition, 1959–60							Desirable carryover [1]	Surplus carryover in 1960 [1]
	Beginning stocks, 1959	Production	Total supplies (including imports)	Utilization, 1959–60			Ending stocks, 1960		
				Domestic	Exports	Total			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Wheat	1,279	1,128	2,415	625	465	1,090	1,325	500	825
Corn	1,530	4,361	5,892	3,702	240	3,942	1,950	800	1,150
Grain sorghums	510	579	1,090	405	110	515	575	50	525
Barley	195	420	635	360	115	475	160	100	60
Soybeans	62	538	600	435	125	560	40	40	----
Oats	368	1,074	1,445	1,208	37	1,245	200	200	----
Rye	13	21	38	24	5	29	9	5	4
Flaxseed	15	22	37	26	7	33	4	5	−1

[1] There are no official figures for desirable carryover or surplus carryover stocks. However, under existing conditions at home and abroad, desirable carryover stocks should be approximately in line with the amounts shown here.

Source: Hearings, Department of Agriculture appropriation bill, 1961, pt. 3, p. 753.

The increase in Commodity Credit stocks as a result of the increasing carryover inevitably results in an increase in storage costs. These, again, are costs charged to the American farmer in almost every discussion of the subject but from which he receives little direct benefit.

STORAGE COSTS MOUNT

For example, the July 1, 1959, corn inventory of 1,043,676,000 bushels resulted in a storage cost of $133,541,000 for fiscal year 1959. The following table shows the inventory for each year and the cost of storage:

TABLE 4

Quantity of price-support corn in inventory at beginning of fiscal year and total storage costs recorded during fiscal years 1951 through 1955

[All figures in thousands]

Commodity	Unit of measure	Inventory July 1, 1950	Storage cost fiscal year 1951	Inventory July 1, 1951	Storage cost fiscal year 1952	Inventory July 1, 1952	Storage cost fiscal year 1953	Inventory July 1, 1953	Storage cost fiscal year 1954	Inventory July 1, 1954	Storage cost fiscal year 1955	Inventory July 1, 1955
Corn	Bushel	332,460	$30,577	413,423	$28,297	313,895	$19,584	228,029	$44,284	364,939	$53,626	580,724

Quantity of price support corn in inventory at beginning and end of fiscal year and total storage costs recorded during fiscal years 1956 through 1959

[All figures in thousands]

Commodity	Unit of measure	Inventory, July 1, 1955	Storage cost, fiscal year 1956	Inventory, July 1, 1956	Storage cost, fiscal year 1957	Inventory, July 1, 1957	Storage cost, fiscal year 1958	Inventory, July 1, 1958	Storage cost, fiscal year 1959	Inventory, July 1, 1959
Corn	Bushel	580,724	$71,532	702,121	$116,659	803,256	$139,978	1,028,032	$133,541	1,043,676

CORN RATES CLIMB

The tremendous increase in costs is not accounted for solely by the great increase in inventories. The rate paid per bushel has also increased steadily under the storage agreements. Increased costs of labor and material have undoubtedly attributed to the increase. The following table shows the change in rates for corn, which increased from 13.25 cents per bushel in 1952 to 18.89 cents in 1959:

TABLE 5.—*Annual storage rates paid per bushel of corn in commercial storage*

Year:	Rate
July 1, 1951, to May 31, 1952	$0.1325
June 1–30, 1952	.1590
July 1, 1952, to June 30, 1953	.1590
July 1, 1953, to May 31, 1954	.1050
June 1–30, 1954	.1824
July 1, 1954, to June 30, 1955	.1824
July 1, 1955, to May 31, 1956	.1824
June 1, 1956, to June 30, 1957	.1889
July 1, 1957, to June 30, 1958	.1889
July 1, 1958, to Dec. 31, 1959	.1889

Source: Department of Agriculture appropriations bill hearings, 1961, pt. 3, p. 377.

Overall storage and handling costs for all commodities increased from $73.3 million in fiscal year 1952 to $481.7 million in fiscal year 1959. It is appropriate to note at this point that net income to the farmer dropped 24 percent during the same period. Estimated storage charges for fiscal year 1960 are $612 million and they are expected to be over $700 million for 1961 unless something is done to correct the situation.

As I have said, increased costs have undoubtedly made some increases necessary. Our subcommittee has watched developments closely, however, and there are questionable practices which have contributed to this situation.

EXAMPLES OF WASTE

In 1955, for example, over 16 million bushels of corn were moved from the Midwest to the west coast at a cost to the Government of over $8 million, even though vacant space remained at the locations from which it was shipped.

In other instances, we learned that storage charges paid to some warehouses from 1957 to 1959 were sufficiently high to allow operators to recover their investment in buildings and equipment in 2 years.

In some cases usable Government bins were leased by Commodity Credit Corporation to private persons and were rerented for storage of Government-owned grain.

INEFFICIENCY CHARGED TO FARMER

No one will condone such practices as the "efficient and effective" conduct of business which is required by the charter of the Commodity Credit Corporation.

Farmers themselves are the first to suffer from costly and ineffective programs which only create new problems without solving those already at hand.

The problem has meaning for a State like mine, Minnesota, in which farmers receive 74.5 percent of their income from livestock and livestock products and 25.5 percent from crops. Minnesota farmers are familiar with the agricultural adage that cheap feed means cheap livestock. This has been hammered home to them by experience.

STOCKS HANG OVER MARKET

Farmers who depend upon livestock and livestock products as a major source of income have a right to be uneasy about the mounting stocks of feed grains. Those who produce cattle, hogs, dairy products, and eggs may well be concerned if such stocks can be made available at any moment to others who could convert them into livestock and livestock products. In the past 2 years we have seen the warning signs in the violent fluctuations in feed prices because of these available feed stocks.

The following table relates corn productions and the number of hogs raised from 1952 through 1959:

TABLE 6.—*Corn production, number of pigs raised, 1952–59*

Year	Corn production	Pigs raised
	Thousand bushels	*Thousand head*
1952	3,291,994	88,829
1953	3,209,896	77,914
1954	3,057,891	86,830
1955	3,229,743	95,719
1956	3,455,283	89,572
1957	3,422,331	87,960
1958	3,800,863	94,499
1959	4,361,170	101,636

Source: Hearings, Department of Agriculture appropriations bill, 1961, pt. 3, p. 313.

What this means to agriculture in dollars and cents can readily be seen in the average prices received by farmers for these products. On November 1, 1952, the average price received for corn was $1.49. By January 15, 1960, it had dropped to 98 cents a bushel.

HOG PRICES DROP

Farmers received an average of $17.65 per hundredweight for hogs on November 1, 1952. The average price per hundredweight on January 15, 1960, was $12.10.

The same pattern is repeated for other feed grains, as well as for most of the commodities sold by farmers. This is evidence enough that the tremendous expenditures of this administration on what it calls farm programs have only contributed to one failure after another. Farmers may well question the motives of those who charge them with such great costs from which they benefit so little.

FEED PRICES STILL DECLINING

That lower livestock and poultry prices tend to further depress grain prices is evident from the recent issue of the

Feed Situation, a bimonthly publication of the Agricultural Marketing Service. The April 1960 report says:

Big feed grain supplies, lower average prices for livestock and poultry, and reduced demand for commercially prepared feeds, especially poultry and hog feeds, have been bearish factors in the market. Feed grain prices have made less than their normal seasonal rise since last fall. In mid-March the index of prices received by farmers for feed grains was 4 percent below a year earlier. The index of wholesale prices of high-protein feed averaged 8 percent lower in March this year than last.

MANAGEMENT, CONSERVATION SUFFER

The consequences do not end here. When more production is needed to maintain a bare subsistence income because of lower prices, both farm management and soil conservation suffer.

Some will say we had the soil bank with its acreage reserve and conservation reserve. This, they try to tell us, not only controlled production but conserved soil. My answer is that you do not bring production into balance with demand by setting aside all of the marginal land in the country. Very little high productive land has gone into the soil bank as it was administered. In my own State of Minnesota, we planted more acres of corn when the acreage reserve was in operation than we did without it.

Corn acreage planted jumped from 74,513,000 acres in 1958 to 85,530,000 acres in 1959. In Minnesota, during this period, alfalfa acreage dropped 25,000 acres and all hay planted was down almost 86,000 acres. The harvested acreage of all hay in the United States dropped from 75,360,000 acres in 1954 to 69,404,000 acres in 1959. During the corresponding period, all hay in Minnesota dropped by 500,000 acres.

HAY ACREAGE DECLINES

The following table, supplied in our hearings at my request, tells its own story about the trend in Minnesota and the Nation in the first year the new program on corn was in effect.

TABLE 7

[In thousands]

	1958		1959	
	Acreage (acres)	Production (tons)	Acreage (acres)	Production (tons)
Minnesota:				
Alfalfa and alfalfa mix for hay	2,253	4,957	2,230	4,906
All hay	3,505	6,663	3,382	6,403
United States:				
Alfalfa and alfalfa mix for hay	29,864	67,247	28,740	64,739
All hay	73,004	121,819	69,404	112,764

Source: Crop production, 1959 annual summary (AMS).

Hearings, Department of Agriculture appropriations bill, 1961, pt. 3, p. 547.

There is no intent to imply that the result is already disastrous. An unfortunate trend has been established, however, and it bears watching by all who are concerned in promoting sound conservation practices. It is another trend reversed and we can only hope it does not have the same meaning we have witnessed in some of the other reversals we have examined today.

INCOME ESSENTIAL TO CONSERVATION

When farmers are driven to abandon soil and water conservation practices in a desperate effort to preserve a bare level of existence, the whole Nation will inevitably suffer. Technology has provided the tools of conservation but a reasonable and stable income is one of the essentials to proper use of these tools.

Corn is a ready example of what is happening to one of our most important crops. For the past decade the value of our corn production has been at or above the $4 billion mark. It is grown on more acres than any other crop with the exception of pasture land.

CORN IS A MAJOR CROP

Corn produces more than two-thirds of a hog, more than one-third of a chicken. It produces 13 percent of a beef steer and about 8 percent of a quart of milk. The Department of Agriculture experts have told us that 1,000 bushels of corn is equivalent to enough meat, milk, and eggs to supply one person with food energy for 20 years.

The basic uses of corn are food for man and feed for livestock but it has hundreds of other uses. Products made from corn are in the books we read, the paper we write on, the rugs on our floor. Corn is used in the mines, in the steel plants, in the chemical factories, in explosives, in textiles, and in the airplanes that fly overhead.

First and foremost, however, corn remains a basic food crop and what happens to it and the other feed grains has consequence for all of American agriculture.

CORN FAILURE IS SYMBOL

What has happened to corn in the agricultural economy is just one example of the Eisenhower administration's lack of understanding and cynical disregard of farm facts. How else could it fail to profit from the experience of the Hoover administration's Farm Board?

The corn program approved and adopted by Secretary Benson is as inept and wasteful as anything we have witnessed since the failure of the Farm Board. What causes us most concern is that the worst is yet to come. If the Nation's agriculture—livestock, poultry, and crop producers—can continue to operate under this legacy of chaos it will indeed be a miracle.

THIS IS THE RECORD

The sorry record of the consequences these policies have had for all agriculture does not need to be discussed here in all of its dismal and discouraging detail. The Secretary of Agriculture himself has done this for us in a table which he supplied for the record of our hearings. It is a comparison of the average prices received by farmers in the United States on November 1, 1952, on January 15, 1953, and January 15, 1960. Mr. Chairman, sad to say, it speaks for itself:

TABLE 8.—*Average prices received by farmers for farm products, United States*

Commodity and unit	Estimated, Nov. 1, 1952[1]	Estimated, Jan. 15, 1953	Estimated, Jan. 15, 1960
Wheat, per bushel	$2.10	$2.10	$1.78
Rye, per bushel	1.76	1.65	.925
Rice (rough), per hundredweight	5.92	6.43	4.77
Corn, per bushel	1.49	1.48	.979
Oats, per bushel	.836	.821	.685
Barley, per bushel	1.42	1.37	.848
Sorghum grain, per hundredweight	2.84	2.74	1.53
Hay, all baled, per ton	25.80	26.40	22.20
Cotton, American Upland, per pound	.3541	.2979	.293
Cotton, American-Egyptian, per pound	1.08	1.00	.531
Cottonseed, per ton	70.20	65.30	39.60
Soybean, per bushel	2.71	2.69	2.01
Peanuts, per pound	.111	.100	.101
Flaxseed, per bushel	3.74	3.70	31.2
Potatoes, per bushel	2.14	2.06	2.10
Sweetpotatoes, per bushel	3.02	3.06	3.51
Beans, dry edible, per hundredweight	8.48	8.46	7.50
Peas, dry field, per hundredweight	5.78	6.09	3.92
Apples, per bushel	2.77	3.21	2.14
Grapefruit, per box[2]	1.01	.83	.95
Oranges, per box[2]	$1.50	$1.15	$2.06
Lemons, per box[2]	1.92	2.86	1.36
Hogs, per hundredweight	17.65	17.80	12.10
Beef cattle, per hundredweight	21.65	19.70	20.30
Veal calves, per hundredweight	23.70	23.40	24.00
Sheep, per hundredweight	7.49	8.40	5.74
Lambs, per hundredweight	21.55	20.30	17.80
Butterfat, in cream, per pound	.729	.683	.597
All milk, wholesale, per hundredweight[3]	5.30	[4] 4.89	4.36
Milk, retail, per quart[5]	.213	.211	.217
All chickens, live, per pound	.253	.265	.163
Turkeys, live, per pound	.333	.336	.282
Eggs, per dozen	.511	.458	.296
Wool, per pound	.501	.510	.425
INDEX NUMBERS (1910–14=100)			
Prices received from farmers	280	267	231
Parity index	282	282	299
Parity ratio	99	95	77

[1] Average of prices received Oct. 15 and Nov. 15 except grapefruit, which is Oct. 15.
[2] Equivalent on-tree for all methods of sale.
[3] Estimated average price for the month for all milk sold at wholesale to plants and dealers.
[4] Preliminary.
[5] Sold by farmers directly to consumers.

Hearings, Department of Agriculture appropriations hearings, 1961, pt. 3, p. 279.

If ever there was a time for a change, it is now. Continuation of the present policies must ultimately force the American farmer into a tightly regulated and regimented system of agriculture or into economic peonage. This has been the fate of a depressed agriculture in almost every civilized nation in the world. The consequences will not be suffered only by those who till the soil but by the entire Nation. When farmers are forced by a cost-price squeeze to destroy their soil resources, the entire Nation and its future generations are impoverished.

AGRICULTURE IS BASIC INDUSTRY

Despite the disregard in which it is held by this administration, agriculture is still the most important single industry in the United States, the major source of our food and raw materials, and one of industry's largest customers.

Our Subcommittee on Agricultural Appropriations has been fighting alternately a delaying and then a holding action against the onslaught of administrative power. The bill before you today represents another battle in this cold war. We have tried to meet the needs of modern agriculture by writing workable laws and providing the funds to administer them. Unfortunately, we have not always won.

SUBCOMMITTEE EFFORTS OPPOSED

What comfort we have we take in consideration of how much worse things might have been. We have tried to preserve some semblance of working programs even when overwhelmed by maladministration and deliberate contempt for the intent of Congress. I say to you in all sincerity, I wish we had been more successful. I am sorry to report that some of the funds we have provided have been squandered to the detriment of the farmer and in total disregard of our purposes.

We can no longer afford the luxury of do-nothingism and the extravagance of hesitation and confusion. Not only the welfare of our basic industry is at stake. It involves the welfare of every man, woman, and child who eat their daily bread in the secure knowledge that our soil, in the providence of God, contains untold wealth if we are both wise and good in its use.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I yield 1 minute to the gentleman from Illinois [Mr. ARENDS].

Mr. ARENDS. Mr. Chairman, I would like to say to the committee that at the bottom of page 17, "Benefits to General Public," you begin to get into a question which has interested me very much. I picked up the paper the other day when this appropriations action was announced, and the headlines said, "$4 Billion Appropriated for Agriculture."

It seems to me that we too often leave the impression that every dollar spent within the Agriculture Department is spent for the benefit of the farmer. In this section you have begun to get into the question and I was hoping your committee could set forth the total amount of what might be really charged to agriculture and what to the general public, so that there will be a better understanding on the part of our populace that agriculture as such does not reap the benefit of many of the dollars appropriated in the Department of Agriculture bill.

Mr. WHITTEN. I thank the gentleman for his statement. I am afraid much of the press is directed to the 88 percent of the people who are nonfarmers.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I yield 15 minutes to the gentleman from Washington [Mr. HORAN].

Mr. HORAN. Mr. Chairman, I take this time to make some observations and to perhaps have a little colloquy with my chairman.

It has been a pleasure to serve with the gentleman from Mississippi [Mr. WHITTEN], and the other members of this subcommittee, and I want to at this time particularly pay my respects to two of our hard-working clerks, Mr. Pope and Mr. Gunnels.

The responsibilities of the Appropriations Committee are not in themselves legislative, but we do have a responsibility to point out to the House in our report on these bills the need for amending present legislation or even the need for new legislation.

Out my way we have no Government storage at all. Up until a sorry incident of about 6 weeks ago we had a very fine record as to honesty and good storage practices.

I would like to ask the chairman a question at this point. In our dealing with this storage problem, it was not the intention of the subcommittee to handicap or in any way criticize our old line storage people, such as cooperatives and that sort of thing.

Mr. WHITTEN. Mr. Chairman, if the gentleman will yield, certainly we did not. However, we did recognize the total cost and that there should be some attention given to holding the cost in line. I think the gentleman would agree with me, whether it was an old line warehouse or not, that the ideal situation would be to keep the warehouse full the year around, rather than on a 30-day basis. We tried to limit our directives to holding the total cost down. I think, however, the big warehouse might have definite means of storing grain at a flat rate per month, and that is the sort of thing we directed our attention to.

Mr. HORAN. I do not want to belabor the point too much. Of course, in a period of 3 years we will have paid out in excess of $1¾ billion of American money for storage of surplus commodities, and that certainly dictates to me the need for remedial legislation, and I hope that that is the thing that we have pointed out this afternoon.

Now, on page 216 of part II of our hearings, we have a complete report covering many pages of the operations under Public Law 480. And, on page 19 of the committee report here we have a considerable discussion of the operations under Public Law 480, and if the chairman will respond, I would like to get his reaction to what is intended. I was referring to the report on page 19 where it says, "Everybody but the farmer benefits from Public Law 480." I would like to have your comments on that at this time.

Mr. WHITTEN. May I say to the gentleman that I worked rather hard on this report. I would not say that there is no benefit to the farmer. What we are trying to say is that everybody else profits to a greater degree. Really, with what we are now giving away virtually under Public Law 480, if production were pulled back and the farmer's price related in some degree to his cost, the farmer would be a great deal better off. If, what we are now giving away under Public Law 480, we were selling so that it would follow normal channels and become available to people, it would be much less costly. As the gentleman well knows, most all the Public Law 480 sales are made to foreign governments and the governments then in turn sells them for what the traffic will bear. For instance, I know of one country where they bought the commodities and in turn sold them and reaped a tremendous profit.

Mr. HORAN. In no way did you intend to close the doors of Public Law 480 in the export field?

Mr. WHITTEN. It is beyond our control. They have the authority to dispose of these commodities, and there is nothing we can do about it except sign the check and complain. So, this is our complaint.

Mr. HORAN. We have a pretty good export market as reflected in the hearings. Our exports of agricultural commodities for the present year are expected to be $4.2 billion, of which $2.9 billion are exported for dollars. But where Public Law 480 is important, it is very important to those of us who have wheat districts, because under Public Law 480 about 64 percent of our wheat is exported. Thirty-three percent of our cotton, 49 percent of our rice and 73 percent of our cottonseed and soybean oil.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. HORAN. I yield to the gentleman.

Mr. WHITTEN. May I say that, as long as we have our production plant built up the way it is, and as long as we have nothing except existing laws, I think the American farmer if we did not have this outlet would be in a terrible situation. I do think that we need to point out that the maximum benefits go elsewhere and that somewhere along the line we owe it to ourselves and the farmer to pull our production in line, so that the farmer will not be dependent upon this outlet, and so that the Treasury will not be financing this outlet. In other words, we need to recognize that this is an emergency program and is not a long-range cure of the problem.

Mr. HORAN. Mr. Chairman, I want to say to the committee that last Friday the full Committee on Appropriations took what I think is a good step. They appointed a special subcommittee to study the use of these foreign currencies that are generated under Public Law 480. Our subcommittee feels that one of the primary reasons for having Public

Law 480 was the market development work and I hope that that is protected.

On page 218 of part 2 of the hearings you will see a list of the proposals to spend these foreign currencies which are resting comfortably in our Treasury now, and more or less the whole Committee on Appropriations has denied these funds except in their use for agricultural market development work.

Mr. Chairman, there is one other matter I would like to discuss here. There has been some discussion about the pesticide investigation. We had a colloquy with the chairman of the subcommittee when he spoke, on that subject. Of course, a lot of it was generated because of the cranberry fiasco last fall. It seemed that practically everybody who came before our subcommittee used that as an argument for justification so we did not go along entirely with the budget request, because we felt that some coordination should exist between Food and Drug, Public Health and the Department of Agriculture, that each should know what the other is doing.

The committee felt it was necessary to cut this request for approximately $1,500,000 of additional funds to carry on research to avoid pesticide residues. The committee recommends an increase of $250,000. I am sure that every member of the committee agrees that residues from pesticides and other chemicals used in agriculture are one of the greatest difficulties facing American agriculture and American consumers.

Production of commercial quantities of many of our most popular fruits and vegetables would be impossible without pesticides. The apple crop would be almost a total loss, and the same would be true for peaches. Potatoes and tomatoes would be cut drastically. The small quantities of acceptable fruits and vegetables would sell at prices way out of reach of the average American.

We might as well face the facts about the need for chemicals in our present state of knowledge concerning insects, diseases, and other pests. We also have to face the fact that it is almost impossible to control these pests with chemicals without leaving some residues that should be avoided. Recent techniques are able to detect traces of residues that were not even suspected a few years ago. The only answer to this situation is more research.

In the Agricultural Research Service today we have some of the world's most able scientists. They have already demonstrated their ability to think up new ways to control pests without chemicals, as illustrated by the eradication of the screw worm fly in Florida. They now propose a hard-hitting research program to make fuller use of biological controls, insect sterility, and new materials such as attractants, repellants, and hormones.

This new research would not take the place of that done by the chemical companies. They would continue their work of development and testing. The Department should direct its energies to finding new ways to control insects without chemicals or by developing new chemicals that do not leave harmful residues.

Mr. LIPSCOMB. Mr. Chairman, will the gentleman yield?

Mr. HORAN. I yield to the gentleman.

Mr. LIPSCOMB. I take this time, Mr. Chairman, to ask a question of the chairman of the subcommittee. On page 31 of the report, under Foreign Agricultural Service, there is a paragraph which reads as follows:

> The increase includes an additional $800,000 to cover by direct appropriation for the first time certain attaché expenses paid in prior years from foreign currency allocations;

Does this mean that the United States Government is now going to spend dollars for certain attaché expenses that in the past have been paid for out of foreign currencies?

Mr. WHITTEN. Only to the degree that circumstances have made it necessary. In other words, heretofore we have had foreign currencies available in a number of Western European countries and elsewhere, in countries which no longer qualify for Public Law 480 commodities which generate these currencies. So we have directed this agency to use foreign currencies to the fullest extent possible. But in some of those cases, countries which were formerly financed that way do not have the currencies available. So we anticipate that out of the $800,000 they will use foreign currencies to the fullest extent possible. But we did not want the absence of such currencies to cause us to close up attaché posts in areas where it has become necessary to finance them with dollars.

Mr. LIPSCOMB. Is it possible to pinpoint the areas or the countries where the additional $800,000 is going to be spent?

Mr. WHITTEN. The testimony was that they could not. One of our problems is, where there is a limited amount of currency, frequently our Government gives priority to embassies and regular operations there, and perhaps the military, so agriculture does not know just where it will stand in the list of those that are seeking foreign currencies in those countries where it is very limited in the way of priority. They could not tell us. But they have specific instructions to use foreign currencies where available.

Mr. LIPSCOMB. It is the intention of the committee that where foreign currencies are owed or owned by the Treasury of the United States the agricultural observers should use American dollars to purchase foreign currencies?

Mr. WHITTEN. They all belong to the Government. The Foreign Agricultural Service would be buying them from the Treasury and reimbursing the Commodity Credit Corporation. So the money in that instance would go to one arm of the Government and the currency be owned by the other. This happens to be in the same department of Government and would be a bookkeeping transaction.

Mr. BOW. Mr. Chairman, would the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Ohio.

Mr. BOW. Would these have to be 480 funds or could they not be other currencies, foreign currencies generally?

Mr. WHITTEN. We have been dealing with 480 funds and inadvertently I used that terminology. We have other foreign currencies, too.

Mr. BOW. It would refer to all foreign currencies?

Mr. WHITTEN. Yes. I had reference to that. I happened inadvertently to use the term "480 funds."

Mr. HORAN. Mr. Chairman, I ask unanimous consent that the gentleman from Nebraska [Mr. WEAVER] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. WEAVER. Mr. Chairman, in discussing this bill briefly I would like to commend the gentlemen of the Subcommittee on Agricultural Department Appropriations for a very fine job, indeed. They have attacked a very complex job with vigor and foresight and have on the whole accomplished a great deal in this bill.

I would like to limit my comments to two specific phases of this measure which are of extreme importance not only nationally but to my own congressional district as well. I would like to mention briefly the watershed conservancy program and the hot lunch program for the 39 million schoolchildren of our Nation.

Watershed conservancy is, in my opinion, one of the most important developments in recent years in the field of positive planning for the orderly development of our natural resources and the protection of our farmlands, our small towns and, in some cases, our bigger cities.

This vital work is aimed as keeping the water back in the upper valleys, the small streams and creeks of the Nation, holding it back during the heavy period of runoff so that these waters cannot swell the bigger streams and rivers and add to the flood damage below. It is geared, too, to the holding back of water on the land where it can be used as the dry spells of the summer make it necessary.

In my own State of Nebraska this year we suffered disastrous floods. It is estimated that roads and highways and bridges were damaged in the amount of over $3 million.

In one small area of Gage County in southern Nebraska one major source of runoff—Big Indian Creek—did damage to county roads and bridges alone estimated at $100,000. This particular area has already been organized into a watershed conservancy district and plans are under way for proper development of conservation projects. The amount of damage done in the spring of 1960 would have paid for the operation costs of these projects for a number of years.

By contrast, the watershed next to Big Indian Creek has already started construction work and is about 80 percent completed. The streams in this area did practically no damage this year. They were, indeed, very well behaved.

We have these classic examples of what can be done, the amount of money that can be saved, in every part of the Midwest. I hope that this program can eventually be spread to include every part of the Nation.

The present bill will be a major step in achieving that ambition. It provides a total of $32 million for this work, an increase of $9,250,000 over last year's appropriations and an increase of some $4,250,000 over this year's budget estimates.

Mr. Chairman, this kind of increase cannot be considered a waste of tax dollars; it is, instead, a wise investment of public funds in the future of America. It is estimated that each year flood damage costs the American people over $1 billion. Of this amount, some $500 million or more is in the form of damage to farmlands in the upper valleys, the watershed areas. If, by making an investment of $32 million we can cut down this extravagant waste of soil and other resources, we are making a major investment in America.

Every ounce of this valuable soil will someday be needed. We are a nation presently rich in natural resources, but every economist and every forecaster points to the day which is not too far distant when the United States will be straining its reserves to provide enough food for its growing population. This valuable asset must be preserved if we are to face these critical times of the future with confidence. I am highly gratified that the committee has seen fit to take the necessary steps.

Concerning the school lunch program, I feel that it, too, is an investment in the future. It is an effort to help develop our most important of all resources, the youngsters of the Nation.

I have heard many times and in many places the stories of benefits which have accrued to the Nation through this hot lunch program. I believe in it; I have always believed in it.

There are some 39 million school-age children in the United States today. Approximately 30 percent of these children benefit directly from the hot lunch program. For many of these youngsters it is the only decent meal they get during the course of the day. It is the only effort at balancing the diet of many thousands of them.

The present bill provides an outright appropriation of $110 million for this program. In addition, it provides for transfer of $45 million from section 32 funds to provide meats and so forth for the program. This makes a minimum of $155 million for the hot lunch program and it is my sincere hope that this will be augmented during the course of the year by transfer of other commodities to the program from our surplus stocks.

Mr. Chairman, both of these programs represent increases over the recommendations contained in the President's budget. I do not consider either of them to be a waste of tax dollars, or a depletion of the Nation's wealth. I consider both of them to be rather a wise and sound investment by this Congress in the future of America. I can and do most heartily recommend both of these increases to my colleagues on both sides of the aisle. It is my hope that they will be retained in the bill, as is, upon final passage.

Mr. ANDERSEN of Minnesota. Mr. Chairman I yield 10 minutes to the gentleman from Illinois [Mr. MICHEL].

Mr. MICHEL. Mr. Chairman, I come to the well again in this session still the low man on the totem pole so far as the composition of this subcommittee is concerned. It is no secret that during this year and the past year I have been at odds with members of the majority and sometimes even to some degree with members on my own side. I guess this stems from the fact that I try as best I can to represent the thinking of the majority of the farmers in my congressional district back in the heart of Illinois. The general philosophy of those farmers is that eventually they would like to get back to a free system. They do not like controls and they do not like allotments and they do not like Government regimentation of any sort. They want to be free to be on their own to chart their own course. So my whole philosophy reflects that thinking which is prevalent among the farmers of my district.

I am sorry that last Friday it was necessary for me to be out at St. Louis University on a prior commitment when the subcommittee was reporting to the full committee. The report of the committee was airmailed special to me and I read it on the plane coming back today.

It is in a sense the chairman's handiwork, and this is his privilege as chairman of our subcommittee. He knows that many times I disagree with him, always in good faith. It seems to me that the first 20 pages of the report are pretty much a political speech. I suspect that if I spend 25 or 30 years here I could make my own political speech, if it becomes my pleasure to author a report at some future date.

Let me go over several of the items in the few minutes I have. We find on page 2, for instance, a discussion of the decline in farm income. Farm income has declined, but it compares with the period of time from 1932 to 1952, making no mention of course that in that time there was a serious depression and that as late as 1939 there were still 9 million unemployed. Then, of course, we had World War II and then a few postwar years following the war, and again another war, the Korean conflict. All that has a definite effect, I would say, on what farmers were getting for their commodities as against the peaceful years from 1953 to the present day.

On page 4, in talking about the programs that have been enacted through this administration by this Congress, and the item of $25.8 billion of cost, $8 billion coming from reduced price supports. Of course, there is no mention made of what the cost might have been had we had rigid 90-percent price supports. There is nothing in the record that would indicate if we had rigid 90-percent price supports what the cost might be. The $8 billion could very well be double that amount with high rigid supports.

Then the soil bank program costing $4.3 billion. I differed at times with the Department in the administration of the soil bank program. My own feeling would be that Congress itself, since we are writing the laws, should have said "crop acres" or "productive acres" and not have left it up to the discretion of the farmer himself to put his creek bottom land in the soil bank or in the conservation reserve. It seems to me our responsibility here is—if we intend to put crop acres and good productive acres into the bank, we ought to say so in the law and if we do not say so, why should we criticize the people downtown when in this vast and massive program, they cannot keep on top of every single one of them?

Then on page 5, in talking about the reduced net income over a period of 7 years to the extent of 20 percent, we discount to a degree the decline in farm population which from 1950 to 1960 declined 23 percent from 7½ million to 5.8 million, and under the best predictions from the Department, we will find the farm population declining in the sixties another 12 percent.

It seems to me when we are talking about "farmers tending to increase their production as farm prices are reduced," we discount altogether the matter or the idea that a farmer regardless of what conditions prevail would not want to increase his farm production.

If we might move along to Public Law 480, and the criticism that has been leveled against the program, it seems to me that the Secretary and the Department ought to be commended for the amount of surplus commodities that we have been able to peddle overseas although I am concerned, having visited a number of foreign countries, at what is involved when we get paid not in dollars but rather in local currencies. I was glad when we were in Japan to find that one product which does sell in Japan for dollars is $100 million worth of soybeans of which we produce so much in my area and in the entire State of Illinois. When I was in Thailand we were criticized, or our Government was criticized, because of the amount of grain we were sending to Indonesia. Why? Because the export of rice from Thailand to Indonesia was their second best source of revenue.

So it is not just a simple matter for the Secretary or our officials to peddle our surpluses. There are a number of complex problems to be considered. I think they ought to be commended for what they have been able to dispose of.

On page 10, there is discussed the Commodity Credit Corporation and suggestions to the extent that the board should be full-time employed individuals of the Department rather than simply those individuals in the Department who are in the capacity of Secretary or Under Secretary or Assistant Secretary and so on down the line.

I have some mixed emotions about this particular proposal although I am very mindful that here we have a corporation with such tremendous assets, it seems to me that just about full time has to be devoted to the business of administering the business of this vast Corporation. My mind is open on this particular suggestion. But I do not think the committee erred in opening it up for discussion.

On the matter of grain storage on page 11, I think we should be temperate in our criticism. When one says we should utilize Government storage when available, rather than private storage, what happens when the Government storage is in the State of Washington and the grain is in Ohio or Indiana or Pennsylvania? Do we pay the cost of freight from one coast to the other, just in order to get it into Government storage?

Mr. WHITTEN. I think the point the gentleman makes is a good one.

Mr. AVERY. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield.

Mr. AVERY. I think the gentleman was on the floor when I had a colloquy with the gentleman from New York [Mr. SANTANGELO] in respect to the storage matter. After I had concluded my remarks, I think the record was left in this position: That the Department of Agriculture had advised at least some Members of the House that Government-owned storage was costing only about 6 cents a bushel. I would like to propound a question to the gentleman from Mississippi [Mr. WHITTEN]. Has the Department of Agriculture ever furnished the committee that figure?

Mr. WHITTEN. I do not have any such information. They may have supplied it to some individual. I have not had any such statement that I know of. I do not mean to be all inclusive, because there are about 8,000 employees in the Department, so what somebody may have told somebody else I do not know.

Mr. AVERY. Did I understand the gentleman to say that the committee itself had made some study of the cost of this storage?

Mr. WHITTEN. We have made about three investigations through the years.

Mr. AVERY. I mean recently.

Mr. WHITTEN. We had one this year.

Mr. AVERY. What did that reveal as to the cost of Government storage?

Mr. WHITTEN. Again I am sorry I cannot give the gentleman that information right offhand. If you leave it for 2 years it costs one amount. If you turn it over it costs another amount. So there is no set figure, but it did show that in some instances it would be much more economical, in my opinion.

The CHAIRMAN. The time of the gentleman from Illinois [Mr. MICHEL] has expired.

Mr. WHITTEN. Mr. Chairman, I yield the gentleman 3 additional minutes.

Mr. AVERY. Mr. Chairman, will the gentleman yield again?

Mr. MICHEL. Glad to yield to my friend.

Mr. AVERY. Does not the gentleman from Mississippi concede that it is not according to correct practice to put into a committee report that the storage rates are excessive and issue a mandate that they should be reduced when he says he does not know what the cost is?

Mr. WHITTEN. There are not many places where the Secretary and I agree, but he said they were excessive and he cut them. We say we agreed with them. So that apparently we are in agreement. He said they were excessive and cut them.

Mr. AVERY. I am trying to find out what the committee finds.

Mr. WHITTEN. I hate to quote the press, but according to the press the Secretary said his own investigation had nothing to do with it. This is done from our own studies.

Mr. AVERY. All I am asking the gentleman is, can he tell us what the study showed as to the cost of Government storage?

Mr. WHITTEN. I am not giving the details because I do not have them. They were sufficient because the Department reduced the rates. We in our report urged them to reduce them and urged them to use the Government storage when they were more economical.

Mr. AVERY. I appreciate the gentleman yielding to me. I include the following chart:

Cost of handling grain—Expense per bushel, elevators Nos. 1 and 3

	1947	1948	1949	1950	1951	1952	1953	1954	1955	1956	1957	1958	1959

Mr. MICHEL. That is very well. I would say to the gentleman from Kansas that my own position would be of course that many times we need storage and we need it now. Who is to say that the Government could build storage more efficiently at the moment than some private industry? We have to pat them on the back for supplying the storage when they did, in times of critical need, and refrain from casting a blanket indictment against all when most have acted in good faith.

Mr. BROOKS of Louisiana. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. Happy to yield.

Mr. BROOKS of Louisiana. I want to say I am thoroughly in accord with what the gentleman has had to say with reference to using available storage if it is located in the right areas. Recently, however, it came to my attention that the military was withdrawing from a certain plant which was suitable for storage purposes. I took the matter up with the CCC and suggested that it might be available for grain storage. I have a letter in reply from them to the effect that public storage was not usable, that they wanted private storage even if it had to be constructed. I know the gentleman does not go along with that.

Mr. MICHEL. No; certainly not.

Mr. BROOKS of Louisiana. But certainly if public storage is available and can be adapted to the program it seems it seems to me it should be used.

Mr. MICHEL. The gentleman will agree that when public storage is available and suitable for the storage of grain it should be used, but there are a number of problems involved and factors that have to be taken into consideration, such as aeration and so forth.

Mr. BROOKS of Louisiana. But they should look into its adaptability to storage and use it if possible. They do not want public storage if it will cost a great deal to adapt public storage to the purposes indicated. I can understand that, but they should not take an arbitrary stand in the matter.

I say further to the gentleman I recently read an article to the effect that we were paying $1 million a day for grain storage, and paying $2 million a day for overall storage. If that is correct surely we should use public storage if it is adaptable for the purpose and properly located and would cost less than storage which has to be built by private enterprise for that particular purpose. The gentleman I am sure agrees with that.

Mr. MICHEL. Yes sir.

Mr. BREEDING. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield.

Mr. BREEDING. I would like to commend the gentleman from Illinois for his stand on this matter and make the point that in our area of Kansas if it had not been for private enterprise creating grain storage we would not have had any, for there is not any public storage of any consequence available. I think a good deal of unjust criticism has been directed at the grain storage

people, saying they are riding the gravy train, and so forth, whereas if it had not been for them, if it had not been for private enterprise, we would not have had any storage in my State of Kansas; the farmers would not have had any place to store their grain.

Mr. MICHEL. I appreciate the gentleman's contribution.

If I might make another point it would be in the area of the conservation reserve program and ACP payments. Last year I offered a cutting amendment to the bill and I was soundly defeated by about 2 to 1 majority. This year, of course, there is no change in the complexion of the Congress and I do not know that my arguments would be any more persuasive this year than last. I still say, however, that in this bill there is no rhyme, nor sense, nor reason for the Federal Government's footing the bill on any farm for taking out hedgerows or tearing down stone fences and one thing and another, which is still the practice. When I was a boy on the farm we rooted out our own hedgerows on the farm with horses and a scraper. Many a harness and tugs were broken in this operation but I see no reason why people today cannot do the same thing on their own. If it is a matter of tearing down stone fences I do not see why we have to come to Washington to get Federal aid to tear down stone fences, but this is still a practice under the ACP program.

Mr. Chairman, in my remaining minute or two may I simply conclude by making my own little political speech in answer to the first 20 pages of our report and I would do by making these six points:

First. The Democrats bequeathed the Eisenhower administration an agricultural time bomb composed of obsolete, depression-bred, war-born farm laws. Despite endorsement of flexible supports for peacetime in platforms of both political parties, these old laws were continued until over $7 billion worth of surplus had been accumulated in 1955.

Second. The administration has repeatedly urged Congress to pass reasonable farm legislation truly beneficial to farmers. Congress has been controlled 23 out of the last 27 years by the Democrats. Most of the time Congress has talked about the problem and, in the few instances where they have acted, they have only passed a few bills that would have been another dose of what made the patient ill in the first place.

Third. Experience proves that the price-fixing and acreage-control programs have not worked, but many Democrats prefer to ignore this fact. It appears they will either not admit to the facts or else prefer to perpetuate the problem and attempt to profit politically.

Fourth. Because of efficiency and hard work, the American farmer produces for himself and 25 others. Artificial price incentives established by excess Government interference have contributed toward a superabundance in some crops. Many Democrats exemplify the greatest surplus problem—the surplus of demagoguery—when they talk but do not act. After years of attacking the administration proposals, only in recent weeks have a few Democrats come forth with a modification of the old discredited Brannan plan and the 1960 version is even more of an economic monstrosity which would impose unrealistic production cuts and slash national farm income while greatly reducing farm purchasing power.

Fifth. The Democrats for years, and regularly in campaign years, have wept for the plight of the small farmer while doing little to help him. The outmoded farm laws helped the big operators the most, who need it the least. The rural development program created by this administration and operating successfully in over 30 States is the first concerted effort to assist small, low-income farmers who need help the most.

Sixth. The Democrats compare farm prices during the Korean war period with farm prices during the 7 peacetime years of the Eisenhower administration. Actually per capita farm income has been at record high levels during this administration, exceeding even the war years. Instead of using the years 1949 or 1950, which were postwar years comparable to the last 7 years, they stress the 1951 and 1952 levels. American farmers and their sons want to drive tractors instead of tanks.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I ask unanimous consent that the remarks of the gentleman from Iowa [Mr. JENSEN] may be placed immediately following mine in general debate, so as to have them consecutive in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I ask unanimous consent that the gentleman from Iowa [Mr. HOEVEN] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. HOEVEN. Mr. Chairman, the farm problem is just like the weather—we all talk about it but do nothing about it. There are many dedicated Members of Congress who are earnestly striving to find a solution to a most perplexing situation. I am one of them.

Everyone knows that agriculture is the soft spot in our national economy today. The farmer's income continues to go down while his operating expenses continue to rise. Hence, the American farmer is definitely in a price-cost squeeze. I am sure we all agree that the farmer is entitled to his share of the national wealth and productive capacity of this Nation. Our main problem and concern is to bring this about. We must all realize that we are presently passing through an agricultural revolution. Our farms are rapidly becoming completely mechanized and, as a result, farms are getting larger in order that farming may be a profitable business. We have more part-time farmers than ever before who are compelled to go into industry to augment their income. I personally regret the passing of the so-called "family size farm" and the trend toward corporation farming. This not only disturbs farm community life as we once knew it, but it is taking many people out of our agricultural communities. This certainly is not good for America.

The composition of the Congress has changed a great deal since the time when Representatives from farming districts were a potent force in enacting farm legislation. Due to the trend of population into the urban areas of this country, farm representation in the Congress is becoming less and less and, hence, it has also become more difficult to enact any kind of major farm legislation. If legislation is enacted, it must not only satisfy farmers but the people in the city as well.

Another handicap facing agriculture today is the diversity of views regarding farm legislation as expressed by our various farm organizations. If there was more general agreement among these groups as to the type of legislation actually needed, legislating in this field would not be so difficult. In this connection, I long ago advocated a White House Conference on Agriculture at which the problems of agriculture could be discussed with the leaders of farm organizations and other experts at the highest level in the hope that such a meeting might prove constructive. I still think this is a good idea.

Furthermore, I sincerely believe that the problems of agriculture should be completely divorced from partisan politics. There is no reason in the world why agriculture, the Nation's basic industry, should be kicked around by political parties in order to gain votes. The American farmer deserves better treatment than that. Members of Congress approach the question of foreign affairs and national defense on a nonpartisan basis. On these issues we stand united, but when it comes to dealing with agriculture, we continue to spar for political advantage. This is another important reason why it is so difficult to enact proper and sensible farm legislation, especially in an election year.

I will be very much surprised if the present Congress will do anything very constructive in passing adequate and proper farm legislation at this session. Aside from general consideration involving the entire farm problem, we all realize that something must be done to cut down on farm surpluses, particularly wheat. It seems to me that wheat legislation should have the highest priority as far as this session is concerned. President Eisenhower has indicated that he will approve a wheat bill if it meets the guidelines set out in his special farm message to the Congress. Therefore, if the majority leadership in the Congress really wants a wheat bill which can be enacted into law, all they have to do is meet the President's challenge. Whether or not a realistic wheat bill is passed at this session will depend upon how sincere the Democrat majority is in trying to do something about it.

Mrs. SULLIVAN. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentlewoman from Missouri?

There was no objection.

Mrs. SULLIVAN. Mr. Chairman, earlier today I asked the chairman of the subcommittee several questions about provisions of the bill before us dealing with poultry inspection. I think the facts clearly show that it was the intent of Congress—and it is the law of the land—that all poultry and poultry products in interstate commerce must be inspected for wholesomeness, and that must entail continuous inspection, not a hit-or-miss sampling system. If this bill provides for less than that, as I am afraid it does, then the situation requires correction. Plants making poultry soups, poultry pies, and other processed foods using significant quantities of poultry in their preparation, should be extended the free inspection service, on a continuous basis, both for their benefit and the benefit of the consuming public. Under a temporary situation which has been in effect, all such further processing plants have been exempted from the new Poultry Products Inspection Act requirement for continuous inspection, but the exemption has been for the convenience of the Government. That exemption expires June 30. After that, all plants in interstate commerce are entitled to have inspectors on their premises. This is most important. If the additional $500,000 provided for poultry inspection in the bill is not sufficient to assure such continuous inspection in all plants—including the 300 now temporarily exempt—then more money must be provided. The responsibility cannot be evaded.

However, I do want to say I am pleased that in answer to the request which I made and which several other Members of Congress also made, as well as representatives of the Meat Cutters Union and the poultry processors, that some additional funds, at least, are being provided in the bill for poultry inspection even though the President failed to ask for those extra funds. I cannot understand that failure on the part of the executive department. It seems to me it represented a case of repeal of an important provision of consumer law by the process of appropriation starvation. The committee is to be commended for recognizing that funds must be available to comply with the inspection law, even if the President did not ask for those extra funds. My concern now is whether the $500,000 is enough, and whether the technical language inserted in the bill in connection with this extra $500,000 item is, as I believe it to be, a limitation on the effectiveness of the inspection work in plants which buy chicken parts and carcasses and process them into prepared foods.

Now, Mr. Chairman, I turn to another aspect of agricultural expenditures which concerns me deeply. I refer to the distribution of surplus foodstuffs to the needy. The Department maintains, and the President seems to believe, that our Government is doing a terrific job of distributing surplus food to the needy. Even the committee report seems to swallow some of that. But the reports we are receiving from West Virginia—right now very much in the political news—are that the free food distribution system is a cruel hoax on the needy. The variety of foods distributed is frightfully inadequate to help assure even a minimum diet. It is a dumping program. And yet we have widespread farm distress because farmers cannot sell all they produce of the wonderful variety of foods grown in this bountiful country. Why must any American go hungry when we raise more chickens than we can sell and more eggs than can possibly be sold, produce more butter than we can sell, more fresh fruits and vegetables, more meat, more of everything, and while we are frantically trying to give food away overseas, as the committee report points out?

In this country we are told that technical problems of distribution make it impossible to give out fresh eggs instead of powdered eggs to our needy. We are told it is impossible to give our needy poor an occasional few pounds of chicken, yet we gave frozen chickens to Egypt. The only outlet in this country for surplus fresh foods in the form most people like to eat them is the school lunch program and some of the public institutions. Actually, we have 7 million or more Americans on various forms of public assistance who could also, through a food stamp plan, enjoy the surplus of our harvests. This would remove the necessity of processing a lot of this food for dumping overseas; for instance, of processing eggs into powder on such a huge scale. Why not fresh eggs for our needy?

The answer, of course, is that our surplus distribution machinery does not have the necessary flexibility for distributing fresh products. It is a warehousing operation, and the food must fit the mechanics of that system.

A food stamp plan, using the neighborhood grocery for distribution purposes, would make possible a continuous flow of surplus farm products in fresh and appetizing form to the very poor who cannot now afford to buy such items.

I intend to discuss the food stamp distribution system in greater detail in the near future. We have the legal authority in the law—at long last—after 5 years of administration obstructionism on it—we have the legal authority for a food stamp plan. In all reverence, I say God knows we need such a program. West Virginia is not the only place in the Nation with stark poverty and many, many needy persons.

And the food—we have more food than we know what to do with. Our vast hoard of food is a storage headache, a budgetary nightmare, a fiscal scandal, and a moral shame considering how much hunger exists on this earth. But we have the food. It could be a blessing, not a curse, if more of it could be used to feed our own malnourished people—millions of them.

I am disappointed that the subcommittee, in drafting the report on this bill, did not see fit to include the suggested language I submitted calling for administration action to institute a food stamp plan. I am also sorry the committee partially swallowed the administration propaganda about the billions of dollars worth of surplus food going to 21 million of needy Americans, when that figure clearly includes many millions of schoolchildren who are not needy—for it includes all distribution under the school lunch program.

The food stamp plan, if implemented, could do for all agriculture on a tremendous scale what the school milk program is now doing for dairy farmers. We spend almost $100 million a year on this extra milk allowance. It is not a welfare program—it is intended primarily to sell and dispose of milk—a price support program. But no one objects to it. We recognize its tremendous value in building the health of the Nation's children. Along the same lines a food stamp plan would assure better meals also for 7 million or more Americans—and thus establish a vast new market for farm products which now rot in the fields or go overseas as gifts.

Mr. Chairman, when we talk about revitalizing agriculture, why can we not recognize that the best way to help the farmer is to provide him with more customers for what he raises? A food stamp plan would enable us to use up all of our surplus items eligible for support under section 32 as well as much more of the storables. If perishables could be distributed through the neighborhood grocery, we could make full use of the more than $300 million available every year under section 32, much of which never gets spent for the purpose for which it was intended.

In conclusion, Mr. Chairman, I think it only fair to point out that in many important respects the subcommittee which drafted the bill now before us has done an excellent job, and I do not want anything I have said to be regarded as a blanket condemnation of this bill or a blanket criticism of the report filed on the bill. I have tried to make my criticisms specific, and I think they are justified.

On the other hand, I applaud the subcommittee for again handling the school lunch appropriation with sympathy for the great importance of this program, and for once again earmarking some of the frequently unused section 32 price support funds for the school lunch program. I back up the committee on many of the statements in the report critical of our surplus disposal program. I particularly want to express my appreciation for the decision of the subcommittee to provide the full budget amount for meat inspection in the Agricultural Research Service appropriation, so that meat inspection for the red meats can continue at the same level as in the current year.

This was one of the items I stressed in my testimony before the subcommittee, in view of the indication the subcommittee gave last year that it thought further processing in the red meats did not require continuous inspection. Since the issue involved last year in

meat inspection, as discussed in my testimony, is exactly the same as now confronts us in connection with the inspection of further processing operations in poultry, I sincerely hope the outcome for poultry inspection will be the same.

It is not enough to make sure that the meat and poultry which go into processed foods were wholesome at the time of slaughter; as my testimony before the subcommittee pointed out, meat carcasses or parts—and the same holds true for poultry—can spoil in transport from one plant to another, and often do. The Federal meat inspectors each day condemn large amounts of meat intended for use in processed meat products, even though the meat was wholesome at the time of slaughter. Much can happen to it en route to final processing. The same holds true, as I said, for poultry.

Under unanimous consent, I submit at this point my testimony before the subcommittee, as follows:

THE SCHOOL LUNCH PROGRAM, MEAT AND POULTRY INSPECTION, AND THE FOOD STAMP PLAN

(Statement by Representative LEONOR K. SULLIVAN, of Missouri, before Subcommittee on Agricultural Appropriations, House Appropriations Committee, March 15, 1960)

As members of the subcommittee know, I have appeared before you a number of times in past years to urge adequate appropriations for such items in the Agriculture Department's budget as the school lunch program, meat and poultry inspection, distribution of surplus foods to the needy, and various other programs of the Department of Agriculture which are important to urban areas of our country. I am happy to say that this subcommittee has usually shown great awareness of the importance of these programs even though the present Secretary of Agriculture has frequently demonstrated very little concern for the consumer viewpoint, and his budget requests have usually been inadequate for consumer-type services conducted by his Department.

I do not want to go into any great detail on the budget items this year. For instance, I know it is not necessary for me to take your time to urge fair treatment for the school lunch program. I am well aware of the fact that the only reason the school lunch program in the past several years has been as effective as it has been is that members of this subcommittee have insisted on it, and the House has demanded such action. I will support you, I can assure you, if, following your review of this appropriation request, you once again recommend more money for this program than the budget recommends.

MEAT INSPECTION

On meat inspection, however, I am not sure we see exactly eye to eye. As I recall, I was the only Member of the House to take the floor last year, during debate on the Agriculture appropriation bill, to protest some language you wrote into your report concerning the matter of further Federal inspection during processing operations of meat products containing meat which had already been inspected for wholesomeness at the time of slaughter. In your report you called for a study of the need for such continuous inspection, indicating that perhaps some money could be saved by eliminating the requirement that meat going into meat pies, and meat products of various kinds made from inspected meat must be inspected again in this secondary processing operation.

The information I have since obtained about this issue strengthens the view I expressed last year. Meat inspectors in St. Louis with whom I have discussed this matter have informed me of numerous instances in which they have spotted and condemned processed meat products which were totally unfit for human consumption, even though the meat which went into them had originally been passed for wholesomeness at the time of slaughter. Each day in St. Louis alone hundreds of pounds of meat products are condemned as tainted, sour, putrid, unsound, contaminated, rancid, poisoned by contact with certain metals, or even containing fragments of glass. So the followup inspection is most necessary.

The meatpackers whom I know are not anxious to poison the consumer. On the contrary, they work hard to assure a safe and sanitary and nutritious product. They are, I might say, among the biggest boosters of an adequate meat-inspection program and are in the forefront of demanding adequate funds for this work. Enlightened business recognizes the importance of maintaining consumer confidence in its product, and that is why the enlightened meatpackers want adequate funds for meat inspection that must include funds for continuous inspection in the processing operations. So I ask that you not attempt to save a little money by cutting this item, because a budget cut on meat inspection would be a serious thing to the consumers of this country and to the meatpackers who are anxious to assure a wholesome product. Only the unscrupulous or fly-by-night operator would benefit from shortcuts on meat inspection, and that is exactly the kind of operator we don't want to benefit from the laws we pass. So I urge the full budget amount be provided for the Agricultural Research Service item for meat inspection, including funds for inspection of processed items.

POULTRY INSPECTION

As you all know, I was one of those Members of Congress who took an active role in the enactment in the last Congress of the Poultry Products Inspection Act. This act provided for an exemption until July 1, 1960, for the output of those processors for whom the Department of Agriculture could not immediately provide inspectors. The budget for the coming year fails, however, to request the additional funds which will now be required—about $1 million—to pay the salaries of inspectors who will be needed in the 1961 fiscal year to inspect the output of processors which up to now have been exempt under this provision. I am informed that the Department has suggested new legislation continuing the exemption indefinitely for firms making poultry pies and similar processed items. I would bitterly oppose such a step. The Poultry Products Inspection Act has been of tremendous benefit to the country—to the consumers, the processors, and the farmers. We now have assurances that nearly all the poultry we eat is wholesome. Until a few years ago we did not have that assurance on most poultry. There is no reason to weaken the act by opening up exemptions Congress did not intend and has not agreed to.

Hence, under present law—under law which should not and probably will not be changed between now and July 1—the Department must provide inspectors by July 1, 1960, for about 300 poultry products plants which are at this time still exempt under the act. These are the plants which make poultry pies, soups, etc., and which were originally exempted for a short time because Congress recognized there would be difficulty in hiring enough qualified inspectors to cover all of the slaughtering plants as of the time the new act went into effect, so there was a reason to provide for temporary exemptions of this nature for processors at the convenience of the Department.

But these temporary exemptions expire as of June 30 of this year. No convincing reasons have been put forward to continue those exemptions beyond that time. Most of the exempted plants—about two-thirds of them, I understand—are already set up physically for inspection, and are, in fact, so anxious to have inspection that despite their exemption from the compulsory inspection program they are paying their own funds to have their products inspected under the voluntary Federal poultry inspection program. Obviously, then, inspectors are available for those plants. There is no reason, then, to continue exempting them. They are entitled to have inspection on the same free basis as the slaughtering plants, rather than to have to pay for it out of their own funds.

As for the 100 additional processing plants now exempt and not participating under the voluntary inspection program, we should take direct action to serve notice that as of July 1 they had better be set up for Federal inspection—including the required sanitary conditions—if they want to remain in interstate commerce after that date. The best way to accomplish that sort of warning is for the Congress to appropriate the additional $1 million which will be required as of July 1 to pay the costs of a complete inspection program for all poultry and poultry products processed and sold in interstate commerce. If we don't appropriate the funds, a lot of these uninspected plants will probably see no urgency in getting set up for inspection—getting the proper equipment and installing required sanitary facilities—and if they have to do this at the last minute, they will really be up against it. For let me repeat that the law allows for no administrative exemptions for poultry in interstate commerce after June 30.

While I am discussing poultry inspection, I might say that I am again wondering aloud as to the wisdom of the Secretary of Agriculture in placing the poultry inspection program under the producer-conscious Marketing Service rather than making it a coequal agency with meat inspection in the more independent-minded Agricultural Research Service. This latest incident of not seeking funds for inspection in the plants which are now temporarily exempted is yet another instance of tepid concern for the consumer interest. I will say that the meat inspection branch, on the other hand, has usually felt much more free to battle for the highest standards of consumer interest in its work.

SURPLUS FOOD DISTRIBUTION—AND FOOD STAMPS

Now I want to ask you to do me, and the Congress, and the American people, a big favor. I want you to write into your report on this bill language which reiterates that it is the intent of Congress that the Secretary of Agriculture utilize the authority he already possesses under law for the distribution of surplus foods to our needy under a food stamp plan, and stating that it is the intent of this committee of the Congress also.

Such a statement in the report will not in itself increase by a single cent the amount you will be appropriating in this bill. For, of course, the Secretary would still have to come back to Congress and to the Appropriations Committee to request a supplemental appropriation if a food stamp plan were actually to go into effect. I would like this subcommittee, however, in connection with the regular agricultural appropriation bill, to make it clear that the Congress is prepared to appropriate the funds for a food stamp plan, if the Department shows its willingness to carry out the intent of Congress and put such a plan into operation.

We have widespread distress among farmers; we have billions of dollars worth of surplus food and we have millions of undernourished Americans—persons not getting enough

to eat. The cost of distributing a few surplus foods to the needy at the present time is out of all proportions to the benefits the recipients obtain. Most of these costs are shouldered onto localities which find it uneconomic and burdensome to have a full-scale distribution set up for the purpose of distributing such a little bit of food—items like corn meal and flour and dried skim milk and occasionally some butter or cheese.

Under the food-stamp plan approved by Congress last year, however, these storable items—plus perishables which are removable under section 32—could be distributed directly through the regular grocery stores. The food industry, I am sure, would be delighted to participate for very little or no profit—just if their costs were covered—if the Department of Agriculture would make the effort to set up such a program, and enlist the food industry's cooperation. It would certainly help the farmer.

Therefore, since you are the subcommittee which directs the Department of Agriculture on how to use its money and what to use it for, I ask that you write wording such as this into your report:

"The committee notes that no funds have been requested by the Department for the implementation of the food-stamp plan enacted by Congress last year. While the law gives the Secretary discretionary powers in placing the program into effect, the conference report on the bill extending Public Law 480 made clear that Congress intended that the food-stamp plan should be utilized to distribute surplus food items to needy Americans. The Committee on Appropriations therefore recommends that the Department prepare and submit by July 1, 1960, a detailed plan for implementing the food-stamp law, and that it indicate the cost of putting such a specified plan into operation in the 1961 fiscal year, so that Congress can then appropriate the funds necessary to place a departmental food-stamp program in operation."

The wording is rough—I am aware that you do not need my help in writing the language of your report. I am just trying to express the thought. And I sincerely hope you will take this step as a means of ending the complacency of the Department of Agriculture over the tragic contradiction of so much surplus food, so many impoverished farmers, and so many Americans not receiving adequate diets. Thank you.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I yield 5 minutes to the gentleman from Maine [Mr. McINTIRE].

The CHAIRMAN. The gentleman has but 3 minutes remaining.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I yield 3 minutes to the gentleman from Maine.

Mr. WHITTEN. Mr. Chairman, I yield 2 minutes to the gentleman from Maine.

The CHAIRMAN. The gentleman from Maine is recognized for 5 minutes.

Mr. McINTIRE. Mr. Chairman, I rise simply to ask a question or two to the extent to which time will permit. I would like to direct a question to the committee, and perhaps the chairman of the committee, if I may, in relation to the item of appropriation in this bill concerning the school lunch program of $110 million. May I say that I concur with the committee in its very careful consideration of this program. I should like to raise a question as to the chairman's opinion concerning the purchase policy which would be applied in relation to items which go into the school lunch program.

In view of the commentary which has already taken place here relative to the importation of food products into our markets, would it be the opinion of the committee that these funds should be directed toward purchase of American products for distribution in the school lunch program?

Mr. WHITTEN. That issue did not come before us in the consideration of this bill. But I certainly would think, in view of the fact that one of the primary sources of our contribution to the school lunch program in addition to appropriated funds is section 32 purchases, which in turn use domestic markets for perishable commodities primarily, anybody handling it could easily see they should use the appropriated funds for purchases of American food. I agree with the gentleman we would anticipate that the fund would be used for the purchase of American products.

Mr. McINTIRE. I appreciate the chairman's reply and I certainly concur with his observation. I believe it is important to have this observation as a matter of record for guidance in the purchase program.

Now, I would like to ask another question. I have searched through the report of this committee and also the legislative document. Is there in this report or in the bill accompanying the report any specific reference to the 5 percent of foreign currencies being used specifically for market development work under Public Law 480?

Mr. WHITTEN. I think there is. We had a reference to that in the report and I think we had some changes in language as to the intent of the act. We attempted to bring the use of those funds in line with the original act. It is in the report on page 32.

Mr. McINTIRE. I appreciate that response. It has been of concern to some of us on the legislative committee that certain priorities have gotten ahead of market development work. It was our intent in our last extension of the act to place emphasis on the market development work.

Mr. WHITTEN. We discuss that thoroughly on page 32. There is a definite limit as to how far this subcommittee can go in trying to restore the intent of the gentleman's committee.

Mr. McINTIRE. I thank the gentleman. I should like to call attention to the colloquy that took place with the gentlewoman from Missouri today in relation to poultry inspection. It is my understanding from that colloquy that the poultry inspection provision in this legislative document is to provide an additional $500,000 for inspection and that the language which is inserted in this bill, although perhaps a point of order could be made against it, does perhaps release the Department from the mandatory provisions of the original Poultry Inspection Act.

Mr. WHITTEN. It is modified some, but it is not mandatory. It does give the Department some discretion as to how much inspection is required, which is provided in the basic law.

May I say to the gentleman that I do not quarrel about jurisdiction. There is enough work around here for everybody to do, but I do say, as the gentleman well knows, that no matter what legislation you might pass, if we do not give the money we do not have the program. Involved here is an effort to get together on the views of all concerned.

Mr. McINTIRE. I appreciate the chairman's comment.

I would like to comment further. I follow with interest the rural resources program of the Department of Agriculture. I appreciate the fact that there is provided in this bill $2 million, but there are some people who feel that this program could well stand some further expansion, and I certainly would appreciate, as I am sure each member of the committee has already done, a careful review of this program, because I think we are on common ground in this respect.

There is one other area which causes me some concern. I am sure that the chairman and the members of the committee have given it close attention. I notice throughout this report that provision has been made for increased personnel costs, changes in grade, the wage and benefits provision under the existing Classified Employees Act. However, in the provisions made for the administrative expenses of the Farmers Home Administration there seems to be no provision for this factor. I am advised that the Civil Service Commission has required the upgrading of the clerks, which costs $150,000 annually, and a wage and benefit increase of $150,000; then some normal step increases, and that there is need for about $500,000 here to be comparable with other divisions of the Department.

Mr. WHITTEN. May I say to the gentleman that these promotions that he has mentioned will have to be made from funds available. The question arises then whether the Farmers Home Administration should have that much additional money. In view of the relatively small workload in some sections of the country, it was felt that the problems of this agency could be met by the overall funds here. Again, it will be reviewed in the other body, and we will see what they think should be done.

Mr. McINTIRE. I thank the gentleman.

Mr. WHITTEN. Mr. Chairman, I yield such time as he may desire to the gentleman from Iowa [Mr. KYL].

Mr. KYL. Mr. Chairman, I am deeply concerned with the attitude apparently held by a number of my colleagues—an attitude that the farmer is in good financial condition. He is not. Preliminary census information indicates that my district of Iowa has again lost population—this is a direct reflection of agriculture's financial problem—now a problem of our small towns and cities as well.

There is need now, for broad legislation which reaches the basic causes of this situation. There are numerous proposals which would help. We will never vote on these proposals unless we are concerned with farmers rather than farmers' votes. This legislation is a first step. Beyond this we must take a long look at farm imports. Third, we should improve our agricultural reporting service to make it a truly effective guide for production.

Finally there is the job of finding new uses and new markets for agricultural products.

I do not care who introduces or supports attempts at effective legislation. Politics should not interfere with an honest attempt to find the solution.

The CHAIRMAN. All time has expired. The Clerk will read:

The Clerk read as follows:

Research: For research and demonstrations on the production and utilization of agricultural products, home economics, and related research and services, including administration of payments to State agricultural experiment stations, $67,934,000: *Provided,* That the limitations contained herein shall not apply to replacement of buildings needed to carry out the Act of April 24, 1948 (21 U.S.C. 113a), or to not to exceed $1,000,000 to remain available until expended for the construction and alteration of buildings: *Provided further,* That the Secretary of Agriculture may sell the Entomology Research Laboratory at Orlando, Florida, in such manner and upon such terms and conditions as he deems advantageous and the proceeds of such sale shall remain available until expended for the establishment of an entomology research laboratory: *Provided further,* That in the establishment of such laboratory the Secretary may acquire land therefor by donation or exchange;

Mr. ANDERSEN of Minnesota. Mr. Chairman, I ask unanimous consent that the bill be considered as read and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

Mr. WHITTEN. Mr. Chairman, reserving the right to object, it is my understanding that the part to be read would not be subject to amendment.

Mr. ANDERSEN of Minnesota. I withdraw my request, Mr. Chairman.

The Clerk read as follows:

DISEASES OF ANIMALS AND POULTRY

Eradication activities: For expenses necessary in the arrest and eradication of foot-and-mouth disease, rinderpest, contagious pleuropneumonia, or other contagious or infectious diseases of animals, or European fowl pest and similar diseases in poultry, and for foot-and-mouth disease and rinderpest programs undertaken pursuant to the provisions of the Act of February 28, 1947, and the Act of May 29, 1884, as amended (7 U.S.C. 391; 21 U.S.C. 111–122), including expenses in accordance with section 2 of said Act of February 28, 1947, the Secretary may transfer from other appropriations or funds available to the bureaus, corporations, or agencies of the Department such sums as he may deem necessary, to be available only in an emergency which threatens the livestock or poultry industry of the country, and any unexpended balances of funds transferred under this head in the next preceding fiscal year shall be merged with such transferred amounts: *Provided,* That this appropriation shall be subject to applicable provisions contained in the item "Salaries and expenses, Agricultural Research Service".

Mr. AVERY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I do this in order to propound a question to the distinguished subcommittee chairman, the gentleman from Mississippi [Mr. WHITTEN]. Could the gentleman advise us what his plan of procedure is for the remainder of the time this afternoon? Are you going to read the entire bill?

Mr. WHITTEN. It was my hope to read the entire bill. If the session stretches out too long, of course, then we would rise, say, at 5 o'clock.

Mr. AVERY. And the gentleman hopes to complete work on the bill this evening?

Mr. WHITTEN. I certainly would hope so, but it will go over until tomorrow for a final vote.

Mr. AVERY. Well, Mr. Chairman, I, of course, am in no position to object. It was my understanding we were just going to conclude general debate this afternoon and read the bill under the 5-minute rule tomorrow.

Mr. WHITTEN. It was my understanding with the leadership that we would proceed but that any vote would go over until tomorrow. That was my understanding individually, so that I am carrying out what I understood to be the situation.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

EXTENSION SERVICE

Cooperative extension work, payments and expenses

Payments to States and Puerto Rico: For payments for cooperative agricultural extension work under the Smith-Lever Act, as amended by the Act of June 26, 1953 (7 U.S.C. 341–348), and the Act of August 11, 1955 (7 U.S.C. 347a), $54,220,000; and payments and contracts for such work under section 204(b)–205 of the Agricultural Marketing Act of 1946 (7 U.S.C. 1623–1624), $1,495,000; in all, $55,715,000: *Provided,* That funds hereby appropriated pursuant to section 3(c) of the Act of June 26, 1953, shall not be paid to any State or Puerto Rico prior to availability of an equal sum from non-Federal sources for expenditure during the current fiscal year: *Provided further,* That all of the additional funds provided herein shall be used to meet expenses at the county level.

Mr. YOUNGER. Mr. Chairman, I make the point of order that a quorum is not present.

Mr. WHITTEN. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. KILDAY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 12117) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes, had come to no resolution thereon.

JOINT COMMITTEE ON INTELLIGENCE MATTERS

Mr. ZABLOCKI. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. ZABLOCKI. Mr. Speaker, I wish to advise the House that I have again contacted the Committee on Rules, urging favorable action on House Joint Resolution 31, and similar resolutions pending before the committee. House Joint Resolution 31 provides for the establishment of a Joint Congressional Committee on Intelligence Matters.

The recent downing of a U.S. plane over Soviet Russia, and the conflicting reports that follow, again underscore the necessity for the approval of this proposal.

There is a drastic need for improved coordination of our Nation's intelligence activities, and for better contacts between the Congress and the executive branch in this vital field.

When I first introduced my proposal in 1953—in the form of House Concurrent Resolution 169, 83d Congress—I pointed out that over a score of separate agencies, offices, and bureaus are independently engaged in intelligence-gathering activities.

That the Central Intelligence Agency, created for the purpose of coordinating and evaluating intelligence, has not given adequate emphasis to its basic statutory functions and had become an intelligence-gathering organization in its own right.

And that intelligence matters have been handled in a piecemeal, at times almost slipshod manner from the congressional standpoint.

Those facts were in evidence in 1953, and they are still in evidence today.

Two years after my original proposal was introduced, the Hoover Commission, in its "Report on Intelligence Activities," endorsed and called for the creation of a Joint Congressional Committee on Intelligence.

On June 28, 1955, the Hoover Commission stated—in its one and only recommendation on the subject of intelligence activities—that our Nation needs a congressional "watchdog" committee, patterned on the Joint Atomic Energy Committee, to collaborate with the Executive on matters of special importance to the national security.

On January 17, 1955, when the 84th Congress convened, and even before the Hoover Commission submitted its recommendations, some 20 Members of this House joined me in reintroducing the proposal to establish such a "watchdog" committee.

On July 6, 1955, at my request, the Committee on Rules granted a hearing on this legislation. After 2 days of hearings, the committee took no action to place the resolution before the House but assigned a subcommittee to study the proposal.

This action was followed by a second hearing before the Committee on Rules, held on January 31, 1956. In spite of our efforts, however, the resolution did not advance to the House.

With the help of interested colleagues, I again revived the effort to bring this proposal before the House when the 85th Congress convened, by introducing House Concurrent Resolution 49, and asking for an early hearing.

I followed this by reintroducing the proposal in the 86th Congress in the form of House Joint Resolution 31 and House Concurrent Resolution 11. Both of these measures are pending before the Committee on Rules.

Mr. Speaker, I have mentioned all these steps merely to show that the pro-

posal to establish a Joint Congressional Committee on Intelligence Matters is not a rash proposal brought out by a single international incident.

It is a well-thought-out measure, which I have repeatedly brought to the attention of the House for the past 7 years.

I do not believe that House consideration of this proposal should be delayed any longer. The facts of the international situation, and the facts relating to the operations of executive intelligence agencies, speak for themselves.

I earnestly hope that the Committee on Rules will promptly schedule House Joint Resolution 31, or House Concurrent Resolution 11, for floor debate and a vote.

RELIEF OF HARDSHIP FOR DISPLACED FAMILIES AND BUSINESSES

Mr. RAINS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. RAINS. Mr. Speaker, I have today introduced two housing bills, the Home Financing Act of 1960 and the Relocation Assistance Act of 1960, to serve as a frame of reference for the extensive hearings on general housing legislation to be held by the Housing Subcommittee beginning May 16. I would like to emphasize, Mr. Speaker, that these two bills incorporate a number of new suggestions and proposals to help improve our home financing programs and to bring relief to families and businesses forced to move because of the urban renewal program. I am hopeful that the ideas incorporated in these two bills will stimulate interest and discussion among the many groups who have an interest in the many facets of Government-assisted housing programs. I cannot emphasize too strongly, however, that no one should gain the impression that the subject matter of our hearing will be confined merely to the new ideas advanced in the two bills I have introduced today. We will, of course, in writing our omnibus housing bill go thoroughly into all of the problems facing existing programs, such as the need to provide additional funds for the college housing loan program, additional grant money for the urban renewal program, the question of additional units for the low-rent public housing program, the problems of military housing, the special problem of housing for the elderly, and so forth.

Mr. Speaker, I am also inserting in the RECORD two brief summaries of the main provisions of the two bills. I am now having prepared a detailed section-by-section summary which will be available soon for distribution to interested persons. I would also like to announce in connection with our hearings that anyone interested in testifying should contact the subcommittee staff, room 406, Old House Office Building, CA-4-3121, extensions 4855 or 2258.

BRIEF SUMMARY OF THE MAIN PROVISIONS OF THE HOME FINANCING ACT OF 1960

TITLE I—FHA INSURANCE PROGRAMS

1. The bill extends the FHA title I home improvement program for 2 additional years and makes an increase in the insurance authorization for that program.

2. Another section would provide for an additional increase in mortgage insurance authority for FHA's various programs to keep them in full operation.

3. The bill would provide no-downpayment financing on low-cost homes by eliminating the present 3-percent downpayment on FHA loans on the first $13,500 of value. Also, the 10-percent-downpayment factor now applicable above $13,500 would extend up to $20,000 instead of the present $18,000 cutoff point, and in addition the 30-percent-downpayment factor on higher valuations would be reduced to 25 percent.

4. The maximum FHA loan on a single-family home would be increased from the present $22,500 to $25,000.

5. The present 30-year maximum loan maturity would be increased to 35 years. Also, the bill would give permissive authority for approval by the Commissioner of terms up to 40 years in hardship cases where the family could not otherwise meet the monthly payments.

6. The bill would make mandatory a reduction in the FHA insurance premium from the present one-half of 1 percent per annum to one-fourth of 1 percent, unless the FHA Commissioner makes a formal finding that such a reduction cannot be made without impairing FHA's reserves.

7. The present 1-percent prepayment penalty on FHA loans would be prohibited after the loan has matured for 5 years.

8. The bill also includes a number of amendments to improve the present rental housing and cooperative housing programs. One important amendment to the cooperative housing program would establish a mutual mortgage fund for cooperatives so that cooperative owners would have the same financing advantages as those enjoyed under the regular FHA sales housing program.

TITLE II—EXPANSION OF FNMA SUPPORT OPERATIONS

Part 1. Central mortgage bank

This part of the bill would make a number of important amendments to the present secondary mortgage market operations of FNMA designed to enable that agency to provide the central mortgage banking function which has long been needed to assure an adequate supply of mortgage credit to the home-building and home-financing industry. To achieve this the bill, among other things, would (a) increase FNMA's capitalization substantially, (b) authorizes the Association to make advance commitments to purchase mortgages, and (c) for the first time authorize the Association to make loans on mortgages pledged by lenders as security.

Another important amendment would establish an Industry Advisory Board of 12 members, 1 from each of the existing Federal Reserve districts. The Board would be composed of representatives of the housing industry with expert knowledge of the needs and problems in the various fields of housing activity.

Part 2. Special assistance functions

To improve FNMA's program to provide special assistance for mortgages financing specially deserving programs, the bill would (a) make par purchase a mandatory permanent feature of the special assistance operation, (b) limit the fees and charges FNMA can make on special assistance mortgages, and (c) provide additional funds for the President to support deserving programs such as urban renewal housing, cooperative housing, etc.

Another important provision would set up a special fund to give financial backing to mortgages to finance the nursing homes authorized in the Housing Act of 1959.

TITLE III—SECONDARY MARKET FOR CONVENTIONAL MORTGAGES

This title would fill an important gap in existing financial support mechanisms in the private mortgage market. Savings and loan associations are presently the largest single source of mortgage financing, and the bill would set up a new corporation within the Home Loan Bank System with the authority to purchase conventional mortgages from institutions which are members of the Federal Home Loan Bank System. The corporation would have the authority to issue debentures in the private market against its portfolio of acquired conventional loans. This should provide a much-needed measure of liquidity in the conventional loan field and help even out the availability of mortgage credit in various parts of the country.

TITLE IV—FHA INSURANCE FOR SITE PREPARATION AND DEVELOPMENT

This title would authorize an entirely new program to permit FHA to insure loans to builders and developers to prepare sites for residential construction. In many areas of the country financing for site development is extremely difficult or impossible to obtain, with the result that too often there is a monopoly situation in which land development is confined only to a few wealthy developers. Lack of availability of loans on reasonable terms for land development also has been an important contributing factor to the inflated land costs which plague home-building in many parts of the country.

TITLE V—DEPARTMENT OF HOUSING AND URBAN AFFAIRS

1. In order that our housing and other urban problems may be treated at the highest levels of Government, the bill would give Cabinet status to housing by creating a new Department of Housing and Urban Affairs.

2. The functions of the Housing and Home Finance Agency would be immediately transferred to this new Department and the executive branch would be directed to make further studies to determine what other functions should be included in the new Department. (The bill specifically excludes veterans affairs and the functions of the Department of Agriculture and the Federal Home Loan Bank Board from the new Department.)

BRIEF SUMMARY OF THE MAIN PROVISIONS OF THE RELOCATION ASSISTANCE ACT OF 1960

TITLE I—RELOCATION ASSISTANCE

Relocation payments

1. The bill would raise the ceiling on relocation payments to displaced families from the present $200 to $300.

2. While the present $3,000 ceiling on relocation payments to displaced business firms is adequate in most cases, it works a hardship on those concerns which have heavy equipment. In these cases the bill would permit the agency to pay total certified actual moving expenses.

3. The bill would give displaced business firms a "reasonable opportunity" to the maximum extent feasible to relocate in the urban renewal area after development.

4. The bill would authorize local redevelopment agencies to retain a full-time relocation specialist to assist displaced families and business concerns. The salary of this specialist would be paid in full by the agency under such regulations as the Administrator may prescribe, in the same way that the Federal Government now pays the full cost of relocation expenses.

Small business loans for concerns displaced from urban renewal areas

Another provision of the bill would extend relief to business concerns which are displaced by urban renewal. This would be done by authorizing the Small Business Administration to make loans on liberal terms to reestablish their new businesses. These loans would be made on the same basis as is now used by SBA in lending to firms struck by disasters such as windstorms and flood; they would have a term of up to 20 years and carry an interest rate of 3 percent.

TITLE II—LOW-RENT PRIVATE HOUSING FOR DISPLACED FAMILIES

The purpose of this title is to provide relief for those displaced families whose incomes are high enough to qualify them for public housing but yet not quite high enough to afford decent private housing. To do this the bill would authorize loans to nonprofit corporations for the construction of rental housing.

These loans would be made for the full replacement cost of the project, would have maturities up to 60 years, and would have an interest rate of 2 percent, the same interest rate which has made the rural electrification program so successful. These loans would be confined to communities which have workable programs as required by the Housing Act of 1954 for urban renewal assistance. The number of units which may be built in any community would be limited to that which the Administrator determines is necessary for the relocation of low- and middle-income families who have been displaced by urban renewal activities, and the Administrator shall publish such regulations as are necessary to give a priority in renting to displaced families.

TITLE III—URBAN RENEWAL AREAS INVOLVING HOSPITALS

The bill would make certain expenditures by hospitals eligible for inclusion as local grants-in-aid on the same terms as expenditures by colleges and universities under section 112 of the urban renewal law.

RUMANIAN INDEPENDENCE DAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, the peoples of the Balkan Peninsula differ from each other in many ways: in race, in language, in history, and in tradition. They all have, however, one great influence in common: their willingness to fight for their freedom, and in adverse circumstances they have all shared the same fate. The Rumanians, as one of the largest of the peoples in the peninsula, have of course suffered a similar fate.

Early in modern times their country was overrun by the Ottoman Turks, and they were subjected to the unwelcome and harsh rule of their conquerors. For centuries they tried hard to free themselves from the oppressive yoke of their overlords, but most of their attempts ended in failure. In the middle of the last century, however, they had better luck. At the end of the Crimean War, in 1856, they gained autonomous status and this was obtained with the guarantee of the European powers. That was the first step in the rise of modern Rumania. The next and most important move was made in 1877, in the middle of the Russo-Turkish War of 1877–78. On May 10 of that year Rumanians took their destiny into their hands and proclaimed their independence. Since that year, for 83 years, May 10 has been celebrated as their national holiday, their independence. I gladly join them in this anniversary celebration.

THE FEDERAL TRADE COMMISSION TO DECIDE WHETHER THE NEW YORK TIMES' ADVERTISING "ALL THE NEWS THAT'S FIT TO PRINT" IS FALSE AND MISLEADING ADVERTISING IN VIOLATION OF THE FEDERAL TRADE COMMISSION ACT

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. PATMAN] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. PATMAN. Mr. Speaker, I am inserting in the RECORD a letter which I have today written to the Chairman of the Federal Trade Commission, raising the question whether advertising by the New York Times that it prints "all the news that's fit to print" is false and misleading within the meaning of the Federal Trade Commission Act.

This morning, when I sent this letter to the Federal Trade Commission, I also sent a copy to Mr. Arthur Hays Sulzberger, publisher and chairman of the board of the New York Times Corp. Since Mr. Sulzberger may wish to make a public comment, and will not have received this letter until tonight or tomorrow morning, I am inserting the letter in the RECORD without prior release to the press, so that it will be available for the first time tomorrow morning, in which case Mr. Sulzberger may be prepared to comment, should he care to comment.

MAY 10, 1960.

Hon. EARL W. KINTNER,
Chairman,
Federal Trade Commission,
Washington, D.C.

DEAR MR. CHAIRMAN: The new and enlarged way in which the New York Times is advertising its claim that it prints "All the news that's fit to print", has prompted a serious question whether this claim is false and misleading within the meaning of the Federal Trade Commission Act and thus violates the law which is intended to protect the public against false and deceptive advertising.

Surely this questionable claim has a tendency to make the public believe, and probably does make the public believe, that the New York Times is superior to other newspapers which must compete with it for advertisers' patronage and, accordingly, for readers. Competing papers, on the other hand, do not and cannot, truthfully, claim that they print all of the news that's fit to print.

The observation has been made that the New York Times certainly does not print all the news, and rarely prints all the important news, such as that concerning the operation of the Federal Government here in Washington.

Consequently, in view of the campaign to eradicate advertising which has a tendency or capacity to deceive or mislead the public—which has included ferreting out and condemning "payola," prohibiting use of the word "free," condemning claims of "former" prices which are not truly the prices previously charged, and so on—it appears the FTC should give specific attention to the New York Times' claim that it prints all the news that's fit to print.

Further, in view of your many speeches on "The Importance of Integrity in Advertising" which indicate that you are mobilizing the FTC against all falsity in advertising, it has been suggested that I call this matter to your attention for the Commission's consideration and action.

If efforts to clean up false and misleading advertising claims are to meet with reasonably prompt success, surely the place to begin is with the claims of the leading advertising media, since the character of the claims these media indulge in no doubt serves as a persuasive example for the other advertisers.

Please be good enough to advise me at your earliest convenience what conclusion the Commission reaches in this matter. In the meantime, should you need assistance in compiling evidence on the fact that the New York Times has not printed all of the news that's fit to print, please let me know, as such assistance has been offered to me.

Please be assured of my support for any legislation which the Commission should believe it needs to strengthen its powers to halt false and deceptive advertising.

Sincerely yours,

WRIGHT PATMAN.

FISHERIES RESEARCH AND MARKETING

The SPEAKER. Under previous order of the House, the gentleman from Maine [Mr. COFFIN] is recognized for 30 minutes.

Mr. COFFIN. Mr. Speaker, I wish to explain the purposes and terms of several bills identical to H.R. 12141, to amend the fisheries research and marketing provisions of the Saltonstall-Kennedy Act, introduced today by the gentleman from California [Mr. GEORGE P. MILLER]—H.R. 12144—the gentleman from Louisiana [Mr. THOMPSON]—H.R. 12147—the gentleman from North Carolina [Mr. LENNON]—H.R. 12143—the gentleman from New York [Mr. ANFUSO]—H.R. 12142—the gentleman from Washington [Mr. PELLY]—H.R. 12146—my colleague the gentleman from Maine [Mr. OLIVER]—H.R. 12145—and myself.

LEGISLATIVE BACKGROUND

In 1954 Senate bill 2802 and House bill 7641 became law. They amended section 2 of the act of August 11, 1939 (53 Stat. 1411), by requiring the transfer of 30 percent of the gross receipts from duties collected under the customs laws on fishery products from the Department of Agriculture to the Department of the Interior. The fund so established was to be used to conduct technological, biological, and related research programs in fisheries. The Secretary of the Interior was directed as far as practicable to cooperate with other Federal agencies and with State or local governmental agencies and other groups and individuals in this program.

Part of the essence of the approach was Federal-State cooperation. As was

stated in debate on the floor of the Senate—CONRGESSIONAL RECORD, volume 100, part 5, page 6583:

Under the pending bill, the Secretary of the Interior will cooperate with the States, which are conducting studies relative to their individual problems, such as pollution, methods of catching, industry problems, conservation measures, and other difficulties peculiar to their particular areas.

This was an admirable example of a Federal program strengthening the economy of the Nation through the use of the States as laboratories.

EXPERIENCE UNDER SALTONSTALL-KENNEDY ACT

Our experience under this act, Mr. Speaker, has fallen short of this concept of widespread State-Federal participation.

Although the original intent of the Saltonstall-Kennedy Act in providing research and marketing funds was to stimulate expanded activities in these fields, especially at the State level, each year the Bureau of Commercial Fisheries has been forced to divert these funds to its regular research, formerly financed wholly out of appropriations, with the result that (a) Saltonstall-Kennedy funds have been drained away from State agencies and institutions, and (b) the Bureau of Commercial Fisheries budget has been held at an artificially low level. During fiscal year 1960, $4.4 million of the $5.1 million available for research and marketing assistance has been spent on Bureau of Commercial Fisheries operated programs. Of the remaining $700,000, approximately $460,000 was spent through contracts with educational institutions, $69,000 went to State institutions under contracts, and the remainder was handled through other institutions.

There has been considerable dissatisfaction with the program as it has operated. States have found it difficult to get increased funds from State legislatures, because members of the legislatures have suggested that funds be obtained from those available under the Saltonstall-Kennedy Act. At the same time, State agencies have felt that they are not receiving their fair share of funds under the Saltonstall-Kennedy Act.

Universities have complained because the Saltonstall-Kennedy Act makes no provision for grants, similar to those made by many other Federal agencies, for the basic research which these institutions believe they must conduct. The universities have found also that there is no assurance of continuity in the Saltonstall-Kennedy program which would aid them in their primary responsibility of producing research personnel for fisheries work.

The failure of the Law of the Sea Conference to accept the United States-Canada compromise proposal to extend territorial seas to 6 miles and the fisheries zone to 12 miles will most certainly create serious problems in this area in coming years. It is anticipated that some nations will extend the fisheries zone unilaterally. In order to work out favorable and desirable bilateral agreements much more intensive fisheries research will be required. Since this is basically a Federal problem, affecting the States, it is only fair that the Federal Government should assist the States in meeting the added financial costs which will stem from these developments.

THE PROPOSAL

Under the proposed amendment, the research and marketing funds, after deducting 8 percent for administrative costs, would be divided into thirds, with one-third going for grants, one-third for contracts and one-third for States on a matching fund basis. The allocation to the States would be based on a formula involving the volume and value of their fisheries and the number of fishermen engaged in the fisheries industry.

This amendment would restore the program to its original objective, and would enable States to do research on problems peculiar to their own fishing industries. The contract and grant provisions would allow universities to develop continuity in their own programs, training qualified personnel, supplementing the work of the Bureau of Commercial Fisheries, and doing basic research. The matching fund provision would increase the amount spent on fisheries by about $1,600,000 annually.

There is ample precedent for the matching fund approach, including the Dingell-Johnson and Pittman-Robertson programs administered by the Bureau of Sport Fisheries and Wildlife in the Department of the Interior.

EFFECT ON OTHER PROGRAMS

Some objections may be raised to the proposal, on grounds that it will interfere with the regular Bureau of Commercial Fisheries research program, now financed in large part by Saltonstall-Kennedy funds. This is not the intention of the proponents. We do not wish to curtail any work which the Bureau of Commercial Fisheries is presently doing, either with regular or Saltonstall-Kennedy funds.

If this amendment were enacted, it would, for fiscal year 1962, be necessary for the Bureau of Commercial Fisheries to ask the Bureau of the Budget and Congress to add to its regular appropriation enough funds to carry out its regular duties. The Saltonstall-Kennedy funds would be doing the job they were intended to do and would therefore no longer be a substitute for regular appropriations. The amendment would have no effect on fiscal year 1961.

The proposed change would put all regular projects in one place, where they should be, and would not increase Bureau of Commercial Fisheries' employment or expenditures. It would use Saltonstall-Kennedy funds for those special purposes for which they were intended, such as grants, contracts, and help to the States, especially in critical or urgent situations. It would restore the Bureau of Commercial Fisheries budget to a realistic basis.

It should be noted that a somewhat similar shift of funds was approved for the Bureau of Sport Fisheries and Wildlife, this year, when it was determined that all duck stamp funds would be used for wet lands acquisition. At the same time an increase of $3.8 million in the regular budget for an equal sum, formerly financed from duck stamp funds for wildlife research, was provided.

This legislation would not adversely affect the Magnuson oceanography bill, because it covers a much broader field of recipients—States, commercial organizations, universities, and other private institutions—and activities—market development, education, and biological, technological, and related research.

ADVANTAGES OF GREATER FEDERAL-STATE PARTICIPATION

There are several research administrative and psychological advantages to the State-Federal practice of matching fund appropriations. Among these advantages are:

First. Better coordination of Federal-State fisheries research.

Second. Better cooperation between Federal-State agencies in fisheries research.

Third. Better use of strengths of State agencies—local and background knowledge, more intimate acquaintance with industry problems, previous research, continuity of research effort, experience in resource management, experience in working with local government—and those of Federal agency—special facilities in laboratory, equipment, boats; highly specialized personnel; breadth of experience.

Fourth. Minimizing duplication of research effort.

Fifth. Establishment and definition of cooperative research responsibility of State and Federal Government.

Sixth. More careful scrutiny of research programs.

Seventh. Better use of individual agency facilities. In other words State facilities would be available for Federal use and vice versa.

Eighth. Better "pooling" of talents, facilities, installations, equipment, and so forth.

Ninth. Better use of specialists—either State or Federal—for problems which require specialists—not limited to biological problems.

Tenth. Elimination of "no man's lands" and "blind spots" in research which presently exist because neither State nor Federal agencies have been able to do the work.

Mr. Speaker, we who have introduced these bills today feel that this is constructive legislation which attempts to make a good program better. This bill contemplates no subsidy. It is a national investment in a national resource. We are hopeful that it will receive close study from the Subcommittee on Fisheries and Wildlife Conservation of the Committee on Merchant Marine and Fisheries, from the executive branch, and particularly from the State commissioners of fisheries of our 22 States which depend partly on the products of the sea for their prosperity.

In conclusion, I wish to submit the following statement by the Maine Commissioner of Sea and Shore Fisheries, Ronald W. Green, in support of this proposal:

"In spite of the rapid increase in the world's population and the resulting need for additional sources of high-protein foods,

and in spite of a general nationwide economic prosperity, the fishing industry—particularly the New England segment—is showing a continued decline. Evidence of this steady downward trend may be found in all phases of the industry: in the increasing numbers of overage vessels presently employed in the New England fleet, in the slow rate of replacement by means of new construction, in the decreasing amount of available investment capital, and in static level of the income of both producers and processors.

There are many reasons for the failure of the fishing industry to achieve the progress so obvious in other economic activities. Two of the more fundamental causes are a lack of sufficient scientific knowledge based on research, and a need for a specific, aggressive market development program which would enable the industry to meet its intensive competition.

Organized marine research is a relatively new development. In fact, only in the last decade or so have systematic studies been undertaken by the Bureau of Commercial Fisheries of the U.S. Fish and Wildlife Service and various State fisheries agencies. Thus marine research is actually as young as space research—and by no means as well supported financially.

For the most part fishing enterprises are small, and individual firms usually lack adequate capital for either research or market development programs of their own. In addition, there has been a long-standing tendency on the part of the fishing industry to look to the past, rather than to the future. Improved marine engines and the introduction of electronic devices have not basically altered the traditional fishing methods of the past 15,000 years. Fishing is still a hunting activity dependent upon the net, the hook and the spear, just as it was in mesolithic times. Even where a departure from this philosophy has been attempted, inadequate scientific information has prevented a dependably high order of operational efficiency.

This approach has also carried over to a considerable degree into the industry's marketing efforts. It is true, of course, that duty-free imports of seafood products have created serious problems for the industry. On the other hand, those segments of the fisheries which have a marketing program geared to present-day competitive standards have enjoyed some measure of economic prosperity.

As a result of this inclination on the part of much of the fishing industry to look backward instead of ahead, much research has been based on a series of crises in the industry. The Long Island Sound oyster-starfish crisis, the Pacific salmon problem, red tide, mass mortalities of shellfish, and the decline of the California pilchard fishery are a few examples which emphasize the fact that too often research was not encouraged until after some catastrophe upset the fishery. For a sound research program, this is the worst possible approach; yet, in spite of this handicap, much valuable information has been obtained. Thus it is likely that a more adequate research program will give results as spectacular as those obtained in other scientific fields. In short, when research efforts are increased manyfold, then and only then, will we begin to meet the most urgent needs of the industry.

In the same way, a considerable proportion of the fishing industry's efforts to promote, advertise, and market its products have been based on reactions to crises. Sudden fluctuations in prices have frequently touched off hasty advertising and promotional efforts aimed only at meeting an emergency and altogether lacking in continuity or long-range purpose. Most fisheries firms simply do not have the funds with which to conduct well-planned advertising and market development programs on a nationwide scale. Further, too often such promotional efforts as there have been in the past were of the shotgun variety—a blast fired at random with no specific target in sight.

The proposed amendment to the Saltonstall-Kennedy Act, which would provide funds for joint Federal-State research and market development programs, would be a most progressive step and should do much to help solve many of the fishing industry's problems.

As far as research is concerned, such a jointly supported program would enable Federal and State fisheries agencies to coordinate their respective efforts more effectively, thereby keeping duplication to a minimum. Better use of available personnel, particularly specialists, would be possible, and in addition facilities and equipment could be pooled. A better use could be made of background knowledge possessed by marine scientists of the Bureau of Commercial Fisheries and of the close acquaintanceship with the industry's problems which is maintained by State agencies. Research proposals would be more carefully scrutinized, and areas where research is not being done—in the "no man's land" not now covered by either Federal or State programs—would be reduced.

As far as market development is concerned, such a jointly supported program would make possible substantial increases in current promotional and marketing efforts. Such expansion is essential, if the fishing industry is to meet the growing competition from high protein, nonfish food products such as poultry and meat. It is also essential, if the industry is to meet the increasingly stiff competition provided by imported fisheries products, many of which start out with a clear-cut advantage, thanks to their own well-established market-development programs and to Government subsidies at home.

A joint marketing program would enable Federal specialists to carry on a general campaign to increase the sales and consumption of fisheries products, while at the State level more specific projects could be conducted in close cooperation with the fisheries firms concerned. In this way a well-thought-out overall program could be developed aimed at the long-term prosperity of the fishing industry. Crash programs and stopgap emergency efforts to shore up a distressed segment of the industry would be eliminated. A vital continuity would be established, and up-to-date methods could then be applied to the advertising, promotion and sales of fisheries products, similar to those which are proving so successful in other industries today.

Perhaps one of the most attractive features of this proposal is that it will not require additional Federal funds. By earmarking a portion of Saltonstall-Kennedy money for this purpose, Congress will make available $2 for every dollar now being spent by the Bureau of Commercial Fisheries—thanks to State participation. In addition, the proposed amendment will stimulate State interest and activity in an area where State responsibility is increasingly needed. It will also encourage industry and local participation in both scientific and marketing endeavors and will serve to reduce the traditional inertia produced by the lack of clearly defined policies.

In short, a close correlation between biological, economic and technological studies and programs of market research and development should do much to revitalize the fishing industry and to help it achieve solvency in a highly competitive field.

The text of H.R. 12141 follows:

H.R. 12141

A bill to amend the act of August 11, 1939, with respect to the allocation of funds available under that Act, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (e) of section 2 of the Act entitled "An Act to authorize the Federal Surplus Commodities Corporation to purchase and distribute surplus products of the fishing industry," approved August 11, 1939, as amended (15 U.S.C., sec. 713c–3), is amended to read as follows:

"(e) The fund created for the use of the Secretary of the Interior under subsection (a) of this section and the annual accruals thereto shall be available for each year hereafter until expended by the Secretary of the Interior. After deducting 8 percentum for his expenses in the conduct of necessary investigations, administration, and execution of this Act the Secretary of the Interior is directed to allocate funds for the purposes mentioned in this section to the agencies, organizations, and individuals mentioned in this section as follows:

"(1) one-third in the form of grants;

"(2) one-third in the form of contracts; and

"(3) one-third for apportionment on an equitable basis, as the Secretary of the Interior may determine, among the several States. In making such apportionments the Secretary of the Interior shall take into account the extent of the fishing industry within each State as compared with the total fishing industry of the United States and such other factors as may be relevant in view of the purposes of this section.

Any State desiring to avail itself of the benefits of this section shall, through its State fisheries department, submit to the Secretary of the Interior full and detailed statements of any project proposed for that State. If the Secretary of the Interior finds that such project is consistent with the purposes of this section, and meets with standards to be established by him and otherwise approves such project, the State fisheries department shall furnish him such detailed surveys, plans, specifications, and estimates with respect to such project as he may request. If the Secretary of the Interior approves such detailed surveys, plans, specifications, and estimates, he shall so notify the State fisheries department. No part of any moneys apportioned under this subsection shall be paid with respect to any project until the detailed surveys, plans, specifications, and estimates have been approved by the Secretary of the Interior, and not more than 50 percent of the total estimated cost of the approved project shall be paid from funds made available under this section. If any funds made available for an approved project under this section are not used by the State for that project, that State shall not receive any further funds under this section until it shall have replaced the misapplied funds."

SEC. 2. The amendment made by the first section of this Act shall take effect as of July 1, 1961.

Mr. SCHWENGEL. Mr. Speaker, will the gentleman yield?

Mr. COFFIN. I yield to the gentleman from Iowa.

ABRAHAM LINCOLN

Mr. SCHWENGEL. Mr. Speaker, next May 18 will be a historic day in the United States. It will be just 100 years to the day since Abraham Lincoln was nominated for President of the United States on the Republican ticket. We, in

accordance with the wishes of Congress expressed in a resolution unanimously passed, have just finished a year's commemoration of the 150th anniversary of his birth. The national and international response to, the acceptance of the Lincoln story, the tribute to this great American has never been surpassed in history. Most of you will recall the joint session, February 12, 1959, which was provided for in House Joint Resolution 648 of 1958 and concurred in by House Resolution 57 in 1959, when for the first time a private citizen of the United States who has never served in a high office spoke to us in joint session and to the American people on the subject of Abraham Lincoln. This private citizen, eminent poet, historian, and scholar, spoke movingly and most appropriately to us. Not only did all of the news services in this country note this occasion but the world noted it, too. This occasion was even noted behind the Iron Curtain.

Now, you and I know that only a Lincoln could inspire and a Carl Sandburg to produce such literature.

This occasion and the lesson presented from the podium in the House by this scholar was good for each of us. It has been said that a nation may be judged by its heroes. If this be true, then it cannot be wrong for us to use this House and take advantage of every opportunity to recall our heritage and the great blessings that have been ours because we were fortunate to have such men in the crucial times of our history.
